What is the Tower Hamlets Living with Cancer Programme?

A £1 million partnership between Tower Hamlets Council and Macmillan, also involving NHS and voluntary sector partners.

The partners will:

- Co-design new services and support
- Achieve a more joined up approach between existing services and systems
- Ensure this is sustainable

Alignment with national and local strategy

Macmillan 'Right by You'

NHS Personalisation agenda

Tower Hamlets Living with Cancer Programme

National Cancer Strategy 2015-20

LBTH local transformation:

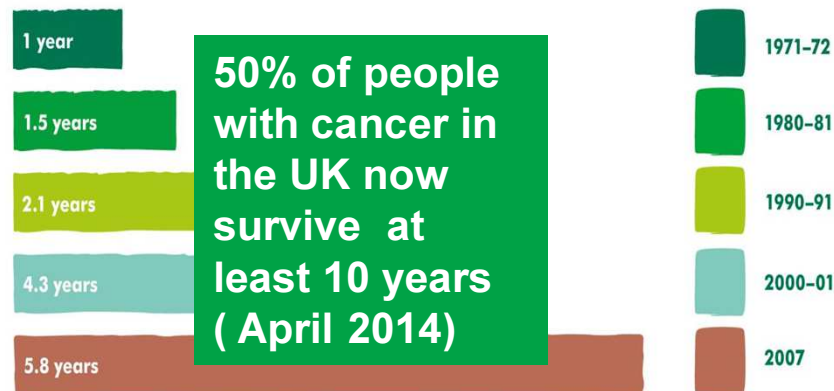

- Information, Advice and Guidance
- Adult Social Care
- Social prescribing
- Care coordination

Why is this important?

Increasing number of people living with cancer, for an increasing number of years

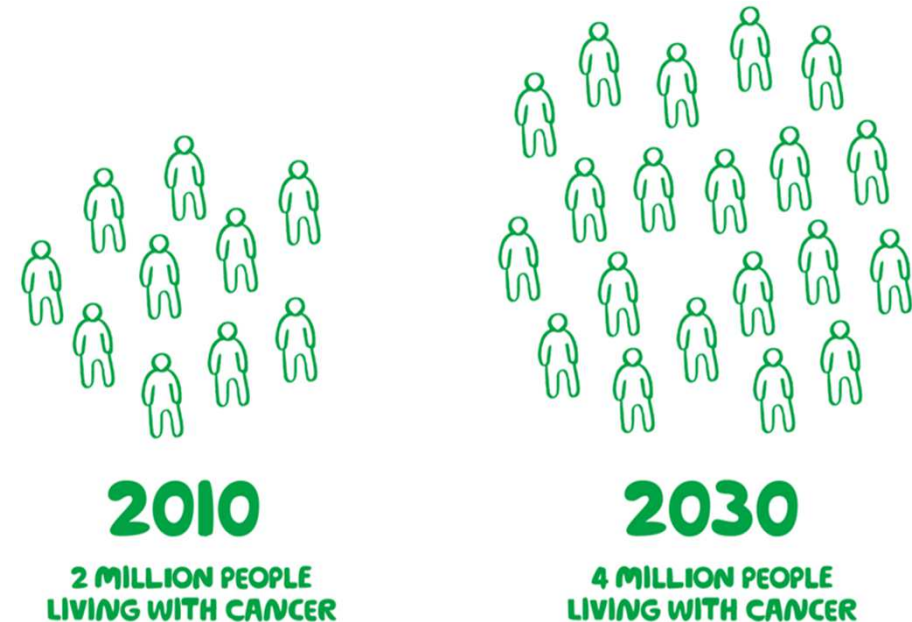

- Cancer needs to be recognised as a long term condition
- Not everyone has a good quality of life – many long term consequences
- 72% of people living with cancer in Tower Hamlets have another long term condition

Median survival time (years) by period of diagnosis, all cancers¹

Many of the patients diagnosed in 2007 will survive substantially longer than the predicted six years.

¹ Data are for adults aged 15-99 diagnosed in England and Wales. 2007 data are predicted survival estimates. Prostate and Bladder cancer are excluded. See Appendix 1 & 2 for full details.

