trip generation from developments and through-trips. The location of development proposals close to services and amenities, integration with the transport network, prioritising the most sustainable forms of travel, and facilitating and enabling behaviour towards the use of public transport and active forms of travel are crucial factors in accommodating the predicted population and economic changes over the plan period. Development proposals must accord with the latest guidance and policy approach set out in the London Plan, The Mayor of London's Transport Strategy, the Tower Hamlets Transport Strategy (2019) and seek to achieve the targets of the most recent Local Implementation Plan (LIP).

19.11 Part 1(a) seeks to ensure that development proposals support walking and cycling as a primary means of travel in line with the London Plan (2021) Healthy Street Approach. Development should incorporate and improve pedestrian and cycling environment that is safe, accessible, and permeable both within the borough and into neighbouring boroughs. It also identifies the necessity to link development to the borough's pedestrian networks, such as the Green Grid network and Thames Path, and strategic cycling networks, and improve access to river transport where possible, in accordance with the borough's Transport Strategy (2019).

19.12 Part 1(c) ensures that development proposals support the use of, and connect to, public transport, cycling and walking facilities that surround the site. The design, management, and operation of a development should encourage its users to travel in a sustainable manner. It should also be permeable and provide links to existing or planned infrastructure as well as relevant on-site infrastructure, such as bicycle storage, workplace showers and changing facilities.

19.13 Part 1(d) identifies the need for development proposals to be located in an area appropriate to the number trips it generates. The scale of development must reflect the level of public transport available. Transport for London (TfL) has mapped the Public Transport Accessibility Levels (PTAL) across the whole of London; the PTAL toolkit is a measure of accessibility to the public transport network, taking into account walk access times and service availability. Areas are graded on a scale between 0 and 6b, with a score of 0 is very poor access to public transport, and 6b is excellent access to public transport. In Tower Hamlets, ratings range from highly accessible areas – such as Canary Wharf, Whitechapel, Bethnal Green, Bow and Mile End - to areas with lower levels of public transport accessibility, including parts of the Lower

Lea Valley. It should be noted that PTAL values are regularly updated, and the latest values should be used to assess accessibility levels.

19.14 The scale of development should also have regard to the town centre hierarchy, whereby development densities should consider the availability of nearby shops, services, and amenities, thereby reducing the need to travel.

19.15 Part 1(e) seeks to ensure that development proposals do not have a detrimental impact to the safety and efficient operations of existing transport networks. In particular, development proposals must ensure consideration of:

- the safety of the highway user and/or the ability of public transport providers to safely operate services which includes consideration of adequate driver welfare facilities and bus stands;
- the demand on the borough's transport networks beyond operational limits and/or capacity;
- the potential reduction in the quality of stations, stops, or services; or
- restrictions on access to the same services.

19.16 Development proposals are expected to be well-integrated with the public transport network and contribute to its efficient running and service improvements. Developers should ensure they engage early with relevant bodies (e.g. Transport for London) to establish the likely impacts and/or appropriate mitigation measures towards public transport to be funded through developer contributions in accordance with Policy DV1.

19.17 Part 2 identifies the role of development proposals in supporting improvements and enhancements to the borough's transport and freight infrastructure (including safeguarded wharves and consolidation

centres). Applicants should work with the council to support planned and future transport initiatives that underpin new growth; any development that adversely affects or planned infrastructure improvements will not be supported.

19.18 Where infrastructure enhancements will be required to meet the demands arising from future growth, the council will work in partnership with neighbouring boroughs, Transport for London and other agencies (e.g. Highways England) to understand and address the future transport needs of the borough and cross-boundary transport needs.

19.19 The list below sets out a number of planned interventions that are required to support the borough's transport network.

- New pedestrian and cycle networks, by reducing severance of major arterial roads, improving cross-river and other waterways connections, and improving connectivity for pedestrians and cyclists;
- New cycle infrastructure, including Cycleway routes and the Mayor of London's cycle hire network;
- Enhancements to the bus network to South-East London facilitated by the Silvertown Tunnel (2025), including new route SL4 Grove Park – Canary Wharf, which will form part of the emerging Superloop London orbital bus network;
- Improvements to DLR network capacity, station improvements (including improving step-free access and improved modal interchange) and other rail network improvements; and
- Improved river services and potential new piers at Wapping, Canary Wharf East and Trinity Buoy Wharf and Blackwall Reach.
- North South Route from Hackney Wick Station, across the Hertford Union Canal via the new Roach Point Bridge, to Fish Island.³³

³³ As identified in the LLDC Local Plan and the Hackney Wick Fish Island SPD

19.20 In addition, as set out in the Lower Lea Valley Connection and Movement Study, development proposals in the Leaside Valley area to the east of the borough are expected to contribute to the delivery of the following priority interventions to improve walking and cycling connections:

- High-quality cycle provision along the B140 (Devas Street and Devons Road), including potentially through removal or relocation of on-street parking.
- Junction re-design at Campbell Road, Violet Road and Devons Road to replace roundabouts with T-junctions, remove guard rails, and relocate pedestrian crossings closer to desire lines.
- Signalise junction of Devas Street, A12, and Twelvetrees Crescent, and open up east-west walking and cycling movement across the A12 at this location.
- High-quality cycle provision along Violet Road, Morris Road and Chrisp Street, including potentially through removal or relocation of on-street parking.
- Creation of an east-west walking and cycling 'spine' from the River Lea to Langdon Park DLR Station by delivering high-quality cycle provision and improved footways along Lochnagar Street, Zetland Street, St Leonard's Road, and Langdon Park. Closure of the slip road from the A12 onto Teviot Street, to allow a wide footway and easier north-south movement.
- Creation of an east-west walking and cycling 'spine' between Abbott Road and Chrisp Street Market by delivering dedicated cycling provision and continuous footway crossings along Blair Street and Brownfield Street. This should include environmental improvements to the subway crossing at Balfron Tower, a new crossing between

the top of Abbots Road and Jolly's Green, and aligning the Chrisp Street crossing with Brownfield Street and converting it to a 'toucan' crossing.

- Traffic calming on Abbott Road, including high-quality cycling provision and continuous footway crossings. Upgraded, 'toucan'-style crossings should be provided at the junctions with Aberfeldy Street, Dee Street, and Blair Street.
- Remodeling of Leamouth Junction for safe cycle and pedestrian movement, including introduction of high-quality cycling provision on the roundabout and on Leamouth Road.

19.21 These interventions should be delivered through funding mechanisms including S106 agreements, CIL payments, and other sources of funding.

19.22 Further interventions that the council will support include ensuring partnership with the London Borough of Newham and developers on relevant sites, to deliver up to five new crossings of the River Lea, and one additional bridge entirely within Tower Hamlets. Where relevant, development proposals on the Tower Hamlets side of the river will be expected to safeguard land to contribute towards the delivery of:

- Lochnagar Bridge, from Lochnagar Street to Canning Town Riverside
- Poplar Reach Bridge, from the north of the Leven Road site to Cody Dock
- Mayer Parry Bridge, from the south of the Leven Road site to Canning Town Riverside
- Leamouth Crossing, from Orchard Place to the Limmo Peninsula
- Trinity Buoy Wharf to Thames Wharf Bridge
- A13 walkway, from the Blackwall Trading Estate, under the A13, to the Leamouth Depot site

19.23 In addition to safeguarding land, that the layout and design of development proposal on or adjacent to these crossings responds to these new connections with active and viable routes that are safe and welcoming for all users.

19.24 These lists are not exhaustive, and new interventions may arise from other transport strategies and assessments alongside regional policies, such as the emerging Tower Hamlets Infrastructure Development Plan. Development may also be required to contribute financially towards new transport infrastructure and improvements in accordance with Policy DV5.

London Plan policies:

- S115 Water transport
- T1 Strategic approach to transport
- T2 Healthy Streets
- T9 Funding transport infrastructure through planning

Local Plan policies:

- CG9 Air quality
- DV1 Areas of growth and opportunity within Tower Hamlets
- DV5 Developer contributions

Evidence base:

- Mayor's Transport Strategy

- East of the Borough AAP Transport Report, 2020

Policy MC2 Active travel and healthy streets

1. All development proposals that involve changes to streets should implement the Healthy Streets Approach.
2. Development proposals must demonstrate how they have applied the London Plan Healthy Streets Approach in the design process. This will be achieved by requiring:
 - a. all major development proposals to submit a Healthy Streets Assessment as part of the transport assessment; and
 - b. positive engagement with the Healthy Streets Approach to deliver public realm and other improvements that support walking, wheeling, cycling, and the use of public transport.
3. Development proposals must be designed to maximise the contribution of the public realm to encourage and enable active travel modes by:
 - a. safeguarding, maintaining, and enhancing the Borough's network of walking routes and cycleways, including the Thames Path and the Green Grid Network;
 - b. providing unobstructed footway widths of at least 2 metres, or as calculated using the TfL Pedestrian Comfort Level tool, whichever is greater;
 - c. ensuring contiguously permeable public realm by foot, wheeling and cycle, and connect to local walking and cycling networks as well as public transport;
 - d. providing legible routes for walking, wheeling, and cycling to

and within sites, ensure signage, street signs and place names are easy to read; where appropriate contributing to the 'Legible London' programme;

- e. ensuring an inclusive-by-design approach, with consideration for the accessibility and safety of all users, giving particular attention improving accessibility of streets for older users and users with disabilities, and consider the safety and comfort in the public realm of women, girls, and gender diverse people, by:
 - i. having well-maintained streets which are free from clutter and meet minimum width requirements (above);
 - ii. ensuring good sight lines and visibility with plenty of well-lit entrances and exits;
 - iii. maximising opportunities for passive surveillance by using ground floor units to create active frontages, where feasible;
 - iv. considering the needs of both daytime and night-time uses; quieter daytime routes that favour access to green spaces and avoid busy roads, and night-time routes that pass by transport hubs and busier pedestrian ways; and
 - v. providing segregated routes for pedestrians and cyclists where possible, and shared use routes in streets with high pedestrian or cyclist flows should be avoided.
- f. supporting the delivery of the Tower Hamlets Transport Strategy (2019) and the Mayor of London's Cycling Action Plan 2 (2023), by:
 - i. contributing to the expansion of the strategic cycle network, providing protected cycle lanes where required; and

- ii. providing high-quality long- and short-term cycle parking within new developments that is fit-for-purpose, secure, well-located, and is suitable for a wide range of cycle types, including adapted cycles and cargo bikes (see Policy MC4).
- 4. Development proposals that adversely impact the safety, accessibility, legibility, connectivity, and convenience of the Borough's walking and cycling network will not be supported.

Supporting text

19.25 Active travel aims to promote and encourage walking, cycling, and other active modes of transportation to improve public health by increasing physical activity levels, reduce air pollution and greenhouse gas emissions, reduce traffic congestion, and improve road safety, and create more liveable cities and communities. Overall, active travel aims to create sustainable and healthier transportation options for individuals and communities. In committing to becoming one of the best places to walk and cycle in London, Tower Hamlets can fulfil these aims.

19.26 Physical inactivity is a major cause of disease, and nearly a quarter of Tower Hamlets' residents do not get the recommended minimum levels of daily physical activity. In addition, encouraging more people to choose active travel will reduce reliance on private vehicles, especially for short journeys, and help to relieve pressure on the public transport network.

19.27 The 'Healthy Streets Approach' prioritises the health and well-being for all those who live, work, study in, and visit the borough, by putting human needs and experiences at the centre of public realm and transport design. Streets should be welcoming places where everyone feels able to spend time, engage in physical activity, or socialise with other people. Healthy streets support many types of active travel, from commuting to work, walking for pleasure, or cycling with children to school, all of which require different kinds of route. Healthy streets support vibrant and lively communities, where different groups can come together to socialise and enjoy public spaces. The design of healthy streets should have regard for other relevant best practice guidance, such as Sport England's Active Design Guidance (2023).

19.28 This policy embeds the council's road user hierarchy, which prioritises walking and cycling, then public transport use, as sustainable modes of travel, followed by all other modes of motorised transport.

19.29 Part 1 of this policy requires development proposals to improve the quality and connectivity of walking, wheeling, and cycling routes in the area. Development proposals are required to demonstrate how they have applied the Healthy Streets Approach as set out in the London Plan as part of the transport assessment.

19.30 Part 2 requires major development proposals to submit a Healthy Streets Assessment as part of the transport assessment. By utilising the Healthy Streets Design Check tool which scores proposed street design interventions against the 10 Healthy Street Indicators, the results can be used to measure how design features may improve a potential street, as well as identify areas of poor street design opportunities to make further improvements.³⁴

19.31 Part 3 sets out how development proposals should engage positively with the design of high-quality public realm within and in the vicinity of the development, to encourage and enable active travel. Walking and cycling networks must be:

- safe;
- accessible;
- legible and easy to use;
- connected; and
- convenient.

19.32 Part 3(a) requires development proposals to safeguard and contribute to maintaining and enhancing the boroughs network of walking routes and cycle ways, particularly the Thames Path and Green Grid Network. The Green Grid Strategy identifies a series of strategic projects to improve cross-borough connections and improve active travel and urban greening. This policy should be read in conjunction with Policy BO2 Open spaces and the green grid network.

19.33 Part 3(b) requires developments to provide a minimum unobstructed footway width of at least 2 meters. To support active

³⁴ Healthy Streets Design Check England, DfT (2021)

travel, footpaths should be spacious enough to support a wide range of users and uses. Street clutter can be anything which takes up additional space on the pavement, such as signage, cycle parking, café seating, planters, and EV charging points. While many of these items individually can contribute to improved look or comfort of the street, such as urban greening, improved lighting, and places to rest and socialise, when crowded together they can obstruct the footway and hinder pedestrian movement. Obstacles can significantly hinder the ability to navigate the public realm, and particularly impact people with mobility or visual impairments. In some instances, such as within town centres and other high traffic areas, minimum unobstructed footway widths of 2 metres may not be sufficient to enable adequate flow of pedestrians. The Pedestrian Comfort Level tool should be used determine appropriate footway widths based on the number of pedestrians per square metre and pedestrian flows per minute.

19.34 Part 3(e) requires developments to be inclusive-by-design, considering the needs, comfort, accessibility, and safety of all users. Safety can be described as a spectrum of exclusion, which can be experienced in the form of mild inconvenience, significant discomfort, to severe danger. This is more commonly experienced by women, girls, and gender diverse people; from the inconvenience of having to carry pushchairs and small children up flights of stairs, or struggling to find a public bathroom; or feeling uncomfortable taking certain routes home at night, to being threatened by verbal harassment and physical violence. The intersection of marginalised identities can compound and exacerbate experiences of exclusion from the public realm, while also considering that the lived experiences of women, girls, and gender diverse people is incredibly varied. Ultimately, streets that are inclusive-by-design will improve the experiences, comfort, and safety for all users.

19.35 In addition, to minimise potential risk of conflict or collision

between users, where possible pedestrian footways and cycle lanes should be clearly designed to be perceived as separate facilities, and mixing pedestrian and cyclist should be avoided. This is particularly important to protect vulnerable road users, for example, those who may not be able to see or hear an approaching cyclist. Best practice guidance such as the DfT Inclusive Mobility Guidance should be followed.

19.36 Part 3(f) requires development proposals to support the uptake of cycling in Tower Hamlets. Safety and perceptions of safety is often cited as a key reason why people choose not to take up cycling, with particular risk from heavy traffic, HGVs, and hostile motorists.

19.37 To overcome this, cycling routes, networks, and facilities should be designed to a high quality as outlined in the Healthy Streets Approach, with clear separation from pedestrian and motor traffic where possible.

19.38 Part 4 requires development to ensure the safety, accessibility, legibility, connectivity, and convenience of the borough's walking and cycling network to help ensure we meet the aims related to active travel aims and creating a sustainable and healthier transportation options for individuals and communities.

Policy MC3 Impacts on the transport network

1. Development proposals must ensure impacts on the transport network are mitigated and avoided. This will be achieved by ensuring that:
 - a. impact to the transport network is reduced by promoting and enabling active and sustainable travel; and
 - b. environmental impacts are reduced, including reducing congestion, emissions, and improving air quality and public health.
2. Major development proposals and any development that is likely to have a significant impact on the transport network are required to submit a transport assessment or transport statement, and/ or travel plan as part of the planning application. Transport assessments should focus on embedding the Healthy Streets Approach within and around new developments. Transport assessments should be accompanied by an Active Travel Zone (ATZ) assessment, as well as a Night-time ATZ assessment where necessary.
3. Development proposals that will have an adverse impact to traffic congestion on the highway network and/or the capacity and function of the transport network will be required to contribute and deliver appropriate transport infrastructure and/or effective mitigation measures.
4. Development proposals will be required to demonstrate, in accordance with TfL's latest Construction Logistics Plan Guidance and the Tower Hamlets Code of Construction Practice (CoCP), that any impacts on the transport network during the construction phase of the development will be managed and mitigated.
5. Development proposals will be required to demonstrate that proposals will not result in any detrimental impact on road safety.
6. Development proposals are required to support the delivery of, and safeguard land required for, future strategic transport schemes, as well as protect and enhance existing transport infrastructure. Development proposals that would prevent the delivery of future strategic transport schemes will not be supported.

Supporting text

19.39 This policy seeks to address the impact that development has (both individually and cumulatively) on the transport network, particularly issues of congestion, air quality, severance, safety, and accessibility for cyclists and pedestrians. It sets out how development proposals should assess the severity of impact it has on existing transport infrastructure and services, including the approach taken to mitigate any adverse impact on capacity, connectivity, and congestion.

19.40 Tower Hamlets has a high-density of strategic roads designed to carry high volumes of traffic through and within the borough, which has a severe impact on air quality, traffic congestion, and road danger.

19.41 Congestion levels in many parts of the borough are severe, and the interconnectedness of the highway network – whether local or strategic – plays a significant role in contributing to this congestion. A development's impact on congestion is not just a matter of building size but depends on its location, use, design, density, and operational factors (for instance, a relatively small development could be judged to have a severe impact if it generates a high number of vehicle trips and/or is in a sensitive location). Given the significant capacity constraints on the public transport and highway network, any development that generates a net-increase in vehicle trips has the potential to have a severe impact on the safety and operation of this network within Tower Hamlets.

19.42 Part 2 seeks to ensure applications provide an independent, objective, and accurate transport assessment or transport statement appropriate to the scale of development. A transport assessment or statement must be prepared in accordance with the latest guidance from Transport for London. The level of detail required will be dependent on the type and scale of the development. Applicants

should seek pre-application advice to determine whether a transport assessment or statement will be required. A transport assessment should be submitted with a draft construction management and logistics plan and a delivery and servicing plan.

19.43 A transport statement is a simpler document that identifies the likely transport impacts of a proposal and seeks to mitigate the negative transport impacts of development in order to promote sustainable development. A transport statement may be accompanied by a construction management and logistics plan or a delivery and servicing plan depending on the type of land use and its location; this should also be established and scoped out with our transport and development management teams at the pre-application stage.

19.44 Transport assessments and statements will be required to provide detailed information on the range of transport users and modes, including the movement of people and goods, both before and after a proposed development has been constructed. A transport assessment or statement should identify and address transport impacts on all modes of transport and set out the measures to avoid, remedy or mitigate identified impacts of the development.

19.45 Where transport assessments are required, they should be accompanied by an Active Travel Zone (ATZ) assessment. The ATZ should identify and assess key routes to major trip attractors, using latest TfL guidance. It should also consider evening/night-time use, and the safety of marginalised or vulnerable groups, including women, girls and gender diverse people, children and older people, and people with disabilities.

19.46 Applicants should submit a travel plan alongside the planning application, where appropriate. The requirement for a travel plan should

be agreed with relevant teams such as the council's highways team, school team and Transport for London (TfL) before an application is submitted. TfL provides guidance that sets out the requirements for travel plans. Such plans must promote and provide a long-term strategy to meet sustainable transport objectives. They should contain a package of measures that will seek to minimise the number of trips undertaken by private car (e.g. restricting car parking provision), encourage use of sustainable transport and generally reduce the need to travel to and from the development. Travel plans must set targets, objectives and provide detail on implementation, funding, and monitoring. This will be secured as a planning obligation for major development proposals and as a condition on minor development proposals.

19.49 Part 3 seeks to ensure that development does not exacerbate or overload transport networks through trips associated with its uses. Where appropriate, conditions and/or planning obligations will be sought to secure mitigation measures required to make a development acceptable. This is in addition to CIL contributions which fund transport infrastructure improvements on a borough-wide scale. All contributions towards new transport infrastructure improvements must be in accordance with Policy DV5 and the Planning Obligations SPD.

19.48 Areas in the borough anticipated to accommodate higher levels of the population and economic growth such as the Isle of Dogs and City Fringe are where existing highway and/or public transport demand is already close to or exceeding supply during peak travel times. Other areas of the borough also experience local highway or public transport stress during these times. Development that increases demand without appropriate mitigation (including infrastructure contributions to service improvements and/or delivering effective modal shift) will not be supported.

19.49 Part 4 requires development proposals to demonstrate that any impacts on the transport network during the construction phase of a development will be managed and mitigated. Traffic generated by construction and demolition of all scales is a significant contributor to poor air quality throughout the borough and can also significantly impact on the flow of traffic, road safety, and pedestrian convenience.

19.50 Applicants are required to provide a Construction Management Plan, including details of any demolition works, and a Traffic Management Plan, as per the Tower Hamlets CoCP. For major developments a Construction Logistics Plan is also required.

19.51 Part 5 seeks to support the Mayor of London's Vision Zero objectives. The aim of Vision Zero is to eliminate all deaths and serious injuries on London's transport system. Road safety is fundamental to the creation of healthy streets, where all users feel safe while walking, cycling, and using public transport.

London Plan policies:

- T3 Transport capacity, connectivity and safeguarding
- T4 Assessing and mitigating transport impacts

Local Plan policies:

- DV4 Planning and construction of a new development
- CG9 Air quality

Evidence base:

- Mayor's Transport Strategy, 2022
- Strategic Transport Assessment, 2016
- Tower Hamlets Transport Strategy, 2019-2041
- LBTH Code of Construction Practice, 2023

Policy MC4 Parking and permit-free

1. Development proposals must prioritise sustainable approaches to parking in areas that have, or will have good public transport accessibility, in order to support the delivery of healthy, safe, liveable neighbourhoods, and consider the needs of the wider community.
 - a. In line with the London Plan, car-free development should be the starting point for all development proposals;
 - b. for areas with a PTAL rating between 1-3, residential developments have regard for the maximum car parking standards set out in the London Plan;
 - c. residential car parking will not be supported in the borough's Opportunity Areas, the Central Activity Zones (CAZ), Metropolitan and Major town centres, and any areas with a PTAL rating of 4 and above, except from providing required Blue Badge parking spaces for disabled people in accordance with London Plan Policy T6.1;
 - d. disabled parking spaces in residential developments must be reserved for use by Blue Badge holders who are occupiers of wheelchair accessible homes within the development. Disabled parking spaces must not be sold or leased to other residents;
 - e. residential development is required to be permit-free in terms of on-street car-parking, with any parking associated with a development to be located off-street;
 - f. designated parking spaces for car clubs will only be supported where it can be demonstrated that car club use would reduce the overall car-use of the development and there are active charging facilities;
 - g. development proposals for specialist and supported housing should provide short stay parking bays which must be restricted to support and care services needed by residents; and
 - h. car parking for commercial or industrial uses will only be permitted where it has been demonstrated to the council to be essential to the operational requirements of the business of service, and must be the lowest justified quantity. Car parking for staff will not be permitted.
2. All new or re-provided parking spaces (in residential and non-residential development) should be equipped with active electric vehicle charging facilities.
 - a. When located on pavements, electric vehicle (EV) charging points should be integrated into the streetscape design and should not obstruct pedestrian movement. Where practicable, installation of EV charging points in the carriageway is preferred.
3. All new development proposals must deliver high-quality cycle parking in line with the London Plan and the London Cycling Design Standards. Developments will be required to ensure:
 - a. cycle parking is well-located, safe, secure, and accessible, and provide a balance of short-stay and long-stay provision;
 - b. cycle parking and storage caters to all types of cycles, including bicycles, adapted cycles, e-bikes, and cargo bikes, and;
 - c. complementary facilities to support cycle use are provided where appropriate, including accessible showering and changing facilities, storage lockers, and basic maintenance equipment such as bike pumps.
4. Where suitable, developments should provide or contribute towards new or expanded publicly accessible shared cycle hire facilities.

Supporting text

19.52 This policy seeks to ensure that new developments adopt a sustainable approach to managing parking, to prioritise land uses such as housing, facilitate sustainable travel patterns, address congestion and poor air quality, and respond to the needs of the community.

19.53 Car parking takes up large amounts of space and can reduce the area available for development, can put pressure on the public realm that otherwise could benefit all residents by providing increased space for outside amenity space, parks, and urban greening. Where parking is provided in basement accommodation, this can add to the cost of a development and impact the viability of a scheme. However, it is noted that the use of cars can support community members who rely on their vehicle for work, mobility, or other important and necessary reasons.

19.54 Part 1(a) sets out that a car-free approach is required in areas of Tower Hamlets where there are good levels of existing or planned public transport accessibility and where there is significant residential growth expected in the coming years. Furthermore, in line with the London Plan, all development proposals within the borough's Opportunity Areas, CAZ, Metropolitan and Major town centres must be car free. Where there are high levels of public transport accessibility, alternative modes of transport will be promoted.

19.55 When applying the residential parking standards from the London Plan, development proposals should consider future changes to public transport accessibility levels (PTAL) as a result of new infrastructure provision, particularly in areas of low public transport accessibility (PTAL 1 and 2).

19.56 Part 1 (b) recognises that in areas of low public transport accessibility, some residents, businesses, and organisations rely on private vehicle use as their only transport option, to provide care to family members, or as a primary source of income. If car parking is deemed essential, it must be justified in the transport assessment and provided entirely on-site. Likewise, if parking can be considered essential for certain commercial or industrial uses, the amount provided must be of the lowest possible quantity.

19.57 Parking may be required for those with rely on private vehicles for

mobility, accessibility, or wheelchair needs. Part 1(d) requires accessible parking bay provision to be provided even in developments which are otherwise car-free, with minimum numbers provided in accordance with London Plan policy T1.6.1- T6.5. This parking must be safeguarded for use by Blue Badge holders, and cannot be leased or sold to other residents.

19.58 Part 1 (e) sets out that all residential development parking must be permit-free, and any parking required must be provided on-site and off-street. This will be secured by planning obligation. The required accessible parking spaces are exempted from this requirement.

19.59 Demand for on-street parking can create a significant amount of stress across the borough's street network. This demand has also increased significantly in recent years due to population growth. In addition, the issue of on-street parking outside of controlled hours (usually overnight and at weekends) often overcrowds streets, resulting in unacceptable safety and accessibility issues for vulnerable road users; as well as restricting traffic flows, delaying busses, and increasing journey times.

19.60 Part 1 (f) sets out that in some instances, car clubs can be cheaper alternatives to individual car ownership and allow for occasional car use while also discouraging shorter car journeys. However, car clubs can encourage car usage over more sustainable transport modes and share many of the negative impacts of private car ownership. Designated parking spaces for car clubs will only be supported where it can be demonstrated that car club use would reduce the overall car-use of the development. Spaces allocated for car clubs are included in the overall maximum allowance of permitted car-parking spaces. Any car club spaces should have active charging facilities.

19.61 Part 1 (g) recognises that in some instances, short-term parking for specific uses, such as specialist and supported housing, are essential for the function or operational requirements of the development. Where on-street drop-off or other essential parking is proposed, the need for specific parking spaces must be demonstrated.

19.62 A Parking Design and Management Plan that outlines how parking will be designed, managed, and enforced must be submitted with all applications that include car parking provision, in line with Transport for London Guidance.

19.63 Part 2 requires all parking spaces provided as part of a new development should be fitted with electric vehicle (EV) charging points. This goes significantly beyond the London Plan requirement of at least 20% parking spaces to have electric charging, with passive provision (the infrastructure capacity to install electric charge points at a later date) serving the remaining spaces.

19.64 However, taking into consideration the UK Government's commitments to end the sale of new combustion engine vehicles by 2030, it is justified to maximise the provision of electric vehicle charge points to have necessary infrastructure in place to support the transition to low-emissions vehicle use over the next decade. As per the Tower Hamlets Electric Vehicle Delivery Plan (2021-2025) accelerating the switch to electric vehicles will require potential users to feel confident that there is an adequate number of charging points and that are conveniently located to meet their needs. Passive provision is not considered appropriate, as there is no longer a question of if or when the demand for EV charge points will increase. Responsibility for installing them should be taken on now, to avoid dispute in the future over who has responsibility for upgrading all car parking spaces in development.

19.65 As per London Plan Policy T6, EV charging points should be integrated into the streetscape design and should not obstruct pedestrian movement. Where practicable, installation of EV charging points in the carriageway is preferred.

19.66 Part 3 requires all new developments to deliver high-quality cycle parking in line with the London Plan and London Cycling Design Standards. Around 80% of Tower Hamlets residents live in flats, and much of this accommodation has extremely limited cycle parking, cycle storage or cycle hire docking space. A lack of appropriate cycle parking and storage facilities is often cited as a barrier to cycle use and ownership. Applicants and developers to the detailed parking standards for vehicles and bicycles in. A sufficient amount of cycle parking should be provided to accommodate current demand and to encourage further use over time. Design of cycle parking has been extensively covered in the Transport for London's Cycle Design Standards and developers are required to take account of this when designing cycle facilities. Development proposals are required to provide cycle parking at least in accordance with the minimum standards as set out in Table 10.2 in the London Plan.

19.67 However, even in instances where cycle storage is currently provided, these facilities are not well-used: in a residents' survey undertaken for the Tower Hamlets High Density Living SPD, 76% of respondents reported never having used cycle storage in their building, and a further 26% of residents who own a bicycle responded that they stored it within their home, instead of the communal storage. This was largely attributed to accessibility of bike storage and perceptions of safety.

19.68 Both long- and short-term cycle parking provision must be

designed to the highest standard, taking into consideration the needs of all users, to help encourage the take-up of cycling in the borough. Providing cycle parking must not be seen as a tick-box exercise to provide required quantity at the expense of quality; for example, while stacked two-tier cycle racks can provide a large amount of storage in a limited space, they are only suitable for standard two-wheel bikes and can require significant upper-body strength to use. Consideration should also be given to a variety of users and mobility options, such as space for non-standard cycles, mobility scooters, and cargo bikes.

19.69 To increase cycle uptake by offering greater flexibility for residents, minimum cycle storage requirements should be provided in different locations. Preferably cycle storage should be located in the vicinity of a more active usage, such as the street or lobby. Indoor cycle storage should be fully accessible for all users, have step-free access via a ramp or direct lift, with suitably wide automated doorways to accommodate all types of cycle.

19.70 Furthermore, short-term cycle parking in key delivery destinations should include provision for accessible cargo-bikes, e-bikes, and e-mopeds (with charging facilities) to support the growth of cycle and last-mile logistics operations.

19.71 Part 4 requires developments to provide, or financially contribute to, publicly accessible cycle hire facilities as part of the development, where suitable. To increase access to cycling in the borough, the council is working closely with the Mayor of London and Transport for London to extend the existing Santander Cycle Hire scheme with new docking stations in appropriate locations. Where appropriate, development will be expected to safeguard land within the site where Transport for London has identified a need to accommodate publicly accessible

shared cycle hire stations. In addition, dockless cycle hire schemes run by private operators are becoming increasingly popular within the borough. The provision of cycle hire schemes should be managed to ensure that docking stations and cycles do not result in a cluttered public realm, which would adversely impact safety, accessibility of pedestrian movement.

19.72 To support increased cycle use and particularly cycling to work, new office developments should include complementary cycling amenities where appropriate, such as accessible showers, changing rooms, and storage lockers.

19.73 This policy should be read in conjunction with Policy MC5 and London Plan Policy T6 to ensure that along with on-site parking provision, development provides adequate delivery and servicing facilities within the site as well as encouraging shared servicing arrangements and timing of deliveries.

London Plan policies:

- T5 Cycling
- T6 Car parking

Local Plan policies:

- DV7 Utilities and digital connectivity
- CG9 Air quality

Evidence base:

- Cycle parking implementation plan, 2019
- Strategic Transport Assessment, 2016
- Tower Hamlets Transport Strategy, 2019-2041
- Tower Hamlets electric vehicle delivery plan: 2021-2025
- East of the Borough Transport Study, 2020
- Tower Hamlets High Density Living SPD
- Tower Hamlets Sustainable Freight, Servicing, and Delivery (2024)

Policy MC5 Sustainable delivery, servicing, and construction

1. New development proposals should facilitate sustainable freight through water, rail, and road. They should also encourage safe, low emission and efficient delivery and servicing, particularly through 'last-mile distribution' and active travel. Delivery and servicing requirements should be considered at the early stages of the design-led approach, with sufficient space allocated off-street and integrated within the site boundary to accommodate growth and future demand.
2. New development proposals should use zero emissions vehicles for servicing wherever possible and consolidated deliveries are expected to be of this type. Servicing by cycle and other non-motor vehicular modes should be used wherever possible. Any loading bay required for a development should be supplied with an electric vehicle rapid charge point to allow zero emissions vehicles to operate from the bay.
3. Development proposals that generate a significant number of vehicle trips for goods or materials during its construction and/or operational phases are required to submit a Construction Logistics Plan and/ or Delivery and Servicing Plan as part of the transport assessment. This should demonstrate how:
 - a. impact to the transport network and amenity will be avoided, remedied or mitigated;
 - b. delivery of goods and servicing will be provided within the site to encourage shared arrangements and timing of deliveries;
 - c. movement by water and/or rail and the use of low emission vehicles, electric vehicles, bicycles and freight consolidation facilities have been prioritised;

- d. where possible, development will use existing consolidation and distribution facilities to minimise the number of trips required to service the site, and smart or joint procurement measures will be considered to reduce the numbers of deliveries and servicing trips as should the use of micro-consolidation centres; and
 - e. new micro-consolidation centres will be provided within developments where appropriate.
4. Development proposals adjacent to safeguarded wharves, rail depots and bus depots are required to ensure they do not compromise their operation in line with the 'Agent of Change' principle.
5. Development proposals that provide new or improved wharves or other facilities for freight transfer between road, rail or water will be supported where they:
 - a. minimise impacts on the environment and neighbouring amenities;
 - b. support modal shift; and
 - c. facilitate the use of zero or low emissions vehicles.

Supporting text

19.74 Deliveries and servicing are essential to the economic growth of the borough. In recent years, we have seen a surge in demand for e-commerce and home delivery services, which combined with continued population growth, is driving an increase in vehicle trips across London. Fuelled in part by changing behaviours during the COVID-19 pandemic, customer expectations have also changed, with deliveries expected to be fulfilled in a matter of hours, rather than days or weeks. Typical freight and delivery vehicles are some of the most polluting vehicles on our roads. Increased delivery demand is contributing to increased traffic congestion, air pollution, and could result in obstructions to local and strategic roads while loading and unloading of goods takes place, which could impact bus journey times and access for emergency service vehicles. Furthermore, the projected growth and development in the borough will increase the demand for building materials, which, if not carefully managed, which result in increased construction traffic, air pollution, noise, and dust.

19.75 This policy seeks to address the challenges the borough faces in ensuring the efficient, safe, timely and sustainable movement of goods and materials across the borough, while also seeking to improve air quality and reduce impacts arising from the freight network such as accidents, spillages, or wastes.

19.76 As the proportion of cyclists and pedestrians has increased, pedestrian and cycle safety has become an area of increasing concern in Tower Hamlets, particularly given the rise in fatalities on busy arterial roads. Across London, nearly two-thirds of cyclist deaths and around a quarter of pedestrian deaths involve a heavy goods vehicle. This policy seeks to reduce the impact of delivery, servicing, and construction traffic

on the environment and the health and well-being of residents in terms of noise disturbance and its contribution to road congestion and air pollution.

19.77 Part 1 seeks to support the aims of the Tower Hamlets Transport Strategy (2019-2041) to maximise the use sustainable transport methods for freight, making use of the rivers and waterways where practicable for business cargo and freight delivery.

19.78 Part 2 seeks to encourage the use of zero emissions vehicles wherever possible for deliveries. This includes deliveries by cycle,

cargo-bike, and other non-motor vehicles. Loading bay requirements for developments should be supplied with EV rapid charge points to allow for zero emissions vehicles to operate and recharge on delivery routes.

19.79 Part 3 ensures that development generating a significant number of vehicle trips for goods or materials will be assessed in relation to its likely impact on the transport network, with reference to the most up-to-date Transport for London guidance relating to deliveries, servicing, and construction logistics. An assessment will also be required where a development has the potential to have a significant impact on the transport network. The level of assessment required will be decided through the development management process.

19.80 Development proposals will need to plan and manage its freight movements through the construction and operational phases of the development. Construction management plans and/or delivery and servicing plans are required to show how the Construction Logistics and Community Safety (CLOCS) standard has been incorporated and that fleets serving the site have Fleet Operator Recognition Scheme (FORS) silver accreditation. In addition, development will need to provide sufficient space for deliveries and servicing within the site curtilage and off the public highway, including refuse collection.

19.81 Development proposals must seek to prioritise sustainable methods in the movement of goods and services, particularly sites with significantly greater delivery and servicing frequencies and sizes. Construction can make significant environmental and cost savings through more sustainable methods of recycling existing materials; this can significantly reduce freight movements by vehicles such as tipper trucks which tend to be more polluting and more hazardous to cyclists compared to other vehicles.

19.82 Part 3 (b) seeks to ensure that the delivery of goods and servicing will not take place on-street wherever possible, to avoid negative impacts on highway safety and traffic flow. In addition, off-peak deliveries and servicing operations should be considered where appropriate to reduce motor traffic and road danger, minimising the impact of servicing at the busiest times, particularly in areas of high footfall. In these cases, quiet delivery agreements should be considered.

19.83 Part 3(d) requires development to minimise the number of daily vehicle trips to and from the site. by consolidating and coordinating deliveries and servicing. Residential development will require bespoke management and delivery accommodation when compared to commercial development. The rapid acceleration of internet shopping has resulted in a significant growth of smaller light goods vehicles, which increase congestion and pollution at peak times as well as traditionally quieter times. Delivery vehicles to residential addresses often park on the highway causing traffic flow and safety concerns. This disruption increases with missed deliveries whereby the same address receives a second or third delivery attempt. Development should provide space for these deliveries and help ensure all such deliveries are completed on the first attempt.

19.84 The Tower Hamlets Sustainable Freight Study (2023) concluded that the use of a construction consolidation centre can help reduce and control the number of deliveries to site by up to 50%. Holding areas located on nearby vacant sites can be used to control the number of construction deliveries and vehicles dwell times.

19.85 Parts 4 and 5 requires developments adjacent to safeguarded wharves to recognise the role of wharves and depots, and ensure that their continued function is not negatively impacted. The borough's river and rail network represent an underused resource and priority should

be given to utilising the railways, rivers, and canals to facilitate the movement of waste and goods, particularly the safeguarded wharves such as Northumberland Wharf and Orchard Wharf.

20. Reuse, recycling and waste

RW1 – Managing our waste

RW2 – New and enhanced waste facilities

RW3 – Waste collection facilities in new development

Introduction

20.1 The management of waste is one of the most challenging issues facing Tower Hamlets. To address this the Council has brought the collection and management of household waste under its direct control, declared a waste emergency and developed a detailed management strategy for local authority collected waste. The borough will continue to have significant population and development growth in the coming decades and this is expected to give rise to a growing quantity of waste to be managed, from homes, businesses and construction work. The Council wants to ensure that as much of this waste as possible is, reused, recycled, and has value extracted from it while facilitating a shift towards a circular economy where the quantity of waste produced falls.

20.2 As a unitary authority Tower Hamlets performs the roles of waste planning authority, waste collection authority, and waste disposal authority in the borough. In our capacity as a waste planning authority, we have a statutory duty to prepare a waste local plan in line with legislation. This is being fulfilled through the inclusion of waste policies in this Local Plan. A key purpose of these policies is to ensure waste produced in the borough is properly managed through

access to suitable management facilities. These policies have been prepared within the context of the requirements of the London Plan, with particular focus on the requirement to provide for quantities of household and commercial and industrial waste apportioned and the management targets set.

20.3 The management of waste rarely respects administrative boundaries and hence waste is considered to be a strategic cross-boundary issue and is subject to the duty to co-operate³⁵. In the interests of proper planning and sustainable development Tower Hamlets, through the duty co-operate mechanism, will seek to secure access to sufficient waste management capacity to meet the borough's apportionments as set out in the London Plan and ensures construction, demolition and excavation waste is also properly managed. We will support the transition to the circular economy through the establishment of Material Hubs. Material Hubs can be used to store otherwise unused material which can be reused, repaired, or repurposed within or outside the borough. It is expected that Materials Hubs will be initially trialled in the early part of the plan period and scale up in the medium to long term reducing the quantity of construction and demolition waste requiring management in particular.

20.4 The LLDC is currently the planning authority for part of the borough of Tower Hamlets, but it does not have a separate apportionment. The Council is therefore planning for waste across its whole administrative area. We will continue to work closely with the LLDC on delivering our strategic plan for waste.

20.5 Our duties as a waste collection authority and waste disposal authority include helping households to prevent waste as well as reuse items and recycle as much waste as possible. The London Plan sets a

³⁵ Tower Hamlets Waste Data Update – Identification of Strategically Significant Cross Boundary Waste Movements BPP Consulting June 2024

target of recycling 65% of municipal waste by 2030 and zero biodegradable waste to landfill by 2026. However, in 2021/2022, only 20% of household waste was reused, recycled, or composted in Tower Hamlets and it is recognised this needs to increase for those targets to be met.

20.6 Whilst London boroughs have not been set individual targets, Tower Hamlets is working towards meeting the London-wide target. The design of new development is required to ensure integrated waste collection and bulking systems are included which contribute to the borough's ability to implement the waste hierarchy and increase recycling/ composting rates (see Policy RW/3).

20.7 The Local Plan must identify sufficient opportunities to meet the identified needs of an area for the management of waste, aiming to drive waste management up the Tower Hamlet's waste hierarchy (see Figure 22). The Council is required to plan for seven waste streams, including household, business, and construction waste. The London Plan 2021 requires boroughs to provide sufficient capacity to manage the tonnages of household and commercial/industrial waste apportioned in the London Plan 2021. The intention is for London to be net self-sufficient in managing all waste, other than excavation waste, by 2030.

20.8 The following tonnages of waste are predicted to arise from Tower Hamlets over the Plan period:

Table 13: Tower Hamlets' waste capacity need 2026-2041 (tonnes)³⁶

Waste stream	2026	2031	2036	2041
Apportionment (LACW and C&I)	197,000	199,000	203,000	207,000
Non hazardous C,D&E waste	286,000- 303,260	286,000- 323,290	286,000- 329,000	286,000- 337,2000
Hazardous waste included in LACW, C&I apportionment. Overall arising predicted to be c16,200 tpa ³⁷				
All other waste streams	0	0	0	0

20.9 Providing for the predicted arisings within the constraints of the borough presents a particular challenge because parts of the borough are densely built-up and there are competing pressures from higher value land uses such as meeting housing and employment land needs.

³⁶ Derived from Table 9.1 of the London Plan 2021

³⁷ Tower Hamlets Waste Data Update – Management requirements for Hazardous Waste in Tower Hamlets to 2042 BPP Consulting June 2024

20.10 The London Plan also has a target of 95% reuse/recycling/recovery of Construction and Demolition waste and 95% beneficial use of excavation waste overall and 100% of inert excavation³⁸. The available evidence indicates that Tower Hamlets is likely to be meeting these targets although the data is not definitive.³⁹

20.11 Tower Hamlets is also required to plan for hazardous waste, wastewater, agricultural waste, and low-level radioactive waste. The evidence concludes that no additional facilities are required within the borough for these waste streams because they are only produced in very small quantities and/or they are managed at specialist facilities outside the borough.⁴⁰

20.12 Capacity offered by existing waste sites in the borough has been assessed to be insufficient to meet the management needs for C&D waste arisings in particular. It is estimated that an area of approximately 0.65 to 1 hectare would be required to provide sufficient capacity to manage this waste⁴¹.

20.13 To continue to provide for the London Plan apportionments for household and business waste, Tower Hamlets will safeguard existing waste sites, identify suitable land where facilities offering additional capacity may be located under Policy RW1 and work with the GLA and other boroughs to secure access to suitable capacity elsewhere in

London. Policy RW2 will guide the development, delivery and operation of facilities offering additional waste management capacity within the Borough.

³⁹ Tower Hamlets Waste Data Update – Management requirements for Construction, Demolition and Excavation Waste in Tower Hamlets to 2042 BPP Consulting June 2024

⁴⁰ Tower Hamlets Waste Data Study 2023 Vitaka

⁴¹ Tower Hamlets Waste Data Update – Management requirements for Construction, Demolition and Excavation Waste in Tower Hamlets to 2042 BPP Consulting June 2024

20.14 Policy CG5 – Retrofit and the Circular Economy will ensure that construction and demolition waste continues to be utilised as a resource in the construction and regeneration of new development in the borough and London. The Council will explore opportunities to take waste management in house or work in partnership in order to maximise the extraction of resources and financial returns from the waste the borough generates.

20.15 The borough is not allocating individual sites for waste but instead identifying areas of search within which individual sites could come forward; this approach is supported by both national policy and the waste industry. The total amount of suitable industrial land in the borough is just under 22 hectares. It has been calculated that up to 5.28 hectares of land could come forward within the areas of search for new waste management sites (see Policy RW1) through business turnover and vacancies⁴². The assessment of existing waste management capacity evidences that the safeguarded existing waste sites along with the areas of search should be sufficient to serve the Borough’s projected waste management needs⁴³.

20.16 The Council will continue to monitor arisings of waste, the availability of land capable of providing additional waste capacity within the Borough and the continued availability of suitable capacity elsewhere in London over the course of the Local Plan period.

⁴² See Appendix 2 of Tower Hamlets Waste Data Update – Management Requirements for Construction, Demolition & Excavation Waste in Tower Hamlets to 2042 for examples.

⁴⁴ Tower Hamlets Waste Data Update – Management Requirements for Apportioned HIC Waste in Tower Hamlets to 2041 BPP Consulting June 2024

Capacity Assessment

20.17 The figures below set out the findings of an assessment of the potential capacity of existing waste management facilities provided in Tower Hamlets.

Table 14: Capacity Assessment of Existing facilities managing apportioned waste in Tower Hamlets (tonnes per annum⁴⁴)

Capacity source	LACW/C&I management capacity
Existing licensed waste sites	160,000tpa
Exempt waste sites	40,000tpa
Onsite segregation facilities	17,600tpa
Total assessed capacity	217,600tpa
Total potential capacity	217,600tpa

20.18 When the value of c220,000 tpa is compared with the apportioned tonnages presented in Table 14 above, it shows that the assessed capacity ought to be sufficient to meet the apportionment requirement. However given the identified shortfall in capacity for the management of construction and demolition waste predicted to arise in the borough over the Plan period, it is still considered appropriate to identify areas of search where facilities offering additional waste management capacity may be developed, on a precautionary basis.

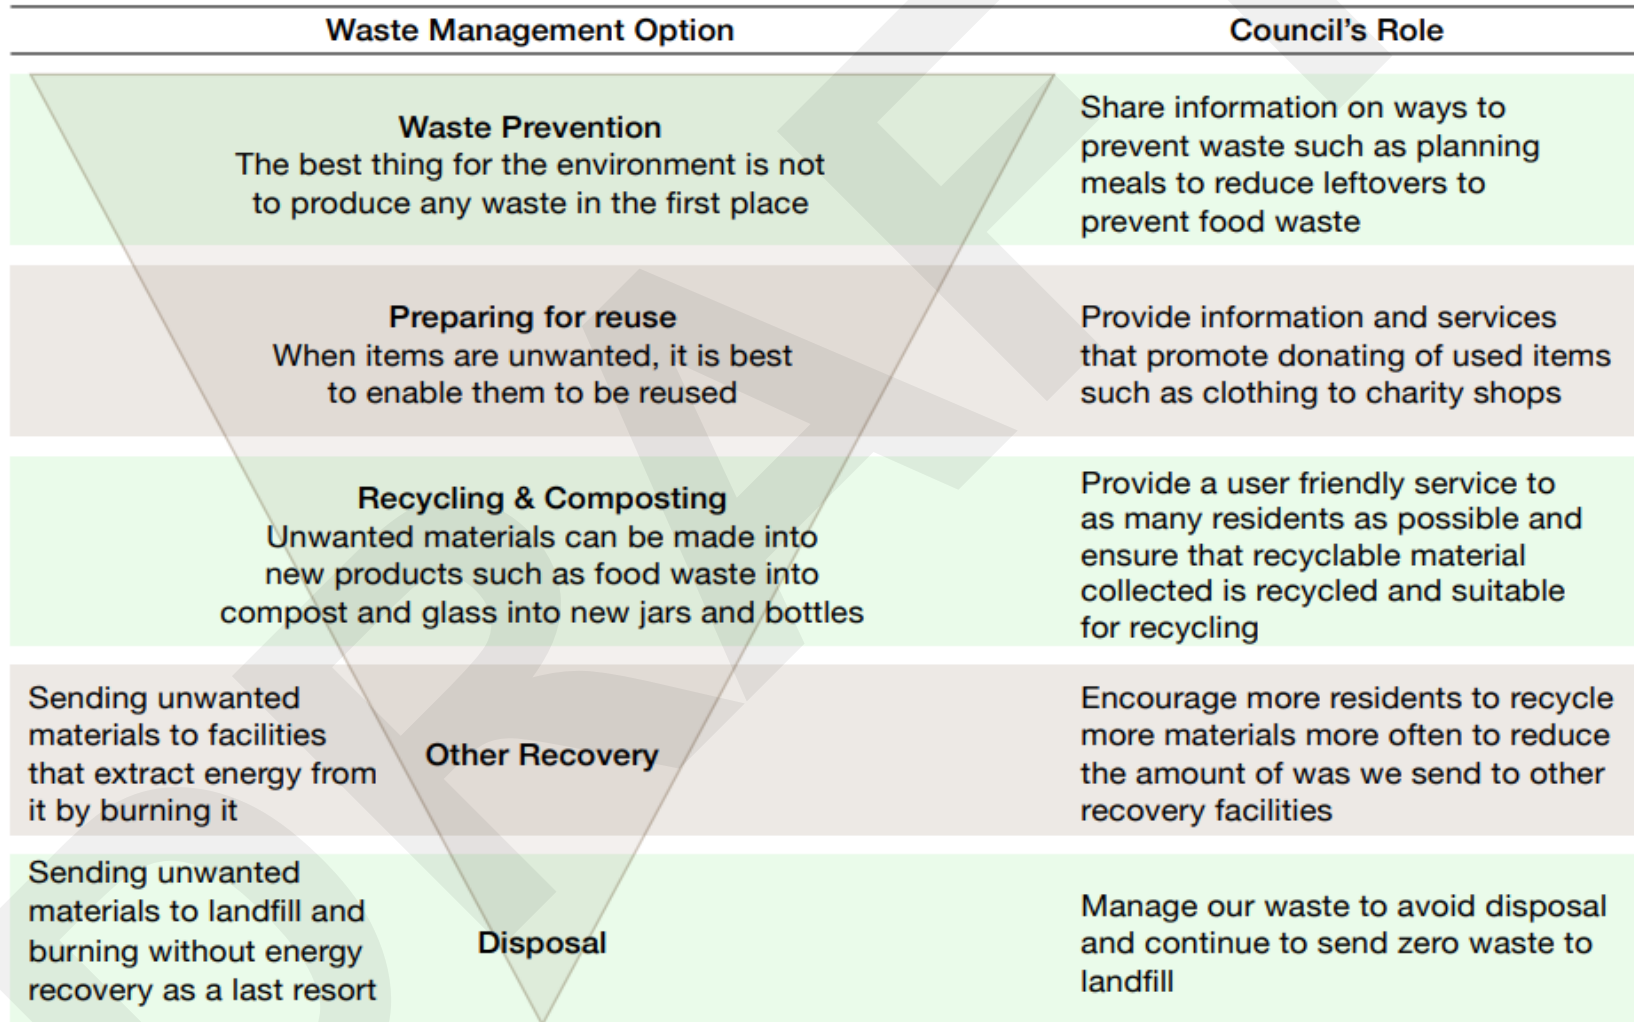

20.19 Areas listed in policy RW1 Managing our waste are considered to be suitable in principle to accommodate new waste management facilities. This is primarily due to their industrial nature and access to the strategic transport network so that waste and vehicle movements can avoid local roads and protect the safety and amenity of residents and heritage assets. Areas of search are not exclusively designated for waste management purposes as they are also considered to be suitable, in principle, for other uses that are considered appropriate for their respective policy designations.

20.20 Any proposals for new or extended waste management facilities in Tower Hamlets will be assessed against criteria in the National Planning Policy for Waste, the London Plan and Local Plan policies. The Council is actively exploring opportunities for the development of further waste management facilities to manage the Borough's waste through its waste management strategy.

20.21 The construction of new, extended or replacement of existing waste management facilities must include, where possible, technologies that seek to extract as much material and value as possible through the repurposing, recycling, storage, and management of waste. Where opportunities arise for synergies or partnerships with delivery of the Council's waste management services these will be explored.

20.22 The London Plan is seeking to move towards a future where goods are designed to be reused and recycled and very little waste will require disposal in the future (a 'circular economy'). Tower Hamlets will contribute to this approach in various ways (e.g. new developments will be required to recycle and reuse construction materials – see Policy RW1).

Figure 22: Waste Hierarchy Diagram

Policy RW1 Managing our waste

1. The following existing waste sites within Tower Hamlets (as shown on the Policies Map) are safeguarded for waste use over the plan period.

Table 15: Schedule 1: Existing waste sites in Tower Hamlets

Reference	Name/Location	Other designation(s)	Site area (hectares)	Operational capacity/ contribution to apportionment (tonnes per year)
1	Northumberland Wharf, Yabsley Street	Safeguarded Wharf	0.88	160,000
2	Ailsa Street		0.53	0/23,850 – 34,450

2. The following is the existing waste site in the London Legacy Development Corporation area (LLDC) and is subject to Planning Policies in the LLDC Local Plan.

Table 16: Schedule 2: Existing waste site in LLDC

Reference	Name/Location	Other designation(s)	Site area (hectares)	Operational capacity/ 5 yr peak(tonnes per year)
3	455 Wick Lane	LLDC Local Plan: Strategic Industrial Location and Preferred Industrial Location	0.47 (0.027 currently used for waste purposes ancillary to civil engineering works)	64,610

3. Development proposals which seek to maximise the efficiency and/or enhance the capacity of existing waste facilities in the borough will be supported.

4. Applications for non-waste uses on safeguarded sites or the reprovision of existing waste management facilities will only be permitted where it is clearly demonstrated and ensured through a legal agreement that compensatory capacity at least equivalent to, the maximum annual throughput that the existing site can achieve will be delivered on a suitable replacement site within the borough in the first instance or another part of London which provides.

5. Development proposals that prevent or prejudice the continued availability of capacity of these sites will only be supported where alternative capacity provision is made.
6. Areas in Schedules 3 and 4 are considered suitable for new waste management facilities (as shown on the Policies Map).

Table 17: Schedule 3: Areas of search for new waste sites in Tower Hamlets

Reference	Name/Location	Other designation(s)	Waste facility type	Site area (hectares)	Assessed potential capacity contribution (tonnes per year)
4	The Highway	Local Industrial Location	Reuse/ refurbishment/ repair	2.7 (of which an estimated 0.65 to become available over the plan period)	Up to 32,500
5	Empson Street	Strategic Industrial Location	Recycling, composting or recovery	10.07 (of which an estimated 2.42 to become available over the plan period)	Up to 121,000

Table 18: Schedule 4: Areas of search for new waste sites in LLDC

Reference	Name/Location	Other designation(s)	Waste facility type	Site area (hectares)	Assessed potential capacity (tonnes per year)
6	Fish Island	LLDC Local Plan: Strategic Industrial Location	Recycling, composting, recovery	9.21 (of which an estimated 2.21 to become available over the plan period)	Up to 110,500

7. Small-scale waste management facilities integrated within new developments outside of the Areas of Search listed in Schedules 3-4 may be acceptable where they contribute to managing apportioned waste and are of a scale and nature that does not compromise adjacent existing and proposed land uses.
8. New development will be expected to reuse and recycle construction, demolition, and excavation waste on or close to the site where it arises.
9. Development proposals in the vicinity of existing, safeguarded or consented waste management facilities must consider the agent of change principle to ensure the proposed use and operations do not constrain the assessed potential.

Supporting text

20.23 This policy seeks to support the development of a well-planned and integrated network of waste management facilities that provides for identified future capacity needs and contributes towards managing waste generated within the borough (and beyond) over the plan period.

20.24 Meeting this need will require the management of waste arising from new development to be provided for, retention of existing waste management facilities (operational and non-operational), and provision of additional facilities in identified Areas of Search and other suitable locations which comply with the criteria set out in Policy RW2 (and the development management criteria contained in this Local Plan). Proposals for waste management facilities within the Areas of Search will be guided towards locations within these areas so they are located as far away as possible from sensitive receptors (such as residential uses, schools, nurseries, and healthcare facilities) and mitigation measures are provided to ensure any significant detrimental environmental and amenity impacts are adequately addressed. Where existing facilities can be enhanced to maximise their use, subject to the requirements of Policy RW2, this will be encouraged.

20.25 The LLDC is the planning authority until December 2024 for those sites and areas of search within its boundary (as shown in Schedules 2 and 4). The LLDC Local Plan (2020-2036) safeguards existing waste sites (listed in Schedule 2) and identifies areas of employment land suitable for waste uses (listed in Schedule 4). To secure the delivery of an effective waste plan for the borough as a whole Tower Hamlets and the LLDC agree that the Area of Search listed in Schedule 4 is potentially suitable for waste management use. Acceptability of proposals for waste management uses in this location will be determined with reference

to policies within the LLDC Local Plan 2020 and any other relevant material considerations that apply to that proposal. Until December 2024 applications for planning permission in these locations will be determined by the LLDC.

20.26 The existing safeguarded waste site of Ailsa Street is within an area of regeneration and may be released for other uses, providing the requirements set out within Policy RW1 (see Part 4) are met.

20.27 Compensatory capacity will be sought which is at least equivalent to the maximum annual throughput over the last five years, where reported through the Environment Agency's Waste Data Interrogator. Compensatory provision should be provided locally within Tower Hamlets in the first instance, or failing that, elsewhere in London. Compensatory provision will be secured through conditions requiring proof of commencement of operation and operational capacity and a legal agreement at the planning permission stage.

20.28 Competition for land means the borough must look beyond traditional industrial locations when seeking space for facilities to manage its waste. There is an opportunity for innovative technologies to be incorporated into new development to manage waste generated over its lifetime. Part 7 of the policy therefore allows modern waste facilities to be integrated within new development outside the areas of search. Small scale facilities which come forward will be assessed on a case-by-case basis against criteria in Policy RW2 and regional and national policy.

20.29 On-site materials processing systems for food are an important aspect to consider in this borough due to the particular challenges to collection services within blocks of flats. The principle of these systems is two-fold:

- a. To carry out processing of materials at source, thereby reducing the tonnage and volume of solid waste to be managed and the subsequent burden on collection services; and
- b. To make use of valuable end products such as unlocking the energy held within the waste material itself.

20.30 There are a number of pieces of equipment, which may provide appropriate on-site waste processing including, but not limited to, micro digesters and composting units.

20.31 The flexibility of these systems is such that it reduces the need for separate collections of food waste to be carried out within the development and thereby reducing vehicle movements. Where such systems are proposed, it will be the responsibility of the managing agent to maintain the system/facility. An agreement will also need to be made with the Council with regards to securing the long-term availability of this capacity so it may be relied upon to contribute towards Tower Hamlets' apportionments prior to permission being granted.

20.32 Integrated waste collection systems are also required for new developments under Policy RW3. We will also consider the allocation of community infrastructure levy contributions towards provision of strategic waste management facilities located elsewhere in the borough.

20.33 For part 7 of the policy, developers should submit a plan for the management on-site waste to demonstrate how much construction, demolition and excavation waste will be reused and recycled, taking account of the London Plan target of 95%. The sustainable transportation of waste (by water and rail) will be assessed as part of Policy RW2, see Part 1(i).

20.34 All sites and areas of search listed under Policy RW1 are shown on the relevant policies maps for Tower Hamlets and the LLDC

Page 960

Policy RW2 New and enhanced waste facilities

1. Development proposals to construct new waste facilities or replace or extend existing waste facilities will be supported where:

- a. they are located on safeguarded waste sites or existing waste sites or strategic industrial land or local industrial locations;
- b. they observe the 'Proximity Principle', dealing with waste as close to its source as possible;
- c. there is good access to the strategic transport network and where feasible, they prioritise rail and water transport over use of the principal road network;
- d. infrastructure to facilitate any road based vehicle fleet's transition to Zero and Ultra Low Emission Vehicles is provided on site;
- e. they demonstrate that the waste will be managed in accordance with the application of the Waste Hierarchy in priority order and its contribution to the circular economy and, where possible, seek to achieve a positive carbon outcome in accordance with the requirements of the London Plan (2021) Policy SI 8;
- f. they incorporate high-quality design, are of a scale and nature which integrates into its surroundings and ensures compatibility with adjacent existing and proposed land uses (including within neighbouring boroughs);
- g. they minimise amenity impacts on surrounding areas in terms of noise, odour, air quality and impacts on the transport network, according with Agent of Change principles;

- h. there is co-location with other compatible uses (including existing waste facilities or fleet depots);
- i. they propose technology which is appropriate for the location and nature of the site;
- j. there is adequate road capacity to accommodate any vehicle movements generated and that vehicles can enter, wait, unload and leave the site without prejudicing the safety of pedestrians and other road users;
- k. it provides effective on-site measures to ensure safety and security;
- l. it is enclosed, unless it can be demonstrated that environmental and amenity impacts, including the emission of air pollutants, noise, vibration, dust, glare, vermin, odours can be mitigated, both during and after operations; and
- m. it incorporates measures to minimise carbon emissions and maximise the use of lower-carbon energy sources.

2. Developments that propose waste management facilities should include an appropriately detailed plan for the site during construction, operation and decommissioning.

Supporting text

20.35 This policy relates to the provision of new and enhanced waste management facilities (including those replacing, expanding, or intensifying existing sites as well as capacity on exempt sites) and seeks to direct them towards the most appropriate and sustainable locations which maximise the efficient use of the land and do not have any unacceptable impacts.

20.36 The policy seeks to incorporate flexibility into the assessment of new waste management uses, recognising the evolving nature of both waste management practices and national and regional policies that may result in a need for retrofit or the delivery of new waste management facilities in the borough.

20.37 New waste management facilities will be directed towards existing safeguarded sites and areas of search (as set out in Policy RW1). In other locations, such facilities will still be expected to meet the criteria set out in Policy RW2 as well as any other relevant policies within the plan. Windfall proposals for waste management facilities outwith existing sites, safeguarded sites or areas of search will be required to demonstrate why it is not feasible to do so within the areas identified in RW1.

20.38 Part 1 seeks to ensure that new developments are located close to the sources of waste they are intended to manage, operate to support the application of the waste hierarchy and the move towards a circular economy. Development proposals should be supported by documentation which sets out how the development will meet these requirements. Part 1 (a) seeks to ensure the protection existing and safeguarded sites and also those with exemptions.

20.39 Part 1 (b) and 1 (d) set out details regarding management of waste in line with the proximity principle, within Tower Hamlets and surrounding boroughs; seeking to promote more sustainable operations at waste management facilities and the circular economy; and waste being a resource which can support future development within Tower Hamlets and London.

20.40 It should also be demonstrated how the operation of the facility either new or enhanced will minimise impact on surrounding existing uses and amenity.

20.41 Parts 1(c) and (j) seek to ensure applicants demonstrate that opportunities to transport both construction and operational waste from the site via rail and water are explored (including shared facilities at existing railheads, wharves, and depots) as a means to reduce congestion and vehicular movements on the road network. Information on sustainable transportation of waste should be submitted as part of the planning application, alongside details of reuse and recycling of waste arising during the construction phase in line with Policy RW1 (see part 7).

20.42 Developments providing additional waste management capacity will be encouraged to co-locate with existing waste facilities and other

compatible uses without having any significant detrimental impacts on the amenity and the function of the immediate and surrounding area to optimise the potential of sites and address the intensification of land uses, as per part 1(h).

20.43 The types of waste technology that will be suitable will depend on the nature and scale of the proposed scheme and the characteristics of the site and its surroundings, as required under part 1(i). Broad types of facility suitable for each area of search are set out in the schedule of areas in Policy RW1. These are likely to be small-scale facilities due to the constrained nature of the borough.

20.44 Part 1(l) seeks to mitigate adverse impacts associated with waste management facilities. Waste management facilities should be enclosed and covered on all vertical sides with small access and egress points, fitted with fast-acting doors, and incorporate an air filtering system to reduce airborne particulate concentrations in and outside of the building in line with Environment Agency advice. This provides an effective way of controlling dust and particulate pollution within waste developments. In cases where enclosure is not possible, proposals must provide details of proposed measures demonstrating how the control measures can adequately mitigate these impacts. Operators will be expected to obtain the appropriate environmental permits from the Environment Agency or the Local Authority and comply with the conditions of those permits at all times.

20.45 To minimise the impact on climate change, waste management facilities should incorporate opportunities to be attached to the district heating network and/or incorporate opportunities for energy recovery and combined heat and power, see Part 1(m), such as anaerobic digestion. In instances where this is not feasible, an energy statement must be submitted with the planning application demonstrating that it is not technically feasible or economically viable.

20.46 Part 2 seeks to offer applicants guidance on the content of management plans which are to be designed to ensure the operation of waste management facilities does not detrimentally impact on the amenity, environmental and infrastructure of the surrounding area during construction, operation and decommissioning. Management plans should include:

- ★ vehicle movements within the site, demonstrating there is adequate road capacity to accommodate any vehicle movements generated and that vehicles can enter, wait, unload and leave the site without prejudicing the safety of pedestrians and other road users;
- ★ how dust, mud or debris build up will be minimised on hard surfaces outside designated waste storage or processing areas;
- ★ site surfacing, ensuring the integrity of surfaces facilitates the safe and smooth movement of heavy goods vehicles around the site;
- ★ where and how waste is stored, how material drop heights will be minimised and stockpile height limited;
- ★ any water or odour neutralising misting system to prevent the escape of dust or odour from the site, and its maintenance;
- ★ wheel washing facilities to ensure vehicles do not track mud or debris around the site or onto the highway;
- ★ how vehicles will be sheeted and securely covered where carrying materials likely to generate dust or odour onto the public highway to and from the site;
- ★ how any build-up of dust, mud or debris will be monitored and reduced where it would inhibit the safe and efficient operation of the site; and
- ★ site maintenance and record keeping.

- Don't let our future go to waste, Waste Management Strategy, 2018-2030
- Reuse, Recycling and Waste Supplementary Planning Document (SPD), adopted 2020

Policy RW3 Waste collection facilities in new development

1. All new development must include sufficient accessible space to separate and store dry recyclables, organics, residual and bulky waste for collection, both within individual units and for the building as a whole. Waste storage facilities within developments should be designed to avoid any adverse amenity impacts.
2. New major residential development proposals must incorporate high-quality on-site waste collection systems that do not include traditional methods of storage and collection and are compatible with waste collection methods set out in the Tower Hamlets Reuse, Recycling and Waste SPD. In instances where this is not practicable, supporting evidence must be submitted with the application to demonstrate this.
3. New residential, non-residential, and mixed-use development proposals should be accompanied by a Waste Management Plan that complies with the requirements of Tower Hamlet's Reuse, Recycling and Waste SPD.
4. Provision of waste storage and collection should be informed through early engagement with relevant London Borough of Tower Hamlet's service areas. Developments that propose provision of onsite waste management technologies should be discussed at an early stage of design with the London Borough of Tower Hamlet's waste management team.

Supporting text

20.47 Part 1 of this policy will help to ensure that waste is collected and managed in a sustainable manner in line with the principles of the Tower Hamlets' waste management hierarchy as set out in Figure 22. It is also intended to increase the amount of waste recycled and composted from all developments, and to improve waste collection systems in developments with communal waste facilities in particular. Tower Hamlets is working towards meeting the London Plan target of recycling 65% of municipal waste by 2030 and zero biodegradable waste to landfill by 2026. The volume of household waste that was reused, recycled, or composted in Tower Hamlets needs to increase to meet these targets and ensuring the required facilities are provided in new developments will help move towards and meet these targets.

20.48 This part also seeks to ensure that dry recyclables, organics, and residual waste will be segregated, and for residential developments bulked, at source within new developments to:

- a. minimise transport movements from waste collection operations;
- b. minimise the financial and operational burden on existing waste collection system;
- c. maximise efficient use of collection resources;
- d. encourage recycling behaviour by residents and reduce contamination of recyclables collected; and
- e. make a positive impact on the quality of the street scene.

20.49 Incorporating sufficient waste storage capacity within new developments should be done from the outset to avoid capacity shortfalls or poor quality service. Applicants will need to forecast how much organic, recyclable, and residual waste will be generated when

the development is occupied and demonstrate that sufficient space has been allocated to the storage and/or bulking of this waste in both individual units and for the development as a whole.

20.50 Tower Hamlets is seeking to move away from the traditional waste storage methods, such as standard wheeled bins, bagged collections, and Euro bin containers, towards central bulking systems particularly for residential developments that require communal waste collection facilities. Central bulking system rather than standard bins and communal Euro bins, offer more waste storage which can be stored before needing collection and more waste can be collected in a single round. As a general rule, all of the systems using bulk containers allow waste to be stored in a smaller footprint than standard communal Euro bins. The location of storage containers should be chosen to maximise operational convenience and minimise environmental, amenity and transport impacts.

20.51 Under part 2 of the policy, new major residential developments will be expected to incorporate on-site waste collection systems that are compatible with waste collection services. Such systems could include compactors, underground storage containers, vacuum systems, and automated waste collection systems. These systems require land to be set aside to store bulked waste materials, with the size and footprint varying from system to system. Preference should be given to systems that can provide for a weekly collection service as a minimum and allow separate collection of organic wastes or facilitate onsite processing of organics. Applicants should discuss options with the waste management team prior to the submission of an application. Food waste, household waste and recyclables must be separated to allow independent collection and onward management.

20.52 The Tower Hamlets Reuse, Recycling and Waste SPD sets out information on how waste management should be addressed in proposals for new residential (including mixed use) development. The SPD has been produced to support developers in submitting a planning application that meets the policy requirements of the Council. The principles set out in the SPD may also be applied to wholly commercial development and when existing development is refurbished. The Tower Hamlets Reuse, Recycling and Waste SPD sets out how the five stages of waste management and ten steps to occupation are to be followed to guide the most appropriate waste management system for new developments, and how to provide sufficient information in support

of a complete planning application. This SPD can be used to inform formulation of a waste management plan as required under part 3 of Policy RW3 – Waste collection facilities in new development.

20.53 In instances where it is not practicable or we consider it inappropriate for non-traditional waste collection systems to be incorporated within the development, the developer or managing agent must provide adequate space as well as collection containers that are in accordance with the requirements set out in the Tower Hamlets Reuse, Recycling and Waste SPD.

20.54 Planning applications should clearly set out the access route of the occupiers and the servicing vehicles, including a clear swept path in accordance with the Council's waste collection specifications, and access arrangements to container stores. The identified waste storage area must be designed to ensure refuse collection vehicles are able to enter and exit the highway in a forward gear and perform all collection activities within the curtilage of the development site. Applicants are advised to contact the waste management team that manages the collection of waste prior to submitting a planning application and adopt a collaborative approach to ensure these arrangements are in line with our waste collection services. Further advice is available in Tower Hamlets Reuse, Recycling and Waste SPD.

DRAFT

Site Allocations

21. Introduction

21.1 Delivering sustainable places is an important aspect of spatial planning to address the needs and priorities of Tower Hamlets, such as building a significant number of homes to reduce overcrowding, and delivering long term benefits to people and communities across the borough. Successful place-making is critical to creating cohesive, well-connected and more vibrant communities and ensuring that development responds positively to the distinct and unique characteristics which make Tower Hamlets a great place to live, work and visit.

21.2 Policy DV1 (Areas of growth and opportunity within Tower Hamlets) sets out the overall strategy of how growth will be delivered across the borough. This section provides more detail on how different areas of the borough will accommodate this growth.

21.3 In order to realise the vision and objectives of the Local Plan, the following sub-areas have been identified to positively manage development opportunities, particularly housing delivery, and change in the borough at the strategic level:

- City Fringe
- Central
- Leaside
- Isle of Dogs and South Poplar.

21.4 This section sets out how each sub-area will grow and change over the period to 2038. In particular, it sets out the vision, objectives and overarching principles which will inform and guide development proposals within each sub-area.

21.5 Within each sub-area, a number of sites (known as allocations) have been identified to accommodate new homes and jobs alongside necessary infrastructure, such as open space, community, health and education facilities.

21.6 All of the sub-areas and site allocations are shown in Figure 24. This section also contains figures illustrating each sub-area and the site allocations within them. These figures are illustrative and show how the principles and requirements set out in this section could be implemented.

21.7 The site allocations have been selected following an assessment of their suitability for development (that they would not lead to inappropriate development that would have negative impacts on current or future residents of the borough), their availability and deliverability (that there is believed a realistic prospect of the sites being developed during the plan period), and that they can deliver a strategic amount of housing to help the borough meet its housing targets over the plan period (generally, this has been assumed to be at least 500 homes, although in some instances sites are delivering other strategic functions as well, such as employment space or student housing).

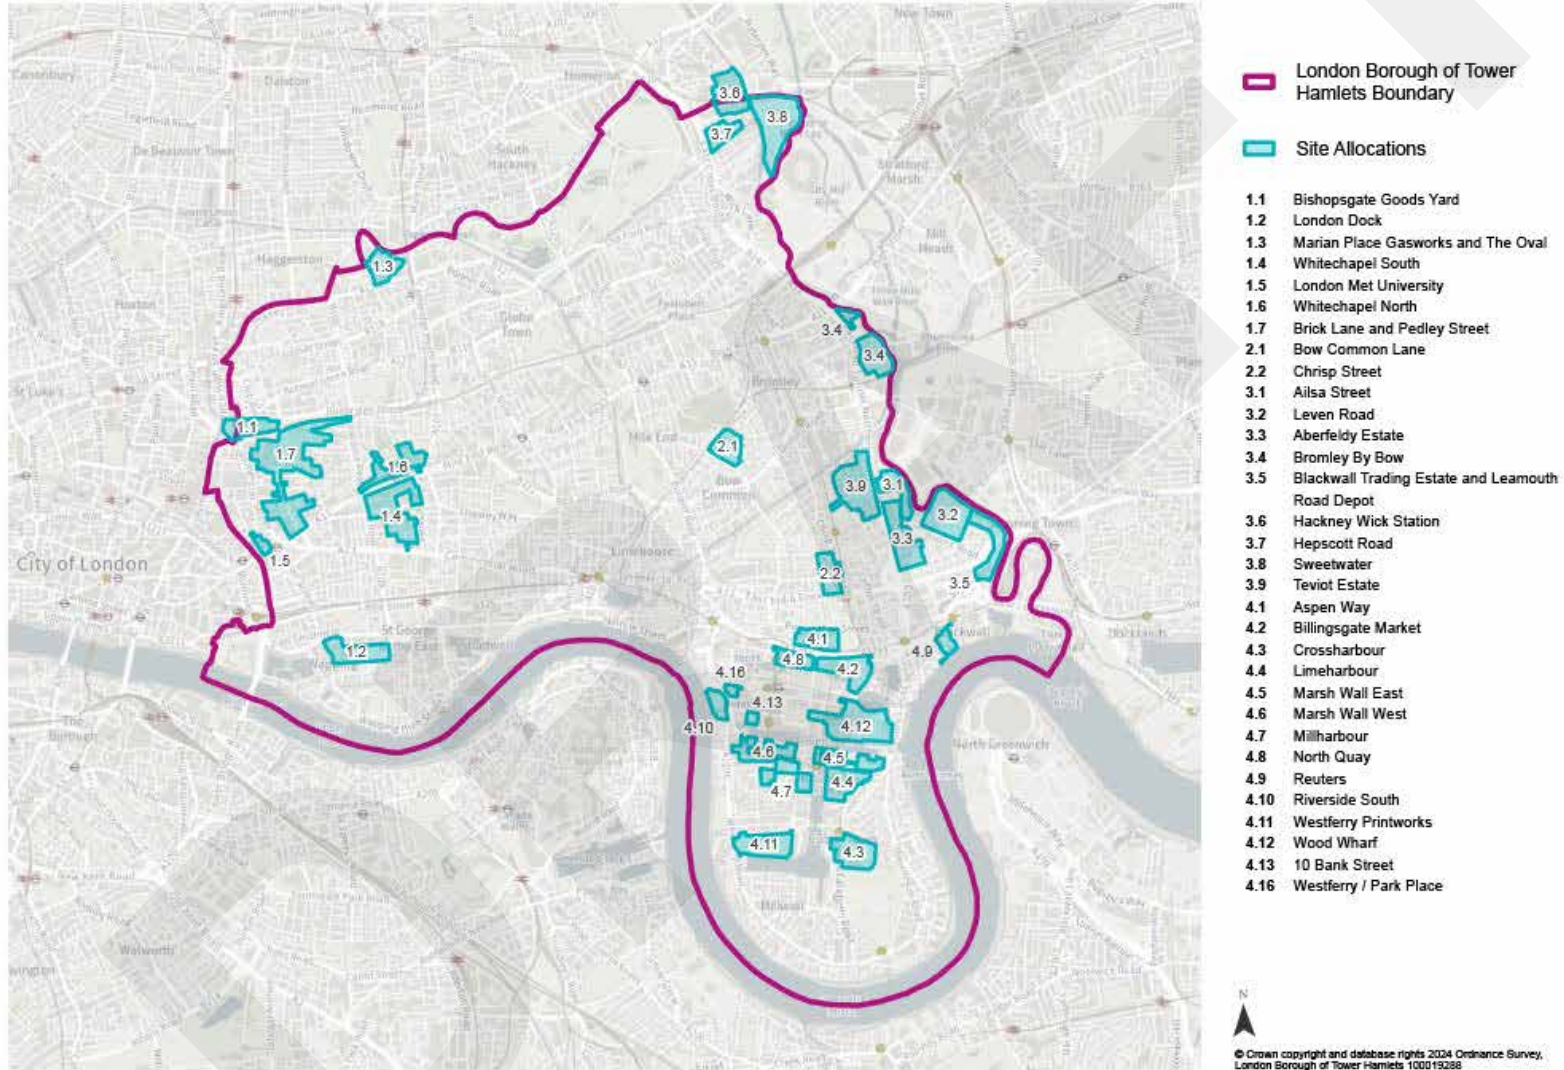

21.8 The site allocations have been further developed through a design-led site capacity assessment, as set out in the London Plan. This has involved looking at each site allocation in terms of what an appropriate layout, scale, mass, and height would be, and from there determining the capacity of housing and, where appropriate, other uses that could be included on site, taking into account the need to provide infrastructure on site allocations as well. These capacity assessments are intended to set out an appropriate form of development, but are not intended to be entirely prescriptive, and other forms of development may also prove to be acceptable where they meet the requirements of the site allocations, and do not exceed the maximum heights set out in them.

21.9 Development within these sub-areas will also need to take account of other relevant guidance and supporting information such as London Plan Guidance (LPGs)/Supplementary Planning Documents (SPDs), masterplans and Opportunity Area Planning Frameworks (OAPFs).

21.10 When determining a planning application, flexibility may be applied to the policies relating to the site allocation requirements based on an up-to-date assessment of need and the agreed viability position of the scheme to ensure the site allocation is deliverable in the context of the principles of sustainable development.

21.11 Some of the site allocations are under multiple ownership and comprise a number of development plots. In such cases, effective engagement between residents, landowners, developers and leaseholders needs to take place in order to facilitate potential land assembly and comprehensive redevelopment.

Figure 24: Site allocations

22. City Fringe

Location

22.1 The City Fringe sub-area is located in the western part of the borough, bounded by the City of London to the west, the London borough of Hackney to the north, the River Thames to the south, and the borough's inner city communities to the east. The sub-area also corresponds with the borough's portion of the London Plan's City Fringe opportunity area. The wider opportunity area also includes parts of the London boroughs of Hackney and Islington.

22.2 The City Fringe represents a collection of vibrant and distinctive town centres and employment hubs, which sit alongside residential areas. It comprises eight distinct character places. The Tower Hamlets Urban Structure and Characterisation Study provides more information on the key elements of the local character of each of these places.

Vision for City Fringe

22.3 By 2038, the City Fringe will become a more attractive place to live, work and visit. New communities will be well integrated into the area, benefiting from the close proximity to existing and new employment, retail and leisure uses within the wider area.

22.4 The world-class economic hub of the City of London will expand and opportunities arising from the Tech City and Med City initiatives will be maximised. Whitechapel, Cambridge Heath, Shoreditch, Spitalfields and Aldgate will all have a more diverse mix of commercial, cultural, leisure, tourism and night-time activities. It will be a place for new affordable and flexible employment spaces benefiting from the

arrival of the Elizabeth line and improved accessibility to the local area. Whitechapel and the surrounding area will benefit from new state-of-the-art research and education facilities and will accommodate start-ups and other supporting businesses.

22.5 A new civic centre and a new green spine to the south of Whitechapel Road will provide focal points for leisure and community/social activities. The public realm in and around the Tower of London world heritage site will be enhanced, with improved legibility and movement for all users.

22.6 A masterplan will be developed for the Brick Lane area, which will set out a tailored vision, strategic priorities, and detailed design guidance for the development of sites within the Brick Lane area. This will be reflected in the site allocation for Brick Lane and Pedley Street.

Objectives

- a. Create a new civic centre and world-class life science research hub at Whitechapel
- b. Protect and enhance the area's heritage assets and improve the historic character of the individual places
- c. Support a mix of uses to support the financial and business centres of the City of London, Tech City and the emerging research and life sciences cluster (Med City), whilst striking the appropriate balance between residential and commercial development
- d. Improve and enhance legibility, permeability and connectivity within, to and from the area, whilst enhancing and improving green grid links
- e. Strengthen the role and function of the area's distinctive and varied

town centres to provide a choice of cultural, leisure and retail activities, and

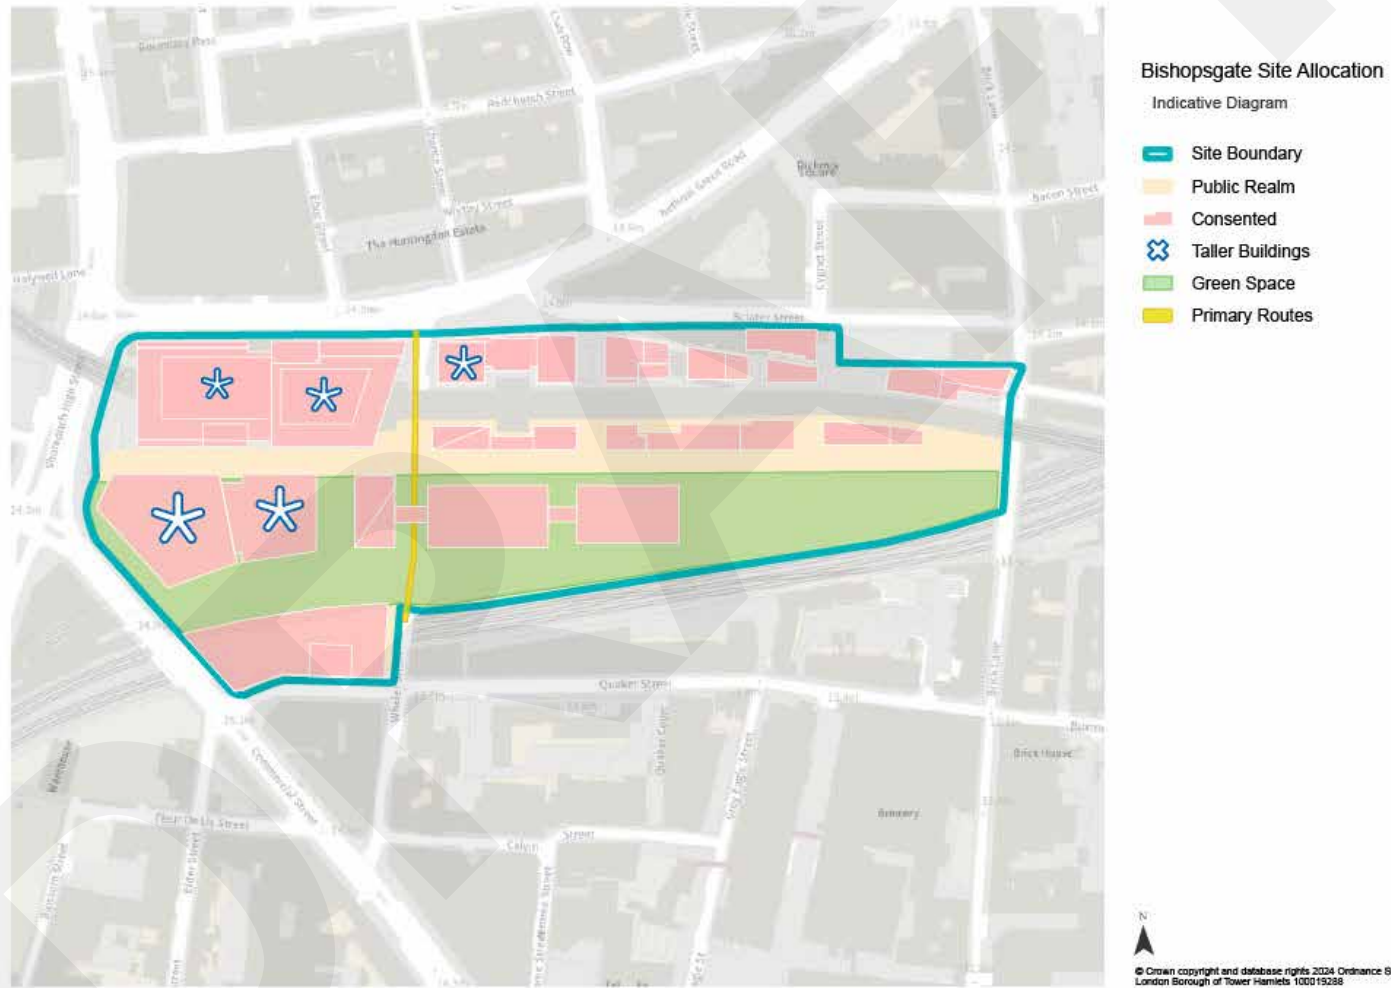

- f. Create new open spaces (including pocket parks and strategic open space) and improve links to existing publicly accessible open space.

Site Allocations in the City Fringe sub-area

- 1.1 Bishopsgate Goods Yard
- 1.2 London Dock
- 1.3 Parian Place Gasworks and The Oval
- 1.4 Whitechapel South
- 1.5 London Metropolitan University
- 1.6 Whitechapel North
- 1.7 Brick Lane and Pedley Street

1.1 Bishopsgate Goods Yard

Figure 25: 1.1 Bishopsgate Goods Yard (indicative)

Site information	Details
Address	Shoreditch High Street
Area [ha]	4.35
Ward	Weavers
PTAL [2031]	6a-6b
Planning designations Page 976	<ul style="list-style-type: none"> ● Area of substandard air quality ● London View Management Framework (views 8A.1 – Westminster Pier to St Paul's Cathedral, and 9A.1 – King Henry VIII's Mound to St Paul's Cathedral) ● Central Activities Zone ● Archaeological Priority Area (Spitalfields and Brick Lane, tier 2) ● Conservation Area (Fournier Street, adjacent to site) ● Statutory Listed Buildings (Braithwaite Viaduct, Grade II; Street Name Plaque Attached to Number 125 Brick Lane, Grade II, adjacent to the site; 2-38 Cheshire Street, Grade II, adjacent to the site)
Relevant Permissions	PA/14/02011 – outline permission for comprehensive mixed-use redevelopment including residential, business, commercial, and community uses. Included detailed permission for the tallest building and the retail arches.

Site proposal	Details
Indicative capacities	Within the Tower Hamlets portion of the site: <ul style="list-style-type: none"> ● 500 homes ● 11,500sqm non-residential uses - maximum
Phasing	2024-29, 2030-34

Land uses, activities, and delivery

- Development within the Tower Hamlets portion of the site should consist of a mixed-use, residential-led scheme with a mix of retail, workspace, community and cultural uses and the provision of a leisure facility and an Idea Store.
- Acceptable land uses include:
 - Residential (Class C3)
 - Town centre uses (Class E)
 - Community and cultural uses (Class F1/F2)
- Required on-site infrastructure includes:
 - Community facility
 - Strategic consolidated open space of minimum 1 hectare
- This is a cross-boundary site with the London Borough of Hackney. Development should coordinate consultation across planning authorities and address cross-boundary issues.
- The community facility should be delivered within or adjacent to the Brick Lane district centre.

Form, massing, and heritage

- Height strategy: Maximum height of 105m at the tallest point within Tower Hamlets, which should be located at the western end of the Tower Hamlets portion of the site, around Shoreditch High Street Overground station, on the boundary with the London Borough of Hackney. Heights should step down towards the eastern end of the site. This allocation does not set heights within the part of the site that is within the London Borough of Hackney.
- The impact of development on nearby heritage assets and conservation areas should be considered – heritage assets should be protected or enhanced, and any negative impacts mitigated, because heritage and historic conservation plays a vital role in benefitting place shaping, social cohesion and the economy. This includes the Fournier Street conservation area, the existing Grade II-listed Braithwaite viaduct, Oriel gate and the forecourt wall to the former goods station fronting Shoreditch High Street, and other identified heritage assets. Consideration must also be given to the impact on strategic and local views. Development should also protect or enhance heritage assets in the surrounding areas (including within the London Borough of Hackney). For further details, refer to the Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals.