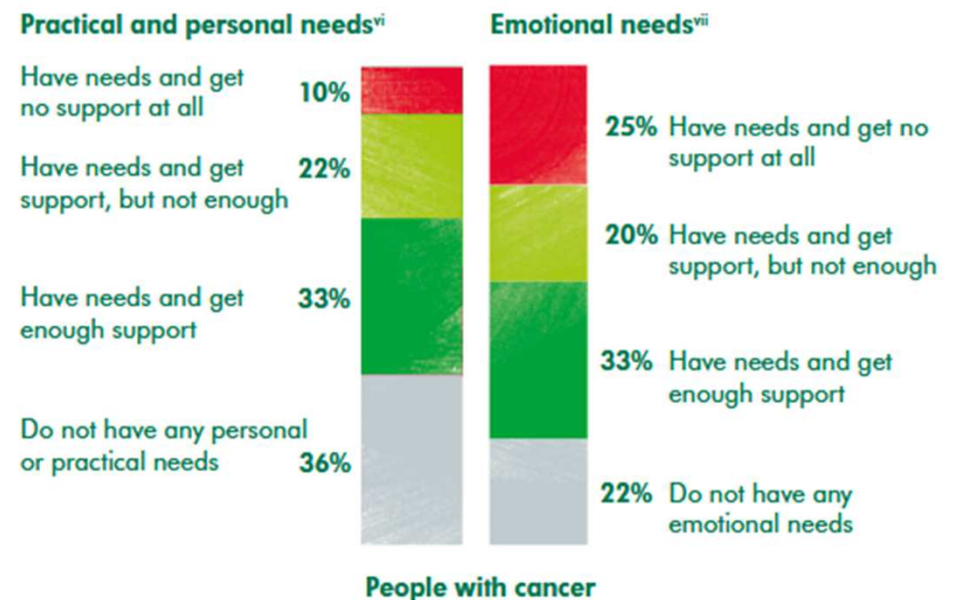

Why is this important? - evidence

Evidence from the Nuffield Trust shows that 15 months after diagnosis, cancer patients have:

- 60% more A&E attendances
- 97% more emergency admissions
- 50% more contact with their GPs than a comparable group.

Macmillan's evidence on the social care needs of people with cancer:

**Our findings and reflections from
insight gathering and asset
mapping to date...**

People need support at the right time, and their needs change over time

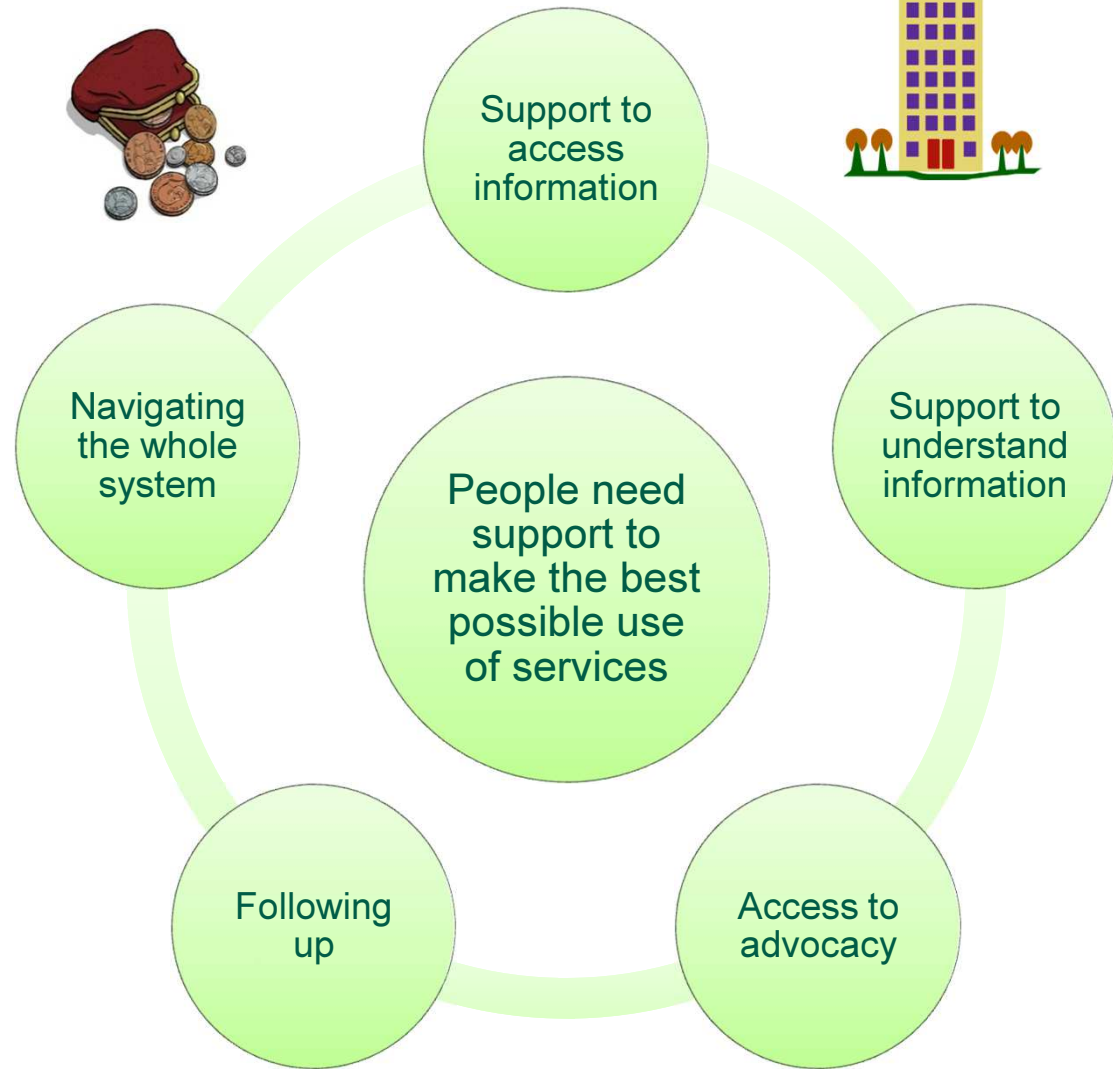