Routes and streets

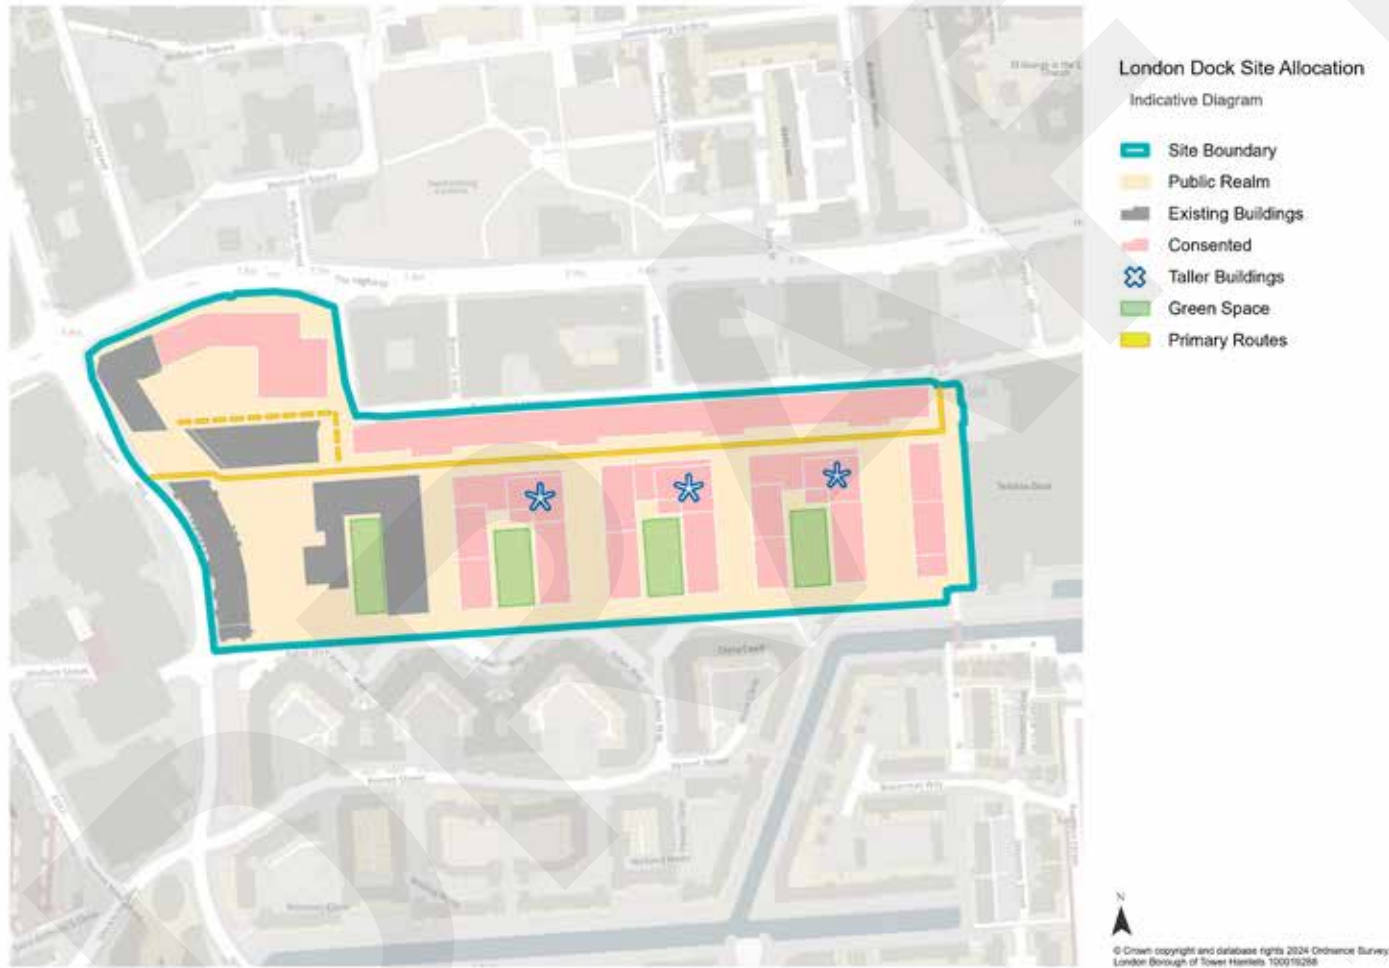

- Improve walking and cycling routes to, from and within the site to establish connections to Shoreditch High Street Overground station, Brick Lane District Centre, Shoreditch Triangle and the new open space. These should align with the existing urban grain to support permeability and legibility. Connections should be made to the green grid at Brick Lane and Quaker Street.

Environment and public realm

- Integrate development with the surrounding area and improve the street frontage and public realm on key routes, particularly along Wheler Street and ensure it is well integrated into the public squares to the east and south of the station.
- Provide a consolidated open space with a minimum size of one hectare, integrated with the green grid along Quaker Street and Brick Lane in the form of a multi-functional local park located above the Braithwaite Viaduct.

1.2 London Dock

Figure 26: 1.2 London Dock (indicative)

Site information	Details
Address	Pennington Street
Area [ha]	5.78
Ward	St Katharine's and Wapping
PTAL [2031]	2-5
Planning designations	<ul style="list-style-type: none"> ● Area of substandard air quality ● Flood risk area (small part of the site) ● Site of Importance for Nature Conservation (Shadwell Basin, Wapping Wood, and Wapping Canals, adjacent to the site) ● Tower Hamlets Activity Area ● Archaeological Priority Area (Wapping, tier 2) ● Neighbourhood Planning Area (Wapping) ● Statutory Listed Buildings (Pennington Street Warehouses and Vaults, Grade II; Tobacco Dock Warehouse, Grade I, adjacent to site)
Relevant Permissions	PA/13/01276 (and subsequent amendments) – outline permission for comprehensive mixed-use redevelopment including residential, business, commercial, and community uses (including a school). Included detailed permission for plots A, B, and C. PA/16/02851 – reserved matters for plot D. PA/19/00766 – reserved matters for Plot E, the secondary school. PA/19/01684 – reserved matters for plot F . PA/22/02666 – reserved matters for plot G.

Site proposal	Details
Indicative capacities	1,800 homes Up to 21,500sqm of non-residential floorspace
Phasing	2024-29

Land uses, activities, and delivery

- Development should consist of a mixed-use, residential-led scheme with a mix of retail, workspace, community and cultural uses and the provision of a secondary school.
- Acceptable land uses include:
 - Residential (Class C3)
 - Town centre uses (Class E)
 - Community uses (Class F1/F2)
- Required on-site infrastructure includes:
 - Secondary School

Form, massing, and heritage

- Height strategy: Maximum height of 98m at the tallest point, which should be the extant plot C1 located to the west of the site. Heights should generally step down towards Tobacco Dock to the east of the site.
- The impact of development on nearby heritage assets should be considered – heritage assets should be protected or enhanced, and any negative impacts mitigated, because heritage and historic conservation plays a vital role in benefitting place shaping, social cohesion and the economy. This includes the listed warehouses on site and the nearby grade I listed Tobacco Dock. For further details, refer to the Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals.

Routes and streets

- Improve walking and cycling connections to, from and within the site. These should align with the existing urban grain to support permeability and access to Thomas More Neighbourhood Centre, St Katharine Docks, Tobacco Dock and the Wapping Canal, and to improve walking and cycling connections across The Highway. Safe access routes to the secondary school are required, and development will need to deliver improved pedestrian and cycling routes. Green grid improvements should be made along Vaughn Way, Pennington Street, and across the eastern edge of the site near Tobacco Dock, and should provide good quality onward connections to the green grid routes at Ensign Street, Artichoke Hill, and the ornamental canal, and to Swedenborg Gardens.

Environment and public realm

- Provide publicly accessible open space of at least 0.4 hectares in size, which should be easily accessible from across the site and connected to the green grid route.
- Improve the public realm at active site edges, particularly along The Highway and Vaughan Way where high levels of traffic can currently create an unwelcoming public realm.

1.3 Marian Place Gasworks and The Oval

Figure 27: 1.3 Marian Place Gasworks and The Oval (indicative)

Site information	Details
Address	Marian Place/The Oval/Emma Street
Area [ha]	4.38
Ward	Bethnal Green West
PTAL [2031]	4-6a
Planning designations	<ul style="list-style-type: none"> ● Area of substandard air quality (part of the site) ● London View Management Framework (view 8A.1 – Westminster Pier to St Paul’s Cathedral) ● Site of Importance for Nature Conservation (London’s Canals, adjacent to the site) ● Publicly Accessible Open Space (The Oval) ● Local Employment Location ● Conservation Area (Regents Canal, part of site; Hackney Road, part of site) ● Statutory Listed Buildings (2 Pritchards Road, Grade II; 444 Hackney Road, Grade II, adjacent to site; 446-450 Hackney Road, Grade II, adjacent to site)
Relevant Permissions	PA/19/02717 - Demolition of existing buildings, decontamination/remediation of the site and retention (including dismantling, refurbishment and reinstatement) of the two existing gasholder frames to facilitate redevelopment for a mixed-use development comprising 5 buildings ranging between 6-13 storeys to contain 555 residential dwellings and 4,182sqm non-residential floorspace in flexible A1-A4, B1 and D Use Classes.

Site proposal	Details
Indicative capacities	700 homes (550 on the gasholder site) 4,000sqm of new non-residential floorspace (minimum)
Phasing	2024-29

Land uses, activities, and delivery

- Development should consist of a mixed-use, residential-led scheme with a mix of retail, workspace, community and cultural uses..
- Acceptable land uses include:
 - Residential (Class C3)
 - Town centre uses, including employment space for start-ups, SMEs, and creative industries (Class E)
 - Community uses (Class F1/F2)
- Development should acknowledge the associated costs of decommissioning the gasworks and the relocation of any significant equipment and address any environmental pollution and on-site decontamination requirements caused by the gas works. An assessment should be carried out to understand the potential contamination on site prior to any development taking place.
- The site is within the Cambridge Heath Local Employment Location, and should provide a range of office, light industrial, and studio workspaces suitable for start-ups, SMEs, and creative industry businesses.
- The site is in multiple ownership, and landowners and developers should work together to develop a comprehensive design-led masterplan for redevelopment of this site, to ensure development is delivered sustainably. Effective engagement between landowners,

developers and leaseholders will be needed to facilitate potential land assembly and comprehensive redevelopment.

- This site could potentially be suitable for extra-care accommodation or accommodation for people with learning disabilities.

Form, massing, and heritage

- Height Strategy: Maximum height of 57m at the tallest point, which should be located within the former gasworks site. Heights should step down around the former gasworks.
- Development should respond positively to the special character of the Regents Canal Conservation Area and its setting, the scale, height, massing and fine urban grain of the surrounding built environment, and integrate heritage assets on site through retaining, reusing and enhancing the existing heritage assets, including gasholders no.2 and no.5, the Victorian buildings adjacent to the Regents Canal, and the Georgian cottages, including the associated setted street and railings. For further details, refer to the Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals.

Routes and streets

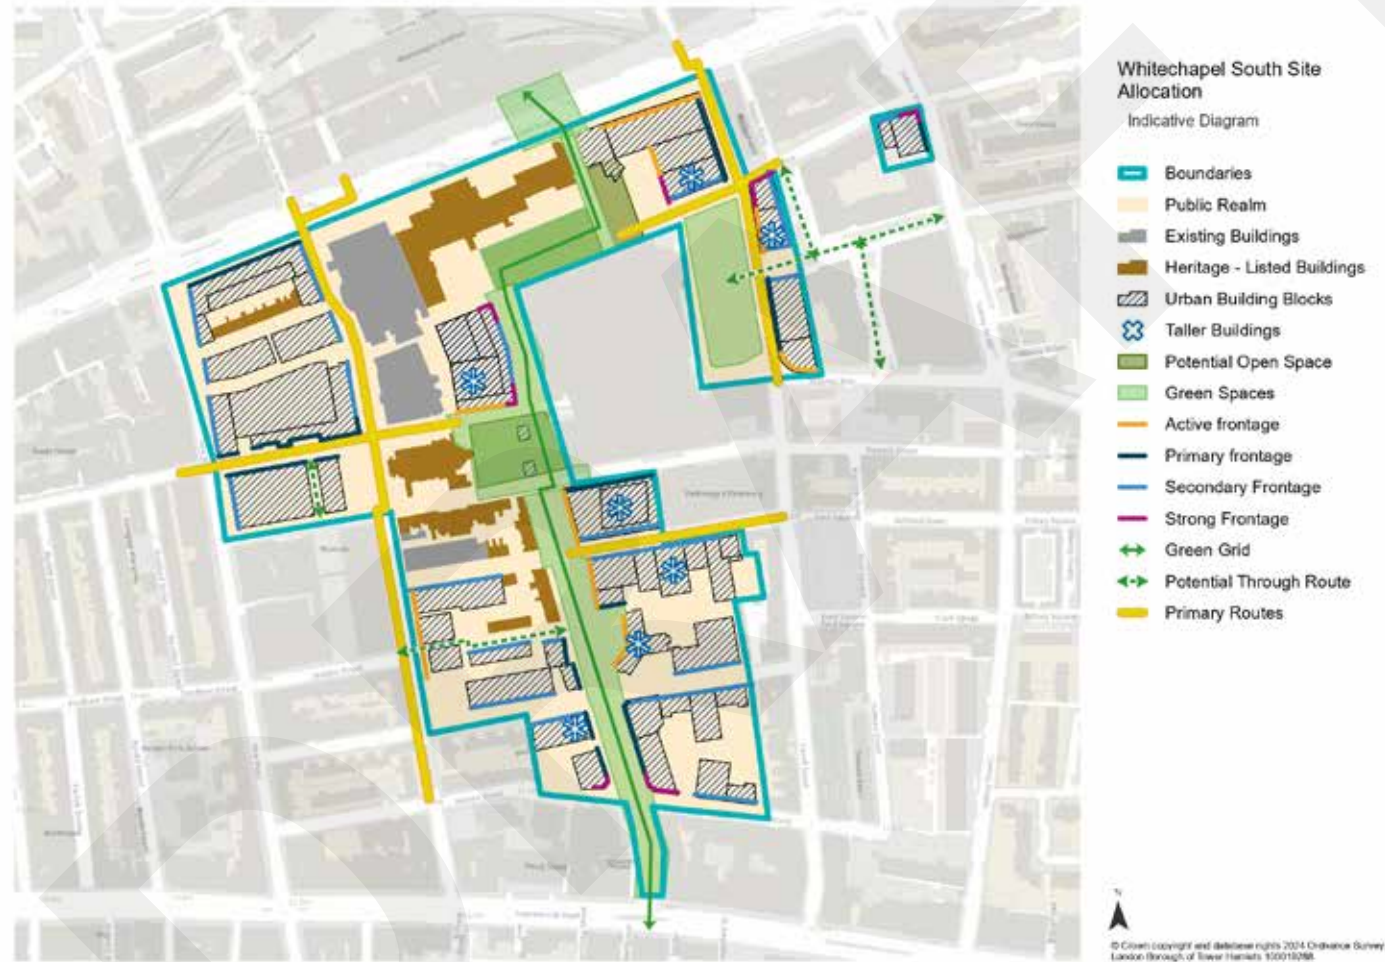

- Improve walking and cycling connections to, from and within the site. These should align with the existing urban grain to support permeability and link with Cambridge Heath Neighbourhood Centre. Development must provide public access along the waterfront at the Regents Canal, and provide good quality walking and cycling routes to the waterfront. Green grid improvements should be made along Emma Street, Hackney Road, Pritchard's Road, The Oval, and along the Regent's Canal, and provide good quality connections onwards to the green grid at Temple Street.

Environment and public realm

- Re-use The Oval as new public open space which positively contributes to the surrounding buildings and is well-connected to the new open space. The Oval should be fronted by a continuous building line following its footprint.
- All proposals for development within the site allocation should look to contribute to an overall provision of 1ha of new public open space across the allocation as a whole, delivered through a number of smaller open spaces and pocket parks.
- Provide active frontage at the waterside, set back from the canal; and positively frame the open space and The Oval to avoid excessive overshadowing.
- Improve the public realm with active site edges, particularly along Hackney Road, Pritchard's Road, Emma Street and The Oval. In addition, generous pavement and a linear landscaped square should be provided along Hackney Road, if this is made possible through redevelopment of the buildings that front it.

1.4 Whitechapel South

Figure 28: 1.4 Whitechapel South (indicative)

Site information	Details
Address	Whitechapel Road/Stepney Way/Varden Street
Area [ha]	9.99
Ward	Whitechapel
PTAL [2031]	6b
Planning designations	<ul style="list-style-type: none"> ● Area of substandard air quality ● Area of deficiency of access to nature ● Town Centre (Whitechapel District Centre) ● Local Employment Location ● Archaeological Priority Area (Mile End, tier 2) ● Conservation Area (London Hospital, part of site; Myrdle Street, part of site; Ford Square, part of site; Whitechapel Market, adjacent to site) ● Statutory listed buildings (Two K2 Telephone Kisoks, Grade II; The London Hospital, Grade II; 18-34 Mount Terrace, Grade II; Pillar Box in Rear Courtyard of London Hospital, Grade II; St Augustine with St Philip's Church, Grade II*; 26-42 Newark Street, Grade II; 43-69 Philpot Street, Grade II; 46-48 Ashfield Street, Grade II; 39-49 Walden Street, Grade II; 2-16 Walden Street, Grade II; 24-32 New Road and Attached Railings, Grade II; and numerous Grade II listed assets adjacent to the site)

Site information	Details
Relevant Permissions	<p>PA/15/02959 – Redevelopment to provide 12 buildings ranging from ground plus 2 – 23 storeys, comprising 343 residential dwellings, 168 specialist accommodation units, office floorspace, flexible office and non-residential institution floorspace, retail floorspace.</p> <p>PA/17/02825 – Partial demolition, including removal of the remaining west wing and the grocer's wing (behind retained façade), alteration and refurbishment of the former Royal London Hospital and erection of a part four-storey and part seven-storey extension (including partial basement) to provide a new Tower Hamlets Council Civic Centre.</p>

Site proposal	Details
Indicative capacities	<p>837 homes (65 on Royal Mail site, 772 on Whitechapel Estate site)</p> <p>425 student rooms (additional student housing on Floyer House site)</p> <p>93,000sqm non-residential floorspace (65,000sqm on NHS Life Sciences sites, 18,000 on Royal Mail site, 10,000sqm on Whitechapel Estate site)</p>
Phasing	2030-34, 2035-39

Land uses, activities, and delivery

- Development should consist of a mixed-use, residential-led scheme with a mix of retail, workspace and community uses.
- Acceptable land uses include:
 - Residential (Class C3)
 - Student housing, only at Floyer House (sui generis)
 - Town centre uses, including employment space for life sciences only on the existing NHS sites in the west of site and a small amount on the Whitechapel Estate (Class E)
 - Community uses (Class F1/F2)
- Required on-site infrastructure includes:
 - NHS primary health care facility (including
- The site is in multiple ownership, and landowners and developers should work together to develop a comprehensive design-led masterplan for redevelopment of this site, to ensure development is delivered sustainably. Effective engagement between landowners, developers and leaseholders will be needed to facilitate potential land assembly and comprehensive redevelopment.
- The existing sexual health facility (including HIV services) will need to be re-provided on site in accordance with the prevailing sexual health facility building guidance (e.g. Health Building Note 12-01: Consulting, examination and treatment facilities. Supplement A: Sexual and reproductive health clinics) unless an alternative location can be found which meets the requirements of the relevant community facility policies. A continued service will need to be maintained to the satisfaction of the council's public health team.
- The site is within the Whitechapel Local Employment Location, and should provide a range of small office spaces to meet local needs. Life Sciences developments will only be acceptable on the NHS-

owned sites in the west of the site allocation, between New Road and Turner Street. A small amount of additional life sciences development may be acceptable on the Whitechapel Estate site, but only as part of developments that provide at least as much standard housing (use class C3) as the current permission on that site. Beyond this, development of workspace should focus on local needs.

- Student housing will only be acceptable on the existing student housing site at Floyer House – this will contribute towards the continuing functioning of the QMUL campus in this area.
- This site could potentially be suitable for accommodation for people with learning disabilities.

Form, massing, and heritage

- Height Strategy: Taller elements should be focused around the existing tall building at the Royal London Hospital. Maximum heights of 68m on the Post Office site, 61m on Floyer House, 88m on the northern part of the Whitechapel Estate, and 64m on the southern part of the Whitechapel Estate. Heights should step down towards the west of the site.
- The impact of development on nearby heritage assets and conservation areas should be considered – heritage assets should be protected or enhanced, and any negative impacts mitigated, because heritage and historic conservation plays a vital role in benefitting place shaping, social cohesion and the economy. This includes the setting of the London Hospital Conservation Area. For further details, refer to the Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals.

Routes and streets

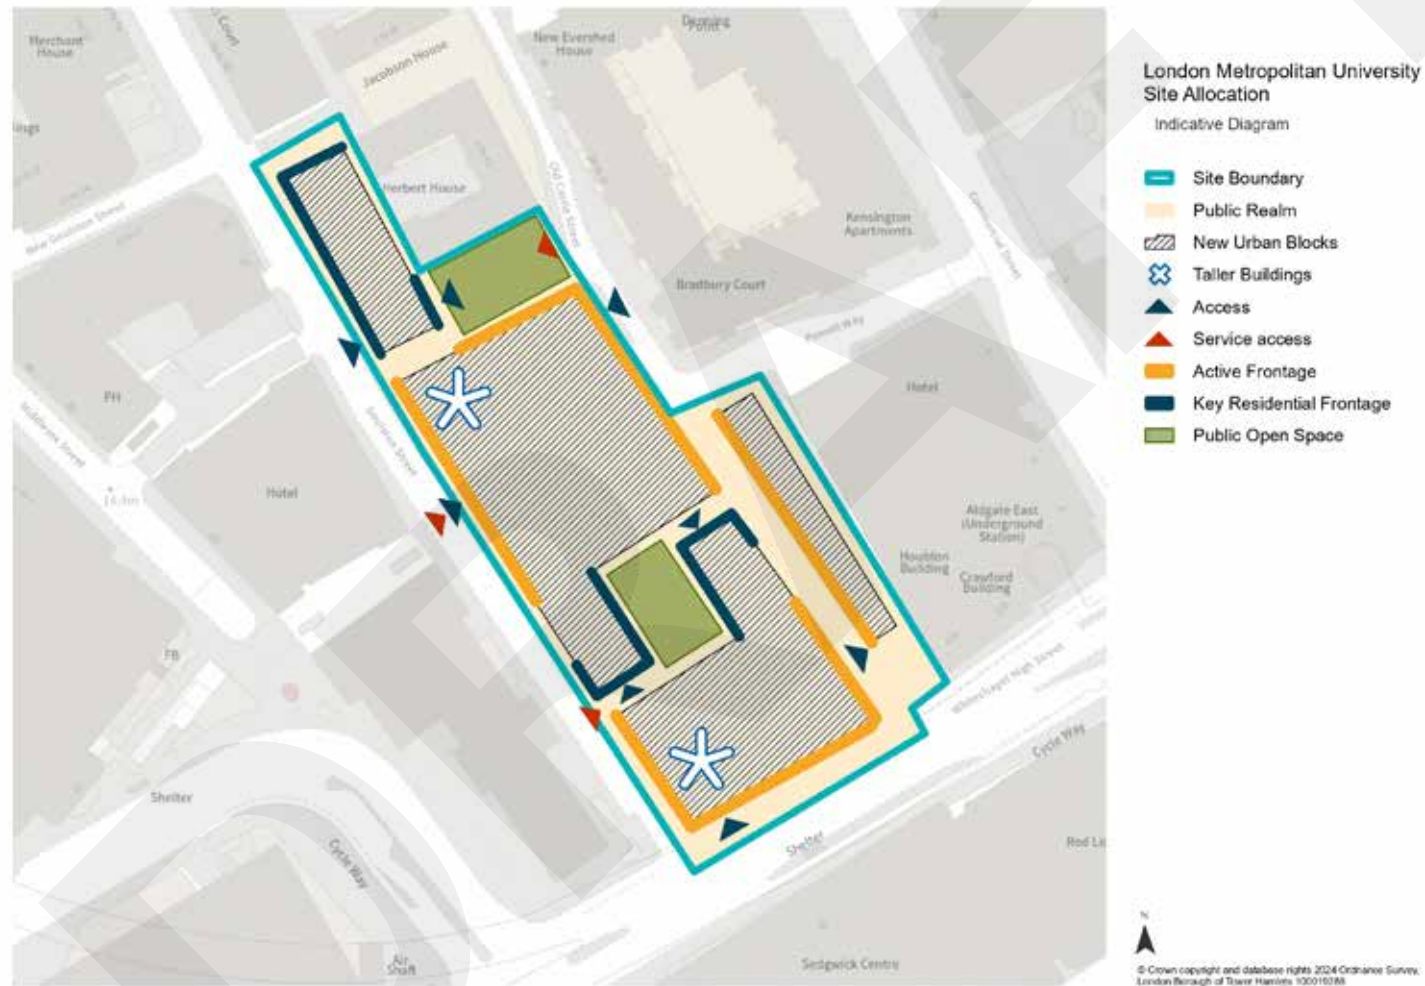

- Enhance connections to the Whitechapel North site allocation, and ensure the streetscape along Whitechapel High Street and adjoining streets is improved. Improvements to the green grid should be provided along Whitechapel High Street, Stepney Way, New Road, and Cavell Street, along with good quality connections to surrounding green grid routes. This is a large site, and connections need to be improved both north-south and east-west.

Environment and public realm

- Development should contribute to the delivery of a new and improved green open space (the Green Spine) stretching from Philpot Street to the new civic centre. It should be linear in nature and provide a direct visual link and improved north-south legibility across its length.
- Existing consented open space which has yet to be implemented on site is an integral element to the provision of one hectare of strategic open space and should be re-provided. Where opportunities exist, development will be expected to consolidate and integrate the consented open space with the new Green Spine to maximise its multi-functional use.
- Create a sense of place set around a public square behind the former Royal London Hospital building and new public square immediately to the east of St Augustine with St Philip's Church to positively integrate the life sciences and research hub with the new civic centre and the green spine.

1.5 London Metropolitan University

Figure 29: 1.5 London Metropolitan University (indicative)

Site information	Details
Address	Goulston Street/Whitechapel High Street
Area [ha]	1.03
Ward	Spitalfields and Banglatown
PTAL [2031]	6b
Planning designations	<ul style="list-style-type: none"> ● Area of substandard air quality ● London View Management Framework (view 25A.1 – The Queen’s Walk to Tower of London) ● Area of deficiency of access to nature ● Central Activities Zone ● Archaeological Priority Area (Aldgate and Portsoken, tier 2) ● Conservation Area (Wentworth Street, adjacent to site)
Relevant Permissions	None

Site proposal	Details
Indicative capacities	520 student rooms 33,500sqm of educational floorspace
Phasing	2030-34

Land uses, activities, and delivery

- Development should consist of a redevelopment of the university buildings to provide additional teaching space and student accommodation.
- Acceptable land uses include:
 - Student housing (sui generis)
 - Residential (Class C3)
 - Educational space (Class F1)
 - Town centre uses along the High Street (Class E)
- The site is within the CAZ, and active frontages and town centre uses should predominate at ground level.

Form, massing, and heritage

- Height Strategy: Maximum height of 63m at the tallest point, which should be located on the southwestern corner of the site, with an additional taller point of 56m further north. Heights should step down towards the existing residential buildings in the surrounding area.
- The impact of development on nearby conservation areas and on protected views should be considered – heritage assets should be protected or enhanced, and any negative impacts mitigated, because heritage and historic conservation plays a vital role in benefitting place shaping, social cohesion and the economy. This includes ensuring no negative impact on the backdrop of the view of the Tower of London. For further details, refer to the Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals.

- Some of the existing buildings contribute positively to the character of the area, and adaptive re-use of these existing buildings should be explored. This includes the brick-faced buildings along Whitechapel High Street, the original Calcutta House building, the Annex to Calcutta House, and the locally listed wash houses towards the north of the site.

Routes and streets

- Improve walking and cycling connections to and from the site, ensuring high quality connections to the underground stations at Aldgate and Aldgate East. Improvements to the green grid should be delivered along Whitechapel High Street, and good quality connections should be provided to the green grid route to the north of the site at Wentworth Street.

Environment and public realm

- Improved public realm and active frontages should be provided at principal entrances to key buildings, including along the Whitechapel High Street frontage, Goulston Street, and Old Castle Street.
- Due to the small size of this site, it cannot fulfil the requirement of policy DV8(1)(e) to provide 0.4ha of publicly accessible open space. Development on the site should therefore aim instead to provide smaller 'pocket parks' of publicly accessible open space and an improved public realm.

1.6 Whitechapel North

Figure 30: 1.6 Whitechapel North (indicative)

Site information	Details
Address	Durward Street/Brady Street/Vallance Road
Area [ha]	5.37
Ward	Spitalfields and Banglatown
PTAL [2031]	6a-6b
Planning designations	<ul style="list-style-type: none"> ● Area of substandard air quality ● Town Centre (Whitechapel District Centre) ● Local Employment Location ● Archaeological Priority Area (Whitechapel, tier 2; and London to Colchester Roman Road, tier 2) ● Conservation Area (Whitechapel Market; London Hospital and Myrdle Street, both adjacent to site) ● Statutory Listed Buildings (261-267 Whitechapel Road, Grade II; K2 Telephone Kiosk, Grade II; Kind Edward VII Jewish Memorial Drinking Fountain, Grade II; Parish Boundary Marker, Grade II; Albion Brewery Entrance Block, Grade II, adjacent to site; and numerous other Grade II listed assets adjacent to the site)
Relevant Permissions	None

Page 992

Site proposal	Details
Indicative capacities	<p>1,225 homes (575 on Sainsbury's site, 200 on Kempton Court site, 200 on Whitechapel Station site, 160 on Sports Centre site, 90 on Vallance Road site)</p> <p>At least 4,500sqm retail space (primarily on Sainsbury's site)</p>
Phasing	2030-34, 2035-39

Land uses, activities, and delivery

- Development should consist of a mixed-use, residential-led scheme with a mix of retail, workspace and community uses.
- Acceptable land uses include:
 - Residential (Class C3)
 - Town centre uses (Class E)
 - Community uses (Class F1/F2)
- Required on-site infrastructure includes:
 - Re-provision and enhancement of NHS primary health care facility
 - Re-provision of leisure centre
 - Community facility
- The site is in multiple ownership, and landowners and developers should work together to develop a comprehensive design-led masterplan for redevelopment of this site, to ensure development is delivered sustainably. Effective engagement between landowners,

developers and leaseholders will be needed to facilitate potential land assembly and comprehensive redevelopment.

- As part of the site allocation, the market facilities should be reprovided, with associated storage and waste facilities provided. The site could also potentially provide operational car parking for the market, to remove parking from Whitechapel Road.
- As part of the site allocation, the leisure centre should be reprovided with at least the same floorspace as the existing leisure centre, and with provision of a 3G artificial grass pitch.
- This site could potentially be suitable for accommodation for people with learning disabilities.

Form, massing, and heritage

- Height Strategy: Maximum heights at the tallest points of 56m at the Sainsbury's site and 52m at the corner of Vallance Road and Whitechapel Road, with heights stepping down around these points.
- Development on the Vallance Road site should repair and incorporate the locally listed building to the north of the street corner.
- The impact of development on nearby heritage assets and conservation areas should be considered – heritage assets should be protected or enhanced, and any negative impacts mitigated, because heritage and historic conservation plays a vital role in benefitting place shaping, social cohesion and the economy. For further details, refer to the Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals.

Routes and streets

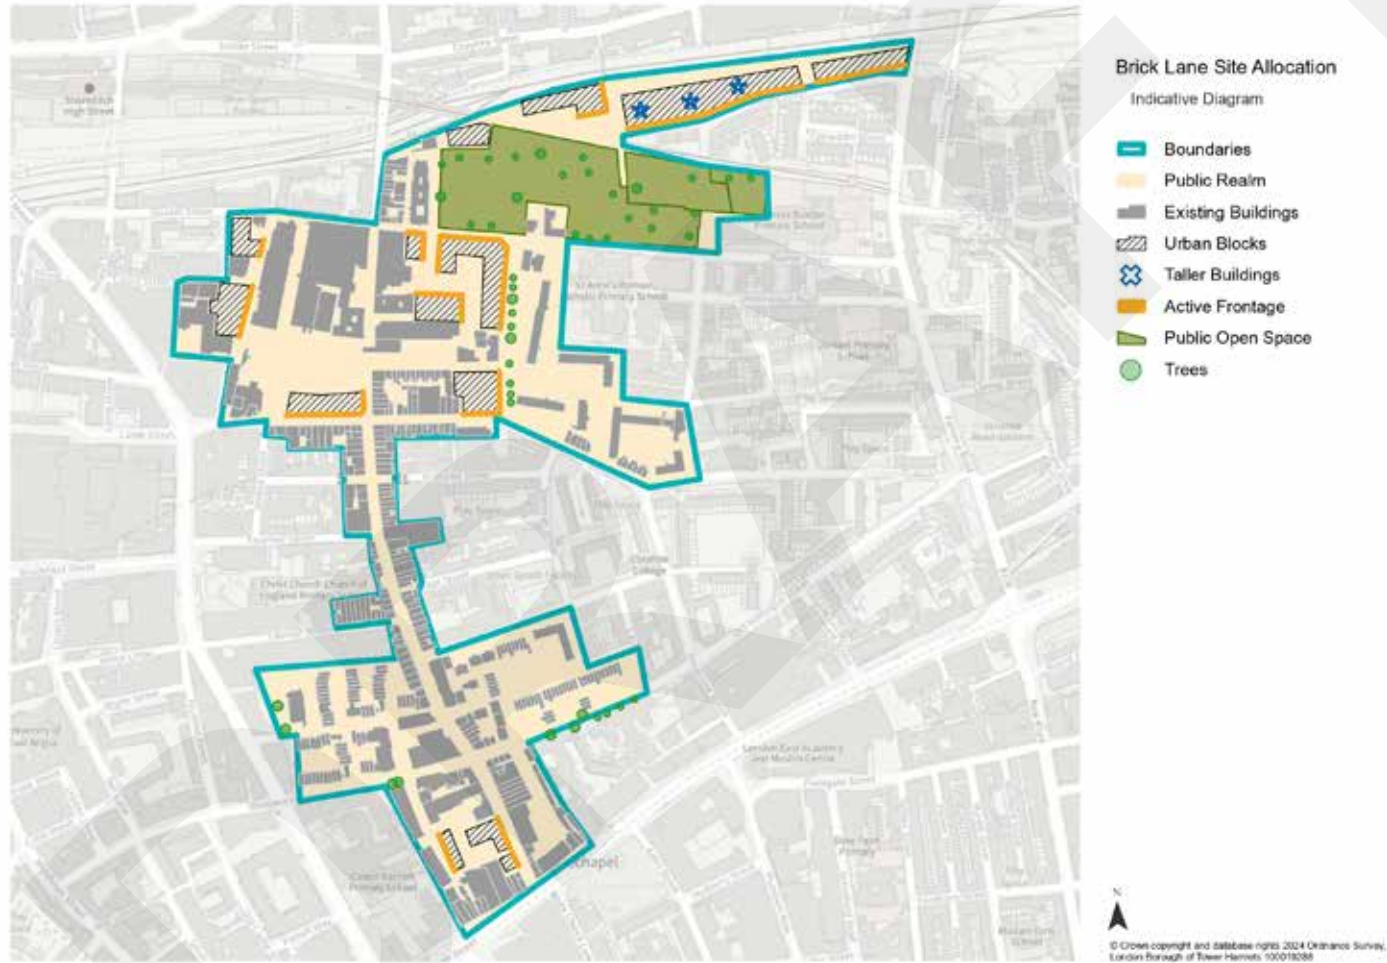

- Enhance connections to the Whitechapel South site allocation and ensure the streetscape along Whitechapel High Street and adjoining streets is improved. Improvements to the green grid should be delivered along Whitechapel High Street, Vallance Road, and Brady Street, along with good quality onward connections to surrounding green grid routes such as that along Old Montague Street. This is a large site, and connections need to be improved both north-south and east-west.
- Vehicle movements around the redeveloped supermarket should be carefully considered to minimise conflict between pedestrians, cyclists, and motorised vehicles.

Environment and public realm

- Parking for the re-provided supermarket should be provided in a way which minimises the negative impact on the public realm and on primary routes for pedestrians and cyclists. Similarly, the provision of market storage areas should be carefully considered to avoid large areas of dead frontage.

1.7 Brick Lane and Pedley Street

Figure 31: 1.7 Brick Lane and Pedley Street (indicative)

Site information	Details
Address	Brick Lane/Pedley Street

Planning designations	<ul style="list-style-type: none"> ● Area of substandard air quality (part of the site) ● London View Management Framework (views 9A.1 – King Henry VIII's Mound to St Paul's Cathedral, and 25A.1 – The Queen's Walk to Tower of London) ● Site of Importance for Nature Conservation (Spitalfields City Farm and Allen Gardens) ● Publicly Accessible Open Space (Allen Gardens, Allen Gardens Play Area, and Spitalfields City Farm) ● Town Centre (Brick Lane District Centre) ● Tower Hamlets Activity Area ● Neighbourhood Planning Area (Spitalfields) ● Archaeological Priority Area (Spitalfields and Brick Lane, tier 2) ● Conservation Area (Fournier Street) ● Statutory Listed Buildings (Director's House, Truman Brewery, Grade II*; Brewmaster's House, Truman Brewery, Grade II; Former Stables at Truman Brewery, Grade II; Engineer's House, Truman Brewery, Grade II; Vat House, Truman Brewery, Grade II; Black Eagle Brewery, Grade II; 35 Buxton Street, Grade II; and numerous Grade II listed assets adjacent to the site)

Site information	Details
Relevant Permissions	PA/20/00415 - Redevelopment to include erection of a part five storey office building with ground floor and first floor commercial units and two storey basement for provision of plant, servicing, storage and a gym.

Site proposal	Details
Indicative capacities page 996	<p>800 homes (410 on Fleet Street Hill and Pedley Street sites 250 on Truman Brewery East and Banglatown Cash & Carry sites 95 on Grey Eagle Street sites 45 on Osborn Street site)</p> <p>Up to 33,000sqm of non-residential floorspace (17,500sqm on Fleet Street Hill and Pedley Street sites 5,000sqm on Truman Brewery East and Banglatown Cash & Carry sites 1,500sqm on Grey Eagle Street sites 5,500sqm on Hanbury Street site 3,500sqm on Osborn Street site)</p>
Phasing	2024-29, 2030-34

Land uses, activities, and delivery

- Development should consist of a mixed-use, residential-led scheme with a mix of retail, workspace and community uses.
- Acceptable land uses include:
 - Residential (Class C3)
 - Town centre uses (Class E)
 - Community uses (Class F1/F2)
- Required on-site infrastructure includes:
 - Community facility
 - Improved crossings of the railway lines in the north of the site
 - Enhancements to public realm and Allen Gardens
- The site is in multiple ownership and consists of a number of fragmented sites with opportunities for redevelopment, and landowners and developers should work together with the council to implement a comprehensive design-led masterplan for redevelopment of this site, to ensure development is delivered sustainably. Effective engagement between landowners, developers and leaseholders will be needed to facilitate potential land assembly and comprehensive redevelopment.
- New employment spaces delivered on this site must include a majority of spaces that are suitable for small-scale local businesses that will serve the local community.

Form, massing, and heritage

- Height Strategy: Maximum height of 70m at the tallest point, which should be located on the Pedley Street site, with heights stepping down to a maximum of 39m on the Fleet Street Hill site. Heights on the rest of the site should respect the prevailing context of the conservation area, with maximum heights of 40m on the Truman Brewery, Cash & Carry, and Grey Eagle Street sites, and 32m on the Osborn Street site.
- The impact of development on nearby heritage assets and conservation areas should be considered – heritage assets should be protected or enhanced, and any negative impacts mitigated, because heritage and historic conservation plays a vital role in benefitting place shaping, social cohesion and the economy. In particular, the character of the Fournier Street Conservation Area should be preserved and, where possible, enhanced. For further details, refer to the Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals.

Routes and streets

- Improve walking and cycling connections to, from and within the site, particularly to connect up Allen Gardens, the Truman Brewery estate, and Shoreditch High Street station. These connections should align with the existing urban grain to support permeability and provide easy access to the district centre. Improved green grid routes should be delivered along Brick Lane, Fournier Street, Buxton Street, Quaker Street, and Wentworth Street, with good quality onward connections to adjoining green grid routes towards Shoreditch High Street Station and the adjacent Bishopsgate Goods Yard site allocation, and along Whitechapel High Street.

- There are a number of large street blocks within the site that present barriers to permeability, such as the Grey Eagle Street car park and other parts of the Truman Brewery estate, and the railway lines in the north of the site, and development should look to improve north-south and east-west connections through these blocks where possible.
- Vehicle movement along narrow streets in this area should be carefully considered to minimise conflict between pedestrians, cyclists, and motorised vehicles.

Environment and public realm

- Development should capitalise on opportunities to provide new small public open spaces, including pocket parks.
- Improvements to the public realm in this area should include additional street lighting, wayfinding, and street furniture, to create a place in which people can dwell, meet friends, and eat food, rather than just a place to pass through. Street furniture should be carefully considered and well-placed to ensure it creates sociable places and does not simply add to street clutter on busy routes.
- Applicants should consider how new development can contribute to explaining and emphasising the historic and cultural importance of Brick Lane.

23. Central

Location

23.1 The Central sub-area sits in the heart of the borough, bounded by London Borough of Hackney to the north, the London Legacy Development Corporation and the Leaside sub-area to the east, the Isle of Dogs and South Poplar sub-area to the south, and the City Fringe sub-area to the west. The sub-area is not a designated opportunity area, but has the capacity to deliver new development.

23.2 The sub-area is a collection of vibrant and distinctive town centres, transport interchanges and residential areas. The sub-area comprises parts of nine distinct character places (see Figure 26). The Tower Hamlets Urban Structure and Characterisation Study provides further information on the key elements of the local character of each place.

Vision

23.3 By 2038, the distinct character and identity of the Central sub-area will have been enhanced and strengthened. Growth will be focused around vibrant and revitalised town centres and neighbourhood parades, including Roman Road and Mile End town centres. New development will complement the well-established streetscape and character and the area's many heritage assets, and their settings will be preserved or enhanced through opportunities for new heritage-led development.

23.4 Access to and the quality of the area's green open spaces (including Victoria Park and Mile End Park) and network of waterspaces (including Regents Canal and Limehouse Cut) will be enhanced and

opportunities for new green links and open spaces will be maximised. New development will reduce the severance resulting from The Highway, Mile End Road and Commercial Road, the waterways and railway lines, and provide public realm improvements. Improved cycling and walking routes will increase local accessibility and access to strategic cycle routes and transport interchanges.

23.5 Employment in the area will remain primarily local and small-scale focused in town centres and transport hubs, including Bethnal Green, Mile End and Limehouse. Industrial locations along The Highway and Limehouse Cut will further complement existing employment opportunities and will accommodate an increasing number of flexible workspaces suited to new growth industries, including creative and digital industries.

23.6 Queen Mary University of London's role as a knowledge hub will be strengthened, with stronger connections to Mile End Neighbourhood Centre and its public transport interchange. The area will be home to a more diverse range of residential and student communities, with a particular focus on family housing which will benefit from access to varied open spaces.

Objectives

- a. Ensure the strategic north-south spine of Victoria Park and Mile End Park is protected and enhanced with walking and cycling links, whilst maximising opportunities to access the waterways for recreational use

- b. Support a mix of uses in town centres to facilitate community cohesion and strengthen their role, including employment, retail, civic, cultural and leisure uses
- c. Overcome the physical barriers of the road, rail and waterway network to increase connectivity within the area, improve permeability between transport nodes and town centres to strengthen interconnected places
- d. Encourage the regeneration of key historic buildings to preserve the area's diverse heritage assets and character
- e. Deliver a range of housing choice from student accommodation, family housing, infill development and intensification where it contributes to delivering mixed and balanced communities, and
- f. Support the expansion of Queen Mary University of London and associated uses, while ensuring good integration with surrounding areas.

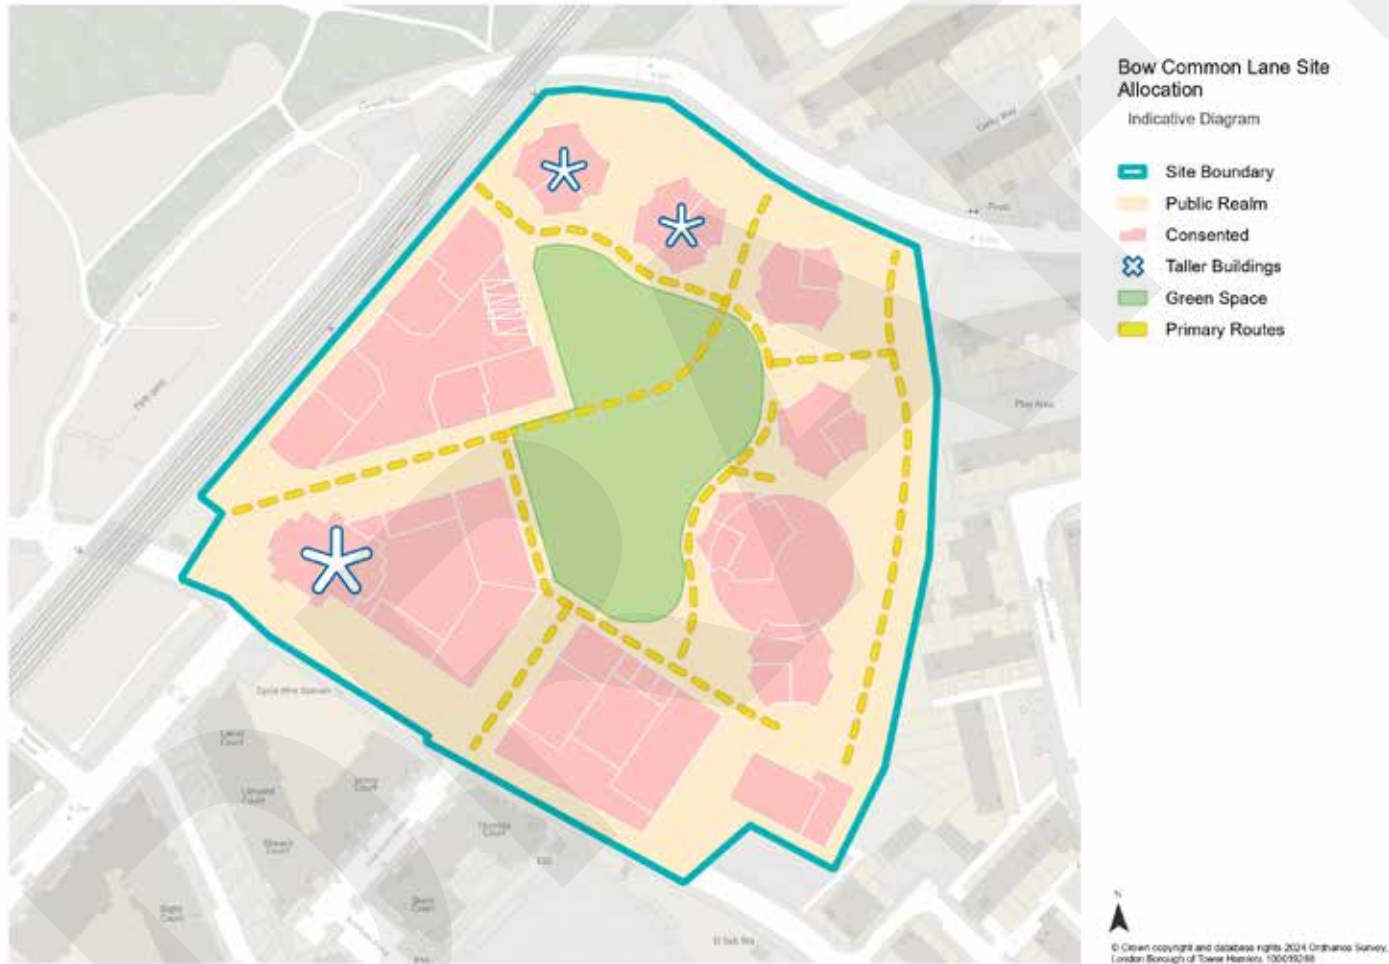

Site Allocations in the Central sub-area

2.1 Bow Common Lane

2.2 Chrisp Street

2.1 Bow Common Lane

Figure 32: 2.1 Bow Common Lane (indicative)

Site information	Details
Address	Bow Common Lane
Area [ha]	3.94
Ward	Bromley South
PTAL [2031]	2-3
Planning designations	<ul style="list-style-type: none"> ● Local Nature Reserve (Tower Hamlets Cemetery Park, adjacent to the site) ● Site of Importance for Nature Conservation (Tower Hamlets Cemetery Park and the Soane Centre, Old Railway at Fairfoot Road, part of Mile End Park SINC, all adjacent to the site) ● Metropolitan Open Land (Tower Hamlets Cemetery, adjacent to the site) ● Publicly Accessible Open Space (Bow Common Lane Gas Works) ● Conservation Area (Tower Hamlets Cemetery, adjacent to site)

Site information	Details
Relevant Permissions	<p>PA/19/02379 – outline permission for comprehensive mixed-use development for residential, business uses including office and flexible workspace, retail, financial and professional services, food and drink uses, community, education and cultural uses, a sixth form centre, assembly and leisure uses, public open space.</p> <p>PA/22/00905/S – approval of reserved matters for blocks A, B, and C, including the construction of residential units, flexible residential facilities, and commercial uses, together with new public open space.</p>

Site proposal	Details
Indicative capacities	1000 homes 2,500sqm retail/workspace/community/cultural uses
Phasing	2024-29, 2030-34

Land uses, activities, and delivery

- Development should consist of a mixed-use, residential-led scheme with a mix of retail, workspace, community and cultural uses and sixth form educational centre.
- Acceptable land uses include:
 - Residential (Class C3)
 - Town centre uses (Class E)
 - Community uses (Class F1/F2)
- Required on-site infrastructure includes:
 - Sixth Form education facility
 - Strategic consolidated open space of minimum 1 hectare
- Development should acknowledge the associated costs of decommissioning the gasworks and the relocation of any significant equipment and address any environmental pollution and on-site decontamination requirements caused by the gasworks. An assessment should be carried out to understand the potential contamination on site prior to any development taking place.

Form, massing, and heritage

- Height strategy: Maximum height of 89m at the tallest point, which should be located towards the western side of the site. Heights should step down towards the existing residential buildings to the south and east of the site.
- Respond positively to the scale, height, and massing of the surrounding built environment, and to the nearby conservation areas at Swaton Road and Tower Hamlets Cemetery Park and nature reserve. The impact of development on the conservation areas should be considered, and any negative impacts mitigated, because heritage and historic conservation plays a vital role in benefitting

place shaping, social cohesion and the economy. For further details, refer to the Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals.

Routes and streets

- Improve walking and cycling connections to, from and through the site, to address poor permeability created by the site. These should align with the existing urban grain to support legibility, particularly joining Knapp Road to Bow Common Lane, which should also see improvements to the green grid delivered. Good quality onward connections to the green grid routes along the railway arches and through the cemetery park should also be provided.
- Integrate the site with Tower Hamlets Cemetery Park through new or improved pedestrian and cycle routes.
- Ensure safe pedestrian and cycling access to the sixth form centre.

Environment and public realm

- Improve public realm with active site edges, particularly along Bow Common Lane.
- Provide active frontages along the railway to enhance the use and setting of the railway arches as a non-designated heritage asset.
- Implement noise screening measures/or a green buffer in areas bordering the railway line.
- In line with the Integrated Water Management Plan for the Isle of Dogs and South Poplar, opportunities for greywater re-use and rainwater harvesting should be investigated.

2.2 Crisp Street

Figure 33: 2.2 Crisp Street (indicative)

Site information	Details
Address	Chrisp Street
Area [ha]	3.92
Ward	Lansbury
PTAL [2031]	3-6a
Planning designations Page 1004	<ul style="list-style-type: none"> ● Area of substandard air quality (part of the site) ● Flood risk area ● Area of deficiency of access to nature ● Publicly Accessible Open Space (Chrisp Street Market) ● Town Centre (Chrisp Street District Centre) ● Archaeological Priority Area (Lea Valley, tier 3 – small part of site) ● Conservation Area (Lansbury) ● Statutory Listed Buildings (Chrisp Street Market Clock Tower, Grade II; Festival Inn, Grade II; Susan Lawrence and Elizabeth Lansbury School, Grade II, adjacent to site)

Site information	Details
Relevant Permissions	PA/16/01612 - Comprehensive redevelopment of the site with 19 new buildings ranging from 3 to 25 storeys providing 643 residential units, market enhancement, refurbishment of retained Festival of Britain buildings, reconfiguration and replacement of existing and provision of new commercial uses including new cinema, alterations and additions to existing Idea Store, flexible affordable workspace/ community space, office space, retail, financial and professional services and café/restaurant floor space, public house, hot food takeaway; upgrade and provision of new public open space including child play space.

Site proposal	Details
Indicative capacities	650 homes 20,000sqm of town centre and community uses
Phasing	2024-29

Land uses, activities, and delivery

- Development should consist of a mixed-use scheme combining residential uses with an enhanced town centre combining retail, workspace, community and cultural uses.
- Acceptable land uses include:
 - Residential (Class C3)
 - Town centre uses (Class E)
 - Leisure uses, such as a cinema (Sui generis)
 - Community uses (Class F1/F2)
- Required on-site infrastructure includes:
 - Idea Store re-provision
 - Youth centre re-provision
- Development should deliver a regenerated town centre for Poplar with a range of unit sizes, (including those suitable for independent and small local retailers), a market square and a re-provided Idea Store located on East India Dock Road.
- As part of the site allocation, the market facilities should be re-provided, with associated storage and waste facilities provided.
- This site could potentially be suitable for extra-care accommodation or accommodation for people with learning disabilities.

Form, massing, and heritage

- Height Strategy: Maximum height of 88m at the tallest point, which should be located at the southeast corner of the site. Additional taller point located in the section east of Crisp Street at a maximum height of 53m. Heights to step down towards the west and north of the site.
- The impact of development on nearby heritage assets and conservation areas should be considered – heritage assets should be

protected or enhanced, and any negative impacts mitigated, because heritage and historic conservation plays a vital role in benefitting place shaping, social cohesion and the economy. This includes the Festival Inn, Clocktower and Poplar Baths and the Lansbury Conservation Area. For further details, refer to the Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals.

Routes and streets

- Improve walking and cycling connections to, from and within the site – particularly to Langdon Park, Bartlett Park, Jollys Green, and All Saints DLR station. These should align with the existing urban form and grain to support east-west connectivity and wider permeability. An improved green grid connection should be provided through the centre of the site, with good quality onward connections to green grid routes at Cordelia Street and East India Dock Road.
- Development should ensure sufficient and well-integrated access arrangements for highways and servicing to the district centre and market, and should minimise conflict between pedestrians, cyclists, and motorised vehicles.

Environment and public realm

- Improve the public realm with active site edges, particularly along East India Dock Road and within the district centre.
- The provision of market storage areas should be carefully considered to avoid large areas of dead frontage.
- In line with the Integrated Water Management Plan for the Isle of Dogs and South Poplar, opportunities for greywater re-use and rainwater harvesting should be investigated.

24. Leaside

Location

24.1 The Leaside sub-area is located on the eastern side of the borough and forms part of the former London Plan's Lower Lea Valley opportunity area which stretches north comprising the boroughs of Newham and Hackney.

24.2 The London Legacy Development Corporation lies to the east of this area, and is the planning authority for the Fish Island and Bromley by-Bow character places within the borough, as well as Queen Elizabeth Olympic Park and surrounding areas.

24.3 The sub-area is a collection of vibrant and distinctive town centres, transport interchanges and residential areas. The sub-area comprises six distinct character places. The Tower Hamlets Urban Structure and Characterisation Study provides further information on the key elements of the local character of each place.

Vision

24.4 By 2038, the Leaside sub-area will experience comprehensive regeneration and redevelopment of former and underused industrial areas. Connectivity will be transformed with a series of new bridges and riverside walkways across the River Lea, crossings along the A12 and A13, and enhancements to the safety and connectivity of pedestrian and cycle routes through and around industrial areas including Bow Goods Yard, which will integrate existing and new communities in the area.

24.5 The development of the Lea River Park (including the Leaway) will provide a new strategic publicly accessible green space and a series

of new pedestrian and cycling routes, linking the River Lea to London's wider green grid network, including the Lee Valley Regional Park.

24.6 Development in the area will have sufficient transport and social infrastructure to facilitate the creation of thriving mixed communities alongside vibrant neighbourhood centres. Housing provision will be accelerated through the Poplar Riverside Housing Zone and delivered alongside new local employment, enterprise and business opportunities.

Objectives

- a. Improve strategic connections to overcome the physical barriers to movement created by the A12, A13 and the waterways
- b. Deliver the Lea River Park (including the Leaway) to provide a network of interconnected water and open spaces, green walking and cycling routes and improve access to and along the River Lea
- c. Improve local connections by creating a street pattern that increases permeability for ease of pedestrian and cyclist movement
- d. Support existing and new neighbourhood centres by improving accessibility to them to ensure they act as the civic heart of surrounding communities
- e. Contribute towards the delivery of new affordable homes and community facilities through Poplar Riverside Housing Zone regeneration
- f. Optimise former industrial/employment land and protect designated industrial areas whilst sensitively integrating industrial activities into their site context and enhancing the public realm and pedestrian and cycle connectivity.

Site information	Details
Relevant Permissions	<p>PA/16/02692 – Ailsa Wharf, Ailsa Street - Demolition of existing structures/buildings and the redevelopment of the site for a mixed use scheme providing 785 residential units and 2,954 sqm GIA commercial floorspace within a series of thirteen building blocks varying between 3 and 17 storeys (Maximum height of 59.9m).</p> <p>PA/19/01760 – Islay Wharf, Lochnagar Street - Demolition of existing warehouse building and redevelopment of the site for mixed use development comprising two blocks ranging in height between 12 storeys and 21 storeys, accommodating 351sqm of flexible uses classes, and residential accommodation on the upper floors providing 133 residential units.</p> <p>PA/19/02148 – Former Poplar Bus Depot, Leven Road – Part retention and part demolition of the existing boundary walls and the former tram shed depot arches, and retention of the three storey office building. Demolition of the remainder of the existing warehouse and the redevelopment of the site to provide 530 residential units, 2644sqm of workspace, 508sqm of flexible retail; professional services; and restaurant/bar uses, within buildings ranging from 3 storeys (20.2m) to 20 storeys (72.7m).</p>

Site proposal	Details
Land uses	Small open space, bridge
Indicative capacities	1,450 homes (785 on Ailsa Wharf, 133 on Islay Wharf, 530 on former bus depot) 6,500sqm commercial floorspace
Phasing	2024-29, 2030-34

Land uses, activities, and delivery

- Development should consist of a mixed-use, residential-led scheme with a mix of retail, workspace, community and cultural uses.
- Acceptable land uses include:
 - Residential (Class C3)
 - Small scale retail/town centre uses (Class E)
 - Community uses (Class F1/F2)
- Required on-site infrastructure includes:
 - Safeguarded bridge landing space for new crossing of the River Lea
- The site is in multiple ownership, and landowners and developers should work together to develop a comprehensive design-led masterplan for redevelopment of this site, to ensure development is delivered sustainably. Effective engagement between landowners, developers and leaseholders will be needed to facilitate potential land assembly and comprehensive redevelopment.
- Development should facilitate a new or extended bus route through the site to enhance access to public transport.
- Access to public transport and delivery of a walking and cycling bridge across the River Lea will need to be improved in line with

the phasing of development and in coordination with the London Borough of Newham.

- Development proposals must include the raising of flood defences in line with the Thames Estuary 2100 Plan. Along the riverside, development should be set back from the water by a minimum of 16m to allow adequate access to flood defences for future maintenance and upgrading.
- This site could potentially be suitable for extra-care accommodation or accommodation for people with learning disabilities – in such circumstances, planning use class C2 may also be acceptable on this site, but only for these uses.

Form, massing, and heritage

- Height strategy: Maximum height of 80m at the tallest point, which should be located to the south of Lochnagar Street. Heights should step down away from this point, and particularly towards to A12 in the west of the site.
- The impact of development on nearby heritage assets and conservation areas should be considered – heritage assets should be protected or enhanced, and any negative impacts mitigated, because heritage and historic conservation plays a vital role in benefitting place shaping, social cohesion and the economy. For further details, refer to the Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals.

Routes and streets

- Improve walking and cycling connections to, from and within the site - particularly to and along the River Lea to Bromley-by-Bow District Centre, Aberfeldy Neighbourhood Centre and to Langdon Park DLR station. These should align with the existing urban grain to support permeability and legibility. Provide an active and well-defined street frontage along Lochnagar Street, and create a stronger east-west link between the River Lea and the Langdon Park DLR station.
- Development must provide public access along the waterfront at the River Lea. Improved green grid routes should be delivered along the River Lea waterfront and along Lochnagar Street, with good quality onward connections to the adjoining green grid route at Zetland Street and the Teviot Estate site allocation.
- Development should provide appropriate riparian lifesaving infrastructure along the riverside path.

Environment and public realm

- Improve the quality of and create a positive sense of place in the form of an active square at the corner of the A12 and Lochnagar Street.
- Development should step back from the River Lea to avoid excessive overshadowing and provide active frontage on the riverside.
- In line with the Integrated Water Management Plan for the Isle of Dogs and South Poplar, opportunities for greywater recycling should be investigated.

3.2 Leven Road

Figure 35: 3.2 Leven Road (indicative)

Site information	Details
Address	Leven Road
Area [ha]	8.06
Ward	Lansbury
PTAL [2031]	1a-2
Planning designations	<ul style="list-style-type: none"> ● Flood risk area ● Site of Importance for Nature Conservation (River Thames and Tidal Tributaries, adjacent to the site) ● Archaeological Priority Area (Lea Valley, Tier 3)

Site information	Details
Relevant Permissions	PA/18/02803 – Poplar Gas Holder Site - A hybrid planning application (part outline/part full) comprising: <ol style="list-style-type: none"> 1.) In Outline, a comprehensive mixed-use development comprising a maximum of 195,000 sqm of floorspace for Residential; Business uses including office and flexible workspace; Retail, financial and professional services, food and drink uses; Community, education and cultural uses; A secondary school; Assembly and leisure uses; Public open space including riverside park and riverside walk. 2.) In Full, for 66,600 sqm of residential arranged in four blocks, ranging from 4, 5, 6, 8, 9, 12 and 14 (57.6m) storeys in height, up to 2700 sqm of office and flexible workspaces, up to 500 sqm community and up to 2000 sqm leisure uses, up to 2500 sqm of retail and food and drink uses.

Site proposal	Details
Indicative capacities	2,800 homes 8,500sqm commercial floorspace
Phasing	2024-29, 2030-34

Land uses, activities, and delivery

- Development should consist of a mixed-use, residential-led scheme with a mix of retail, workspace, community and cultural uses, and provision of a secondary school.
- Acceptable land uses include:
 - Residential (Class C3)
 - Town centre uses (Class E)
 - Community uses (Class F1/F2)
- Required on-site infrastructure includes:
 - Secondary school
 - Strategic consolidated open space of minimum 1 hectare
 - Safeguarded bridge landing space for new crossings of the River Lea
- Ensure the open space is designed and usable for sport and recreation and located adjacent to the River Lea, featuring the Leaway and water spaces. It should meet the minimum size of one hectare.
- Development should facilitate a new or extended bus route to serve the site to enhance access to public transport.
- Access to public transport and pedestrian and cycle connectivity across the River Lea will need to be improved in line with the phasing of development and in coordination with London Borough of Newham.
- Open space should be delivered in the earliest phase of development.
- Development should acknowledge the associated costs of decommissioning the gasworks and the relocation of any significant equipment and address any environmental pollution and on site decontamination requirements caused by the gas works. An

assessment should be carried out to understand the potential contamination on site prior to any development taking place.

- Prior to demolition, the gasholders on the site did not accommodate any employment floorspace and therefore this floorspace does not need to be re-provided as part of any new scheme.
- Development proposals must include the raising of flood defences in line with the Thames Estuary 2100 Plan. Along the riverside, development should be set back from the water by a minimum of 16m to allow adequate access to flood defences for future maintenance and upgrading.
- This site could potentially be suitable for extra-care accommodation or accommodation for people with learning disabilities – in such circumstances, planning use class C2 may also be acceptable on this site, but only for these uses.

Form, massing, and heritage

- Height Strategy: Maximum height of 76m at the tallest point, which should be located in the northern part of the site, near the river and the new park. Heights to step down from this point towards the existing lower-rise residential context to the south and east.
- Development should retain and reuse parts of the dismantled gas holder no. 1 within the future development, and reflect the industrial heritage of the site through measures such as, but not limited to, public art, landscaping and building design.

Routes and streets

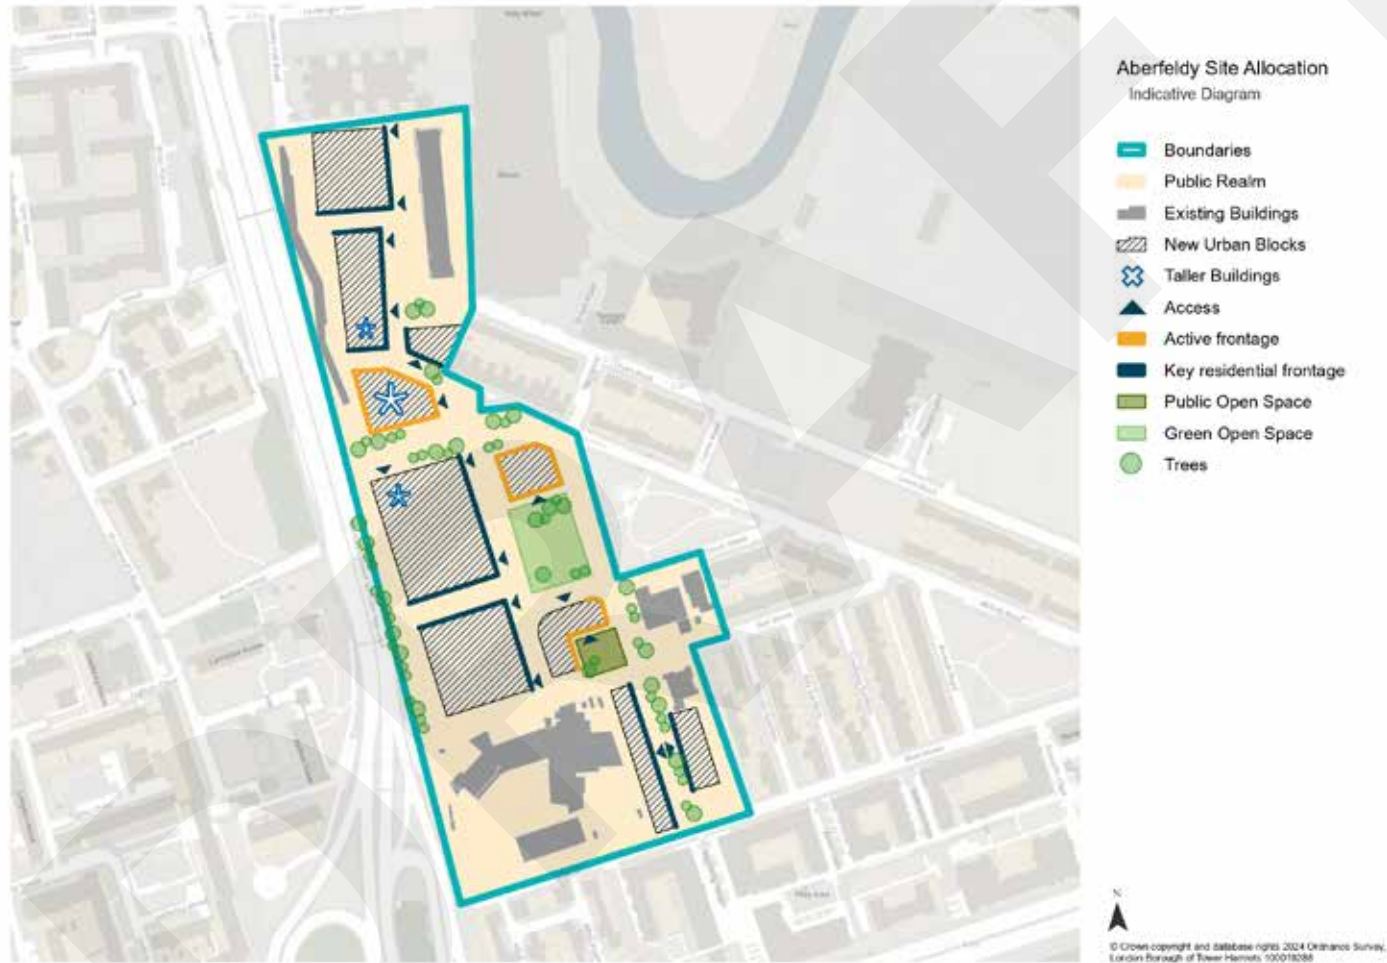

- Improve walking and cycling connections to, from within the site - particularly to link with the River Lea Park walk, Aberfeldy Neighbourhood Centre to Langdon Park DLR station and East India DLR station. Provide safe pedestrian and cycling access to the secondary school. Development must provide public access along the waterfront at the River Lea. Improvements to green grid routes should be delivered through the site and along the River Lea waterfront, with good onward connections provided to green grid routes at Oban Street and Abbott Road, and to the Aberfeldy Estate and Blackwall Trading Estate site allocations.
- Development should provide appropriate riparian lifesaving infrastructure along the riverside path.

Environment and public realm

- Development should step back from the River Lea to avoid excessive overshadowing and enable activation of the riverside.
- Improve the public realm with active site edges, particularly along Leven Road.
- In line with the Integrated Water Management Plan for the Isle of Dogs and South Poplar, opportunities for greywater recycling should be investigated.

3.3 Aberfeldy Estate

Figure 36: 3.3 Aberfeldy Estate (indicative)

Site information	Details
Address	Abbott Road/Dee Street
Area [ha]	7.24
Ward	Lansbury
PTAL [2031]	1b-3
Planning designations	<ul style="list-style-type: none"> ● Area of substandard air quality ● Flood risk area ● Publicly Accessible Open Space (Aberfeldy Playground; Aberfeldy Millennium Green, Leven Road Park, Braithewaite Park – all adjacent to the site) ● Town centre (Aberfeldy Street neighbourhood centre) ● Archaeological Priority Area (Lea Valley, Tier 3) ● Conservation Area (Balfron Tower, adjacent to the site) ● Statutory listed buildings (Former Bromley Hall School, grade II; adjacent to the site)
Relevant Permissions	PA/11/02716 - Outline planning application for the mixed-use redevelopment of the existing Aberfeldy estate comprising: Creation of 1,176 residential units in 15 new blocks between 2 and 10 storeys in height plus 1,743sqm retail space, professional services, food and drink and 1,786 community and cultural uses.

Site proposal	Details
Indicative capacities	1,550 homes 3,500sqm commercial/town centre floorspace
Phasing	2024-29, 2030-34

Land uses, activities, and delivery

- Development should consist of a mixed-use, residential-led scheme with a mix of retail, workspace, community and cultural uses, and provision of a primary school.
- Acceptable land uses include:
 - Residential (Class C3)
 - Town centre uses (Class E)
 - Community uses (Class F1/F2)
- Required on-site infrastructure includes:
 - Primary school expansion (with re-provision of any playing fields, MUGAs, or sports facilities)
 - Community facility (re-provision)
 - Strategic consolidated open space of minimum 1 hectare
- Delivery should be phased so that a revitalised Aberfeldy neighbourhood centre is delivered within the first phase of the programme, to avoid uncertainty for retailers over the status of the centre and to ensure the new centre is embedded in the community as increasing numbers of new residents come to live in the surrounding area. Within the town centre, active frontages and town centre uses should predominate at ground level.
- The site may be appropriate for some small-scale employment uses on the A12 frontage to help manage the hostile roadside environment in terms of noise and air quality for new and existing residents.

- This site could potentially be suitable for extra-care accommodation or accommodation for people with learning disabilities – in such circumstances, planning use class C2 may also be acceptable on this site, but only for these uses.
- This site could potentially be suitable for extra-care accommodation or accommodation for people with learning disabilities.

Form, massing, and heritage

- Height Strategy: Maximum height of 80m at the tallest point, which should be located at the northern end of Abbott Road. Heights should step down from this point towards the lower-rise residential context in the east and south of the site, and towards Bromley Hall School to the north of the site.
- A strong built frontage should address the A12 along the site's western boundary. The scale of development along the A12 edge should vary, to avoid a feeling that the estate is presenting a 'wall' to the road and turning inwards. Given the busy nature of this principal urban road, building frontages should step away from the route. This may permit some mitigation measures along the route to be introduced to help delivery better air quality and help manage noise pollution issues.
- The impact of development on nearby heritage assets and conservation areas should be considered – heritage assets should be protected or enhanced, and any negative impacts mitigated, because heritage and historic conservation plays a vital role in benefitting place shaping, social cohesion and the economy. This includes ensuring that development does not dominate the listed Bromley Hall School or undermine the setting of, and views towards, Balfron Tower. The prominence of Balfron Tower should be preserved from borough-designated viewpoints. Any tall buildings in these

views must be subservient to Balfron Tower and be located so that they do not disrupt the silhouette of the building on the skyline. For further details, refer to the Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals, and the Tower Hamlets Views and Landmarks Study.

Routes and streets

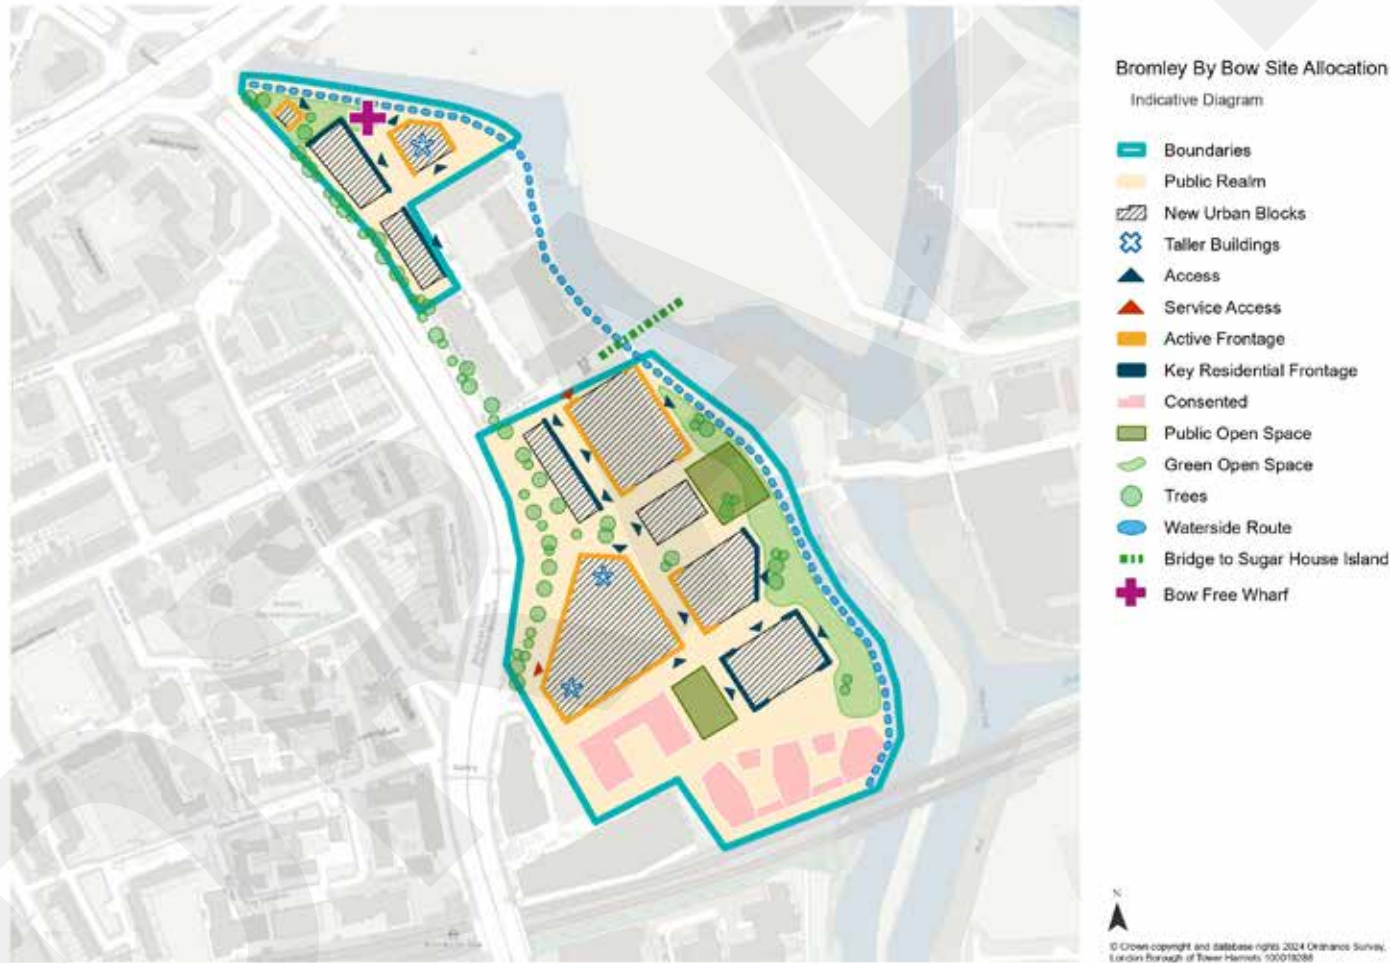

- Improve walking and cycling connections to, from and within the site. These should align with the existing urban grain to support permeability and legibility. The existing complex network of streets and cul-de-sacs should be replaced by a permeable street grid network which fully integrates and makes direct connections with its context creating a stronger and more legible street network across the estate. Improved green grid routes should be delivered along Aberfeldy Street, Blair Street, and Abbott Road, with good onward connections provided to Jolly's Green and green grid routes across the A12 and A13 and towards the Leven Road and Teviot Estate site allocations.
- Aberfeldy Street will be a strong and more legible public route across the estate, which will better establish connections with new development to the south and provide direct connections to the riverside area at the north.

Environment and public realm

- Existing open space at Millennium Green, Leven Road Park, and Braithewaite Park should be retained and improved. There should be a net increase in the overall provision of public open space through redevelopment of the site. Access to the public open space should be improved, alongside improvements to the facilities and quality of the space itself.

3.4 Bromley by Bow

Figure 37: 3.4 Bromley by Bow (indicative)

Site information	Details
Address	Hancock Road/Three Mill Lane
Area [ha]	6.26
Ward	Bromley North
PTAL [2031]	4-6a
Planning designations Page 1020	<ul style="list-style-type: none"> ● Area of substandard air quality ● Flood risk area ● Site of Importance for Nature Conservation (Lea Valley, adjacent to the site) ● Archaeological Priority Area (Lea Valley, Tier 3) ● Conservation Area (Three Mills) ● Statutory listed buildings (Tide Mill, grade I; Clock Mill, grade II; Office Opposite Clock Mill, grade II; and Paved Roadway between House Mill and Clock Mill, grade II; all adjacent to the site)
Relevant Permissions	17/00344/FUL – Imperial Street - Development of a mixed-use scheme to include five buildings, ranging between 3 and 14 storeys in height, which would comprise 407 residential units, 339 sqm of employment space, 274 sqm of flexible retail space.

Site proposal	Details
Indicative capacities	1,300 homes (400 on Imperial Street site, 200 on North Bow River Village site, 700 on Tesco site) 20,000sqm commercial/community floorspace

Site proposal	Details
Phasing	2024-29, 2030-34, 2035-39

Land uses, activities, and delivery

- Development should consist of a mixed-use, residential-led scheme with a mix of retail, workspace, community and cultural uses, and provision of a primary school, community centre, and improved connections across the River Lea.
- Acceptable land uses include:
 - Residential (Class C3)
 - Town centre uses (Class E)
 - Community uses (Class F1/F2)
- Required on-site infrastructure includes:
 - Primary school
 - Community centre
 - Safeguarded bridge landings for improved connections across the River Lea
 - Improved A12 junction
 - Strategic consolidated open space of minimum 1.2 hectares
- Proposals will need to include an appropriate mix and balance of uses that together have the potential to function as a District Centre.
- The site is in multiple ownership, and landowners and developers should work together to implement a comprehensive design-led masterplan for redevelopment of this site, to ensure development is delivered sustainably. Effective engagement between landowners, developers and leaseholders will be needed to facilitate potential land assembly and comprehensive redevelopment.
- Landing for bridges from Sugar House Lane will need to be incorporated into development proposals. The opportunity to create

a new ped/cycle bridge link over the River Lee Navigation to the regeneration of the Hunts Lane area should be explored.

- This site could potentially be suitable for accommodation for people with learning disabilities – in such circumstances, planning use class C2 may also be acceptable on this site, but only for these uses.
- Development must ensure the full operational use of Bow Free Wharf can continue unimpeded, and that new development is designed in such a way that residents will not be exposed to excessive noise or other forms of pollution from the wharf. Vehicle access to the wharf should be designed in such a way as to minimise conflict between wharf uses and residential uses.

Form, massing, and heritage

- Height Strategy: Maximum height of 50m at the tallest point, which should be located to the south of the site, on the Imperial Street plot. Additional points of height of maximum 44m can be located towards the western side of the Tesco site and on the northern part of the site. Building heights should step down towards the east of the site.
- A hard urban edge should be formed along the urban A12 frontage, with builds typically rising to approximately 10 storeys. A softer, more informal and stepped down edge should be formed along the river front - taking proper account of the historic character of the Three Mills Island area.
- The impact of development on nearby heritage assets and conservation areas should be considered – heritage assets should be protected or enhanced, and any negative impacts mitigated, because heritage and historic conservation plays a vital role in benefitting place shaping, social cohesion and the economy. For further details, refer to the Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals.

Routes and streets

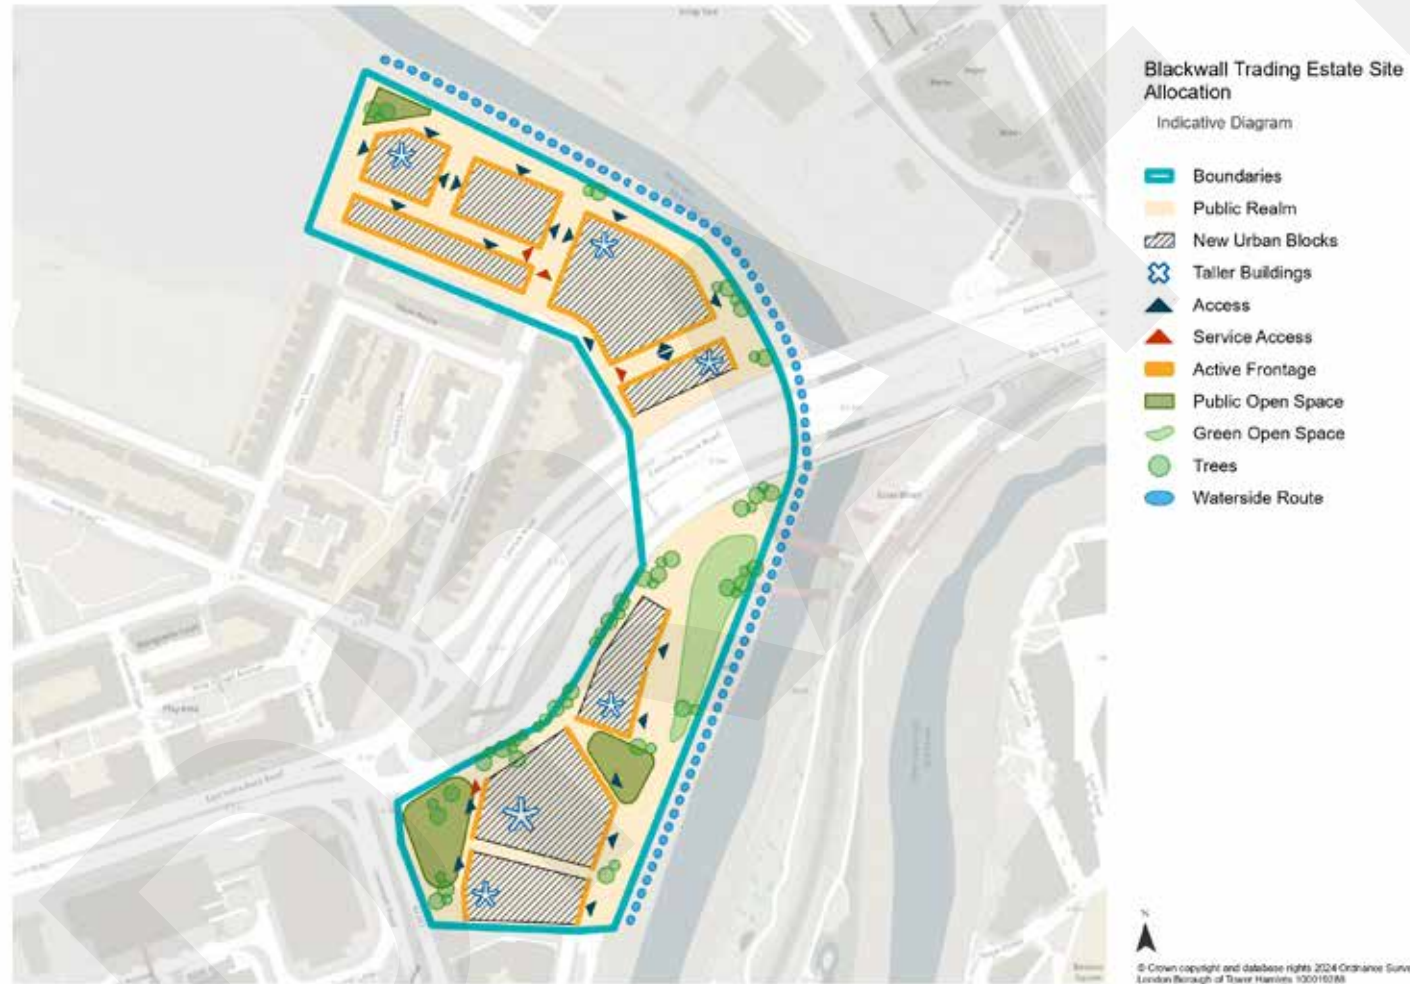

- To maximise the opportunities to deliver a successful new centre and community in this location, improved linkages across the A12 (including through measures to improve safety in the underpasses beneath the A12) and links to the east across the River Lea are essential to improve local and wider connectivity and integration of new and existing communities across the area.
- An improved junction which provides vehicular and pedestrian access from the site to and across the A12 is required, to improve access to the wider Bow area and to Bromley-by-Bow Station. This should include at-grade pedestrian and cycle crossings and the potential to facilitate the 'Bow Vision' bus route, connecting through Bromley-by-Bow to Sugar House Island via a potential new bridge.
- Development must provide public access along the waterfront at the River Lea, and improved access points onto the north canal towpath. Improved green grid routes should be delivered along Three Mills Lane, Imperial Street, and along the River Lea waterfront, with good quality onward connections across the A12 to join the rest of the green grid. Careful consideration should be given as to how to best route the riverside path around Bow Free Wharf to ensure its continued operation.
- Development should provide appropriate riparian lifesaving infrastructure along the riverside path.

Environment and public realm

- High quality new public open spaces should be created along the waterfront, particularly focused on the area where Three Mills Lane crosses the River Lea.

3.5 Blackwall Trading Estate and Leamouth Road Depot

Figure 38: 3.5 Blackwall Trading Estate and Leamouth Road Depot (indicative)

Site information	Details
Address	Leamouth Road/Lanrick Road
Area [ha]	5.10
Ward	Poplar/Blackwall and Cubitt Town
PTAL [2031]	1b-5
Planning designations	<ul style="list-style-type: none"> ● Area of substandard air quality ● Flood risk area ● Site of Importance for Nature Conservation (River Thames and Tidal Tributaries, and Bow Creek Ecology Park, both adjacent to the site) ● Local Industrial Location (Blackwall Trading Estate) ● Archaeological Priority Area (Lea Valley, Tier 3; and Limmo, Tier 2) ● Tall Building Zone (Leamouth) ● Statutory listed buildings (Entrance Gateway, grade II; and East India Dock Wall and Gateway, grade II; both adjacent to the site)
Relevant Permissions	None

Site proposal	Details
Indicative capacities	775 homes (375 on depot site, 400 on trading estate site) 35,000sqm non-residential floorspace 6,500sqm replacement depot (if needed)

Site proposal	Details
Phasing	2035-39

Land uses, activities, and delivery

- Development should consist of a mixed-use, residential- and light industrial-led scheme, with some potential for other commercial uses.
- Acceptable land uses include:
 - Residential (Class C3)
 - Light industrial uses (Class E) – must at least replace the current floorspace
 - Commercial and town centre uses (Class E)
 - Community uses (Class F1/F2)
 - Replacement council depot – if needed (Sui generis)
- Required on-site infrastructure includes:
 - NHS primary health care facility or community facility (as needed)
 - A13 connector bridge – passing underneath the A13
- The site is partly within a Local Industrial Location, and development must provide at least the same amount of light industrial floorspace as currently exists on the site, and this may be secured by condition or other legal agreement as light industrial space in perpetuity.
- The site currently contains a council vehicle depot. This should be reprovided as part of development, unless a separate site elsewhere can be secured for a suitable depot use, in which case the floorspace that is freed-up by the relocation of the depot should be used for additional housing and active ground floor uses.
- The site is in multiple ownership, and landowners and developers should work together to develop a comprehensive design-led masterplan for redevelopment of this site, to ensure development is

delivered sustainably. Effective engagement between landowners, developers and leaseholders will be needed to facilitate potential land assembly and comprehensive redevelopment.

- This site could potentially be suitable for extra-care accommodation or accommodation for people with learning disabilities – in such circumstances, planning use class C2 may also be acceptable on this site, but only for these uses.

Form, massing, and heritage

- Height strategy: Maximum height of 71m at the tallest points, which should be located towards the southern end of the site. Heights should step down towards the centre of the site, and rise up again along the River Thames in the northern part of the site to a maximum of 46-49m in the northwestern part of the site.
- The impact of development on nearby heritage assets should be considered – heritage assets should be protected or enhanced, and any negative impacts mitigated, because heritage and historic conservation plays a vital role in benefitting place shaping, social cohesion and the economy. For further details, refer to the Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals, and the Tower Hamlets Views and Landmarks Study.

Routes and streets

- Improve walking and cycling connections to, from and within the site, particularly along the river and towards the new park and bridge crossings at the Leven Road site allocation, and towards City Island neighbourhood centre and Canning Town town centre and underground station in the London Borough of Newham. These

should align with the existing urban grain where possible to support permeability and legibility, and should connect to the adjacent Leven Road site allocation.