The team around the person

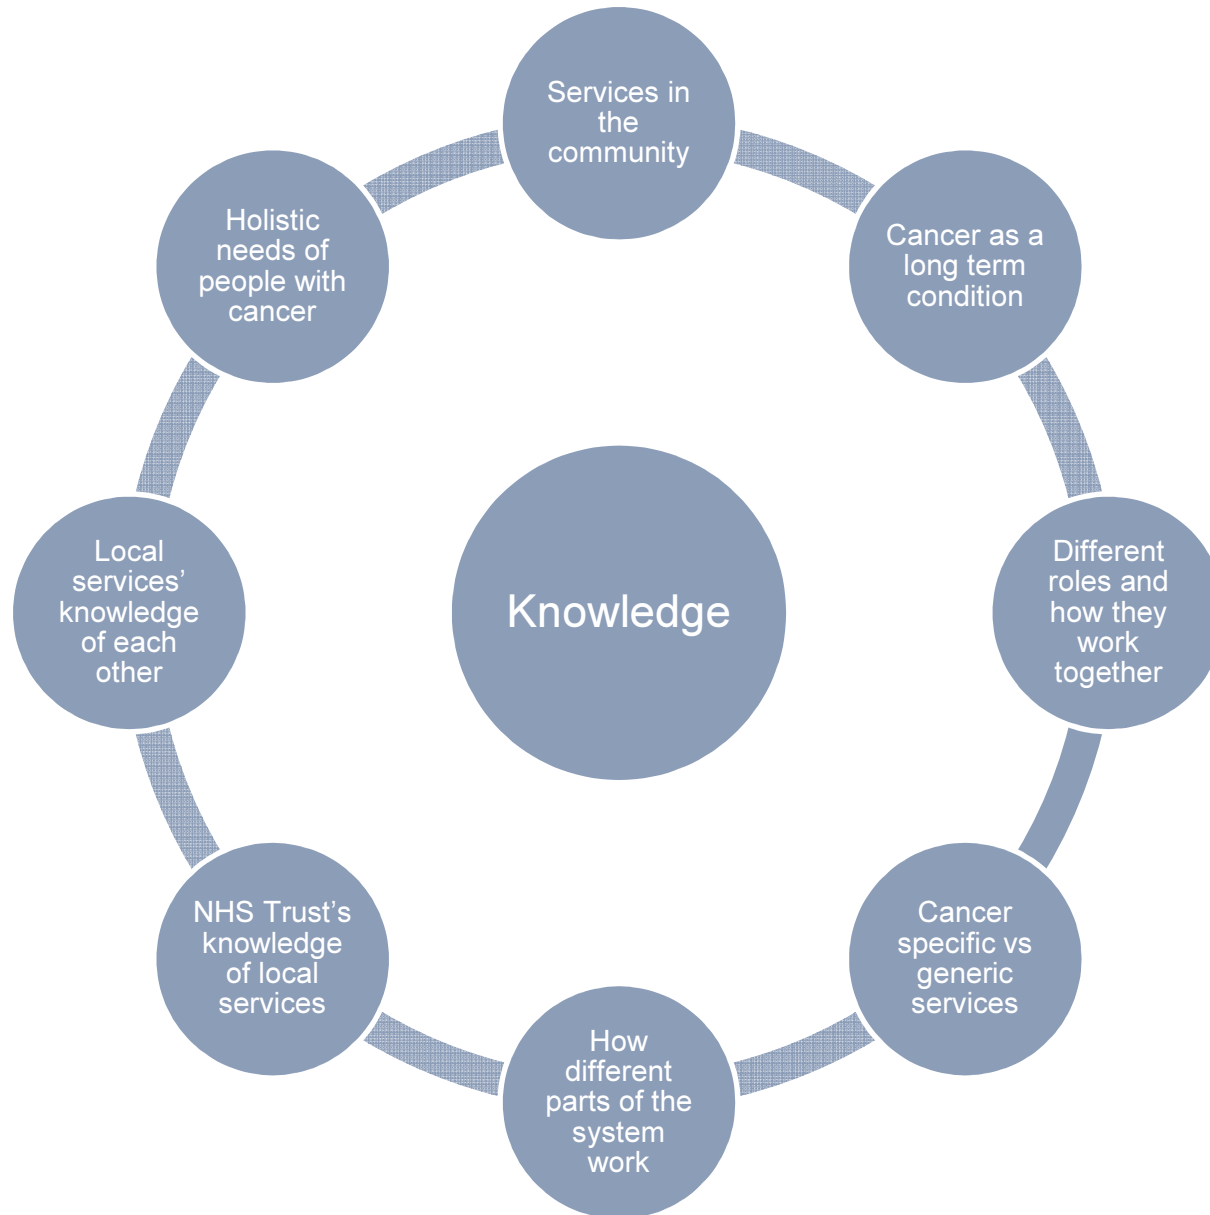

People face challenges in accessing support

Headline findings from insight from 48 residents:

- People not asked about their holistic needs systematically.
- Most felt unprepared for “the end of the sausage machine” and for long term consequences of treatment – many experience depression / low self-esteem for months and years.
- Impact on housing and finance can be severe – people who rent privately are particularly vulnerable; welfare system complex to navigate.
- Social isolation / loneliness – participation in community activities requires a level of physical and emotional wellbeing.

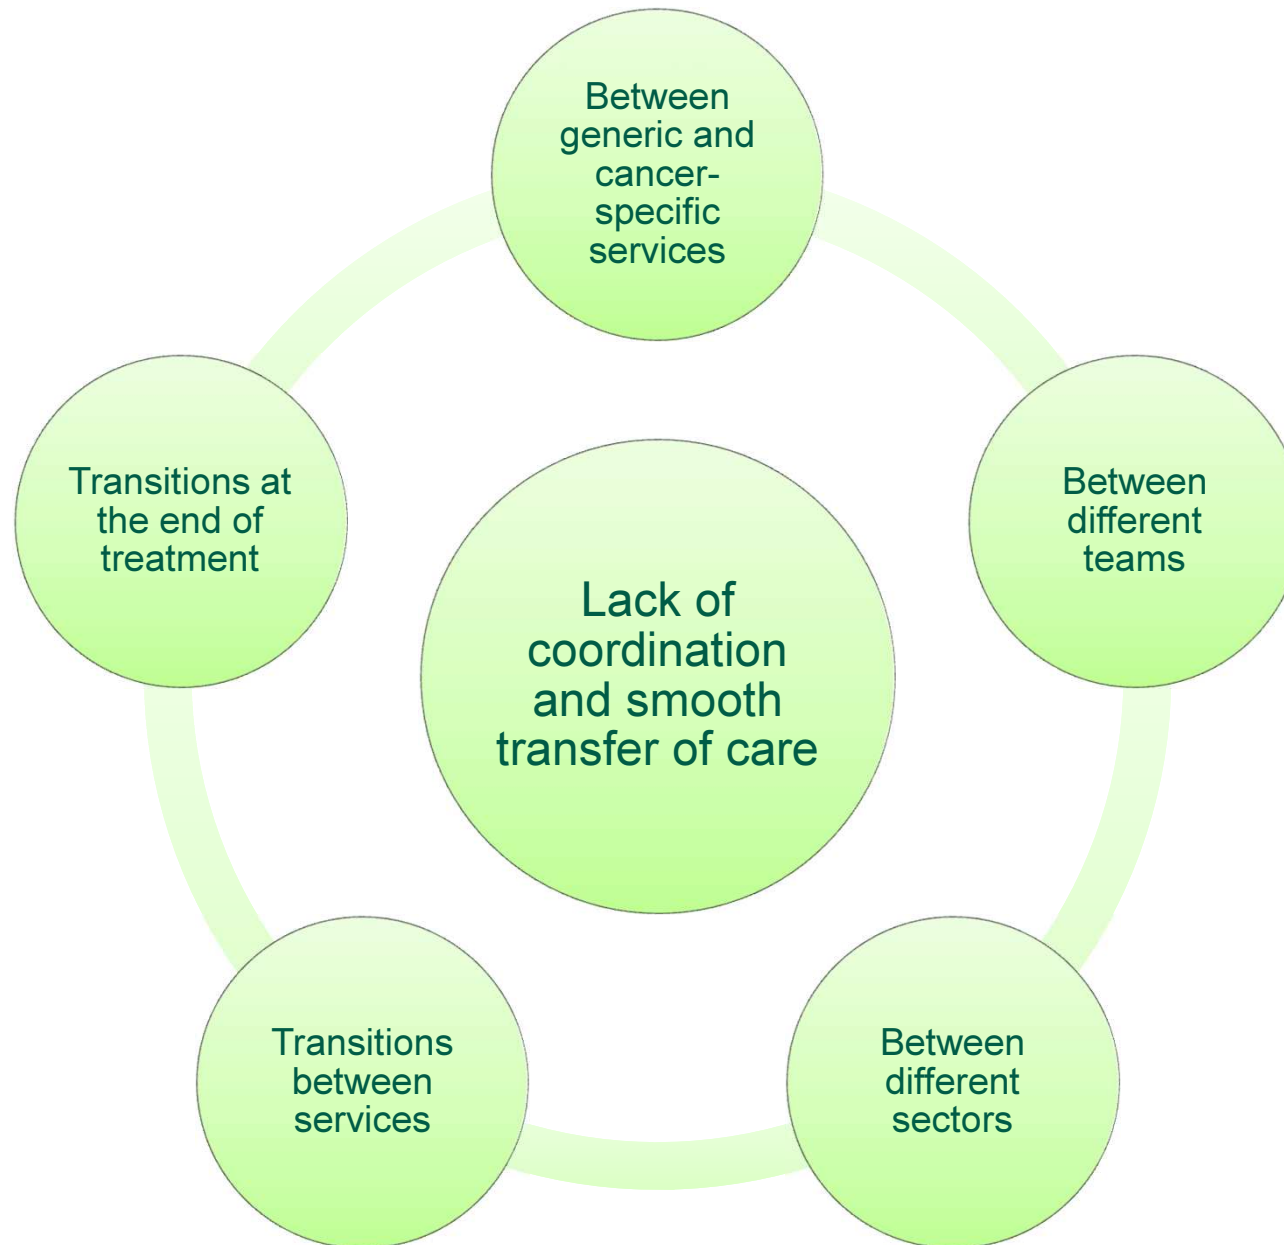

What people need to know to give help and get help:

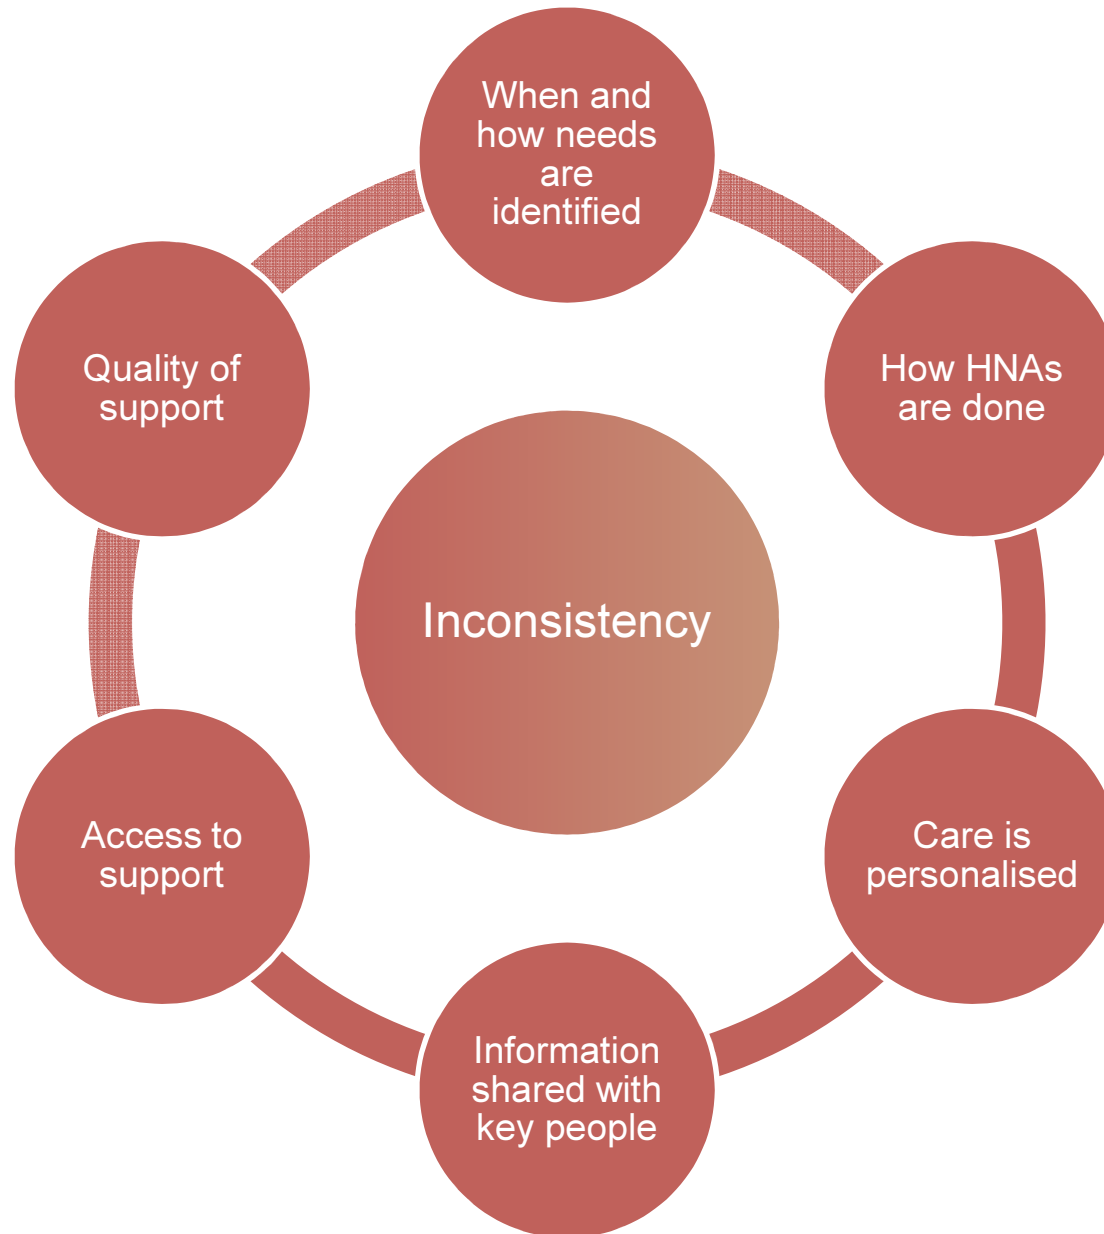

Solutions – increasing knowledge