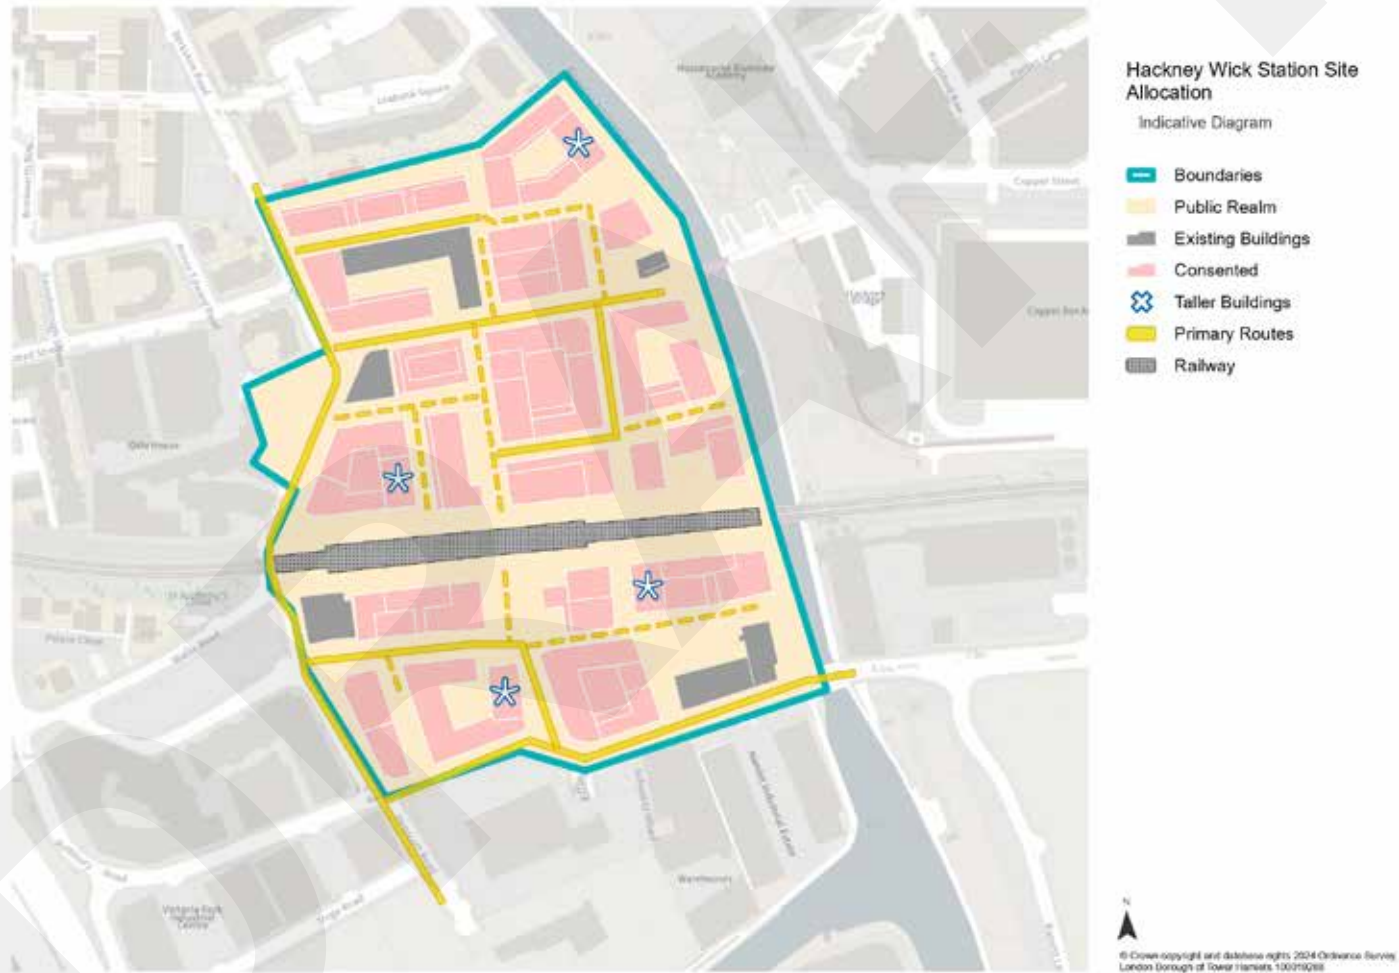

- Land should be secured to provide a connector bridge that runs underneath the A13 to connect both sides of the site, to complete the pathway up the River Lea, and to allow pedestrians and cyclists to travel north and south without needing to cross the busy A13, giving easier access to facilities at Aberfeldy neighbourhood centre and open space on the Leven Road site allocation.
- Development must provide public access along the waterfront at the River Lea. Improved green grid routes should be provided along Oban Street and along the River Lea waterfront, with good quality onward connections towards the green grid at Abbott Road and the Leven Road and Aberfeldy Estate site allocations.
- Vehicle movements around the redeveloped light industrial space and the redeveloped depot should be carefully considered to minimise conflict between pedestrians, cyclists, and motorised vehicles.
- Development should provide appropriate riparian lifesaving infrastructure along the riverside path.

Environment and public realm

- Incorporate a significant amount of riverside public open space, with elements of biodiversity that complement the adjacent Bow Creek Ecology Park Site of Importance for Nature Conservation across the River Lea in the London Borough of Newham.

3.6 Hackney Wick Station

Figure 39: 3.6 Hackney Wick Station (indicative)

Site information	Details
Address	White Post Lane
Area [ha]	6.39
Ward	Bow East
PTAL [2031]	3-4
Planning designations Page 1026	<ul style="list-style-type: none"> ● Area of substandard air quality ● Flood risk area ● Site of Importance for Nature Conservation (Lea Valley, adjacent to the site) ● Metropolitan Open Land (Lee Valley Regional Park, adjacent to the site) ● Town centre (Hackney Wick neighbourhood centre) ● Archaeological Priority Area (Lea Valley, Tier 3) ● Conservation Area (Fish Island)
Relevant Permissions	16/00166/OUT – Hackney Wick Masterplan - Outline planning application for the demolition of 28,281sqm of existing buildings on site and development of a phased comprehensive mixed use development of up to 119,242sqm floorspace. Residential of up to 78,931sqm to deliver approx. 874 units; Employment of a minimum of 29,908sqm; Retail of up to 4,493sqm; and Community Facilities for a minimum of 381sqm and up to 2,318sqm.

Site information	Details
Relevant Permissions	16/00271/OUT – Queen's Yard - Hybrid planning application comprising outline planning permission for a new theatre providing up to 1,500sqm of floorspace, and detailed planning permission for the demolition of all buildings on site and mixed use redevelopment to provide flexible commercial floorspace, residential, and enhanced public realm. 17/00112/FUL – 55-69 Rothbury Road - Demolition of buildings/structures and redevelopment of the site, comprising the erection of a five-storey building, plus basement level, with a total gross internal floor area of 2630sqm of Class B1 (Business) floorspace with shared amenities and facilities. 22/00095/RMA – Hackney Wick Masterplan - Application for the Approval of Reserved Matters of layout, scale, appearance and landscaping for Plot E/F, Plot J East and Plot K2 North of the Hackney Wick Masterplan to provide 190 residential units, 3,984sqm commercial space and 180sqm community/leisure space.

Site proposal	Details
Indicative capacities	800 homes across the whole site (300 on Tower Hamlets portion of site) 6,500sqm commercial and community floorspace
Phasing	2024-29, 2030-34

Land uses, activities, and delivery

- Development should consist of a mixed-use, employment-focused scheme with a mix of residential, retail, workspace, and creative and cultural uses.
- Acceptable land uses include:
 - Residential (Class C3)
 - Retail/town centre uses (Class E)
 - Employment uses (Class E)
 - Community uses (Class F1/F2)
 - Theatre (sui generis)
- Required on-site infrastructure includes:
 - Community facility
- This is a cross-boundary site with the London Borough of Hackney. Development should coordinate consultation across planning authorities and address cross-boundary issues.
- Proposals on this site should be in accordance with the principles of the Hackney Wick Masterplan.
- Development should deliver a mix of uses around the rebuilt Hackney Wick Station, integrate with established retail frontage at Felstead Street and Prince Edward Road, and utilise buildings of heritage value.
- The overall amount of existing employment floorspace (B Use Class) within the allocation boundary must be maintained, with a

particular emphasis on retaining and providing for creative and cultural industries and any other businesses that are compatible with residential use.

- Queen's Yard will act as a high-quality public space defined by a mixture of cultural and public uses that complement existing uses such as The White Building and the Yard Theatre. In line with policy CI5, development should aim to protect the theatre use on this site.
- Workspace provision should be provided at both upper and ground-floor levels to acknowledge the variety of workspace typologies.
- This site could potentially be suitable for extra-care accommodation.

Form, massing, and heritage

- Height Strategy: Maximum height of 43m at the tallest point, which should be located towards the centre of the site, between White Post Lane and Rothbury Road. An additional taller point of maximum 33m should be located on the Queen's yard site, with heights stepping down around these higher points.
- The impact of development on nearby conservation areas should be considered – heritage assets should be protected or enhanced, and any negative impacts mitigated, because heritage and historic conservation plays a vital role in benefitting place shaping, social cohesion and the economy. For further details, refer to the Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals.

Routes and streets

- A new direct and legible north-south connection which structures the heart of the area should be delivered between Wallis Road and Monier Road, integrated with Hackney Wick Station and an improved

bridge over the Hertford Union Canal extending from Roach Road. A fine grain of streets, passageways and yards should be established that should create informal secondary connections to the canal edge.

- Development must provide public access along the waterfront at the Lee Navigation Canal. Improved green grid routes should be provided along the Lee Navigation Canal, with good quality onward connections to the green grid route along the Hertford Union Canal.

Environment and public realm

- Existing streets should be reinforced with strong building edges and active ground floors, and new high quality public realm should be provided throughout the allocation. Queen's Yard should act as a high quality public space defined by a mixture of cultural and other public spaces.

3.7 Hepscott Road

Figure 40: 3.7 Hepscott Road (indicative)

Site information	Details
Address	Hepscott Road/Trego Road
Area [ha]	3.08
Ward	Bow East

Planning designations Page 1030	<ul style="list-style-type: none"> ● Area of substandard air quality ● Flood risk area ● Site of Importance for Nature Conservation (London's Canals, and Disused Railway, Bow, both adjacent to the site) ● Metropolitan Open Land (Lee Valley Regional Park, adjacent to the site) ● Archaeological Priority Area (Lea Valley, Tier 3) ● Conservation Area (Fish Island and White Post Lane)

Site information	Details
Relevant Permissions	<p>16/00451/OUT - Hybrid' planning application for mixed-use redevelopment of 2.88ha site comprising: up to 39 new/refurbished buildings/blocks to provide for a mix of land uses comprising: Residential (475 units); Commercial and Community Uses (up to 11,018sqm).</p> <p>17/00225/FUL - Application for full planning permission for demolition of the existing building and erection of a new building ranging between one and six storeys in height to provide 1,915sqm of commercial floorspace at ground and lower-ground floor level and 52 residential units on the upper floors.</p>

Site proposal	Details
Indicative capacities	525 homes 11,000sqm commercial and community floorspace
Phasing	2024-29

Land uses, activities, and delivery

- Development should consist of a mixed-use, residential-led scheme with a mix of retail, workspace, and creative and cultural uses, and delivery of a linear park and crossings of the canal.
- Acceptable land uses include:
 - Residential (Class C3)
 - Small scale retail/town centre uses (Class E)
 - Community uses (Class F1/F2)
- Required on-site infrastructure includes:
 - Improved crossing of the Hertford Union Canal
 - Strategic consolidated open space of at least 1.2ha
- Development should enable the delivery of improved or new north-south connections across the canal
- This site could potentially be suitable for extra-care accommodation.

Form, massing, and heritage

- Height Strategy: maximum height of 32m, with buildings varying in height across the site.
- The impact of development on nearby conservation areas should be considered – heritage assets should be protected or enhanced, and any negative impacts mitigated, because heritage and historic conservation plays a vital role in benefitting place shaping, social cohesion and the economy. For further details, refer to the Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals.

Routes and streets

- Development should provide new walking and cycling routes through the site providing connections to the Hertford Union Canal towpath, Roach Point Bridge, and Hackney Wick Station. Development must provide public access along the waterfront at the Hertford Union Canal. Improved green grid routes should be provided along the Hertford Union Canal waterfront, with good quality onward connections to the rest of the green grid network, including along the Lee Navigation Canal.

Environment and public realm

- Development should respond positively to the waterside setting, enhance the character of the canal and enhance strategic views west towards central London.
- Proposals should provide a high-quality frontage and deliver public realm improvements to Wansbeck Road.

3.8 Sweetwater

Figure 41: 3.8 Sweetwater (indicative)

Site information	Details
Address	Carpenters Road/Bassett Lane
Area [ha]	11.16
Ward	Bow East
PTAL [2031]	1b-3
Planning designations	<ul style="list-style-type: none"> ● Site of Importance for Nature Conservation (Lea Valley, adjacent to the site) ● Metropolitan Open Land (Lee Valley Regional Park, adjacent to the site) ● Archaeological Priority Area (Lea Valley, Tier 3) ● Conservation Area (Fish Island)

Site information	Details
Relevant Permissions	<p>11/90621/OUTODA – Sweetwater masterplan - Comprehensive, phased, mixed use development within the future Queen Elizabeth Olympic Park.</p> <p>13/00508/REM - Application for the approval of reserved matters for hard and soft landscaping for Canal Park.</p> <p>16/00039/REM – Reserved Matters application for the provision of a two form entry primary school, as well as playing field and associated changing rooms.</p> <p>21/00069/REM – Sweetwater Phase 4 - Application for the approval of reserved matters for the development of 373 residential units, 452sqm retail floorspace, 733sqm employment floorspace, a 493sqm nursery and a 896sqm space for library use and community use.</p> <p>21/00042/REM – Sweetwater Phase 5 - Application for the approval of reserved matters for the development of 399 residential units, a 1,257sqm health centre or retail floorspace, 584sqm retail floorspace and 272sqm flexible retail/employment floorspace.</p>

Site proposal	Details
Indicative capacities	775 homes 4,500sqm commercial and community floorspace
Phasing	2024-29, 2030-34

Land uses, activities, and delivery

- Development should consist of a mixed-use, residential-led scheme with a mix of retail, workspace, and community uses, and provision of a library, nursery, health care facility, and bridges across the canal.
- Acceptable land uses include:
 - Residential (Class C3)
 - Small scale retail/town centre uses (Class E)
 - Community uses (Class F1/F2)
- Required on-site infrastructure includes:
 - Library
 - HS primary health care facility
 - Nursery
 - Provision of bridges across the Lee Navigation Canal
 - Retention and improvement of existing open space
- New bridge links should be provided across the Lee Navigation that align with the street pattern of Hackney Wick and Fish Island, in order to provide improved access to amenities, movement routes, and transport infrastructure for new residents.
- This site could potentially be suitable for extra-care accommodation.

Form, massing, and heritage

- Height Strategy: Maximum height of 43m at the tallest point, which should be located in the northeastern part of the site. Heights should step down gradually towards the south of the site.
- The impact of development on nearby conservation areas should be considered – heritage assets should be protected or enhanced, and any negative impacts mitigated, because heritage and historic conservation plays a vital role in benefitting place shaping, social cohesion and the economy. For further details, refer to the Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals.

Routes and streets

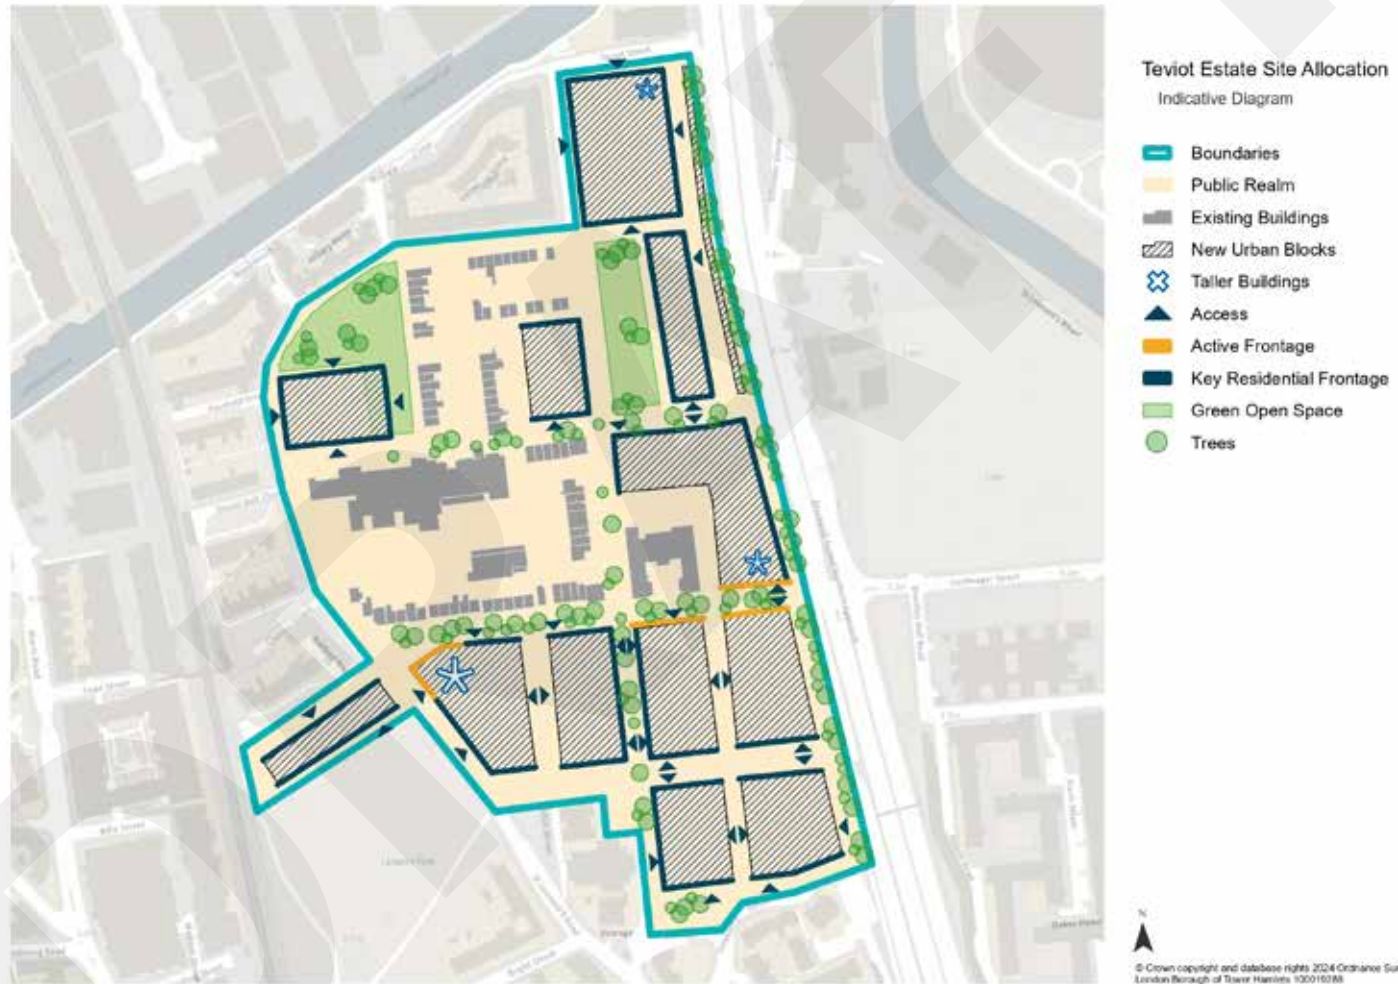

- Development should support the continuation of direct east-west connections from Hackney Wick and Fish Island to the primary school that has already been delivered in the southern part of this site and Queen Elizabeth Olympic Park. Development must provide public access along the waterfront to the east and west of the site.

Environment and public realm

- Active ground floor frontages and high quality public realm should be provided along east-west routes that cross the allocation.

3.9 Teviot Estate

Figure 42: 3.9 Teviot Estate (indicative)

Site information	Details
Address	Teviot Street/Zetland Street
Area [ha]	10.08
Ward	Lansbury
PTAL [2031]	2-4
Planning designations Page 1036	<ul style="list-style-type: none"> ● Area of substandard air quality ● Flood risk area ● Area of deficiency of access to nature ● Site of Importance for Nature Conservation (London's Canals, adjacent to the site) ● Metropolitan Open Land (Lee Valley Regional Park, adjacent to the site) ● Publicly Accessible Open Space (Wyvis Street Open Space; and Langdon Park – adjacent to the site) ● Archaeological Priority Area (Lea Valley, Tier 3) ● Conservation Area (Langdon Park; and Limehouse Cut and Balfron Tower, adjacent to the site) ● Statutory listed buildings (Church of St Michael and All Angels, grade II; and War Memorial, grade II)
Relevant Permissions	None

Site proposal	Details
Indicative capacities	1,200 homes 5,000sqm commercial/community floorspace
Phasing	2024-29, 2030-34

Land uses, activities, and delivery

- Development should consist of a mixed-use, residential-led scheme with a mix of retail, workspace, community and cultural uses, and provision of a primary school.
- Acceptable land uses include:
 - Residential (Class C3)
 - Small scale retail/town centre uses (Class E)
 - Community uses (Class F1/F2)
- Required on-site infrastructure includes:
 - Primary school expansion (with reprovision of any playing fields, MUGAs, or sports facilities)
 - Community facility
 - Improvements to existing open spaces at Langdon Park and Uamvar Street
 - Safeguarded landing space for bridge across Limehouse Cut Canal
- A cluster of local retail and community uses could be reprovided along Zetland Street from the current location on Teviot Street.
- This site could potentially be suitable for extra-care accommodation or accommodation for people with learning disabilities – in such circumstances, planning use class C2 may also be acceptable on this site, but only for these uses.

Form, massing, and heritage

- Height Strategy: Maximum height of 50m at the tallest point, which should be located in the western end of the site near Langdon Park. Along the A12, buildings should reach a maximum height of 36-39m. Heights should step down away from these points.
- A strong built frontage should address the A12 along the site's eastern boundary. The scale of development along the A12 edge should vary, to avoid a feeling that the estate is presenting a 'wall' to the road and turning inwards. Given the busy nature of this principal urban road, building frontages should step away from the route. This may permit some mitigation measures along the route to be introduced to help deliver better air quality and help manage noise pollution issues.
- The impact of development on nearby heritage assets and conservation areas should be considered – heritage assets should be protected or enhanced, and any negative impacts mitigated, because heritage and historic conservation plays a vital role in benefitting place shaping, social cohesion and the economy. This includes ensuring that development does not undermine the setting of, and views towards, Balfron Tower. The prominence of Balfron Tower should be preserved from borough-designated viewpoints. Any tall buildings in these views must be subservient to Balfron Tower and be located so that they do not disrupt the silhouette of the building on the skyline. For further details, refer to the Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals, and the Tower Hamlets Views and Landmarks Study.

Routes and streets

- Improve walking and cycling connections to, from and within the site. These should support permeability and legibility. In particular, improving east-west permeability is a priority, with redevelopment of the estate enabling the establishment of smaller street blocks and a more open and connected set of streets. Development must provide improved public access to the waterfront at the Limehouse Cut Canal. Improved green grid routes should be delivered along Zetland Street and St Leonard's Road, with good quality onward connections to Langdon Park, and to adjoining green grid routes at Chrisp Street across the DLR tracks and at Lochnagar Street across the A12 in the Ailsa Street site allocation.

Environment and public realm

- Opportunities should be sought to extend and improve Langdon Park in its current location by ensuring that all of the park's edges are addressed by good quality frontage. Improved public open space and public realm should also be provided towards the north of the estate, around the community centre.

25. Isle of Dogs and South Poplar

Location

25.1 The Isle of Dogs and South Poplar sub-area is located to the south-east of the borough, bounded by the River Thames to the south, River Lea and the London Borough of Newham to the east, and East India Dock Road to the north.

25.2 The sub-area falls within the London Plan's Isle of Dogs and South Poplar opportunity area.

25.3 The sub-area is a collection of vibrant and distinctive town centres, employment hubs, transport interchanges and residential areas. The sub-area comprises eight distinct character places (see Figure 36). The Tower Hamlets Urban Structure and Characterisation Study provides further information on the key elements of the local character of each place.

Vision

25.4 By 2038, the Isle of Dogs and South Poplar will have a cohesive mix of housing, employment and leisure uses within distinctive, inclusive and vibrant neighbourhoods, which have a strong sense of place.

25.5 South Poplar will be integrated with neighbouring areas in the Isle of Dogs, capitalising on the opportunities in Canary Wharf and Blackwall. New development at Canary Wharf will reinforce and strengthen its role as a global commercial and business centre. There will be additional local employment opportunities in South Poplar and Isle of Dogs to support a range of flexible start-ups and small-to-medium enterprises.

25.6 Development will be of exemplary quality and capable of accommodating densities to support sustainable places and reinforce local character, where appropriate. This will result in a greener and more attractive living and working environment, befitting the waterfront setting.

25.7 Canary Wharf's role as a Metropolitan Centre will expand and diversify to meet the needs of the wider area. Redevelopment of sites will also support revitalised town centres (including new neighbourhood centres at South Quay and London City Island) and a range of functions, such as community facilities and play spaces.

25.8 The opening of the Elizabeth line will facilitate the provision of new homes and jobs to serve both existing and future communities. New and enhanced connections across strategic roads, docks and the River Thames, together with public realm improvements, will enhance walking and cycling across the area. Further improvements to the sustainable transport network (including enhancements to the Docklands Light Railway and river-based services) will allow people to better access jobs, services and visitor attractions.

Objectives

- a. Support the delivery of high quality interconnected places which respond to local heritage assets and the area's distinctive character
- b. Address severance across the area and to surrounding areas through connectivity enhancements as well as new linkages over the waterways and road network
- c. Manage development intensification and associated impacts on the environment and existing communities

- d. Support vibrant and mixed town centres through enhancing the commercial and office employment offer in Canary Wharf as well as a range of flexible small-to-medium enterprises in surrounding areas
- e. Deliver new and improved open and water spaces, which are accessible and well integrated into new development
- f. f. Improve the transport network and secure the necessary strategic and local infrastructure, such as schools, health and community facilities.

Site allocations in the Isle of Dogs and South Poplar sub-area

- 4.1 Aspen Way
- 4.2 Billingsgate Market
- 4.3 Crossharbour
- 4.4 Limeharbour
- 4.5 Marsh Wall East
- 4.6 Marsh Wall West
- 4.7 Millharbour
- 4.8 North Quay
- 4.9 Reuters
- 4.10 Riverside South
- 4.11 Westferry Printworks
- 4.12 Wood Wharf
- 4.13 10 Bank Street
- 4.16 Westferry/Park Place

4.1 Aspen Way

Figure 43: 4.1 Aspen Way (indicative)

Site information	Details
Address	Aspen Way
Area [ha]	5.48
Ward	Poplar
PTAL [2031]	3-5
Planning designations	<ul style="list-style-type: none"> ● Area of substandard air quality ● Flood risk area ● Area of deficiency of access to nature ● Tower Hamlets Activity Area ● Neighbourhood Planning Area (Poplar) ● Archaeological Priority Area (Isle of Dogs, tier 3; and Poplar, tier 2) ● Conservation Area (St Mathias Church) ● Statutory listed buildings (New City College, Grade II)
Relevant Permissions	None

Site proposal	Details
Indicative capacities	780 homes 21,000sqm educational floorspace 2,000sqm other non-residential floorspace
Phasing	2030-34, 2035-39

Land uses, activities, and delivery

- Development should consist of a mixed-use, residential-led scheme with a mix of retail, workspace, community and cultural uses and the reprovision of a college, community centre, football pitches, and transport depot.
- Acceptable land uses include:
 - Residential (Class C3)
 - Town centre uses (Class E)
 - Community uses (Class F1/F2)
 - Transport facilities (Sui generis)
- Required on-site infrastructure includes:
 - Reprovision of college
 - Reprovision of community centre and associated football pitches (of at least equivalent quality and size as the current football pitches on site)
 - Reprovision of DLR depot
 - Improved pedestrian crossing over Aspen Way
 - Strategic consolidated open space of minimum 1 hectare
- Development should enable the continued use of the existing depot.
- Proposals on this site should be in accordance with the principles of the South Poplar Masterplan SPD. This has been developed between landowners and the council in order to positively address the social, economic and environmental disparities between Poplar and Canary Wharf.
- Where landowners and developers can reach agreement on potential land swaps, different options for massing and layout of the site may be acceptable.

Form, massing, and heritage

- Height Strategy: Maximum height of 91m at the tallest point, which should be in the southern-central portion of the site. Heights should step away from this point to the east and west, and should step away significantly towards the existing lower scale residential context to the north.
- Heights and layout should ensure that One Canada Square retains its prominence, and ensure that the silhouette of One Canada Square, and particularly its distinctive pyramid, remain visible in views from north and northwest.
- The impact of development on nearby heritage assets and conservation areas should be considered – heritage assets should be protected or enhanced, and any negative impacts mitigated, because heritage and historic conservation plays a vital role in benefitting place shaping, social cohesion and the economy. The setting of adjacent housing should also be protected through appropriate screening and landscaping. For further details, refer to the Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals.

Routes and streets

- Address the physical barriers and poor connectivity created by Aspen Way, with new and improved walking and cycling routes. This could be facilitated through the provision of improved connections, including new bridges or decking across Aspen Way connecting the site to the Billingsgate Market and North Quay sites.
- Strengthen walking and cycling connections to Poplar DLR station, Poplar High Street, East India Dock Road and Canary Wharf station. Green grid improvements should be delivered along Poplar High Street and through the site towards Poplar DLR station, with good quality onward connections to Poplar Recreation Ground and across Aspen Way.

Environment and public realm

- Create a positive sense of place with a public square and public green open space that integrates north-south links and Poplar DLR station, and improve the quality of spaces around and between buildings and movement through the area.
- Across the South Poplar Masterplan area, development should coordinate to manage surface water to enable discharge into the docks to the south.

4.2 Billingsgate Market

Figure 44: 4.2 Billingsgate Market (indicative)

Site information	Details
Address	Trafalgar Way
Area [ha]	5.75
Ward	Canary Wharf
PTAL [2031]	4-6a
Planning designations Page 1044	<ul style="list-style-type: none"> ● Area of substandard air quality ● Skyline of Strategic Importance ● Flood risk area ● Tower Hamlets Activity Area ● Preferred Office Location (Canary Wharf Fringe) ● Tall Building Zone (Canary Wharf) ● Archaeological Priority Area (Isle of Dogs, tier 3) ● Statutory listed buildings (Quay Walls, Copings and Buttresses to Import Dock and Export Dock, Grade I; Accumulator Tower, Grade II)
Relevant Permissions	None

Site proposal	Details
Indicative capacities	3,000 homes 66,000sqm commercial floorspace 23,000sqm retail floorspace
Phasing	2030-34, 2035-39

Land uses, activities, and delivery

- Development should consist of a mixed-use, residential-led scheme with a mix of retail, workspace, community and cultural uses.
- Acceptable land uses include:
 - Residential (Class C3) – maximum 75% of floorspace
 - Town centre uses (Class E) – at least 25% of floorspace
 - Community uses (Class F1/F2)
 - Warehousing/freight facilities (Sui generis)
- Required on-site infrastructure includes:
 - Community centre
 - Improved pedestrian crossing over Aspen Way
- The operations of Billingsgate Market should be appropriately re-provided at a suitable location within London.
- The site is within the Canary Wharf Fringe and is expected to provide at least 25% of the floorspace as commercial uses, with a focus on Central Activities Zone strategic uses as defined in the London Plan.
- Proposals on this site should be in accordance with the principles of the South Poplar Masterplan SPD. This has been developed between landowners and the council in order to positively address the social, economic and environmental disparities between Poplar and Canary Wharf.
- An assessment should be carried out to understand the potential contamination on site prior to any development taking place.

Form, massing, and heritage

- Height Strategy: Maximum height of 181m at the tallest point, which should be located in the western portion of the site, with additional taller points on either side with maximum heights of 151m and 142m.
- Heights and layout should ensure that One Canada Square retains its prominence, and ensure that the silhouette of One Canada Square, and particularly its distinctive pyramid, remain visible in views from north.
- The impact of development on nearby heritage assets should be considered – heritage assets should be protected or enhanced, and any negative impacts mitigated, because heritage and historic conservation plays a vital role in benefitting place shaping, social cohesion and the economy. For further details, refer to the Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals.

Routes and streets

- Improve walking and cycling connections to, from and within the site, particularly with a new east to west cycle route through the site. Walking and cycling routes should integrate the site with Poplar to the north; North Quay and Canary Wharf Elizabeth line station; and to the wider area. These routes should align with the existing urban grain to support permeability and legibility. Development must provide public access along the waterfront at North Dock. Green grid improvements should be delivered along the waterfront at North Dock, with good quality onward connections to green grid routes through the Wood Wharf and North Quay allocations.

- Address the physical barriers and poor connectivity created by Aspen Way, with new and improved walking and cycling routes. This could be facilitated through the provision of improved connections, including new bridges or decking across Aspen Way connecting the site to the Billingsgate Market and North Quay sites.
- New public routes should be established – with one central primary east-west connection through the centre of the site together with further east-west routes at the northern and southern site boundaries. In addition, as the site widens to the east, multiple new connections should be established with Trafalgar Way.

Environment and public realm

- Provide publicly accessible open space of at least 0.4 hectares in size, which should be easily accessible from across the site and connected to the green grid route along the waterfront.
- Development should prevent excessive overshadowing and enable activation of the dockside by stepping back development from North Dock.
- Enhance legibility and have a clear distinction between public and private spaces, by way of improving public realm particularly along the dockside, providing a continuous walkway with supporting active ground floor uses and frontages, and address the severance caused by Trafalgar Way.
- Great care will need to be taken to ensure the quality of environment and public realm is appropriately high and fully accessible in view of the need to address level changes and the need to link to the northern prospect of a public connection across Aspen Way.
- Across the South Poplar Masterplan area, development should coordinate to manage surface water to enable discharge into the docks to the south.

4.3 Crossharbour

Figure 45: 4.3 Crossharbour (indicative)

Site information	Details
Address	East Ferry Road
Area [ha]	6.15
Ward	Blackwall and Cubitt Town
PTAL [2031]	1b-5
Planning designations	<ul style="list-style-type: none"> ● Area of substandard air quality (small part of the site) ● Critical Drainage Area (part of the site) ● Flood risk area ● Local Nature Reserve (Mudchute Farm and Park, adjacent to the site) ● Site of Importance for Nature Conservation (Mudchute Farm and Park, adjacent to the site) ● Metropolitan Open Land (Mudchute, adjacent to the site) ● Town Centre (Crossharbour District Centre) ● Neighbourhood Planning Area (Isle of Dogs) ● Tall Building Zone (Millwall Inner Dock) ● Archaeological Priority Area (Isle of Dogs, tier 3)
Relevant Permissions	PA/19/02534/A1 – A hybrid planning application (part detailed, part outline) for the comprehensive, mixed-use, re-development of the site. Full details for 526 residential units, flexible commercial floorspace, including a new foodstore, a primary school, community uses.

Site proposal	Details
Indicative capacities	2,500 homes (2,000 on Asda site) 24,000sqm commercial floorspace (17,000sqm on Asda site)
Phasing	2024-29, 2030-34

Land uses, activities, and delivery

- Development should consist of a mixed-use, residential-led scheme with a mix of retail, workspace, community and cultural uses and the provision of a health centre, primary school and community centre.
- Acceptable land uses include:
 - Residential (Class C3)
 - Town centre uses (Class E)
 - Community uses (Class F1/F2)
- Required on-site infrastructure includes:
 - NHS primary health care facility (reprovision and expansion)
 - Primary school
 - Community centre
 - Transport interchange
- Develop and improve the town centre with an anchor supermarket and a range of retail, leisure and community uses with sizes which can support independent providers. A new supermarket should be provided before the existing supermarket is redeveloped to ensure a continued service for local people. Within the town centre, active frontages and town centre uses should predominate at ground level.
- Delivery of new routes and the public square should be prioritised within the phasing timetable.

Form, massing, and heritage

- Height Strategy: Maximum height of 115m at the tallest point, which should be located on the eastern side of East Ferry Road. On the western side of East Ferry Road, a maximum height of 85m at the northern part of the site, with heights stepping down towards the south. Heights should step down toward the edges of the site in response to existing residential and the park.
- Protect and enhance the setting of the Maritime Greenwich world heritage site.

Routes and streets

- Improve walking and cycling connections to, from and across the site to establish connections to the new public square, Crossharbour DLR station and Mudchute Park. These routes should acknowledge the existing urban grain to support permeability and legibility. On the eastern side, pedestrian connections established with Glengall Grove would help local permeability. On the western side, the alignment of the DLR line means that additional connections and linkages cannot be made although the alignment of Selsdon Way should be retained. Improved green grid connections should be delivered through the site, with good quality onward connections to green grid routes along Glengall Grove and Pepper Street.

Environment and public realm

- Improve public realm with active site edges, particularly along East Ferry Road and adjacent to Mudchute Park, and reinforce and complement local distinctiveness and create a positive sense of place with the provision of a new public square in the centre that is framed by the development.

4.4 Limeharbour

Figure 46: 4.4 Limeharbour (indicative)

Site information	Details
Address	Limeharbour
Area [ha]	5.25
Ward	Blackwall and Cubitt Town
PTAL [2031]	3-4
Planning designations Page 1050	<ul style="list-style-type: none"> ● Area of substandard air quality (small part of the site) ● Critical Drainage Area (part of the site) ● Flood risk area ● Site of Importance for Nature Conservation (Millwall and West India Docks, adjacent to the site) ● Tower Hamlets Activity Area ● Neighbourhood Planning Area (Isle of Dogs) ● Tall Building Zone (Millwall Inner Dock) ● Archaeological Priority Area (Isle of Dogs, tier 3)
Relevant Permissions	PA/17/01597 – Construction of a new mixed use development consisting of five buildings ranging from ground plus 3 to ground plus 48 storeys in height comprising 579 residential units; a two-form entry primary school with nursery facilities; a 10,272 sq. m SME Business Centre; 2,228 sq. m of flexible commercial floorspace (Resolution to grant permission).

Site proposal	Details
Indicative capacities	1,900 homes (approximately 1,250 across whole Harbour Exchange site, remainder on Skylines site) 39,000sqm commercial floorspace
Phasing	2024-29, 2030-34, 2035-39

Land uses, activities, and delivery

- Development should consist of a mixed-use, residential-led scheme with some employment spaces.
- Acceptable land uses include:
 - Residential (Class C3)
 - Town centre uses (Class E)
 - Community uses (Class F1/F2)
- Required on-site infrastructure includes:
 - Community centre
- The site is in multiple ownership, and landowners and developers should work together to develop a comprehensive design-led masterplan for redevelopment of this site, to ensure development is delivered sustainably. Effective engagement between landowners, developers and leaseholders will be needed to facilitate potential land assembly and comprehensive redevelopment.

Form, massing, and heritage

- Height Strategy: Maximum height of 167m at the tallest point, which should be located in the north of the site, along Marsh Wall, east of Limeharbour. Additional taller points to the west of Limeharbour along Marsh Wall at maximum heights of 124m and 115m. Height should step down towards the southern end of the site.
- Create a series of buildings scales with a well-articulated built form and skyline, avoiding significant adverse environmental impacts, including overshadowing of adjacent sites either within the area or outside, particularly along the main routes of Marsh Wall and Limeharbour. Massing should be varied so as to avoid creating a canyon-like environment along Marsh Wall.
- Protect and enhance the setting of the Maritime Greenwich world heritage site and the historic dockside promenade.

Routes and streets

- Create a legible, permeable and well-defined movement network through the site, centred on Limeharbour, Marsh Wall, and the path along Millwall Inner Dock, and connected to the surrounding existing street network and docksides, and to the proposed new bridge crossing to the north. Maintain the existing route alignments across Harbour Exchange Square, to ensure permeability of the site.
- Improve walking and cycling connections to, from and within the site – particularly between Oakland Quay and Limeharbour; Limeharbour and East Ferry Road; and between the dock sides, Canary Wharf Metropolitan Centre and Mudchute Park. These routes should align with the existing urban grain to support permeability and legibility. Development must provide access along the waterfront at Millwall

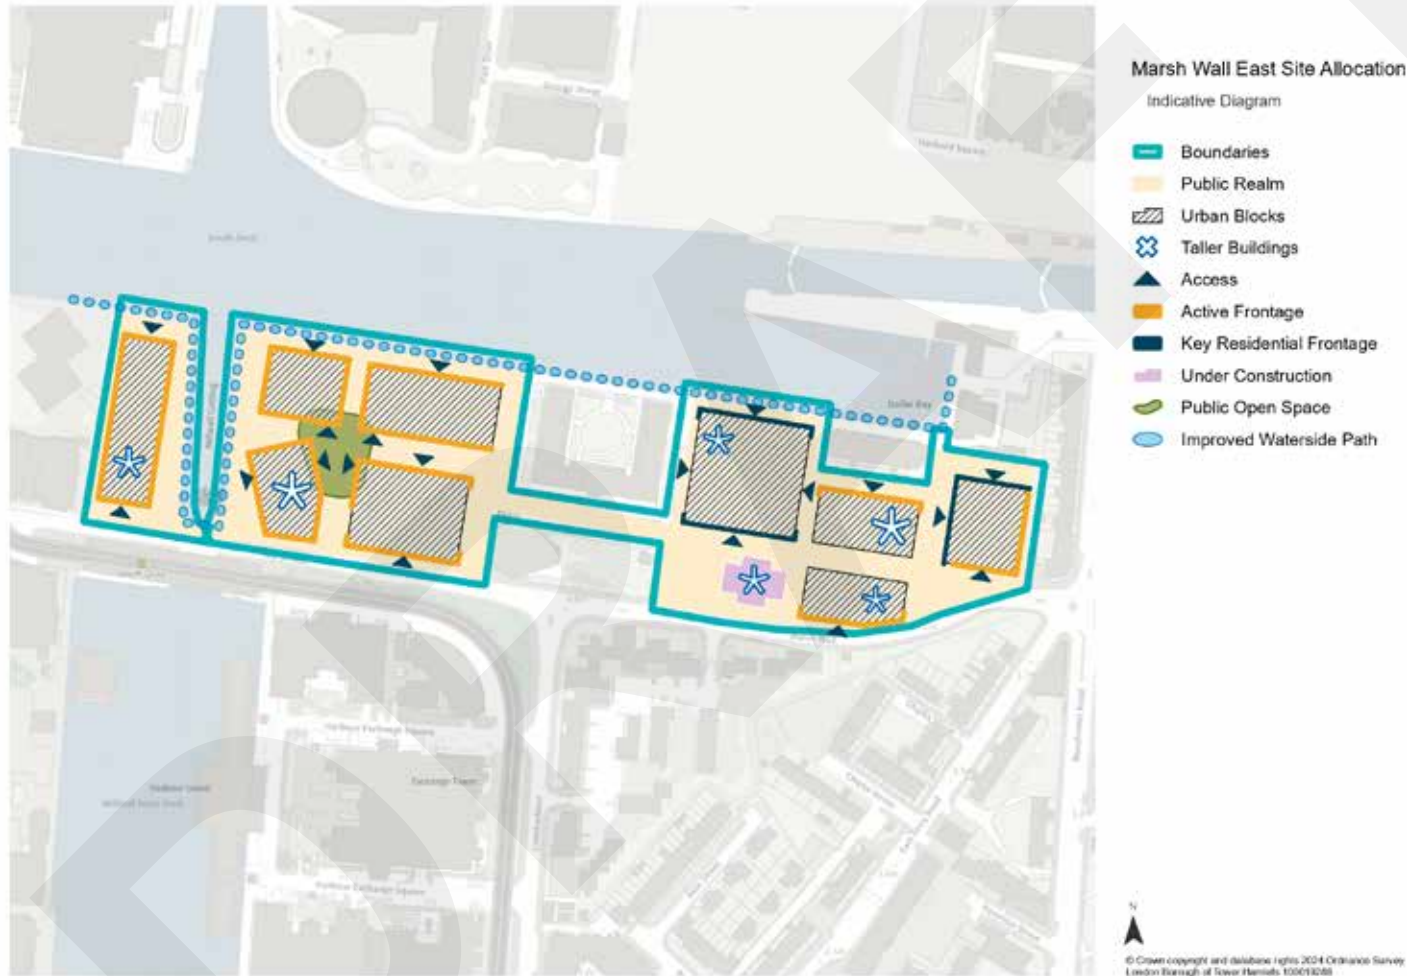

Inner Dock. Improved green grid routes should be provide through the site and between the different parts of the site, with good quality onward connections to adjoining green grid routes such as those on the Marsh Wall East and Marsh Wall West site allocations.

Environment and public realm:

- Integrate buildings with improved public realm and ensure development is stepped back from the docksides with fully accessible active frontages. The priority for improved public realm is the waterfront edge along Millwall Inner Dock, which should provide space for a range of uses and be well-connected to South Quay DLR station.
- Improve the quality of public realm and create a positive sense of place with an arrival point in the form of an active square at the corner of Marsh Wall and Limeharbour.
- Provide well defined public green open space or public squares with active building frontages around the DLR viaduct. The open space should be well integrated into the development.

4.5 Marsh Wall East

Figure 47: 4.5 Marsh Wall East (indicative)

Site information	Details
Address	Marsh Wall
Area [ha]	4.14
Ward	Blackwall and Cubitt Town
PTAL [2031]	3-4
Planning designations	<ul style="list-style-type: none"> ● Area of substandard air quality (small part of the site) ● Skyline of Strategic Importance ● Flood risk area ● Site of Importance for Nature Conservation (Millwall and West India Docks, adjacent to the site) ● Tower Hamlets Activity Area ● Neighbourhood Planning Area (Isle of Dogs) ● Tall Building Zone (Millwall Outer Dock) ● Conservation Area (Coldharbour, adjacent to site) ● Archaeological Priority Area (Isle of Dogs, tier 3)
Relevant Permissions	PA/16/02808 – Redevelopment of the site to provide a building of ground plus 48 storey (maximum height 163.08m) comprising 332 residential units; 810 square metres of community floorspace; 79 square metres of flexible retail/restaurant/community.

Site proposal	Details
Indicative capacities	2,400 homes (approximately 1,475 on western half of site, 332 on 225 Marsh Wall site, 585 on rest of eastern half of site) 10,000sqm hotel floorspace 3,300sqm educational floorspace 45,000sqm commercial floorspace 10,500sqm retail floorspace
Phasing	2024-29, 2030-34

Land uses, activities, and delivery

- Development should consist of a mixed-use, residential-led scheme with some employment spaces, and provision of a primary school and a health facility.
- Acceptable land uses include:
 - Residential (Class C3)
 - Hotel (Class C1)
 - Town centre uses (Class E)
 - Community uses (Class F1/F2)
- Required on-site infrastructure includes:
 - Primary school
 - NHS primary health care facility
 - Community centre

- The site is in multiple ownership, and landowners and developers should work together to develop a comprehensive design-led masterplan for redevelopment of this site, to ensure development is delivered sustainably. Effective engagement between landowners, developers and leaseholders will be needed to facilitate potential land assembly and comprehensive redevelopment.
- The site contains a number of existing buildings, some constructed fairly recently. When demolition and redevelopment is proposed, applications must robustly justify how they meet circular economy and sustainability principles set out in the rest of the development plan.
- Development of residential uses on the eastern half of the site must demonstrate that they have considered and suitably mitigated against potential noise from the data centre uses within this area, in line with the Agent of Change principle.

Form, massing, and heritage

- Height Strategy: Maximum height of 182m at the tallest point, which should be located towards the west of the site, but to the east of the Millwall Cutting. Heights should step down towards the eastern end of the site, and to the west of the tallest point in order to preserve views of One Canada Square within the Skyline of Strategic Importance.
- Development should maintain the existing block structure whilst respecting its dockside location and surrounding built environment – in particular providing a transition in scale in relation to the lower rise buildings to the south-east and ensure appropriate spacing between

buildings to enable visual permeability between Marsh Wall and South Dock, and variation in heights to avoid the creation of a canyon-like effect along Marsh Wall.

- Create a series of building scales with a well-articulated built form and skyline, avoiding significant adverse environmental impacts, including overshadowing of adjacent sites either within the area or outside, particularly along the main routes of Marsh Wall and Limeharbour.
- Heights and layout should ensure that One Canada Square retains its prominence, and ensure that the silhouette of One Canada Square, and particularly its distinctive pyramid, remain visible in views from south and southeast.
- The impact of development on nearby conservation areas should be considered – heritage assets should be protected or enhanced, and any negative impacts mitigated, because heritage and historic conservation plays a vital role in benefitting place shaping, social cohesion and the economy. For further details, refer to the Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals.
- Protect and enhance the setting of the Maritime Greenwich world heritage site and the historic dockside promenade.

Routes and streets

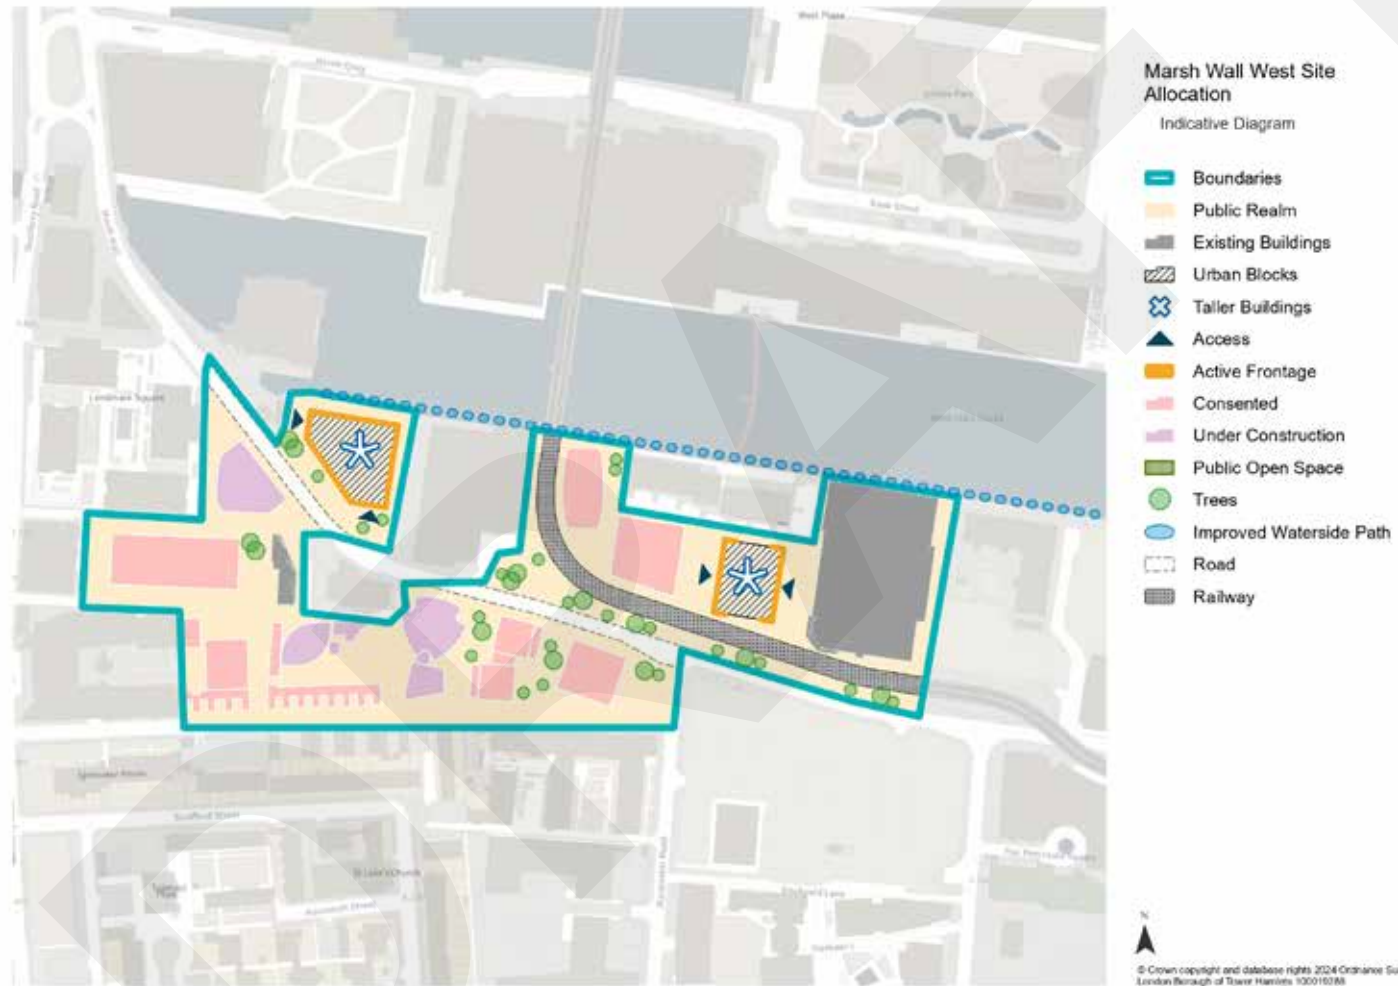

- Create a legible, permeable and well-defined movement network through the site, centred on Limeharbour, Marsh Wall, and the waterfront at South Dock, and connecting to the surrounding existing street network and docksides.
- Improve walking and cycling connections to, from and within the site, particularly to the dockside, Canary Wharf Metropolitan Centre and towards Mudchute Park to the south. These routes should align with the existing urban grain to support permeability and legibility. Development must provide public access along the waterfront at South Dock. Improved green grid routes should be delivered along the waterfront at South Dock, with good quality onward connections provided to green grid routes at Manchester Road, and through the Limeharbour and Marsh Wall Werst site allocations.

Environment and public realm

- Integrate tall buildings with an improved public realm and ensure development steps back from the docksides with fully accessible active frontages, and consider the operational needs of boat operators.
- Provide well-defined public green open space, particularly along the South Dock waterfront and public squares with active building frontages. Good quality public realm and public open space at the base of the tall buildings proposed here will be key for their successful integration into the wider area.

4.6 Marsh Wall West

Figure 48: 4.6 Marsh Wall West (indicative)

Site information	Details
Address	Marsh Wall
Area [ha]	4.94
Ward	Canary Wharf
PTAL [2031]	2-5
Planning designations	<ul style="list-style-type: none"> ● Skyline of Strategic Importance (part of the site) ● Critical Drainage Area (part of the site) ● Flood risk area ● Area of deficiency of access to nature ● Site of Importance for Nature Conservation (Millwall and West India Docks, adjacent to the site) ● Publicly Accessible Open Space (Lenanton Steps) ● Town Centre (South Quay Neighbourhood Centre) ● Tower Hamlets Activity Area ● Neighbourhood Planning Area (Isle of Dogs) ● Tall Building Zone (Millwall Inner Dock) ● Archaeological Priority Area (Isle of Dogs, tier 3)

Site information	Details
Relevant Permissions	<p>PA/15/02671 – 50 Marsh Wall, 63-69 and 68-70 Manilla Street - redevelopment to provide three buildings of 65 (217.5m), 20 (79.63m) and 34 (124.15m) storeys above ground comprising 634 residential units, 231 hotel rooms, provision of ancillary amenity space, a new health centre, a new school, ground floor retail uses.</p> <p>PA/16/01637 – 54 Marsh Wall – construction of two new linked buildings of 41 and 16 storeys comprising 216 residential units; two ground floor commercial units totalling 174 sqm GIA fronting on to Marsh Wall.</p> <p>PA/17/03182 – Jemstock 2 – Minor Material amendment to the planning permission PA/15/02104 which gave consent for the: Erection of building facades to existing structure on site to create a mixed use development comprising 206 serviced apartments, 1,844 sqm of office floorspace and 218sqm of cafe floorspace. Amendments include: increase in the number of serviced apartments from 206 to 250 units.</p>

Site information	Details
	<p>PA/20/02128 – Cuba Street - Erection of single tower block accommodating a high density residential led development with ancillary amenity and play space, along with the provision of a flexible retail space at ground floor, the provision of a new publicly accessible park and alterations to the public highway.</p> <p>PA/20/02588 – 30 Marsh Wall - Demolition of existing building and erection of a single building to provide student accommodation along with flexible retail / commercial floorspace.</p> <p>PA/20/02649 – Quay House – Demolition of the existing building and redevelopment to provide a mixed use development comprising a hotel and serviced apartments.</p> <p>PA/22/00591 – 56-58 Marsh Wall – Demolition of existing buildings and construction of building up to 46 storeys (151.9m) comprising up to 795 co-living units in sui generis use together with communal facilities, non-residential floor space and public realm improvements.</p>

Site proposal	Details
Indicative capacities	<p>2,625 homes (450 on Cuba Street site, 150 on Byng Street/Bellamy Close site, 250 on Britannica hotel site, 650 on Marsh Wall/Manilla Street site, 225 on 54 Marsh Wall site, 500 on Ensign House site, 400 on Beaufort Court site)</p> <p>1,000 student units (30 Marsh Wall site)</p> <p>800 co-living units (56-58 Marsh Wall site)</p> <p>1175 hotel rooms and serviced apartments (225 on Marsh Wall/Manilla Street site, 700 on Quay House site, 250 on Jemstock site)</p>
Phasing	2024-29, 2030-34

Land uses, activities, and delivery

- Development should consist of a mixed-use, residential-led scheme with some employment spaces.
- Acceptable land uses include:
 - Residential (Class C3)
 - Town centre uses (Class E)
 - Community uses (Class F1/F2)
- Required on-site infrastructure includes:
 - Community centre
- The site is in multiple ownership, and landowners and developers should work together to develop a comprehensive design-led masterplan for redevelopment of this site, to ensure development is delivered sustainably. Effective engagement between landowners, developers and leaseholders will be needed to facilitate potential land assembly and comprehensive redevelopment.

Form, massing, and heritage

- Height strategy: Maximum height of 230m at the tallest point, which should be on the Ensign House site. There should be a variation in heights across the site, with heights generally stepping down towards the west and south of the site.
- Development should maintain the existing block structure whilst respecting its dockside location and surrounding built environment
 - in particular provide a transition in scale in relation to the lower rise buildings to the south-east and ensure appropriate spacing between buildings to enable visual permeability between Marsh Wall and South Dock, and variation in heights to avoid the creation of a canyon-like effect along Marsh Wall.

- Create a series of building scales with a well-articulated built form and skyline, avoiding significant adverse environmental impacts, including overshadowing of adjacent sites either within the area or outside, particularly along the main routes of Marsh Wall.
- Heights and layout should ensure that One Canada Square retains its prominence, and ensure that the silhouette of One Canada Square, and particularly its distinctive pyramid, remain visible in views from the south and west.
- Protect and enhance the setting of the Maritime Greenwich world heritage site and the historic dockside promenade.

Routes and streets

- Create a legible, permeable and well-defined movement network, centred on Millharbour and Marsh Wall. Frequent and public routes connecting South Dock with Marsh Wall should be created and maintained in any redevelopment proposals.
- Improve and enhance walking and cycling connections to, from and within the site, and provide legible and pedestrian friendly connections between and along Marsh Wall and South Quay Walk, particularly from Mastmaker Road to the South Quay footbridge and from Millharbour through a newly proposed footbridge to Upper Bank Street.
- Development must provide public access along the waterfront at South Dock. Improved green grid routes should be delivered along the waterfront at South Dock, and along Byng Street, Manilla Street, and Cuba Street, with good quality onward connections provided to green grid routes towards the Thames Path, Stafford Street, and the site allocations at Millharbour and Marsh Wall West.

Environment and public realm

- Prevent excessive overshadowing of the dockside and enable activation of the waterfront by ensuring development is stepped back from the water, and consider the operational needs of boat operators.
- The pedestrian environment along Marsh Wall axis is currently restrictive. This key street route should be a pedestrian friendly environment. Existing and new routes between the Marsh Wall axis and South Dock should be designed primarily for pedestrians and incorporate landscape and SUDs feature.
- Create open spaces around the DLR that should be well defined by public green space or public squares and active building frontages. Open space is in short supply in this location – with views across the dock basin provide the sense of openness. The public routes and spaces alongside the edges of South Dock should be generous.
- In line with the Integrated Water Management Plan for the Isle of Dogs and South Poplar, opportunities for greywater re-use should be investigated.

4.7 Millharbour

Figure 49: 4.7 Millharbour (indicative)

Site information	Details
Address	Marsh Wall/Millharbour
Area [ha]	3.95
Ward	Canary Wharf
PTAL [2031]	2-4
Planning designations Page 1062	<ul style="list-style-type: none"> ● Critical Drainage Area (part of the site) ● Flood risk area ● Area of deficiency of access to nature ● Site of Importance for Nature Conservation (Millwall and West India Docks, adjacent to the site) ● Town Centre (South Quay Neighbourhood Centre) ● Tower Hamlets Activity Area ● Neighbourhood Planning Area (Isle of Dogs) ● Tall Building Zone (Millwall Inner Dock) ● Archaeological Priority Area (Isle of Dogs, tier 3)

Site information	Details
Relevant Permissions	PA/14/03195 - Building G1, a podium with two towers of 10 - 38 storeys and of 12 - 44 storeys; Building G2, a four floor podium with two towers of 34 and 38 storeys inclusive of podium; Building G3, a tower rising to 44 storeys; and Building G4, a four floor podium with a tower of 31 storeys inclusive of podium. The development provides 1,513 new homes in a mix of units and tenures; a new primary school with nursery facilities; further education uses; 5,820 sqm of flexible commercial floorspace; two new public parks including play facilities.

Site proposal	Details
Indicative capacities	1,700 homes 6,000sqm non-residential floorspace 3,500sqm educational floorspace
Phasing	2024-29

Land uses, activities, and delivery

- Development should consist of a mixed-use, residential-led scheme with a mix of workspace and community uses, including provision of a primary and secondary school.
- Acceptable land uses include:
 - Residential (Class C3)
 - Small scale retail/town centre uses (Class E)
 - Community uses (Class F1/F2)
- Required on-site infrastructure includes:
 - Primary school
 - Reprovision and expansion of existing alternative secondary school
- The site is in multiple ownership, and landowners and developers should work together to develop a comprehensive design-led masterplan for redevelopment of this site, to ensure development is delivered sustainably. Effective engagement between landowners, developers and leaseholders will be needed to facilitate potential land assembly and comprehensive redevelopment.

Form, massing, and heritage

- Height Strategy: Maximum height of 146m at tallest points, which should be at the northern and eastern edges of the site. Other taller buildings of 131m and 117m in the north, and 125m in the east.
- Development should respond positively to the local character of the surrounding built environment and its dockside location, and should step down from Marsh Wall to the smaller-scale residential areas south of Millwall Dock.
- Protect and enhance the setting of the Maritime Greenwich world heritage site and the historic dockside promenade.

Routes and streets

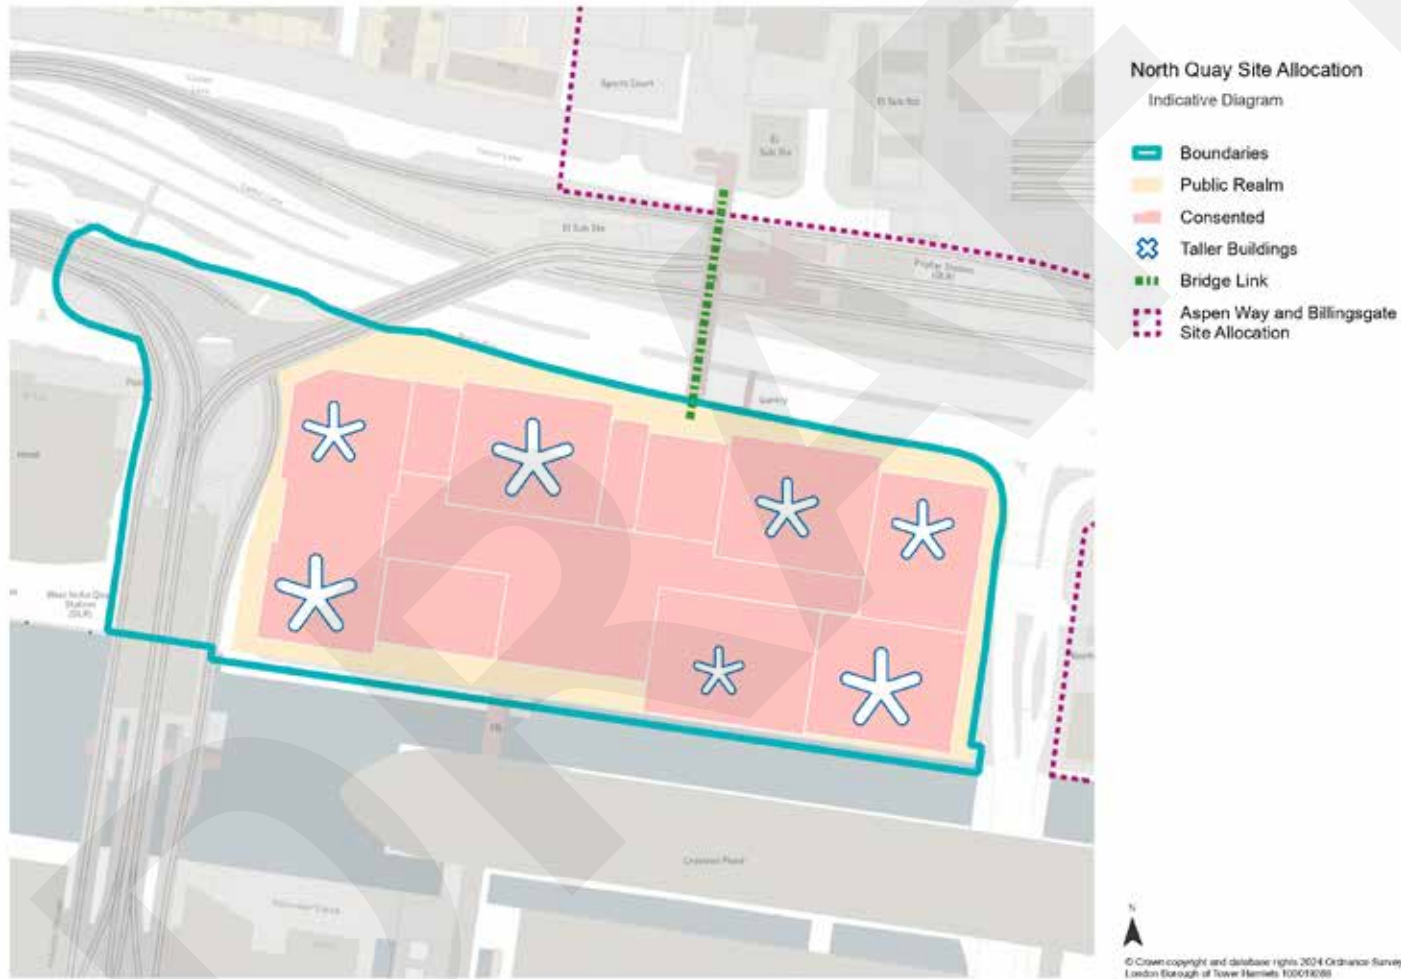

- Create a legible, permeable and well-defined movement network, centred on Millwall Inner Dock, Millharbour and Marsh Wall.
- Improve and enhance walking and cycling connections to, from and within the site, and provide legible and pedestrian friendly connections between Marsh Wall and South Quay Walk, particularly from Mastmaker Road to the South Quay footbridge and from Millharbour through the proposed footbridge to Upper Bank Street. Development must provide public access along the waterfront at Millwall Inner Dock. Improved green grid routes should be delivered along Marsh Wall, Millharbour, and along the waterfront at Millwall Inner Dock, with good quality onward connections to green grid routes through the Marsh Wall West site allocation.

Environment and public realm

- Incorporate active frontages to surrounding streets and spaces (including the waterside) and accessible, high quality public space along the entire dockside.
- Create a positive sense of place with an arrival point in the form of an active square at the corner of South Quay footbridge and Marsh Wall/ Mastmaker Road.
- Prevent excessive overshadowing and enable activation of the dockside by ensuring development is stepped back from the waterside.
- In line with the Integrated Water Management Plan for the Isle of Dogs and South Poplar, opportunities for greywater re-use should be investigated.

4.8 North Quay

Figure 50: 4.8 North Quay (indicative)

Site information	Details
Address	Upper Bank Street
Area [ha]	2.87
Ward	Canary Wharf
PTAL [2031]	5-6a
Planning designations	<ul style="list-style-type: none"> ● Area of substandard air quality ● Skyline of Strategic Importance ● Flood risk area ● Area of deficiency of access to nature ● Site of Importance for Nature Conservation (Millwall and West India Docks, adjacent to the site) ● Town Centre (Canary Wharf Metropolitan Centre) ● Preferred Office Location (Canary Wharf Fringe) ● Tall Building Zone (Canary Wharf) ● Archaeological Priority Area (Isle of Dogs, tier 3) ● Statutory listed buildings (Quay Walls, Copings and Buttresses to Import Dock and Export Dock, Grade I)

Site information	Details
Relevant Permissions	PA/20/01421 – Application for outline planning permission (all matters reserved) for the redevelopment of the North Quay site for mixed use comprising: Demolition of existing buildings and structures; Erection of buildings and construction of basements; The following uses: - Business floorspace – Hotel/ Serviced Apartments – Residential – Co-Living.

Site proposal	Details
Indicative capacities	Up to 1,250 homes At least 160,000sqm non-residential uses
Phasing	2024-29

Land uses, activities, and delivery

- Development should consist of a mixed-use scheme with elements of residential and employment floorspace.
- Acceptable land uses include:
 - Residential (Class C3) – maximum of 75% of floorspace
 - Town centre uses (Class E) – at least 25% of floorspace
 - Community uses (Class F1/F2)
- Required on-site infrastructure includes:
 - Improved pedestrian crossing over Aspen Way
- The site is within the Canary Wharf Fringe and is expected to provide at least 25% of the floorspace as commercial uses, with a focus on Central Activities Zone strategic uses as defined in the London Plan.

- Proposals on this site should be in accordance with the principles of the South Poplar Masterplan SPD. This has been developed between landowners and the council in order to positively address the social, economic and environmental disparities between Poplar and Canary Wharf.

Form, massing, and heritage

- Height strategy: Maximum height of 225m at the tallest point, which should be at the southwest corner of the site. Other taller buildings of a maximum height of 190m in the southeast of the site, 190m in the northeast, and 180m in the northwest.
- The impact of development on nearby heritage assets should be considered – heritage assets should be protected or enhanced, and any negative impacts mitigated, because heritage and historic conservation plays a vital role in benefitting place shaping, social cohesion and the economy. For further details, refer to the Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals.
- Heights and layout should ensure that One Canada Square retains its prominence, and ensure that the silhouette of One Canada Square, and particularly its distinctive pyramid, remain visible in views from north and northwest.

Routes and streets

- Address the barrier of Aspen Way and integrate the site with Poplar High Street to the north, and the Canary Wharf Elizabeth line station and the Canary Wharf estate to the south. These routes should align with the existing urban grain to support permeability and legibility.

- Improve walking and cycling connections to and from the site, accommodating a new east-to-west pedestrian route through the site which facilitates connections to the wider movement network and the DLR and underground stations adjoining the site. Improve strategic links from Canary Wharf to Poplar High Street through the provision of enhanced north-south links.
- Development must provide public access along the waterfront at North Quay. Improved green grid connections should be delivered through the site and along the waterfront at North Dock, with good quality onward connections to green grid routes at the West India Docks and Hertsmere Road, and connecting to the Aspen Way and Billingsgate Market site allocations.

Environment and public realm

- Create a positive sense of place through the delivery of an active public square connecting the Canary Wharf Elizabeth line station and the dockside promenade to Poplar DLR station and Poplar High Street.
- Across the South Poplar Masterplan area, development should coordinate to manage surface water to enable discharge into the docks to the south.

4.9 Reuters

Figure 51: 4.9 Reuters (indicative)

Site information	Details
Address	Paul Julius Close
Area [ha]	1.72
Ward	Blackwall and Cubitt Town
PTAL [2031]	2-5
Planning designations Page 1068	<ul style="list-style-type: none"> ● Area of substandard air quality ● Thames Policy Area ● Flood risk area ● Site of Importance for Nature Conservation (River Thames and Tidal Tributaries, adjacent to the site) ● Tall Building Zone (Blackwall) ● Archaeological Priority Area (Blackwall, tier 2) ● Statutory listed buildings (Dry Dock at Blackwall Engineering, Grade II)
Relevant Permissions	PA/20/02509 – Phased redevelopment of the site and construction of 5 buildings (with maximum heights of between 9 and 39 storeys) comprising residential dwellings of mixed tenure, primary school & nursery, commercial, business & service floorspace. PA/21/00288 – Full planning permission for a riverboat station, jetty and associated works at Blackwall Yard.

Site proposal	Details
Indicative capacities	900 homes 2,250sqm commercial uses and public house
Phasing	2024-29

Land uses, activities, and delivery

- Development should consist of a residential-led scheme with provision of a primary school.
- Acceptable land uses include:
 - Residential (Class C3)
 - Community uses (Class F1/F2)
- Required on-site infrastructure includes:
 - Primary school
- Development proposals must include the raising of flood defences in line with the Thames Estuary 2100 Plan. Along the riverside, development should be set back from the water by a minimum of 16m to allow adequate access to flood defences for future maintenance and upgrading.

Form, massing, and heritage

- Height strategy: Maximum heights of 139m and 117m on the two tallest buildings, which should be located at the northern side of the site. Heights should step down towards the river.
- Buildings should enable visual permeability between Blackwall Way and the River Thames.

- The impact of development on nearby heritage assets should be considered – heritage assets should be protected or enhanced, and any negative impacts mitigated, because heritage and historic conservation plays a vital role in benefitting place shaping, social cohesion and the economy. For further details, refer to the Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals.

Routes and streets

- Improve movement through the area and repair fragmented urban form by reinforcing the route with active uses from East India DLR station and Blackwall Way towards the Thames Path and the Blackwall Yard Graving Dock.
- Improve walking and cycling connections to, from and within the site, to address the connections to adjacent sites and create a legible, permeable and well-defined movement network. A continuous pedestrian and cycle link along the Thames Path should be provided.
- Development must provide public access along the waterfront at the River Thames. Improved green grid connections should be delivered along Blackwall Way and the River Thames waterfront, with good quality onward connections to adjoining green grid routes, such as the route over Aspen Way towards Naval Row.
- Development on this site will be accompanied by delivery of a new riverbus station, to improve access to the area.

Environment and public realm

- Development should create a positive sense of place with an arrival point in the form of an active public square at the corner of Blackwall Way, through Blackwall Yard to the Thames waterfront.
- Reinforce and complement local distinctiveness with the re-provision of the existing waterspace on site and integrate its function with the open space to maximise amenity provision.
- Respect the waterside setting, ensuring public accessibility to the waterfront by stepping buildings back from the water and ensuring active frontages along the water's edge.
- In line with the Integrated Water Management Plan for the Isle of Dogs and South Poplar, development on this site should provide an outfall for surface water drainage into the River Thames.

4.10 Riverside South

Figure 52: 4.10 Riverside South (indicative)

Site information	Details
Address	Westferry Circus
Area [ha]	2.17
Ward	Canary Wharf
PTAL [2031]	5-6a
Planning designations	<ul style="list-style-type: none"> ● Area of substandard air quality (part of the site) ● Skyline of Strategic Importance ● Thames Policy Area ● Flood risk area ● Area of deficiency of access to nature ● Town Centre (Canary Wharf Metropolitan Centre) ● Preferred Office Location (Canary Wharf Fringe) ● Tall Building Zone (Canary Wharf) ● Archaeological Priority Area (Isle of Dogs, tier 3) ● Statutory listed buildings (Former West Entrance Lock to South Dock, Grade II)
Relevant Permissions	PA/08/02249 - Erection of office buildings (341,924sqm) comprising two towers (max 241.1m and 191.34m) with a lower central link building (80.05m) together with ancillary parking service and access roads, public open space and riverside walkway, landscaping including public art and other ancillary works. Stalled permission.

Site proposal	Details
Indicative capacities	1,650 homes 56,000sqm commercial floorspace
Phasing	2030-34

Land uses, activities, and delivery

- Development should consist of a mixed-use scheme with elements of residential and employment floorspace.
- Acceptable land uses include:
 - Residential (Class C3) – maximum of 75% of floorspace
 - Town centre uses (Class E) – at least 25% of floorspace
 - Community uses (Class F1/F2)
- Required on-site infrastructure includes:
 - Community centre
- The site is within the Canary Wharf Fringe and is expected to provide at least 25% of the floorspace as commercial uses, with a focus on Central Activities Zone strategic uses as defined in the London Plan.
- Development proposals must include the raising of flood defences in line with the Thames Estuary 2100 Plan. Along the riverside, development should be set back from the water by a minimum of 16m to allow adequate access to flood defences for future maintenance and upgrading.
- Development should not prejudice the potential delivery of a river crossing across the Thames.
- The site has lain dormant for some time, and temporary meanwhile

uses will be encouraged on this site while plans for a more permanent development are prepared. This could include using the site for open space, employment and commercial uses, or temporary residential accommodation.

- Delivery on this site will need to consider the operational requirements of the West India Dock entrance and impounding station, particularly with regards to the delivery of the improved riverside path.

Form, massing, and heritage

- Height strategy: Maximum height of 186m at the tallest point, which should be to the south of the site, adjacent to Westferry Road. Secondary point of significant height opposite this in the north of the site, with a maximum height of 157m, and additional taller buildings of 125m (northern part of site) and 91m (southern part of site). Heights should step down significantly from these tall points.
- The site should be subdivided to create at least three urban blocks with public routes between them, and should deliver variety and distinction in the heights of new buildings across the site to ensure visual permeability between Westferry Road and the River Thames.
- Heights and layout should ensure that One Canada Square retains its prominence, and ensure that the silhouette of One Canada Square, and particularly its distinctive pyramid, remain visible in views from the west.
- The impact of development on nearby heritage assets should be considered – heritage assets should be protected or enhanced,

and any negative impacts mitigated, because heritage and historic conservation plays a vital role in benefitting place shaping, social cohesion and the economy. Development should enhance the listed lock wall and lock entrance that forms the southern boundary of the site. For further details, refer to the Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals.

Routes and streets

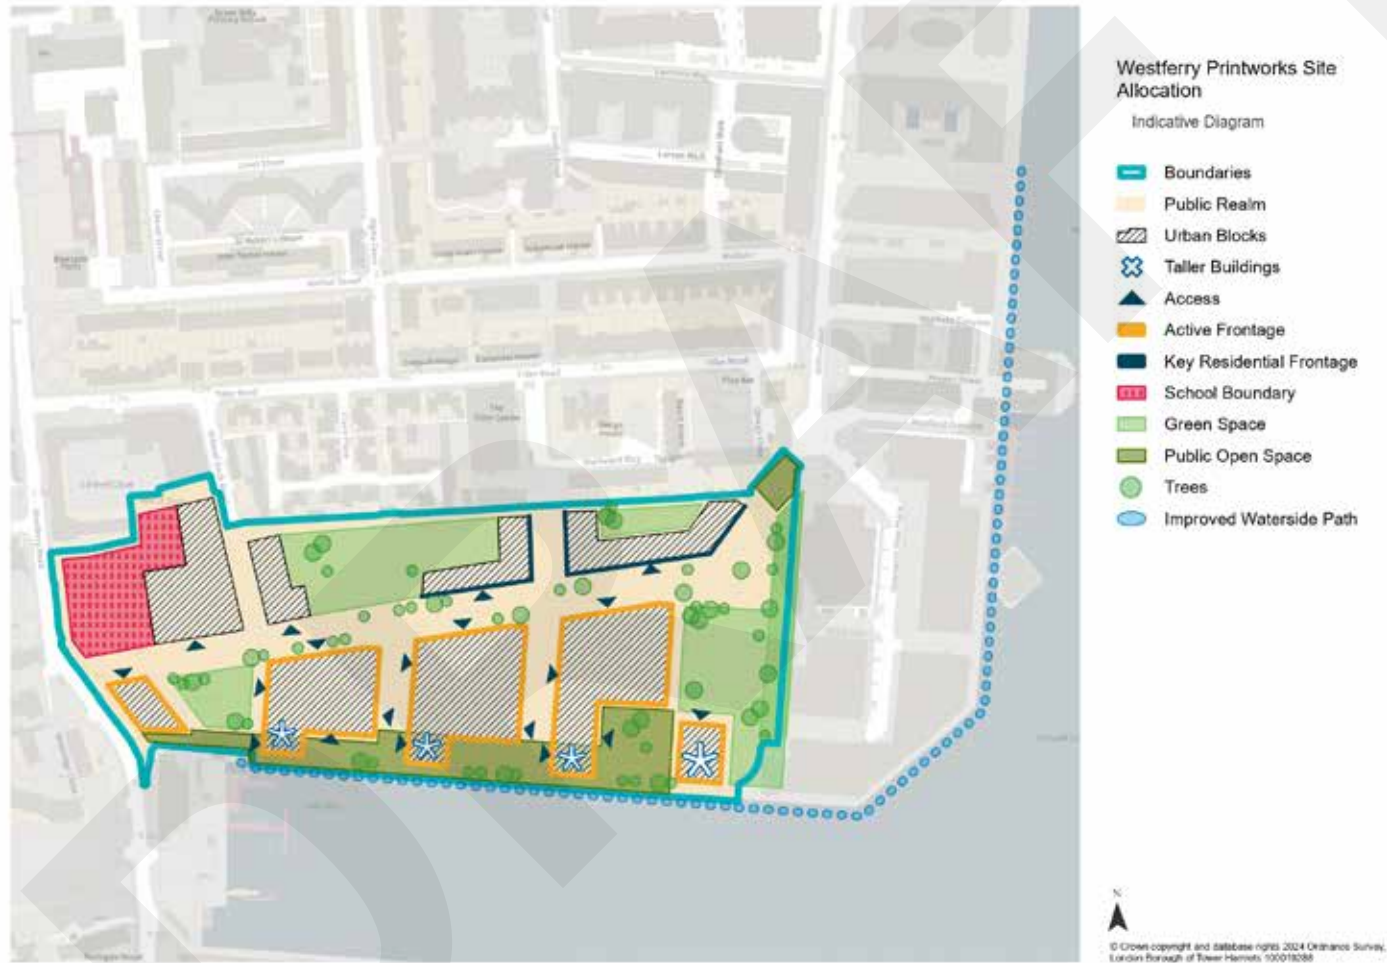

- Improve walking and cycling connections to, from and within the site - particularly to address connections to Westferry Circus, Westferry Road and the River Thames, to create a legible, permeable and well-defined movement network. East-west connections should be created across the site, extending the axis of Bank Street, and providing at least one other east-west route. Reinstate the active street frontage and pedestrian route along Westferry Circus and Westferry Road, with strong visual and activity links to the riverside amenity. Improved green grid routes should be delivered along the River Thames waterfront, with good quality onward connections to the rest of the Thames Path.
- A continuous waterside route for pedestrians and cyclists should be maintained on the western perimeter of the site along the River Thames, ensuring easy public access along the entire waterfront with active retail and commercial uses.
- Development should provide appropriate riparian lifesaving infrastructure along the riverside path.

Environment and public realm

- A major riverside public space should be created at the centre of the site. This space should join all routes and urban blocks together and provide a direct connection to the River Thames. Provide green open space along the River Thames which is activated with commercial uses and expands on the leisure activity hub at Westferry Circus.
- Respect the waterside setting, ensuring public accessibility to the waterfront by stepping buildings back from the water and ensuring active frontages along the water's edge.
- In line with the Integrated Water Management Plan for the Isle of Dogs and South Poplar, development on this site should provide an outfall for surface water drainage into the River Thames.

4.11 Westferry Printworks

Figure 53: 4.11 Westferry Printworks (indicative)

Site information	Details
Address	Westferry Road
Area [ha]	6.21
Ward	Canary Wharf
PTAL [2031]	1b-2
Planning designations	<ul style="list-style-type: none"> ● Area of substandard air quality (small part of the site) ● Critical Drainage Area (part of the site) ● Flood risk area ● Area of deficiency of access to nature ● Site of Importance for Nature Conservation (Millwall and West India Docks, adjacent to the site) ● Neighbourhood Planning Area (Isle of Dogs) ● Tall Building Zone (Millwall Inner Dock) ● Archaeological Priority Area (Isle of Dogs, tier 3)
Relevant Permissions	PA/15/02216 – Comprehensive mixed use redevelopment including buildings ranging from 4- 30 storeys in height (tallest being 110m) comprising: a secondary school, 722 residential units, retail use, flexible restaurant and café and drinking establishment uses, flexible office and financial and professional services uses, Community uses.

Site proposal	Details
Indicative capacities	950 homes 14,500sqm educational floorspace 2,000sqm commercial floorspace 4,000sqm community floorspace 1,500sqm retail floorspace
Phasing	2024-29

Land uses, activities, and delivery

- Development should consist of a residential-led scheme with provision of a secondary school.
- Acceptable land uses include:
 - Residential (Class C3)
 - Small scale retail/town centre uses (Class E)
 - Community uses (Class F1/F2)
- Required on-site infrastructure includes:
 - Secondary School
 - Community centre
 - Strategic consolidated open space of minimum 1 hectare
- Public open space should be located adjacent to the Millwall Outer Dock and designed to facilitate sport and recreation activities.
- An assessment should be carried out to understand the potential contamination on site prior to any development taking place.

Form, massing, and heritage

- Height strategy: Maximum height of 110m at the tallest point, which should be at the eastern end of the site. Heights should step down towards the existing lower-rise context in the west.
- Development should enable clear lines of sight between Millharbour and Millwall Outer Dock and ensure multiple visual and pedestrian permeability between Tiller Road and Millwall Outer Dock.
- Protect or enhance the setting of the Maritime Greenwich world heritage site.
- Heights and layout should ensure that One Canada Square retains its prominence, and ensure that the silhouette of One Canada Square,

and particularly its distinctive pyramid, remain visible in views from the south and southeast.

Routes and streets

- Improve walking and cycling connections to, from and within the site - particularly to improve connections to Millwall Outer Dock and to Barkantine Estate centre, Westferry Road centre and Crossharbour centre. These routes should align with the existing urban grain to create a legible, permeable and well-defined movement network. Development must provide access along the waterfront at Millwall Outer Dock. Improved green grid routes should be provided along the waterfront at Millwall Outer Dock, with good quality onward connections to green grid routes at Tiller Road and towards the Thames Path.
- New development should be well connected to the existing leisure centre at Tiller Road.

Environment and public realm

- Improve public realm with active site edges, particularly along Westferry Road and Millharbour.
- Respect the waterside setting, ensuring public accessibility to the waterfront by stepping buildings back from the water.
- In line with the Integrated Water Management Plan for the Isle of Dogs and South Poplar, development on this site should provide an outfall for surface water drainage into the docks.

4.12 Wood Wharf

Figure 54: 4.12 Wood Wharf (indicative)

Site information	Details
Address	Preston's Road
Area [ha]	11.03
Ward	Blackwall and Cubitt Town
PTAL [2031]	3-6a
Planning designations Page 1078	<ul style="list-style-type: none"> ● Area of substandard air quality (small part of the site) ● Skyline of Strategic Importance ● Flood risk area ● Site of Importance for Nature Conservation (Millwall and West India Docks, and Blackwall Basin, both adjacent to the site) ● Town Centre (Canary Wharf Metropolitan Centre) ● Tower Hamlets Activity Area (part of the site) ● Preferred Office Location (Canary Wharf Fringe) ● Tall Building Zone (Canary Wharf) ● Archaeological Priority Area (Isle of Dogs, tier 3) ● Conservation Area (Coldharbour, part of site, most of the Conservation Area is adjacent to the site) ● Statutory listed buildings (Quay Walls, Copings and Buttresses to Import Dock and Export Dock, Grade I; Blackwall Basin, Grade I)

Site information	Details
Relevant Permissions	PA/13/02966 - Outline application (all matters reserved) for mixed-use redevelopment of the site, comprising the erection of buildings, including tall buildings and basements, comprising residential units, hotel, business floorspace, retail, community and leisure, and sui generis uses. The permission also includes a night club/ jazz club in the basement levels of plot C1. As amended.

Site proposal	Details
Indicative capacities	3,600 homes 165-265,000sqm of commercial floorspace
Phasing	2024-29, 2030-34

Land uses, activities, and delivery

- Development should consist of a mixed-use, residential-led scheme with a mix of retail, workspace, community and cultural uses and the provision of a primary school and health facility and an expansion of the Idea Store.
- Acceptable land uses include:
 - Residential (Class C3) – maximum 75% of floorspace
 - Hotel (Class C1)
 - Town centre uses (Class E) – at least 25% of floorspace
 - Community uses (Class F1/F2)
- Required on-site infrastructure includes:
 - Primary school

- NHS primary health care facility (already delivered and operational)
- Idea Store (or expansion or relocation of existing Canary Wharf Idea Store)
- Strategic consolidated open space of minimum 1 hectare
- The site is within the Canary Wharf Fringe and is expected to provide at least 25% of the floorspace as commercial uses, with a focus on Central Activities Zone strategic uses as defined in the London Plan.

Form, massing, and heritage

- Height strategy: Maximum height of 211m at the tallest point, which should be in the southwest corner of the site. Other taller buildings of 200m, 157m, 135m, 118m, and 107m on the southern side of the site; and 190m, 167m, and 104m on the northern side of the site. Heights should step down towards the existing residential towards the east of the site.
- Heights and layout should ensure that One Canada Square retains its prominence, and ensure that the silhouette of One Canada Square, and particularly its distinctive pyramid, remain visible in views from the east and southeast.
- The impact of development on nearby heritage assets and conservation areas should be considered – heritage assets should be protected or enhanced, and any negative impacts mitigated, because heritage and historic conservation plays a vital role in benefitting place shaping, social cohesion and the economy. This includes protecting or enhancing the Blackwall Basin and former West India Dock walls. For further details, refer to the Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals.

Routes and streets

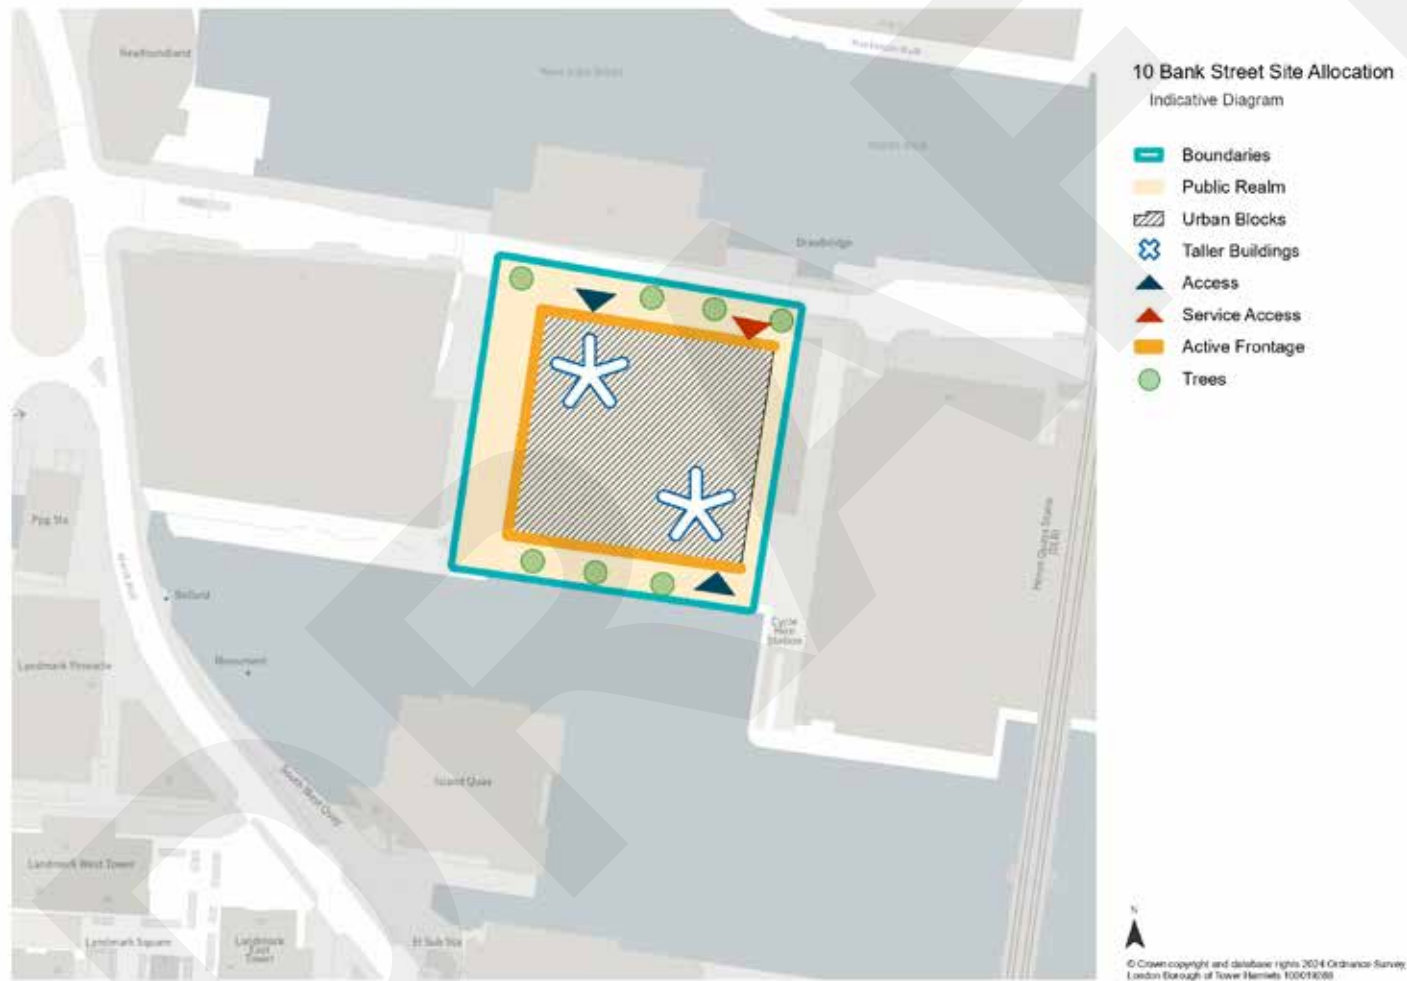

- Create new east-west and north-south walking and cycling routes. These should align with the existing grid geometry of Canary Wharf to create a legible, permeable and well-defined movement network, particularly connecting to Canary Wharf and Marsh Wall East. Development must provide access along the waterfront at Blackwall Basin and South Dock, and provide comfortable access to these spaces. Improved green grid connections should be delivered through the site, with good quality onward connections to green grid routes at Preston's Road and towards Jubilee Park and the Billingsgate Market site allocation.