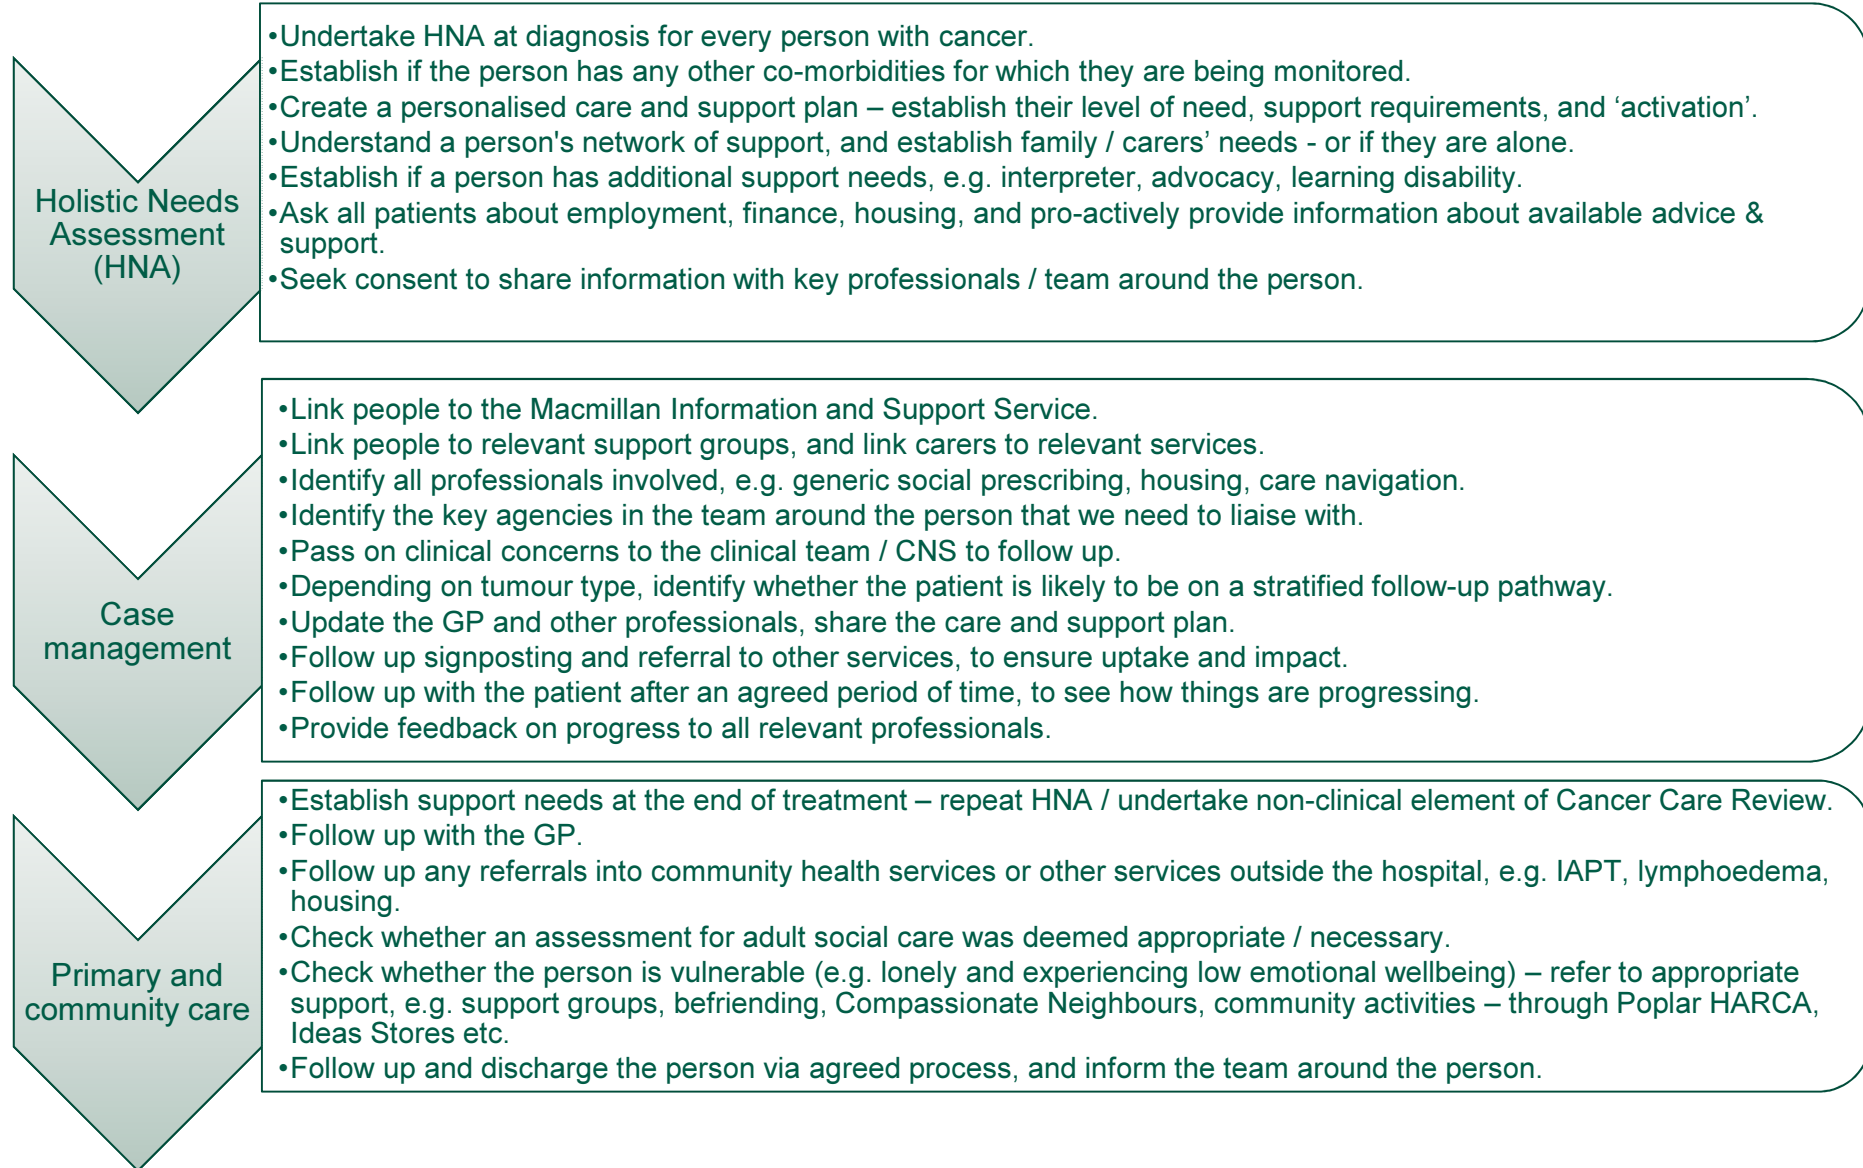

People do not have a seamless experience of care:

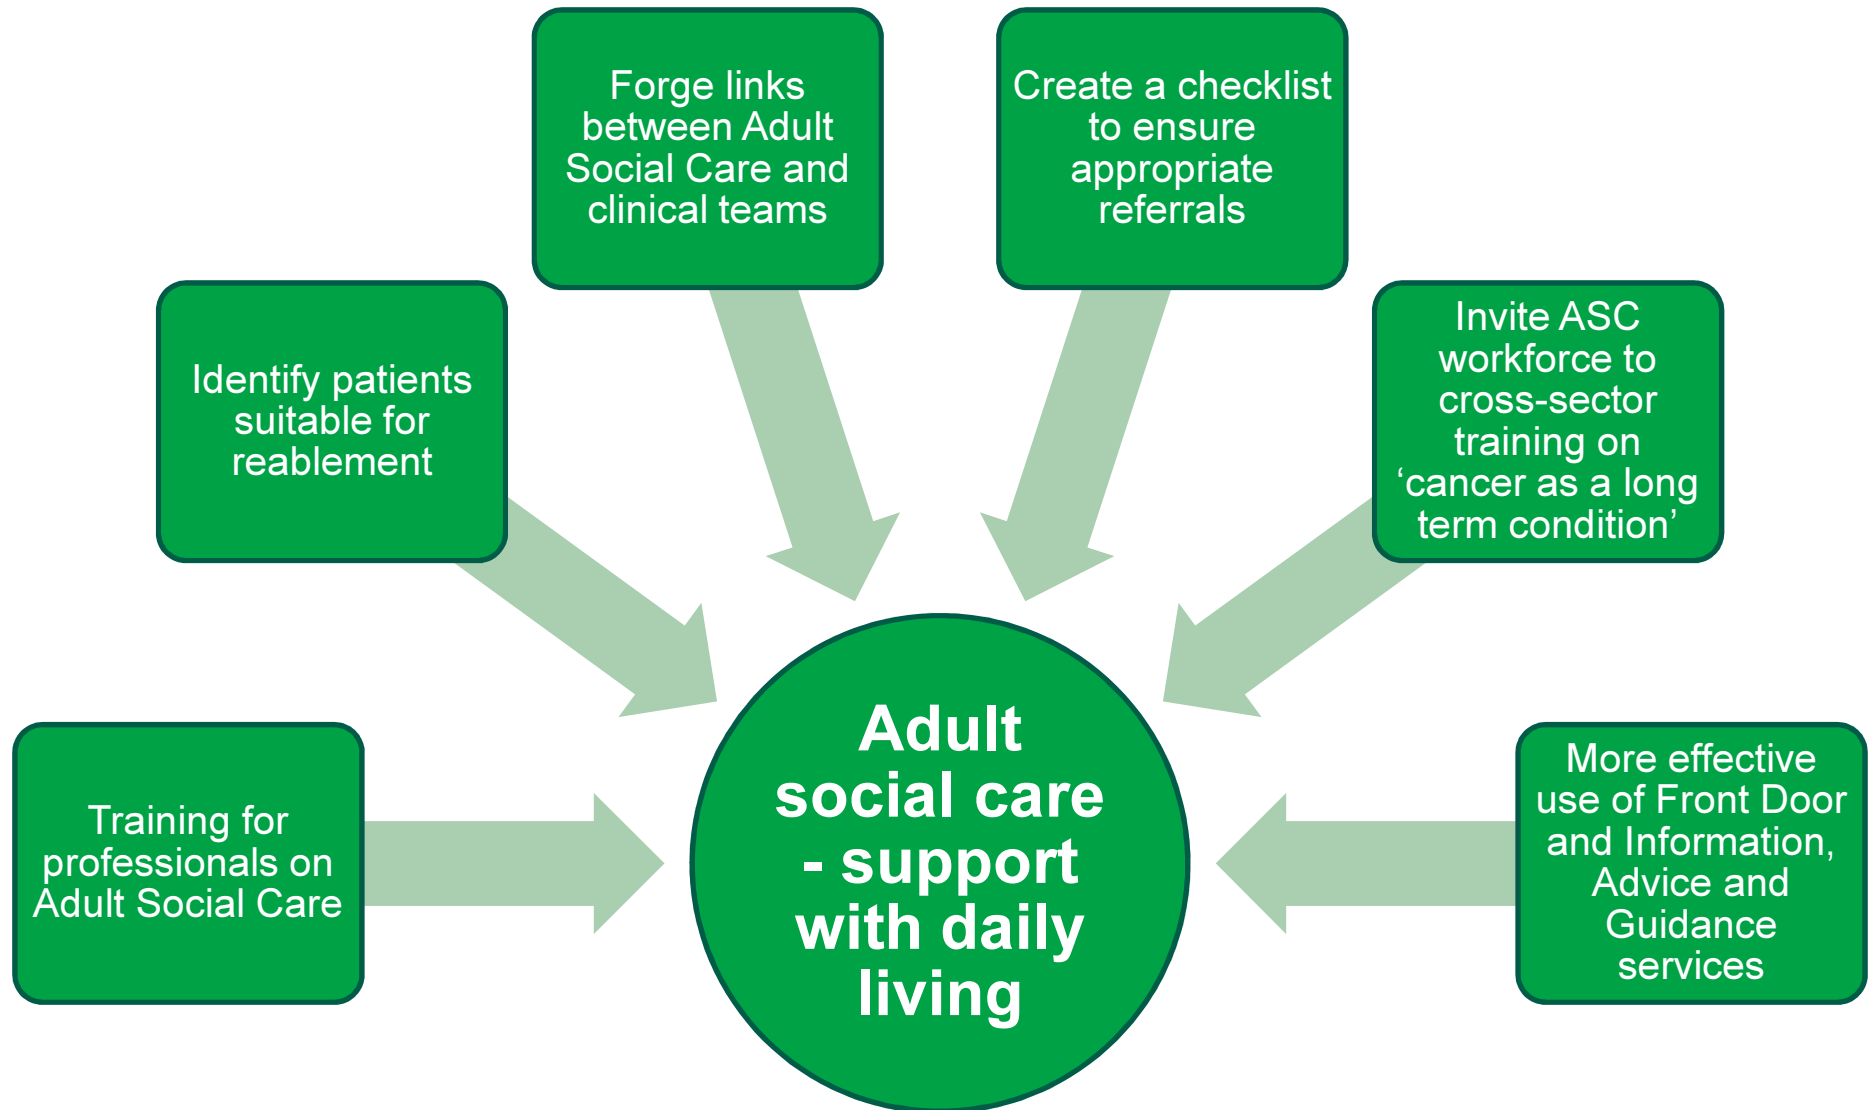

People face inconsistencies:

Solutions – identifying and supporting people's holistic needs

Solutions – early access to adult social care

Quick wins:

- Cancer peer support groups in the community
- Provide support flexibly, e.g. through multiple locations
- Coordinate HOPE (Help to Overcome Problems Effectively) self-management courses
- Health and Wellbeing events in the community
- Training on cancer as a long term condition

Thank you for listening.

Any questions...?