Environment and public realm

- Prevent excessive overshadowing and enable activation of the riverside by ensuring buildings are stepped back from the water edge.
- Provide a range of new publicly accessible open spaces, including a consolidated open space of at least 1 hectare in size.
- In line with the Integrated Water Management Plan for the Isle of Dogs and South Poplar, opportunities for greywater recycling should be investigated.

Planning designations	<ul style="list-style-type: none"> ● Skyline of Strategic Importance ● Flood risk area ● Area of deficiency of access to nature ● Site of Importance for Nature Conservation (Millwall and West India Docks, adjacent to the site) ● Town Centre (Canary Wharf Metropolitan Centre) ● Tower Hamlets Activity Area ● Preferred Office Location (Canary Wharf Fringe) ● Tall Building Zone (Canary Wharf) ● Archaeological Priority Area (Isle of Dogs, tier 3)

Site information	Details
Relevant Permissions	<p>PA/13/01150 - Outline application (all matters reserved) for the demolition of existing buildings and structures and erection of a new building with a maximum height of 191.5m AOD comprising a maximum of 129,857sqm GIA of office floorspace and a maximum of 785 sqm GIA of flexible floorspace (A classes) along with a decked promenade to the South Dock, access and highways works, landscaping and other associated works. (Development not completed)</p> <p>PA/16/02956 - Construction of a building 166m AOD comprising 124,734sqm GIA of office (Use Class B1) and 293sqm GIA of retail (Use Classes A1-A5) along with a decked promenade to the West India Dock South.</p>

Site proposal	Details
Indicative capacities	575 homes 41,000sqm commercial/town centres floorspace
Phasing	2025-29, 2030-34

Land uses, activities, and delivery

- Development should consist of a mixed-use, residential- and commercial-led scheme.
- Acceptable land uses include:
 - Residential (Class C3) – maximum 75% of floorspace
 - Commercial and town centre uses (Class E) – at least 25% of floorspace
 - Community uses (Class F1/F2)
- The site is within the Canary Wharf Fringe and is expected to provide at least 25% of the floorspace as commercial uses, with a focus on Central Activities Zone strategic uses as defined in the London Plan.

Form, massing, and heritage

- Height strategy: maximum height of 166m at the tallest point, with massing focused in the southeastern corner of the site. Secondary tall point of maximum height 119m.
- The towers should be carefully designed with respect to overlooking, given the close proximity of this plot to adjacent developments.
- Heights and layout should ensure that One Canada Square retains its prominence, and ensure that the silhouette of One Canada Square, and particularly its distinctive pyramid, remain visible in views from the west and southwest.

Routes and streets

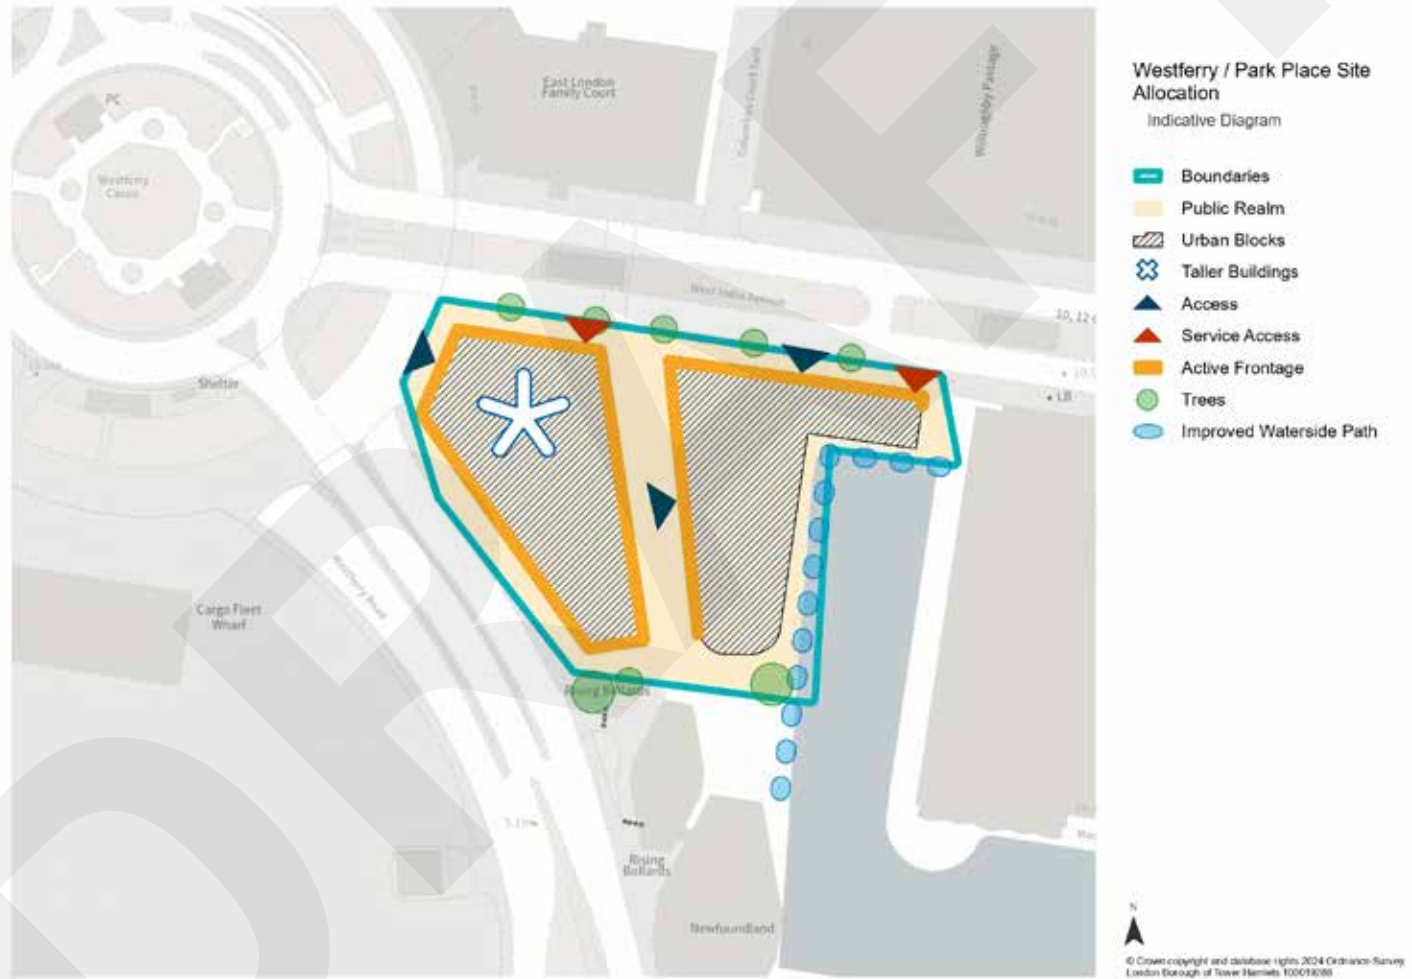

- Improve walking and cycling connections to and from the site, and provide public access to the waterfront at South Dock. Public routes on the east and west sides of the block should also be created, to establish public and accessible routes between Middle and South Docks.

Environment and public realm

- Prevent excessive overshadowing and enable activation of the riverside by ensuring buildings are stepped back from the water edge.
- In line with the Integrated Water Management Plan for the Isle of Dogs and South Poplar, development on this site should provide an outfall for surface water drainage into the docks.
- Due to the small size of this site, it cannot fulfil the requirement of policy DV8(1)(e) to provide 0.4ha of publicly accessible open space. Development on the site should therefore aim instead to provide smaller 'pocket parks' of publicly accessible open space and an improved public realm.

4.16 Westferry / Park Place

Figure 56: 4.16 Westferry / Park Place (indicative)

Site information	Details
Address	West Ferry Road/West India Avenue
Area [ha]	0.68
Ward	Canary Wharf
PTAL [2031]	6a
Planning designations Page 1084	<ul style="list-style-type: none"> ● Area of substandard air quality ● Skyline of Strategic Importance ● Flood risk area ● Area of deficiency of access to nature ● Site of Importance for Nature Conservation (Millwall and West India Docks, adjacent to the site) ● Town Centre (Canary Wharf Metropolitan Centre) ● Preferred Office Location (Canary Wharf Fringe) ● Tall Building Zone (Canary Wharf) ● Archaeological Priority Area (Isle of Dogs, tier 3) ● Statutory listed buildings (Quay Walls, Copings and Buttresses to Import Dock and Export Dock, Grade I)

Site information	Details
Relevant Permissions	<p>PA/13/02344: Outline application for the demolition of any existing structures, and construction of a building of up to 102,102sqm GIA comprising office use (use class B1) along with a decked terrace to the Middle Dock.</p> <p>PA/13/02341/A2: Reserved matters application for the erection of an office building (Use Class B1) comprising two basement levels, lower and ground level and 31 upper levels, construction of a new pedestrian link and other works incidental to the development.</p> <p>PA/16/02363/S: Minor-material amendment to outline planning permission PA/13/02344.</p> <p>PA/20/00125/NC: Application for a Certificate of Lawfulness of Existing Use or Development in relation to the implementation of outline planning permission (ref. PA/16/02363/S) and reserved matters application (ref. PA/13/02341/A2).</p>

Site proposal	Details
Indicative capacities	550 homes 19,000sqm commercial/town centre floorspace
Phasing	2030-34

Land uses, activities, and delivery

- Development should consist of a mixed-use, residential- and commercial-led scheme.
- Acceptable land uses include:
 - Residential (Class C3) – maximum 75% of floorspace
 - Commercial and town centre uses (Class E) – at least 25% of floorspace
 - Community uses (Class F1/F2)
- The site is within the Canary Wharf Fringe and is expected to provide at least 25% of the floorspace as commercial uses, with a focus on Central Activities Zone strategic uses as defined in the London Plan.

Form, massing, and heritage

- Height Strategy: Maximum height of 132m at the tallest point, which should be located in the west of the site, fronting Westferry Circus. Heights to step down to the east and south, with secondary high points of 74m and 65m next to the tallest building.
- Heights and layout should ensure that One Canada Square retains its prominence, and ensure that the silhouette of One Canada Square, and particularly its distinctive pyramid, remain visible in views from the west.
- The impact of development on nearby heritage assets should be considered – heritage assets should be protected or enhanced, and any negative impacts mitigated, because heritage and historic conservation plays a vital role in benefitting place shaping, social cohesion and the economy. For further details, refer to the Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals.

Routes and streets

- Improve walking and cycling connections to and from the site, and provide public access to the waterfront at Middle Dock.

Environment and public realm

- High quality public realm and open spaces should be created between the buildings in the new development, and at the frontage with Middle Dock.
- The street frontage will need to carefully manage level changes on the Westferry Road frontage, where the road passes beneath Westferry Circus and the pedestrian routes rise to meet West India Avenue, and should create an improved pedestrian experience, with wide pavements to create space for pedestrians.
- Due to the small size of this site, it cannot fulfil the requirement of policy DV8(1)(e) to provide 0.4ha of publicly accessible open space. Development on the site should therefore aim instead to provide smaller 'pocket parks' of publicly accessible open space and an improved public realm.

MILE END
PARK KIOSK

Appendices

Appendix 1: Glossary

Term	Abbreviation	Explanation
Active cooling		A heat-reducing mechanism that ensures heat transfer to cool a building. Active cooling is dependent on energy consumption to operate. Examples of active cooling include air conditioning systems.
Active frontages		A building front that promotes activity and natural surveillance, and encourages movement between the building at ground level and the adjacent public realm by the way the building is designed or orientated. A building provides active frontage if the ground floor avoids blank walls or obscured frontages, includes windows and openings, and provides a variety of uses, all of which contribute to natural surveillance and support the visual and physical relationship between the building and ground level.
Affordable housing		Social rented, affordable rented and intermediate housing provided to eligible households whose needs are not met by the market. Eligibility is determined with regard to local incomes and our (the council) housing allocation policy. Affordable housing should include provisions to remain at an affordable price for future households or for the subsidy to be recycled for alternative affordable housing provision.
Affordable workspace		Workspace that is provided at rents below the market rate for that space for a specific social, cultural or economic development purpose. The space may be rented directly to the council or to an approved affordable workspace provider.
Agent of Change Principle		The principle places the responsibility of any new development (i.e. the agent of change) to mitigate the impact of nuisances (including noise) from existing nuisance-generating uses. This is to ensure that occupants in the new development are protected from adverse impacts and existing uses are protected from complaints. Similarly, any new nuisance-generating development, for example a music venue, will need to put in place measures to mitigate noise impacts on existing development close by.
Air Quality Assessment	AQA	An assessment of the impact of a development on levels of certain pollutants in the local area

Term	Abbreviation	Explanation
Air Quality Neutral		An Air Quality Neutral development is one that meets, or improves upon, the benchmarks set out in the Air Quality Neutral LPG. These benchmarks set out the maximum allowable emissions of NOx and particulate matter based on the size and use class of the proposed development, and are designed to prevent the degradation of air quality from the combined emissions of individual developments. Air Quality Neutral applies only to the completed development and does not include impacts arising from construction, which should be separately assessed in the Air Quality Assessment.
Air Quality Objectives		Objectives are expressed as pollution concentrations over certain exposure periods, which should be achieved by a specific target date. Some objectives are based on long term exposure (e.g. annual averages), with some based on short term objectives. Objectives only apply where a member of the public may be exposed to pollution over the relevant averaging time.
Air Quality Positive approach		A process of identifying and implementing ways to push a development beyond compliance with both the Air Quality Neutral benchmarks and the minimum requirements of an air quality assessment. To achieve this, an AQP Statement should be submitted that demonstrates how benefits to local air quality have been maximised, and how measures to minimise pollution exposure will be implemented.
Amenity		A quality of a location or neighbourhood that helps to make it attractive or enjoyable for residents and visitors.
Amenity space		An area within the curtilage of a residential development that is used for recreation and provides visual amenity, e.g. gardens or landscaped space. This includes both 'private' and 'communal' amenity space.
Annual monitoring report	AMR	Assesses the effectiveness of our policies and proposals.
Areas of deficiency in access to nature		Areas where people have to walk more than one kilometre to reach a publicly accessible metropolitan or borough Site of Importance for Nature (SINC).
Areas of deficiency in access to public open space		Areas lacking in sufficient publicly accessible open space, as defined by the distances set out in London Plan policy G4 Open space.

Term	Abbreviation	Explanation
Archaeological Priority Area		A defined area where there is significant known archaeological interest which might be affected by development. These areas have been categorised into three tiers according to their relative archaeological significance and potential - Tier 1: Area which is known or strongly suspected to contain a heritage asset of national importance (e.g. scheduled monument). Tier 2: Area where there is known presence or likely presence of heritage assets of archaeological interest. Tier 3: Area with archaeological potential.
Biodiversity Net Gain	BNG	Biodiversity net gain (BNG) is a strategy to develop land in a manner that contributes to the recovery of nature and leaves the natural environment in a measurably better state than it was beforehand. Biodiversity net gain delivers quantifiable improvements for biodiversity by creating or enhancing habitats in association with development. Biodiversity refers to all living organisms, including animals, insects, plants, bacteria, and fungi. A habitat is the area and resources used by a living organism or assemblage of animals and plants. Biodiversity net gain can be achieved on-site, off-site or through a combination of on-site and off-site measures.
Blue Badge parking		Parking available to holders of Blue Badges (permits issued by the local authority entitling holders to park on the public highway in marked bays or on yellow lines.
Business Improvement District	BID	A business-led mechanism for increasing investment within defined areas of a city such as a town centre, based on a supplementary rate levied on businesses within the defined area.
Build to Rent	BTR	Schemes which meet the definition set out in Policy H11 Build to Rent of the London Plan
Building Research Establishment Environmental Assessment Method	BREEAM	A widely used method to assess the sustainability of non-residential developments.
Canary Wharf Fringe		An area of transition between the Canary Wharf Preferred Office Location and the surrounding residential communities. This area has a mix of office uses and residential.

Term	Abbreviation	Explanation
Car-free development		Car-free developments do not provide parking for cars on-site and there is no entitlement to on-street parking permits for residents, with the exception of providing accessible parking spaces for Blue Badge holders.
Central Activities Zone	CAZ	A large area covering Central London and including parts of the boroughs of Camden, Hackney, Islington, Kensington and Chelsea, Lambeth, Southwark, Wandsworth and Westminster, in addition to Tower Hamlets. This area is the traditional commercial and cultural centre of London, with a high concentration of office, shopping, leisure and cultural facilities. Within Tower Hamlets, the CAZ includes the City Fringe and the North Isle of Dogs.
CAZ Centres		Clusters within the Central Activities Zone (CAZ) that are predominantly retail or leisure focused and act as town centres.
Circular economy		An economic model in which resources are kept in use at the highest level possible for as long as possible in order to maximise value and reduce waste, moving away from the traditional linear economic model of 'make, use, dispose'.
Code of Construction Practice	CoCP	A guidance document setting out relevant legislation, linkages to the Local Plan, key actions to be undertaken by developers (regarding planning submissions and license applications) and encouraging the use of best practice environmental and safety related mitigations while planning and managing demolition and construction works within the borough.
Community facilities		For the purposes of this Local Plan, community facilities can include: public houses, libraries, youth facilities, meeting places, places of worship, public conveniences and other uses in use classes E(d-f), F1, F2(b and d) and Sui Generis that provide a service to the local community.
Community infrastructure levy	CIL	A tariff on development which creates net additional floor space, where the gross internal area of new build exceeds 100 square metres, to help fund new infrastructure required to support the development.

Term	Abbreviation	Explanation
Community-led housing		Schemes that are genuinely community-led all share three common principles: meaningful community engagement and consent occurs throughout the development process (communities do not necessarily have to initiate the conversation, or build homes themselves); there is a presumption that the community group or organisation will take a long-term formal role in the ownership, stewardship or management of the homes; and the benefits of the scheme to the local area and/or specified community group are clearly defined and legally protected in perpetuity.
Communal heating systems		A system that supplies heat to multiple properties from a common heat source. It may range from a district system heating many buildings to a system serving an individual block of flats.
Comparison shopping		Retail goods not bought on a frequent basis, and that may involve comparison shopping or visits to more specialised shopping locations, such as clothes, televisions, fridges and dishwashers etc.
Connectivity		This refers to the number of connections within a street network and their integration, layout and relationship to one another and the impact this has on getting from A to B, by foot, bicycle and vehicle.
Conservation area		An area of special architectural or historical interest, the character and appearance of which the council has a duty to preserve or enhance. The land, buildings and trees in these areas have special protection in the planning system.
Construction, demolition and excavation waste		This is waste arising from the excavation, construction, repair, maintenance and demolition of buildings and structures, including roads. It consists mostly of brick, concrete, hardcore, subsoil and topsoil, but it can contain quantities of timber, metal, plastics and occasionally special (hazardous) waste materials.
Construction logistics and community safety standard	CLOCS	The CLOGS standard is a common standard for use by the construction logistics industry to ensure that construction companies follow effective practice in the management of their operations, vehicles, drivers and construction sites. Each requirement has been developed to reduce the risk of a collision between heavy goods vehicles in the construction sector and vulnerable road users such as cyclists and pedestrians.
Construction management plan	CMP	The CMP provides a site-specific summary of planned management, monitoring and auditing procedures to ensure compliance with the CoCP.
Convenience shopping		The provision of everyday, essential items, such as food, drink and newspapers. In this type of shopping convenience of location usually takes priority.

Term	Abbreviation	Explanation
Creative Enterprise Zone	CEZ	A Mayor of London initiative to establish clusters of creative production, which provide affordable premises and enterprise-related incentives for artists and creative businesses, pro-culture planning and housing policies and offer career pathways and creative jobs for local communities and young people. Tower Hamlets contains one CEZ: The Hackney Wick and Fish Island CEZ in the east of the borough.
Data Centre		A data centre is a physical facility composed of networked computers and storage that businesses and other organisations use to organise, process, store and disseminate large amounts of data.
Design code		A set of simple, concise, illustrated design requirements that are visual and numerical wherever possible to provide specific, detailed parameters for the physical development of a site or area.
Development management		Development management is the term used to include the range of activities and interactions that together transform the 'control of development and the use of land' into a more positive and proactive process in keeping with the ethos of spatial planning and supports local authorities in their role as place shapers.
Development management policies		These policies set out detailed criteria to carefully manage and control development through the planning application process.
Development plan		The borough's development plan is comprised of, the London Plan (produced on behalf of the Mayor of London), the Local Plan (this document), and any Neighbourhood Plans which may come forward. The development plan sets out specific policies to guide the use of land and buildings. These policies will be the starting point for assessing planning applications.
District centre		These designations form part of the borough's network of town centres, providing commercial and retail services to predominately serve local communities. They typically have at least one supermarket and a variety of non-retail functions (including community facilities) and are close to the strategic transport network.
District heating network	DHN	A network of pipes carrying hot water or steam, usually underground, that connects heat production equipment with heat customers.
Docklands Light Railway	DLR	An automated, driverless light metro system serving the redeveloped docklands area, including large parts of the borough and adjoining authorities.

Term	Abbreviation	Explanation
Dual aspect		A dual aspect dwelling is defined as one with openable windows on two external walls, which may be either on opposite sides of a dwelling or on adjacent sides of a dwelling where the external walls of a dwelling wrap around the corner of a building. The provision of a bay window does not constitute dual aspect.
Dwelling		A self-contained unit of residential accommodation; also referred to as a 'residential unit'.
Early years		Facilities and services for children of pre-school age (0-4), which include childcare providers, children centres and nurseries.
Easily adaptable		Easily adaptable requires adjustable level kitchen units to be installed to replace the standard units provided; that a level access shower is provided in one bathroom with "wet-room" drainage and that all parts of the dwelling must be suitably sized and that walls are strengthened for the installation of additional mobility aids, as required in the GLA's Housing Supplementary Planning Guidance.
Electric Vehicle Charging Point	EVCP	Also known as a charging station, it is a power supply device that is used to recharge plug-in electric vehicles.
Elizabeth line		A new east-west spinal rail route through central London and beyond
Embodied carbon		In the built environment, 'embodied carbon' emissions refer to the total carbon emissions associated with the construction process, throughout the whole lifecycle of a building. This includes extraction (of raw materials), manufacture, transportation, assembly, replacement, and deconstruction.
Energy Use Intensity	EUI	Energy Use Intensity is a measure of the total energy consumption of a building over a year, per square meter (kWh/m ² /yr). The EUI of a building covers regulated and unregulated energy uses, including space heating, domestic hot water, ventilation, lighting, cooking, and appliances. It does not include charging of electric vehicles.
Employment uses		Offices, industrial and storage and distribution facilities which fall under use classes B2, B8 and E(g), as well as sui generis uses with industrial functions.
Enclosure		Enclosure refers to using the design and scale of buildings to create a sense of defined space. Development should create streets and spaces with a degree of enclosure by assisting in defining the edges of the public realm.

Term	Abbreviation	Explanation
Evening and night-time activities		All uses and activities that take place after 6pm and before 6am. This includes leisure activities such as bars, pubs, restaurants and nightclubs; shops and services that stay open late; and social and physical infrastructure that requires operation and maintenance in the evening and at night, such as hospitals, wholesale markets and public transport.
Family housing		A dwelling that by virtue of its size, layout and design is suitable for a family to live in and generally has three, four, five, or more bedrooms.
Fleet Operator Recognition Scheme Silver accreditation	FORS	The FORS scheme is a voluntary accreditation scheme encompassing all aspects of safety, fuel efficiency, vehicle emissions and improved operations. The FORS silver accreditation is awarded to operators who maintain their bronze accreditation and are able to demonstrate they meet the FORS silver accreditation requirements.
Flood risk zone		Areas within the borough which are at risk from flooding. The flood risk zones consist of zones 1, 2 and 3a and 3b (the higher the number the greater the risk of flooding) and are based on the Environment Agency's flood map for England and Wales.
Gated communities		Walled or fenced housing developments to which public access is restricted, often guarded using CCTV and/or security personnel.
Greater London Authority	GLA	A top-tier administrative body covering the Greater London area. It is comprised of two parts: the London Assembly and the Mayor of London as defined under legislation. The London Assembly scrutinises the activities of the Mayor of London in the public interest.
Green grid		A network of inter-linked high quality and multi-functional open spaces, waterways and other corridors.
Green infrastructure		Green infrastructure is a network of multi-functional green space and other green features. Green infrastructure assets include open spaces such as parks and gardens, allotments, woodlands, fields, hedges, playing fields, footpaths, and cycleways. Assets involving water can also be called 'blue infrastructure', such as rivers, canals, and other water bodies, but these are all included in the overarching term of 'green infrastructure'.

Term	Abbreviation	Explanation
Growth areas		Three different types of character area, as identified in the Characterisation and Growth Study. This defines all areas in the borough as either conserve areas, enhance areas, or transform areas, setting out how new development should respond to the existing character in the area.
Hamlets		This refers to the 24 places (see Figure 5) consisting of historic as well as more recently established places within Tower Hamlets
Habitable room		A habitable room is any room used or intended to be used for sleeping, cooking, living or eating purposes. Enclosed spaces to be used solely as a kitchen and space such as bath or toilet facilities, corridors, hallways, cellars, utility rooms or similar should not be considered habitable rooms.
Health impact assessment	HIA	Health Impact Assessment (HIA) is used as a systematic framework to identify the potential impacts of a development proposal, policy or plan on the health and wellbeing of the population and highlight any health inequalities that may arise. HIA should be undertaken as early as possible in the plan making or design process to identify opportunities for maximising potential health gains, minimising harm, and addressing health inequalities.
Health facilities		For the purposes of the Local Plan, health facilities can include hospitals, walk-in-centres, doctors surgeries, health and wellbeing centres and community health services.
Healthy Streets		The Healthy Streets Approach is the system of policies and strategies to help Londoners use cars less and walk, cycle and use public transport more. The Healthy Streets Approach uses 10 evidence-based indicators of what makes streets attractive places.
Heritage asset		A building, monument, site, place, area or landscape identified as having a degree of significance meriting consideration in planning decisions, because of its heritage interest. Heritage asset includes designated heritage assets and assets identified by the local planning authority (including local listing).
Heritage at Risk Register		An annual survey prepared by Historic England which identifies heritage assets that are considered to be at risk as a result of neglect, decay, or inappropriate development, or are vulnerable to becoming so.
High fat, salt, or sugar products	HFSS	A collection of foods and drinks that are considered to be high in fat, salt or sugar content or to be 'less healthy', as defined under The Food (Promotion and Placement) (England) Regulations 2021.

Term	Abbreviation	Explanation
Historic Environment Record		Information services which provide access to details on historic assets and landscapes covering a defined geographic area, held in an on-line database.
Historic parks and gardens		A collection of designated heritage assets celebrated for their designed landscapes.
Human scale		The size and scale of buildings and structures which relate well in size to an individual human being and are arranged in a way which makes people feel comfortable rather than overwhelmed.
Idea stores		These provide traditional library services as well as additional services including IT facilities and places for socialising as well as access to lifelong learning courses.
Infill development		Development that takes place on vacant or undeveloped sites between other developments and/or built form.
Infrastructure Delivery Plan	IDP	An assessment of the existing and future infrastructure needs and requirements to support new development and the borough's growing population.
Infrastructure Impact Assessment		A short document setting out the expected impact of new development on the infrastructure capacity of the borough, and identifying measures for mitigating this impact.
Integrated Impact Assessment	IIA	As part of developing Tower Hamlet's Local Plan all policies have been subject to an IIA. The IIA comprises: Sustainability Appraisal, Health Impact Assessment, Equalities Impact Assessment and Habitat Regulation Assessment.
Intrusive elements		Elements that are harmful for a designated view, for example through obscuring a landmark or protected skyline, or adversely affecting the prominence of a landmark by scale and/or proximity, including through coalescence and visual dominance.
Intermediate housing		Homes for sale and rent provided at a cost above social rent, but below market levels subject to the criteria in the affordable housing definition. These can include shared equity (shared ownership and equity loans), other low cost homes for sale and intermediate rent.

Term	Abbreviation	Explanation
Landmarks		A built structure, or group of built structures, that is distinctive because of its appearance or location. It stands out from its surroundings, serving as a reference point for orientation and navigation while having historic or cultural significance.
Legibility		The degree to which a place and the movement routes within and around it can be easily understood by those who inhabit the space.
Leisure facilities		For the purposes of the Local Plan, leisure facilities can include leisure centres, indoor and outdoor sports facilities and swimming pools.
Life sciences		The sciences concerned with the study of living organisms, including biology, botany, zoology, microbiology, physiology, biochemistry, and related subjects. Life sciences facilities typically include wet lab and/or dry lab space in addition to supporting offices and other spaces.
Listed building		A building designated for protection due to its heritage value. Listed buildings are categorised into three tiers - Grade I (highest), Grade II*, and Grade II.
Living building' elements		Living building' elements contribute to local biodiversity through providing habitats, and/or features for priority species. They include living roofs, walls, terraces, and other building greening techniques, and swift bricks or nest boxes. 'Living building' elements can also extend to construction materials that are made of organic materials, which often support thermal control, rainwater flow, can in some cases adapt and self-repair, and are typically more sustainable, resilient, and long-lasting than traditional building materials.
Local Development Scheme	LDS	A project plan setting out how the Local Plan and other relevant documents (e.g. supplementary planning documents) will be prepared and when.
Local Mixed-use Employment Location	LMEL	LELs have unique individual characteristics. They are areas of high accessibility that provide or could provide significant capacity for employment accommodation meeting secondary, more local or specialist employment needs, and to support the needs of start-ups, small-and-medium enterprises and creative and digital industries.
Local Industrial Location	LIL	An area or site identified as being important to local employment and required for the reservoir of industrial employment land, to be safeguarded for industrial employment uses.

Term	Abbreviation	Explanation
Local presence facility		An accessible and integrated facility merging services currently provided within one-stop-shops and idea stores providing customers with the ability to access and interact with council services in different ways alongside a range of complementary activities, such as arts, leisure and learning/information services.
Local shop		Shops, typically convenience retailers, located outside of town centres and serving a local residential or working community.
Local views		A local line of sight from a particular point to an important local landmark, view or skyline.
Locally listed buildings		These are buildings of historic or architectural interest at the local level. Although they are not legally protected, close scrutiny will be given to any development affecting them.
London Legacy Development Corporation	LLDC	The LLDC became the planning authority for the Olympic Legacy area following the Olympic Games in 2012. The north-east area of Tower Hamlets (Hackney Wick/Fish Island and Bromley-by-Bow) was transferred to LLDC in terms of planning responsibilities. The planning powers of this area will be handed back to the relevant boroughs, including Tower Hamlets, by December 2024 as agreed by the Mayor of London.
London Plan		The London Plan is the spatial development strategy for all of London. It is prepared by the Greater London Authority. In London, Local Plans must be in general conformity with the London Plan.
London squares		Protected areas that may not be used for any purpose other than as an ornamental garden, pleasure ground, or ground for play, rest or recreation. No building or structure should be created or placed on or over any London square, unless necessary or convenient for the use or maintenance of the square.
London View Management Framework		A document which sets out a number of important views across London that are required to be protected.
Major centre		A major centre has over 50,000 square metres of retail space, serves a borough-wide catchment, has a combined residential and employment density (in its catchment) in excess of other centres in the borough and contains a variety of functions and services, including a growing leisure economy.

Term	Abbreviation	Explanation
Major developments		In the context of the Local Plan, major developments are defined as, 10 to 100 residential units, 1,000 to 10,000 square metres floorspace, and development on a site of more than 0.5 hectare. Please note: any policy requirement referring to major development applies to all development above these thresholds, unless otherwise stated.
Meanwhile sites		Locations that are used for temporary developments or activities while waiting for a more permanent use.
Metropolitan Centre		Metropolitan Centres are designated through the London Plan. Canary Wharf has been designated a Metropolitan Centre because it serves a wide catchment which extends over several boroughs and into parts of the wider south-east region. It contains at least 100,000 square metres of retail, leisure and service floorspace with a significant proportion of higher-order comparison goods relative to convenience goods. Canary Wharf has very good accessibility and significant employment, service and leisure functions.
Metropolitan Open Land		Strategic open land within the urban area that contributes to the structure of London and has the same protection as the Green Belt.
Mixed-use development		Development for a variety of activities on single sites or across wider areas such as town centres.
Movement hierarchy		The hierarchy of roads, streets and other movement routes that shape how people move around.
National Planning Policy Framework	NPPF	The National Planning Policy Framework sets out the government's planning policies for England.
National Planning Practice Guidance	NPPG	An online resource giving up-to-date government planning guidance and requirements.
Natural/Passive surveillance		The discouragement of crime by the presence of passers-by or the ability of people to be seen from surrounding windows.
Neighbourhood Centre		Neighbourhood centres contain a number of shops including a range of essential uses such as a pharmacy, post office or 'corner shop'. They serve a very local catchment (in the region of a ten-minute walking radius) and are located within walking distance to public transport facilities and a strategic road network.

Term	Abbreviation	Explanation
Neighbourhood Parade		Neighbourhood parades are small clusters of shops, other businesses and community facilities. They are smaller than Neighbourhood Centres and typically serve an extremely local catchment (in the region of a five-minute walking radius, or in some cases a single large housing estate).
Neighbourhood Plan		Neighbourhood plans give communities the power to plan for the areas in which they live. These must be in general conformity with the strategic priorities of the development plan, and have regard to national policy and guidance and should not promote less development than set out in the Local Plan. An adopted plan will form a part of the statutory development plan and will be used to inform planning applications within this area.
Neighbourhood planning		Neighbourhood planning gives communities the ability to create planning documents and development orders: Neighbourhood Plans and Neighbourhood Development Orders.
Net zero carbon		A net zero carbon building is where the sum total of all carbon emissions, both operational and embodied, over full lifecycle of the building, are minimised; meeting local carbon and energy targets, with residual 'offsets' equating to no additional carbon emissions being produced.
Open space (consolidated)		A process of combining open space into a single more effective or coherent whole. The way in which these spaces will function will be assessed on a site-by-site basis and agreed through the development management process. At sites with multiple-ownership, this will mean that each site has to deliver their proportion of open space adjoining the open space which the adjoining landowner will deliver, or deliver it in such a way that the open space would still form a coherent whole over the entire site allocation. We strongly encourage landowners to work jointly to develop masterplans covering the entire site allocation to ensure consolidation can be achieved whilst balancing the impact on the landowners. Consolidation should also avoid fragmentation of open space and ensure that it fulfils the qualities and function of open space set out in the Open Space Strategy.
Open space (wider definition of open space)		All land that offers opportunity for play, recreation and sport or is of amenity value, whether in public or private ownership, where public access is unrestricted, partially-restricted or restricted. This includes all open areas consisting of: major parks (e.g. Victoria Park and Mile End Park), local parks, gardens, local parks, squares, playgrounds, ecological spaces, housing amenity land, playing fields (including playing pitches), allotments and burial grounds, whether or not they are accessible to the public. This definition does not include water bodies.

Term	Abbreviation	Explanation
Open space (publicly accessible)		Open space will be considered to be publicly accessible, where access for the public is secured by virtue of legal agreements and formal arrangement; whether it is in public or private ownership. Publicly accessible open space will not include areas of water such as rivers, canals, lakes, docks or incidental spaces.
Operational Carbon		All carbon emissions associated with the energy use of a building during its lifetime.
Opportunity areas		The London Plan identifies a number of opportunity areas; this includes the City Fringe/Tech City, Isle of Dogs and South Poplar and Poplar Riverside in Tower Hamlets. These areas have the ability to accommodate high levels of growth, focusing on housing.
Optimised site-capacity		Responding to the existing qualities of the surrounding context, and balancing the capacity for growth and increased housing supply and affordability alongside an improved quality of life.
Parking stress		The availability of parking spaces in an area.
Permeability		The degree to which an area has a variety of pleasant, convenient and safe routes through it and the capacity to which those routes can enable the movement of pedestrians, cyclists and vehicles.
Permit-free		Permit-free development may contain some parking on-site, in accordance with the parking standards set out in Appendix 3. However, residents are not entitled to on-street parking permits; permit-free developments will need to provide some spaces for disabled residents and for servicing in line with the parking standards.
Place-making		A process which aims to bring all those involved in shaping the quality of a place together in an inclusive and multi-dimensional manner, in order to create sustainable communities and high quality places. Place-making capitalises on a local community's assets, inspiration, and potential, ultimately creating places that people feel proud of and have a stake in.
Planning obligation/S106 agreement		A legal agreement between the developer, local authority and other interested parties primarily intended to make acceptable those developments that would otherwise be unacceptable in planning terms.
Planning Policy for Traveller Sites		This document sets out the government's planning policy for traveller sites.

Term	Abbreviation	Explanation
Policies Map		A part of the Local Plan illustrating the policies and showing the location of proposals on an Ordnance Survey base map.
Polluting development		A part of the Local Plan illustrating the policies and showing the location of proposals on an Ordnance Survey base map.
Preferred Office Location	POL	Area with major office development as the focus, with supporting uses such as gyms, hotels, restaurants and retail uses helping to achieve a sustainable office environment.
Primary and Secondary Frontages		Primary frontages are likely to include a high proportion of retail uses which may include food, drinks, clothing and household goods. Secondary frontages provide greater opportunities for a diversity of uses such as restaurants, cinemas and businesses.
Private rented sector		All non-owner occupied self-contained dwellings that are being rented out as housing (not including forms of affordable housing).
Public art		Artworks which members of the public are able to access and appreciate. Works may be sited in the public, civic, communal or commercial domain, in semi-public or privately owned public space, or within public, civic or institutional buildings. Artworks can form part of the structure or decoration of buildings, landscapes and streetscapes.
Public sector land		land that is owned or in use by a public sector organisation, or company or organisation in public ownership, or land that has been released from public ownership and on which housing development is proposed
Public realm		A collective term for all outside elements of the built environment that are accessible to the public, including but not limited to streets, squares, river frontages, and parks. Spaces that are privately owned can still form part of the public realm, if they are accessible to the public.
Public square		A consolidated area of open space primarily used by pedestrians, which should include well-defined edges and active frontages. It should be multifunctional and suitable for gatherings and should be well integrated with the wider movement network. The precise shape/form of the public square will be determined through the development management process.
Public Transport Accessibility Level	PTAL	A measure which rates locations by distance from frequent public transport services (from 0 to 6a, where a score of 0 is very poor and 6a is excellent).

Term	Abbreviation	Explanation
Railway Arches		Spaces underneath railway infrastructure that plays host to a variety of businesses and other uses. Includes both traditional brick arches and the larger spaces underneath the DLR.
Referable development		Planning applications of strategic importance to London are referred to the Mayor of London. In Tower Hamlets, this applies to developments of 150 residential units or more, developments over 30 metres in height, and development on Metropolitan Open Land.
Renewable energy		Energy derived from a source that is continually replenished, such as wind, wave, solar, hydroelectric and energy from plant material, but not fossil fuels or nuclear energy.
Safeguarded wharves		A network of sites that have been safeguarded for cargo handling uses such as intraport or transhipment movements and freight-related purposes by Safeguarding Directions. A site remains safeguarded unless and until the relevant Safeguarding Direction is formally removed or amended.
Scheduled monument		A collection of heritage assets designated for their historic, architectural, traditional, artistic or archaeological interest.
Secured by Design	SBD	A police security initiative that works to improve the security of buildings and their immediate surroundings through design guidance.
Sensitive development		A development which would allow users of the site to potentially be exposed to pollutants above the objective for the relevant period. For example, the introduction of a new residential development into an area where an air quality objective is already exceeded, would create the potential for the exposure of residents to poor air quality above the objective. This type of development may also generate significant additional traffic flow and also be a polluting development.
Setting (of a heritage asset)		The surroundings in which a heritage asset is experienced. Its extent is not fixed and may change as the asset and its surroundings evolve. Elements of a setting may make a positive or negative contribution to the significance of an asset, may affect the ability to appreciate that significance or may be neutral
Short stay accommodation		Short stay accommodation is defined as hotels, apart-hotels, serviced apartments and hostels.

Term	Abbreviation	Explanation
Site allocation		A parcel of land which has been set aside in the plan to accommodate strategic housing developments (i.e. sites that can provide over 500 new net-additional homes) and other uses such as employment and retail space. These sites are also expected to deliver significant infrastructure with capacity to accommodate future growth and development.
Site Environmental Management Plan	SEMP	Submission of an SEMP is required to ensure compliance with the CoCP for strategic and major development proposals. The contents of an SEMP will include a noise and vibration management plan that sets out the location of noise and vibration sensitive receptors and detail how noise and vibration arising from demolition and/or construction will be controlled and limited as far as is reasonably practicable, so that all receptors are protected from excessive noise and vibration levels.
Sites of Importance for Nature Conservation	SINC	Locally defined non-statutory sites of wildlife and geological importance.
Skyline of strategic importance		A significant element of the townscape of Tower Hamlets, formed by the cluster of buildings around Canary Wharf. This cluster is visible across London and has become a globally recognised silhouette.
Social value		Social value refers to a broader concept of value beyond just monetary contribution. It focuses on people and contribution to the community, assessing the positive value created for the local economy, improvements in social wellbeing, and enhancements to protect the local environment.
Space Heating Demand	SHD	The amount of heat energy needed to heat a building over a year, expressed in kWh/m ² /yr, used as an indicator of thermal and energy efficiency.
Spatial Development Strategy	SDS	The London Plan is the statutory spatial development strategy for the Greater London area that is prepared by the Mayor.
Spatial policies		High-level, overarching policies to help guide development and the use of land throughout the borough.
Specialist housing		Specialist housing refers to supported housing such as sheltered housing, residential care homes, nursing homes and dual-registered care homes.

Term	Abbreviation	Explanation
Specialist Centres		Centres within the town centre hierarchy that have a specific economic or cultural function. Includes Columbia Road, Redchurch Street and Hackney Wick.
Statement of Community Involvement	SCI	This sets out how and when we will consult with local and statutory stakeholders in preparing, altering and updating development plan documents and supplementary planning documents.
Strategic development		Proposals involving over 100 homes or 10,000 square metres of floorspace.
Strategic Industrial Location	SIL	Designated by the London Plan. This designation seeks to ensure that there are sufficient sites, in appropriate locations, to meet the needs of the general business, industrial, warehousing, waste management and some utilities and transport sectors.
Strategic Housing Land Availability Assessment	SHLAA	An assessment produced by the Greater London Authority which identifies a future supply of land that is suitable, available and achievable for housing and economic development uses over the plan period.
Local Housing Need Assessment	LHNA	This sets out estimates of the borough's current and future housing need.
Strategic Flood Risk Assessment	SFRA	A study which assesses the risk to an area from flooding from all sources, now and in the future, taking into consideration the impacts of climate change, to assess the cumulative impact that land use changes and developments in the area will have on flood risk.
Street furniture		A collective term for objects and pieces of equipment installed along streets and roads for various purposes, including benches, road signs, postboxes, telephone kiosks, and street lighting.
Streetscape		The appearance of the street as a whole incorporating the road, kerb and gutter, verges, fences, trees and building frontages.
Supplementary Planning Document	SPD	A document which helps explain how policies and proposals in the plan will be applied and implemented.

Term	Abbreviation	Explanation
Supplementary Planning Guidance/ London Plan Guidance	SPG/LPG	London Plan Guidance (LPG) provides further information about how the current London Plan should be implemented. Supplementary Planning Guidance (SPG) documents have been prepared to support earlier London Plans.
Sustainability Appraisal	SA	A legal assessment of the social, economic and environmental effects of relevant plans and programmes. This tool is used alongside the Strategic Environmental Assessment, Health Impact Assessment, Habitats Regulations Assessment and Equalities Impact Assessment to appraise impacts on specific groups or characteristics.
Sustainable community		A place or neighbourhood where people have a decent and affordable home to live in and have good access to jobs and services, such as schools, open space and shops, in a safe, inclusive and attractive environment, with opportunities to engage in social and community-based activities, preferably without the need to use a car.
Sustainable Drainage Systems	SuDS	Sequence of water management systems which are designed to manage flood and pollution risks resulting from urban runoff by draining surface water in a sustainable manner. This is achieved by mimicking natural drainage, encouraging infiltration, attenuation, and passive treatment. SuDS can also contribute towards urban greening, biodiversity, and placemaking.
Tall buildings		Within Tower Hamlets, tall buildings are defined as those which are above 30m in height, from ground level to the uppermost element of the building, including any architectural features such as spires, or any other protruding elements such as telecommunications infrastructure or plant.
Tall building cluster		A primarily visual definition based on existing and emerging concentrations of tall buildings, particularly where they form a cohesive group. Tall building clusters generally have a distinctive shape or are visually prominent.
Tall Building Zone	TBZ	A spatial designation that indicates where development proposals for tall buildings may be acceptable within the parameters listed in the policy. These designations are based on the existing distribution of tall buildings, the potential impact of tall buildings on the character of an area, and their capacity for growth and change.

Term	Abbreviation	Explanation
Tenure-blind developments		Schemes that are designed to maximise tenure integration, and affordable housing units designed with the same external appearance as private housing.
Tower Hamlets Activity Areas		Areas of the borough that act as a transition from the predominantly commercial character of the City Fringe and Canary Wharf to the residential character of surrounding communities. These areas tend to have a denser mix of uses than adjacent residential communities and can support the spillover of employment uses from designated employment locations.
Town centre hierarchy		This sets out what role and function different centres in the borough perform in relation to each other and across London. In Tower Hamlets it includes: the Central Activities Zone, Tower Hamlets Activity Areas, Canary Wharf Metropolitan Centre and a series of District Centres, Neighbourhood Centres and Neighbourhood Parades.
Townscape		The term 'townscape' refers very broadly to the overall character and composition of a town (or other aspects of the built environment). It can include the range and quality of buildings in an area, the relationships between those buildings and the different types of space between and around them, and reflects the relationship between people and place.
Transport Assessment		This is prepared and submitted alongside planning applications for developments likely to have significant transport implications. For major proposals, assessments should illustrate the following: accessibility to the site by all modes; the likely modal split of journeys to and from the site; and proposed measures to improve access by public transport, walking and cycling.
Transport interchange		A place where passengers are exchanged between vehicles or different transport modes.
Travel Plan		Travel plans are long term management strategies which should support sustainable and active travel at both new and existing developments.
Urban grain		The complexity and coarseness of an urban area. Fine grained areas have a large number of different buildings and closely spaces streets. Course grained areas have large blocks and building and little architectural variety.

Term	Abbreviation	Explanation
Urban Greening Factor	UGF	Urban greening is a process of introducing vegetation and green spaces into urban areas. It is an initiative to create more sustainable cities with a better quality of life for its residents, by reducing heat, absorbing pollutants from the air, and promoting biodiversity. The Urban Greening Factor (UGF) is a tool that evaluates and quantifies the amount and quality of urban greening that a development scheme provides to inform decisions about appropriate levels of greening in new developments.
Urban Heat Island effect	UHI	An Urban Heat Island (UHI) is an urban area that is significantly warmer than its surrounding rural areas. This happens because the sun's rays are absorbed by hard surfaces rather than by vegetation such as trees, plants, and grass. Radiation from hard surfaces is released into the air as heat. This process exacerbates the city's already hotter and drier summers through urban heat island effect. The UHI reduces the ability for the city to cool and impacts our capacity to regulate temperature.
Waste apportionment		The amount of London's waste that each borough is required to manage to ensure London is self-sufficient in managing its municipal, commercial and industrial waste that it produces. This requires an amount of land to be safeguarded within the borough.
Water neutrality		When total demand for water in a building is the same before and after a development is built. This is achieved by retrofitting older homes and businesses with water efficiency devices, and ensuring that new building and development are highly water efficient.
Water space		An area of water (that exists permanently or intermittently), and includes rivers, canals, docks, basins, ponds, marshland and other water bodies.
Whole Lifecycle Carbon	WLC	The entire amount of carbon resulting from a building or development over its lifetime, from the emissions associated with raw material extraction, the manufacture and transport of building materials, to installation/ construction, operation, maintenance and eventual material disposal.
Windfall site		Sites which have not been specifically identified as available in the Local Plan process. They normally comprise previously developed sites that have unexpectedly become available. In Tower Hamlets, we define small sites as sites that contain fewer than 10 housing units.
World Heritage Sites	WHS	A natural or man-made site, area, or structure recognized as being of outstanding international importance and therefore as deserving special protection. Sites are nominated to and designated by the World Heritage Convention (an organization of UNESCO).

Appendix 2: Financial contribution calculation methodologies

Policy DV5 (Developer contributions) of the Local Plan sets out the council's approach to seeking contributions from developers towards funding improvements to infrastructure, the environment and the community. This includes Section 106 planning obligations which may be financial or non-financial.

The following sets out the methodologies to calculate certain financial contributions. Further information is provided in the relevant policies and the Planning Obligations Supplementary Planning Document (SPD) about how and when these financial contributions will be required.

Where appropriate, costings will be adjusted for inflation by index-linking from the date of the Planning Obligations SPD through to payment.

The methodologies included in this appendix are intended to provide detail on how these contributions will typically be calculated in instances when they are required. The methodologies included are not an exhaustive list and the council may wish to negotiate other forms of planning obligations which meet the CIL Regulation 122 tests depending on the individual circumstances of a site and scheme.

Financial Contribution toward development co-ordination and integration (Policy DV4)

Contributions towards development co-ordination and integration projects and interventions by the council will be calculated using the following formula:

£200 x number of residential units

+

£2 x sqm of non-residential floorspace

= financial contribution

Financial Contribution towards affordable housing (Policy HF2, Policy HF6 and Policy HF7)

Major applications

In exceptional circumstances only, the council will accept a payment-in-lieu for affordable housing where the contribution will secure more than 50% affordable housing provision.

Minor applications

Financial contributions for sites delivering 2-9 new residential units will be calculated in accordance with the following formula:

Number of units

X

Small sites contribution

= financial contribution

Financial Contribution towards wheelchair accessible housing (Policy HF9)

In instances where a payment in lieu is accepted, the contribution will be based on the following formula, subject to an updated retrofitting cost:

Number of wheelchair units not to be delivered on-site
X
Installation costs of retrofitting an existing home
= financial contribution

Financial Contributions to help provide off-site Children's Play Space (Policy HF9)

Contributions to help fund the cost of off-site provision of children's play space for developments where this play space is not provided on-site will be calculated according to the following formula:

Number of children (using child yield calculator)
X
10m2 of play space = play space requirement
Average cost per square metre
X
Shortfall in play space requirement provided onsite = play space contribution
Play space contribution + maintenance fee
= financial contribution

Financial Contribution towards energy offsetting (Policy CG3)

In circumstances where energy offsetting is accepted, the contribution will be calculated according to the following formula:

EUI (kWh/m2/yr)
-
Renewable energy generation (kWh/m2/yr)
= Energy gap
Energy Gap (kWh)
X
£1.32/kWh*
= The energy offset contribution

*The offset price will be set on the basis of cost to install PVs elsewhere in the borough. Using a reasonable cost rate for a high output PV system with micro-inverters (i.e. £1,016/kWp) and applying a 10% additional rate for administering and managing the PV funding process, would give an energy offset price of £1.32/kWh/yr. The offset costs may be updated as required.

Financial Contribution towards surface water drainage offset (Policy CG7)

In exceptional circumstances where the required flow and volume restrictions cannot be achieved on site and at the council's discretion, a financial contribution will be calculated in accordance with the following formula:

Exceedance of surface water drainage standard (Proposed water run-off at peak times – Policy CG7 runoff rate)
X
£785 per m ³ (offset unit cost)*
= financial contribution

*the most up to date offset unit cost at the time of approval will be used.

Financial Contribution towards water efficient design offset (Policy CG8)

In exceptional circumstances where the required maximum mains water use cannot be achieved on site and at the council's discretion, a financial contribution will be calculated in accordance with the following formula:

(Proposed mains water use per person per day – maximum mains water use allowance in Policy CG8)
X
£123.90 per litre (offset unit cost)*
= financial contribution

*the most up to date offset unit cost at the time of approval will be used.

Financial Contribution towards air quality offset (Policy CG9)

The method for calculating the air quality offset payment is set out in Section 5 of the Air Quality Neutral London Plan Guidance.

Financial Contribution towards employment, skills, and training (Policy EG1)

The following methodologies will be used to calculate the level of financial contributions towards employment, skills, and training activities:

Construction phase

£4
X
Sqm of the total new development floorspace (GIA)
= financial contribution

End user phase

Employee yield of the development
X
20% (aspirational labour target)
X
Current cost of training and support
= financial contribution

Apprenticeships

A payment in lieu towards apprenticeships where there is shortfall against the target number of apprenticeships:

Number of apprenticeships not provided
X
Cost for providing apprenticeship (calculated as cost of training per person + 35 hours p/w at London Living Wage for 52 weeks)

Financial Contributions towards affordable workspace (Policy EG3)

In instances where a payment in lieu is accepted, it will be calculated in accordance with the formula below. The commuted sum will be used by the council to provide affordable workspace in the Borough. As such, the calculation accounts for the costs the council will incur when delivering these spaces.

Step 1:

15% of GIA (sqm)
X
rental value per sqm (based on projected rental values from subject property or a comparable property)
= rent per annum

Step 2:

Rent per annum
X
$(((1 + i)^n - 1) / (i (1 + i)^n))$
= Contribution

n = discount period

i = All risks yield (calculated as subject property commercial yields / 100)

Monitoring fees (Policy DV5)

All developments requiring a legal agreement will include a monitoring fee to cover the costs of monitoring the agreements for the lifetime of the obligations. Monitoring fees for specific types of obligations may also be sought where on-going monitoring is required, this includes:

- Health Impact Assessment monitoring
- Social Value Strategy monitoring
- Affordable Housing delivery and compliance monitoring
- Low carbon energy and heating
- Water efficient design
- Employment, skills, enterprise monitoring
- Travel Plan monitoring.

Appendix 3: Links to the Tower Hamlets Local Plan 2031 (Managing growth and sharing the benefits)

The table below explains how the policies from the adopted Tower Hamlets Local Plan 2031 (Managing growth and sharing the benefits) have been replaced in this Local Plan.

New Local Plan policy reference	Local Plan (2031): Managing growth and sharing the benefits - policy reference
Delivering the Local Plan	Achieving sustainable growth
Policy DV1 Areas of growth and opportunity within Tower Hamlets	Policy S.SG1: Areas of growth and opportunity within Tower Hamlets
Policy DV2 Delivering sustainable growth in Tower Hamlets	Policy S.SG2: Delivering sustainable growth in Tower Hamlets
Policy DV3 Healthy communities	Policy D.SG3: Health impact assessments
Policy DV4 Planning and construction of new development	Policy D.SG4: Planning and construction of new development
Policy DV5 Developer contributions	Policy D.SG5: Developer contributions
Policy DV6 Social value	
Policy DV7 Utilities and digital connectivity	
Policy DV8 Site Allocations	
Homes for the community	Meeting housing needs
Policy HF1 Meeting housing needs	Policy S.H1: Meeting housing needs
Policy HF2 Affordable housing and housing mix	Policy D.H2: Affordable housing and housing mix
Policy HF3 Protection of existing housing	

New Local Plan policy reference	Local Plan (2031): Managing growth and sharing the benefits - policy reference
Policy HF4 Supported and specialist housing and housing for older people	Policy D.H4: Specialist housing
Policy HF5 Gypsy and traveller accommodation	Policy D.H5: Gypsies and travellers accommodation
Policy HF6 Purpose-built student accommodation	Policy D.H6: Student housing
Policy HF7 Large-scale purpose-built shared-living	
Policy HF8 Housing with shared facilities (houses in multiple occupation)	Policy D.H7: Housing with shared facilities (houses in multiple occupation)
Policy HF9 Housing Standards and Quality	Policy D.H3: Housing standards and quality
Clean and green future	Protecting and managing our environment
Policy CG1 Mitigating and adapting to a changing climate	Policy S.ES1: Protecting and enhancing our environment
Policy CG2 Low energy buildings	Policy D.ES7: A zero carbon borough
Policy CG3 Low carbon energy and heating	Policy D.ES7: A zero carbon borough
Policy CG4 Embodied carbon, retrofit and the circular economy	Policy D.ES7: A zero carbon borough
Policy CG5 Overheating	Policy D.ES10: Overheating
Policy CG6 Managing flood risk	Policy D.ES4: Flood risk
Policy CG7 Sustainable Drainage	Policy D.ES5: Sustainable drainage
Policy CG8 Water efficient design	Policy D.ES6: Sustainable water and wastewater management
Policy CG9 Air quality	Policy D.ES2: Air quality

New Local Plan policy reference	Local Plan (2031): Managing growth and sharing the benefits - policy reference
Policy CG10 Noise and vibration	Policy D.ESg: Noise and vibration
Policy CG11 Contaminated land and storage of hazardous substances	Policy D.ES8: Contaminated land and storage of hazardous substances
People, places and spaces	Creating attractive and distinctive places
Policy PS1 Design- and infrastructure-led approach to development	Policy D.DH7: Density
Policy PS2 Tall buildings Mayor's office to read accompanying note which explains the changes.	Policy D.DH6: Tall buildings
Policy PS3 Securing design quality	Policy S.DH1: Delivering high quality design; and policy D.DH8: Amenity
Policy PS4 Attractive streets, spaces, and public realm	Policy D.DH2: Attractive streets, spaces and public realm
Policy PS5 Creating inclusive spaces	
Policy PS6 Heritage and the historic environment	Policy S.DH3: Heritage and the historic environment
Policy PS7 World heritage sites	Policy S.DH5: World heritage sites
Policy PS8 Shaping and managing views	Policy D.DH4: Shaping and managing views
Policy PS9 Shopfronts	Policy D.DH9: Shopfronts
Policy PS10 Advertisements, hoardings and signage	Policy D.DH10: Advertisements, hoardings and signage
Policy PS11 Siting and design of telecommunications infrastructure	Policy D.DH11: Telecommunications

New Local Plan policy reference	Local Plan (2031): Managing growth and sharing the benefits - policy reference
Inclusive economy and good growth	Delivering economic growth
Policy EG1 Creating investment and jobs	Policy S.EMP1: Creating investment and jobs
Policy EG2 New employment space	Policy D.EMP2: New employment space
Policy EG3 Affordable workspace	Policy S.EMP1: Creating investment and jobs
Policy EG4 Loss and Redevelopment of employment space	Policy D.EMP3: Loss of employment space; Policy D.EMP4: Redevelopment within the borough's employment areas

Policy RW3 Waste collection facilities in new development	Policy D.MW3: Waste collection facilities in new development

DRAFT

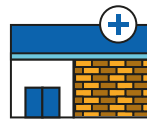

Appendix 4: Key monitoring indicators

The table below sets out the framework for monitoring the performance and effectiveness of the draft new Local Plan for Tower Hamlets and includes targets where these apply. Progress against these indicators will be reported in the borough's future Annual Monitoring Reports (AMR).

Topic area	Policies	Key monitoring indicator
Delivering the local plan  Page 1120	DV1 - Areas of growth and opportunity within Tower Hamlets	Approvals and completions of new homes, employment and retail and leisure floorspaces within the following sub-areas: <ul style="list-style-type: none"> ● City Fringe ● Central ● Isle of Dogs and South Poplar ● Leaside
	DV1 - Areas of growth and opportunity within Tower Hamlets DV8 - Site allocations	Delivery of housing and key infrastructure requirements through site allocations (not including school sites)
	DV3 - Healthy communities	Monitoring the quantity of Rapid and detailed Health Impact Assessments submitted
	DV5 - Developer contributions	Breakdown of community infrastructure levy and S106 monies received and/or negotiated across all topic areas
	DV6 - Social value	Number of additional planning obligations secured within a monitoring year as a result of a social value strategy submission

Topic area	Policies	Key monitoring indicator
Homes for the community 	HF1 - Meeting housing needs	Net additional homes in the monitoring year and previous years by housing type and tenure
	HF2 - Affordable housing and housing mix	Percentage of new homes that are affordable, measured by unit and habitable room
		Percentage of new homes that are affordable, measured by unit and habitable room
	HF5 - Gypsy and Traveller accommodation	Number of Gypsy and Traveller pitches
HF9 - Housing standards and quality	Delivery of wheelchair accessible/ adaptable homes across all housing types	
Clean and green future 	CG2 - Low energy buildings	Number of developments meeting assured performance targets
	CG3 - Low carbon energy and heating	Quantity of PV panels installed
		Number of developments contributing total energy use and renewable energy generation figures
	CG4 - Embodied carbon, retrofit and the circular economy	Developments meeting upfront embodied carbon target
		Number of retrofit plans submitted
	CG5 - Overheating	Number of developments needing to provide detailed overheating assessments
	CG6 - Managing flood risk	Number of developments approved against Environment Agency advice in relation to flood risk and water quality grounds
	CG7 - Sustainable Drainage	Quantity of major developments achieving greenfield run-off
	CG8 - Water efficient design	Water consumption per capita, at a Thames Water regional level
CG9 - Air quality	Concentration of each pollutant at each monitoring station	
	The number of developments that meet or exceed the air quality neutral standards	
	Number of Air Quality Positive Statements submitted.	

Topic area	Policies	Key monitoring indicator
People, places and spaces 	PS1 - Design and infrastructure-led approach to development	Number of applications required to submit infrastructure impact assessment documents
	PS2 - Tall buildings	Number of tall buildings permitted (for the purposes of this indicator, developments referable to the Mayor of London for being over 30m in height will be looked at)
	PS6 - Heritage and the historic environment	Number of designated heritage assets (scheduled ancient monuments, listed buildings, registered parks and gardens, London squares, and conservation areas)
		Removal of heritage assets at risk from the risk register
Inclusive economy and good growth Page 1122 	EG1 - Creating investment and jobs	Net additional employment floorspace delivered by type
		Net additional jobs by type
	EG2 - New employment space	Number of new enterprises created in the borough
	EG3 - Affordable workspace	Net additional affordable workspace
	EG4 - Loss and redevelopment of employment space	Gain/loss of employment floorspace in designated employment locations
		Gain/loss of industrial floorspace in designated industrial locations
	EG5 - Railway arches	Gain/loss of employment floorspace within railway arches
EG6 - Data centres	Net increase in data centre (class B8 or SG) floorspace across the borough and within designated employment locations	

Topic area	Policies	Key monitoring indicator
Town centres 	TC1 - Supporting the network and hierarchy of town centres	Proportion and number of town centre uses (class E) within town centres
	TC2 - Supporting the diversity, vitality and viability of town centres	Town centre vacancy rates
	TC3 - Town centre uses outside centres	Number and floorspace of new town centre uses approved outside of town centres
	TC4 - Markets	Number of pitches and vacancy level in council-operated street markets
	TC5 - Food and drink	Number and proportion of hot food takeaways in town centres; number of new hot food takeaways permitted across the borough; number of new hot food takeaways permitted within 400m of an existing or proposed school or local authority leisure centre
	TC6 - Entertainment uses	Number and proportion of betting shops, casinos and other gambling establishments in town centres; number of new gambling establishments approved within 400m of an existing gambling establishment
	TC7 - Evening and night-time economy	Proportion of businesses in town centres with late opening licenses; proportions of different use classes operating at night
	TC8 - Short-stay accommodation	Approvals and completions of additional short-stay (class C1) accommodation
Community infrastructure 	CI1 - Supporting community facilities	Applications and approvals for new/loss of class E(d-f), F1, F2(b and d) and sui generis uses that provide a service to the local community
	CI2 - Existing community facilities	
	CI4 - Public houses	Loss/gain of public house (class SG) floorspace
	CI5 - Arts and culture	Applications and approvals for new/loss of class F1(b-d) and sui generis uses that provide an arts and culture use

Topic area	Policies	Key monitoring indicator

		Monitoring of operating waste management facilities within the borough
		Recycling rates across the borough

Appendix 5: Noise

Noise thresholds

Noise can have a significant effect on the environment and on the quality of life enjoyed by individuals and communities. Noise can interfere with residential and community amenity and the utility of noise-sensitive land uses.

The significance of noise impact varies dependent on the different noise sources, receptors and times of operation presented for consideration within a planning application. Therefore, thresholds for noise and vibration evaluate noise impact in terms of various 'effect levels' as described in the National Planning Policy Framework.

Aims

Policy CG10 of the Local Plan is seeking to effectively control and manage environmental, neighbour and neighbourhood noise within the context of government policy on sustainable development. It aims to:

1. avoid significant adverse impacts on health and quality of life;
2. mitigate and minimise adverse impacts on health and quality of life; and
3. where possible, contribute to the improvement of health and quality of life.

Approaches to managing noise

1. Good design – Ensuring developments incorporate the concept of "good acoustic design"¹, including through minimising the number of sensitive receptors exposed to noise; ensuring adequate distances between the noise source and sensitive receptors or areas, limiting conflict of use in the development both internally and externally; utilising where possible barriers, natural or otherwise, other buildings, or non-critical rooms in a building.
2. Engineering – reducing noise at source; improving the sound insulation internally and externally of exposed receptors; screening by purpose-built barriers.
3. Administrative – limiting operation time of source, restricting activities allowed on the site, specifying an acceptable noise limit. Several of these measures may be incorporated into the design of a development proposal. Where development is likely to be affected by, or give rise to, high noise levels, applicants are advised to seek the advice of environmental health officers or those with similar expertise.

¹ For more detail see ProPG: Planning and Noise – New Residential Development (Institute of Acoustics and Chartered Institute of Environmental Health and the Association of Noise Consultants, 2017).

General principles

When considering applications for development that will be exposed to an existing noise source, we will take into account the ambient noise level existing at the proposed location at the time of the application and any future likely increase in noise impact that may reasonably be anticipated to occur due to development in the foreseeable future.

Much of the borough is subject to ambient noise levels during the day and at night from transportation, commercial, industrial and leisure sources that are higher than those at which the lowest adverse effects, as defined in policy and guidance, can occur. Development therefore should not make the noise circumstances worse and where possible should improve the situation by lowering noise levels and/or modifying the soundscape in a positive fashion.

In the case of applications involving noise sensitive developments, we will require an applicant to include information about the noise impact of development, or the assessed effect of an existing noise source and transport, industrial or commercial operation upon the development proposed.

A noise impact assessment will be required to support applications where noise sensitive uses are likely to be exposed to significant or unacceptable noise exposure as set out in Policy CG10. Developers will be required to assess the impact of the proposal as a noise generator or receptor, as appropriate. It will also be required to demonstrate in full how the development will be designed, located, and controlled to mitigate (as appropriate) the impact of noise on health and quality of life, neighbouring properties, and the surrounding area.

We recommend that you seek advice from the council's environmental health department in advance of any noise surveys on the methodology,

duration, and timing etc. of any surveys and advice regarding the nearest noise sensitive receptor.

In all cases, the best practical means of mitigation will be required to mitigate noise impact to an appropriate level, and in liaison with the council's environmental health service.

Where necessary, we will use planning conditions and enter into planning obligations under Section 106 of the Town and Country Planning Act 1990 (as modified by Section 12 of the Planning and Compensation Act 1991) to control noise levels.

Further information and guidance

- Noise Policy Statement for England (Department for Environment, Food and Agriculture, 2010)
- Heating and Ventilation Contractor Association – DW/172 Specification for Kitchen Ventilation Systems (2005)
- British Standard 8233: Guidance on Sound insulation and noise reduction for buildings (2014)
- British Standard 4142: Methods for rating and assessing industrial and commercial sound (2014)
- British Standard 6472: Guide to evaluation of human exposure to vibration in buildings (2008)
- BB93: Acoustic design of schools: performance standards (2015)
- British Standard 5228:2009+A1:2014 Code of practice for noise and vibration on construction and open sites (2014)
- ProPG: Planning and Noise – New Residential Development (Institute of Acoustics and Chartered Institute of Environmental Health and the Association of Noise Consultants, 2017).

Design criteria

The design criteria given below are targets the borough wants to see achieved within the context of government policy on sustainable development. Where a variation from these standards is sought, a detailed submission of the reasons and noise effects must be provided as early as possible, preferably through the pre-application process. Any variation will be considered with respect to the context of the scheme (including its use, design, and location) and any wider benefits, as directed by national policy and guidance. Three basic criteria have been developed to inform the design and layout of proposed developments; these being aimed at guiding applicants as to the degree of detailed consideration needed to be given to noise in any planning application.

The design criteria outlined below are defined in the corresponding noise tables.

- NOEL – No observed effect level
- LOAEL – Lowest observed adverse effect level
- SOAEL – Significant observed adverse effect level.

The values will vary depending on the context, type of noise and sensitivity of the receptor.

- **Green** – where noise is considered to be at an acceptable level. In this category development is likely to be granted.
- **Amber** – where noise is observed to have an adverse effect level, but which may be considered acceptable when assessed in the context of other merits of the development. In this category permission is likely to be refused unless a good acoustic design process is followed.

- **Red** – where noise is observed to have a significant adverse effect. In this category development is likely to be refused. Applicants should seek expert advice on possible noise mitigation measures.

Proposed developments - sensitive to noise

Special consideration will need to be given to noise-sensitive developments that are proposed in areas which are, or expected to become, subject to levels of noise which are likely to have an adverse effect. The threshold of acceptability of the noise will primarily depend on two factors: the intended use of the noise sensitive development and the source of the noise experienced, or likely to be experienced.

Applications for residential development should demonstrate a consideration of 'good acoustic design'².

² For more detail see ProPG: Planning and Noise – New Residential Development (Institute of Acoustics and Chartered Institute of Environmental Health and the Association of Noise Consultants, 2017).

Table 19: Noise levels applicable to noise sensitive residential development proposed in areas of existing noise

Dominant noise source	Assessment location	Design period	LOAEL (Green)	LOAEL to SOAEL (Amber)	SOAEL (Red)
Anonymous noise such as general environmental noise, road traffic and rail traffic	Noise at 1 metre from noise sensitive façade (free field)	Day	<50dBLAeq, 16hr*	50dB to 69dBLAeq, 16hr*	>69dBLAeq, 16hr*
		Night	<45dBLAeq,8hr	Between 45dB and 60dB LAeq, 8hr.	>60dB LAeq,8hr
	Inside a bedroom	Day	<40dBLAeq,16hr	40dBLAeq, 16hr	>40dBLAeq,16hr
		Night	<30 dBLAeq,8hr <45dBLAmax,fast	30 to 35dB LAeq,8hr >45 to 60 dBLAmax, fast	>35 dBLAeq, 8hr >60dBLAmax fast
	Outdoor living space (free field)	Day	<50dBLAeq,16hr	50dB to 55dBLAeq,16hr	>55dBLAeq,16hr
	Non-anonymous noise	See guidance note on non-anonymous noise			

*LAeq, T values specified for outside a bedroom window are free field levels

The levels given above are for dwellings; however, levels are use specific and different levels will apply dependent on the noise sensitivity of the use of the premises. We will also take into account the likely times of occupation for types of development and will amend according to the times of operation of the establishment under consideration.

Industrial and commercial noise sources

Relevant standard or guidance document should be referenced when determining values for LOAEL and SOAEL for noise. The standard or guidance should only be used within its intended scope.

Where appropriate, it is expected that the most-up-to-date version of British Standard 4142 'Methods for rating and assessing industrial and commercial sound' will be used. For such cases, a 'rating level' of 10dB below background at 1 metre from the boundary of the nearest noise sensitive receiver should be considered as the design criterion.

Noise insulation

Where the development falls within an area of high noise (amber and red), the most up-to-date version of British Standard 8233 should be met.

Table 20: Noise levels applicable to proposed industrial and commercial developments (including plant and machinery)

Existing noise sensitive receptor	Assessment location	Design period	LOAEL (Green)	LOAEL to SOAEL (Amber)	SOAEL (Red)
Dwellings**	Garden used for main amenity (free field)	Day	< 50 dB LAeq, 16 hr	>50<55 dB LAeq,16 hr	>55 dB LAeq,16 hr
Dwellings**	Outside living or dining or bedroom window (façade)	Day	'Rating level' 10dB* below background	'Rating level' between 9dB below and 5dB above background	'Rating level' greater than 5dB above background
Dwellings**	Outside bedroom Window (façade)	Night	'Rating level' 10dB* below background	'Rating level' between 9dB below and 5dB above background	'Rating level' greater than 5dB above background

* Rating level as per BS 4142:2014** Levels given are for dwellings; however, levels are use specific and different levels will apply dependent on the noise sensitivity of the use of the premises.

Entertainment noise

Assessments for noise from proposed entertainment and leisure premises or from proposed sensitive uses in close proximity to existing entertainment and leisure premises must include consideration to amplified and unamplified music, human voices, footfall and vehicle movements and other general activity. Appropriate metrics must be used to measure and assess the noise impact including LAeq, and LAmx, LA10 and NR metrics and as appropriate along with consideration of the source frequency spectrum. The borough will resist development where it is not possible to achieve the levels for noise from proposed entertainment venues within existing noise sensitive receptors, or from existing entertainment venues within proposed noise sensitive receptors, given below.

Table 21: Noise levels applicable to proposed entertainment premises and proposed sensitive uses in close proximity to existing entertainment and leisure premises

Noise sensitive receptor	Assessment location	Design period	LOAEL (Green)	LOAEL to SOAEL (Amber)	SOAEL (Red)
Dwellings	Garden used for amenity (free field)	Day	The lower of 55dB LAeq,5min or 10dB below existing LAeq,5min Without entertainment noise	56dB to 60dB LAeq,5min or 9dB to 3dB below existing LAeq,5min Without entertainment noise	The lower of 61dB LAeq,5min or 2dB below existing LAeq,5min Without entertainment noise
Dwellings	Garden used for amenity (free field)	Evening	The lower of 50dB LAeq,5min or 10dB below existing LAeq,5min Without entertainment noise	51dB to 55dB LAeq,5min Or 9dB to 3dB below existing LAeq,5min Without entertainment noise	The lower of 56dB LAeq,5min Or 2dB below existing LAeq,5min Without entertainment noise
Dwellings	Garden used for amenity (free field)	Night	The lower of 45dB Aeq,5min Or 10dB below existing LAeq,5min Without entertainment noise	46dB to 50dB LAeq,5min Or 9dB to 3dB below existing LAeq,5min Without entertainment noise	The lower of 51dB LAeq,5min Or 2dB below existing LAeq,5min Without entertainment noise

Noise levels applicable to proposed entertainment premises and for proposed residential premises near existing entertainment premises (entertainment noise)

Objectives

For premises where entertainment takes place more than once per week music and associated sources should not be audible inside noise-sensitive property at any time.

For premises where entertainment takes place less frequently than once per week, music and associated sources should not be audible inside noise-sensitive property between 23:00 and 07:00 hours.

For the purposes of this document, airborne noise may be considered not audible when it is at a low enough level such that it is not recognisable as emanating from the source in question and it does not alter the perception of the ambient noise environment that would prevail in the absence of the source in question.

Design criteria

For the airborne transmission of entertainment noise, the following noise rating curves (NR) measured as a 5 minute linear Leq are regarded as meeting the above objectives:

Room	Noise rating curve	Design period
Bedrooms	NR 10 Leq 5 mins	23:00-07:00hrs
All habitable rooms	NR 20 Leq 5 mins	07:00-23:00hrs

The above design criteria apply to the airborne transmission of entertainment noise. The structure borne transmission of noise is regarded as more problematic as the noise tends to take on much more low frequency bias as it propagates through the structure and the noise is often radiated simultaneously from multiple elements of the structure e.g. floors, walls and ceilings, leading to an all-encompassing surrounding sense of perception; in addition structure borne noise can often be perceived as vibration as well as sound, adding to the adverse effect. Consequently, where there is a risk of structure borne transmission of entertainment noise to sensitive premises we may seek more stringent criteria than for airborne entertainment noise. Developers are therefore encouraged to consult with the council's environmental health department at an early stage in the consideration of the scheme to address this issue and to submit proposals to mitigate the risk for review.

Vibration levels from uses such as railways, roads, leisure and entertainment premises and/or plant or machinery at which planning permission will not normally be granted or in line with the most up-to-date version of British Standard 6472

Appendix 6: Air Quality

This appendix provides additional information on air quality matters and aims to ensure the Local Plan is consistent with London Local Air Quality Management (LLAQM) and wider approaches in London. It provides further details and guidance to support the policies contained

in this Local Plan and sets out the basis for which air quality is a material planning consideration in the determination of relevant planning applications. This appendix should be read in conjunction with Policy CG9 – Air quality.

1.1 Air Quality and Planning

All major developments must submit the following documents in preparation of a planning application:

- Air Quality Assessment (AQA)
- Air Quality Neutral Assessment (AQN)
- Air Quality Positive Statement
- Dust Management Plan (DMP)

Depending on the size, minor developments may also require an Air Quality Neutral Assessment.

1.2 Reducing exposure through design

Considerate design can avoid potential impacts on air quality from the earliest stages. The design and layout of buildings influences exposure to poor air quality.

Wider sustainable design principles that reduce energy use and

demand also reduce the potential emissions from buildings, and involve energy efficiency measures, retrofitting where appropriate, pollution control and urban greening. The remaining energy demand is therefore more likely to be met using zero- or low-emission sources.

1.2.1 Form, layout, and orientation

Increased dispersion of pollution can be achieved through suitable form, layout and orientation of buildings and developments. Exposure to poor air quality is minimised through increasing distances between the source (such as roads, railways, and large combustion facilities) and the receptor (i.e. places where human exposure is most likely to occur). This is especially important for sensitive land uses (hospitals, schools, children's playgrounds etc.).

1.2.2 Ventilation

Ventilation systems should account for the impact of ambient air pollution on indoor air quality, such as through the location of air intakes away from sources of poor air quality (such as at roof level and away from exhaust flues). It may be more appropriate to locate less sensitive land uses (such as commercial units) at ground level, where exposure to roadside air pollution is more likely to be transient.

Where filtration systems are incorporated into mechanical ventilation to ensure good air quality, it is important that their efficacy is supported by suitable evidence and that they do not result in significant increased energy demand, in line with Policy CG2 – Low energy buildings.

Sealed windows and façades should only be employed to mitigate poor air quality as a last resort and must ensure compliance with Policy CG5 – Overheating.

1.2.3 Outdoor and recreation space

The location of outside space is an important consideration, due to exposure arising from gardens, balconies, playgrounds, and roof terraces. Exposure in outdoor spaces may be screened through the use of green infrastructure.

Similarly, the location of flues and exhaust vents in relation to recreational areas, such as roof terraces or gardens, is an important consideration.

1.2.4 Public realm

Public realm proposals have the opportunity to reduce exposure to poor air quality and encourage people to spend time away from polluted areas. It is therefore advantageous for development proposals that incorporate public realm improvements to use design, where possible, to improve pedestrian and cyclist connectivity, encourage routes away from busy roads and reduce severance.

Public realm areas for recreation, seating and exercise may be screened from sources of pollution, either by distance or by the appropriate use of green infrastructure. The Mayor of London and Air Quality Expert Group (AQEG) have produced guidance on incorporating green infrastructure to improve air quality.

1.3 Heating and energy supply

The adoption of technologies to generate heat and energy from efficient and/or renewable sources can minimise air pollution emissions. This is due to the technologies either not requiring combustion or, in the case of district heating, being more efficient at heating than individual boilers. Such technologies can include solar water heating, connection to heat

networks, heat pumps (air-source or ground-source) and/or photovoltaic panels. These technologies therefore give rise to lower emissions of local pollutants and hence improve air quality locally.

1.3.1 Generators

Diesel generators produce high emissions of NO_x and particulate matter and can lead to adverse impacts on both long- and short- term concentrations of air pollutants. Generators are often installed for emergency or life safety purposes, but may also be proposed for

business continuity (such as for large offices and data centres) or short-term operating reserve (STOR) power for the National Grid.

Where a secondary electric power supply cannot be assured, alternative technology to diesel generators (such as battery, fuel cell or gas-fired alternatives) are preferable in terms of air quality. Where permanent diesel generators are installed, these will be required to meet relevant emissions standards and are typically only used for emergency and life safety purpose, and associated maintenance and testing.

Where generators are proposed for any other purpose, it would be important to carry out a full assessment of their impact on local air quality, and to determine whether secondary abatement of emissions is required. Diesel generators proposed for any purpose other than

emergency or life safety use will not meet air quality neutral benchmarks due to their emissions of particulate matter. Proposals for generators to provide short-term supply to the National Grid are very location dependent.

It is preferable for construction sites to seek a temporary electricity supply connection to reduce the need for diesel generators. Any on-site diesel plant will need to meet the NRMM Low Emission Zone standards.

1.3.2 Combustion flues

Should combustion plant be installed, consideration of the flue location and discharge velocity is required at the planning stage to ensure appropriate provision has been made.

Flues should be designed to ensure adequate dispersion of pollutants, and where an Air Quality Assessment is undertaken flues should be included. For smaller or simpler developments it may be sufficient

to demonstrate that the flue terminates at least 1m above the tallest building, and is free of surrounding structures, cowls or caps which may reduce dispersion. Consideration must also be given to the neighbouring and proposed buildings, including outdoor amenity space.

Clean Air Act Chimney height approval needs to be sought where a furnace is burning liquid or gaseous matter at a rate of 366.4 kW or greater or burning pulverised fuel or any solid matter at a rate of more than 45.4 kg per hour. Where an Air Quality Assessment is required the chimney height approval should normally be incorporated in the assessment for the development.¹

1.4 Traffic reduction

Emissions from road traffic are the dominant source of elevated pollutant concentrations in London. Infrastructure to make active travel and public transport the most desirable modes is supported by the Mayor's Transport Strategy, the London Plan, Local Implementation Plans and Local Plans.

¹ The Clean Air Act Memorandum on Chimney Heights (1981) and Technical Guidance Note (Dispersion) D1 1993 are applicable primarily to short term impacts and not for considering annual mean nitrogen dioxide concentrations.

Measures to reduce private vehicle use may be implemented at a borough level, and may include the following:

- Car-free developments and maximum parking standards
- Workplace parking policies
- Requirement for parking space leasing
- Secure, covered, accessible cycle parking standards
- Green travel plans
- Provision of car club bays.

1.5 Construction phase

Construction and development can have a negative impact on people and the environment. This impact can be minimised if the development is properly managed.

All construction works should be carried out in line with The Control of Dust and Emissions During Construction and Demolition SPG July 2014 (GLA) and the Tower Hamlets Code of Construction Practice (CoCP) to avoid air pollution and dust nuisance.

The Control of Dust and Emission during Construction and Demolition SPG sets out measures to control emissions associated with construction and demolition, and other up-to-date guidance is produced by relevant bodies such as the IAQM.

All four construction sub-phases (demolition, earthworks, construction, and trackout) of major developments will have to be assessed from a

dust magnitude perspective, by submitting the Dust Risk Assessment of the site. Based on the sub-phase classification, dust monitoring will consist of:

- Visual assessments for a small construction sub-phase category
- The installation of PM10 real time automatic monitors for a medium or large construction sub-phase category. Parameters to be monitored, duration, locations and monitoring techniques must be approved in writing by the London Borough of Tower Hamlets prior to commencement of monitoring.

Furthermore, for medium or large construction sub-phase categories the following details shall be submitted:

- Total number and location of PM10 continuous monitoring stations, model/brand, air quality consultant responsible for downloading the data and preparing the air quality reports.
- PM10 monitoring must be undertaken for three months before construction works shall start. Monitoring shall continue during and after the construction movements.
- The worksite shall have the following Air Quality Trigger levels:
 - a 'red' alert of 190µg/m³ set as a 1-hour mean for concentrations of PM10
- The worksite shall have automatic alerts direct to the site manager so that when dust levels breach the acceptable limits, action can be taken swiftly and effectively. When a trigger alert is received, the project manager or the appropriate person(s) shall review the activities to identify any potential dust or particulate sources. If the cause of the trigger alert relates to site activity, mitigation shall be put in place immediately. When the trigger alert is exceeded, PM10

monitoring units shall send alerts (emails and/or text messages) to the project manager or the appropriate person(s). Tower Hamlets Pollution Team shall also be notified.

- Notification to Tower Hamlets Pollution Team following a trigger alert:
 - The project manager shall, as quickly as practicable, investigate activities on the site to ascertain any visible dust is emanating from the site and identify activities occurring without adequate dust control measures implemented.
 - If it is identified that the cause of the alert relates to the worksite activity, mitigation shall be put in place immediately to reduce impacts.
 - Details of the alert, investigation and actions taken shall be recorded in the site logbook and the Tower Hamlets Pollution Team shall be notified of the event. Within 24 hours of a 190µg/m³ exceedance, an email to Environmental.Protection@towerhamlets.gov.uk shall be sent by completing the appropriate form 'Daily Air Quality Exceedances form – Tower Hamlets Council'. The site logbook shall be available to Tower Hamlets Council too.
 - If no source of the dust event is identified on site, and/or if the cause of the alert is not related to site operations, the outcome of any investigation shall be recorded in the site logbook and reported to Tower Hamlets Pollution Team through the form available on the council website.
 - For the entire construction/demolition works monitoring duration, monthly air quality monitoring report shall be sent to Environmental.Protection@towerhamlets.gov.uk within the first week of the following month. The monthly report shall include Quality Assurance (QA) and Quality Control (QC) information regarding the monitoring units.

2 Air Quality Assessments

An air quality assessment (AQA) is designed to ensure that development proposals do not result in unacceptable impacts on local air quality or introduce new exposure into areas of poor air quality. They will also outline how development proposals accord with relevant planning policy and any mitigation measures required to make the proposed development acceptable in planning terms.

2.1 Scoping the need for an assessment

An AQA is required to accompany any major planning application, to show how a development meets the requirements of London Plan Policy SI 1 and Local Plan Policy CG9. An air quality assessment is also required for minor developments if future residents, users, or occupants may be exposed to poor air quality.

AQAs consider all stages of the development process, including impacts during the demolition and construction phases. Guidance for the assessment of construction and demolition impacts is set out in the Mayor of London's Control of Dust and Emissions during Construction and Demolition SPG.

The Institute of Air Quality Management (IAQM) has produced several guidance documents on carrying out air quality assessments, including for more specific air quality considerations, which should also be referred to when carrying out air quality assessments:

- Land-Use Planning & Development Control: Planning for Air Quality
- Impacts on designated nature conservation sites
- Assessing odour for planning
- Assessing mineral dust impact for planning

2.2 Contents of an air quality assessment

The scope of an air quality assessment usually includes:

- An assessment of the existing baseline air quality in the vicinity of the proposed development.
- Identification of the opportunities and constraints on the site, and what measures can be taken at the design stage to avoid the need for mitigation later.
- Predictions of the future impact of the development, comparing the future scenario with and without the proposed development, but including all cumulative (consented) development.

An AQA should include the following:

- Site location and brief description of the proposed development, and how it relates to existing air quality.
- Outline of the relevant planning and air quality policy (including odour and dust when appropriate).
- Description of the assessment methodology with appropriate data presented, to allow decision makers to assess the technical quality of the work and the assumptions underlying any model adjustments or verification factors.
- Location and description of all receptors used in the assessment, including any particularly sensitive receptors (residential properties, schools, hospitals etc.) and may include ecological receptors.
- Assessment of the baseline air quality/dust conditions in the vicinity of the proposed development, and a description of all nearby sources of pollution likely to impact on the development, including emissions from nearby energy plant (boilers/CHP) and industrial installations where necessary.

- Prediction of the impact of the proposed development on local air quality, including
 - description of the impacts at individual receptors;
 - description of likely changes in air quality conditions as a result of the development, including any exceedances of the air quality objectives/air quality assessment levels which are created or sustained by the development;
 - consideration of emissions from all sources, including combined impacts road traffic and energy plant.
- Prediction of the exposure of future residents, occupants, or users of the proposed development, including contour maps of pollutant concentrations where appropriate.
- Description and quantification of further mitigation measures required to make the development acceptable in air quality terms.
- An assessment of the significance of the impacts after mitigation.
- An assessment of the cumulative impacts with other development during construction and operation.
- A statement as to whether the development is or is not consistent with relevant policy,.
- Conclusion of the assessment

Section 6 and 7 of the EPUK/IAQM 'Planning for air quality' guidance gives more in-depth information on how to address the requirements listed above.

Air quality assessments carried out using realistic worst-case assumptions to minimise the uncertainty in the outcomes are considered most robust. If certain parameters are unknown or uncertain, this ensures that the results of the assessment are conservative in nature.

Air quality assessments should also take into account the cumulative air quality impacts of other development, including developments that are under construction or have been granted planning permission in the vicinity of the proposed development, where practicable.

Early consultation with the air quality officer is recommended to ensure that the methodology of the air quality assessment is agreed, and that all relevant local considerations and cumulative development are accounted for.

2.3 Construction phase assessments

Information on the assessment and mitigation of air quality and dust impacts during the construction phase is provided in the Mayor of London's Control of Dust and Emissions during Construction and Demolition SPG.

2.3.1 Construction Dust Risk Assessment

A construction dust risk assessment is an assessment of the risk of dust and PM10 impacts from a construction site. It considers the risk of impacts from demolition, earthworks, and construction, as well as from dirt and dust tracked out onto the highway from construction vehicles (track out). The construction dust risk assessment will inform the level of mitigation to be implemented over the duration of the construction works.

A construction dust risk assessment should be carried out in accordance with Chapter 3 and Chapter 4 of the Control of Dust and Emission during Construction and Demolition SPG.

2.3.2 Air Quality and Dust Management Plan (AQDMP)

The AQDMP outlines the measures and protocols which will be

implemented to reduce the impacts of dust and PM10 during the construction works and will reflect the outcomes of the construction dust risk assessment. It may also outline the dust and particulate matter monitoring protocols to be implemented on-site.

The AQDMP should be prepared in accordance with the requirements in Chapter 5 of the Mayor of London's SPG.

2.3.3 Non-Road Mobile Machinery (NRMM)

NRMM includes mobile machines and transportable industrial equipment or vehicles which are fitted with an internal combustion engine and not intended for transporting goods or passengers on roads. NRMM, particularly from the construction sector, can be a significant contributor to London's air pollution.

All NRMM on construction sites, with a power rating between 37 kW and 560 kW, will be required to meet the emissions standards of the NRMM Low Emission Zone by planning condition. These emissions standards are based on those defined for both variable and constant speed engines in EU Directive 97/68/EC and its subsequent amendments, for both NOx and PM.

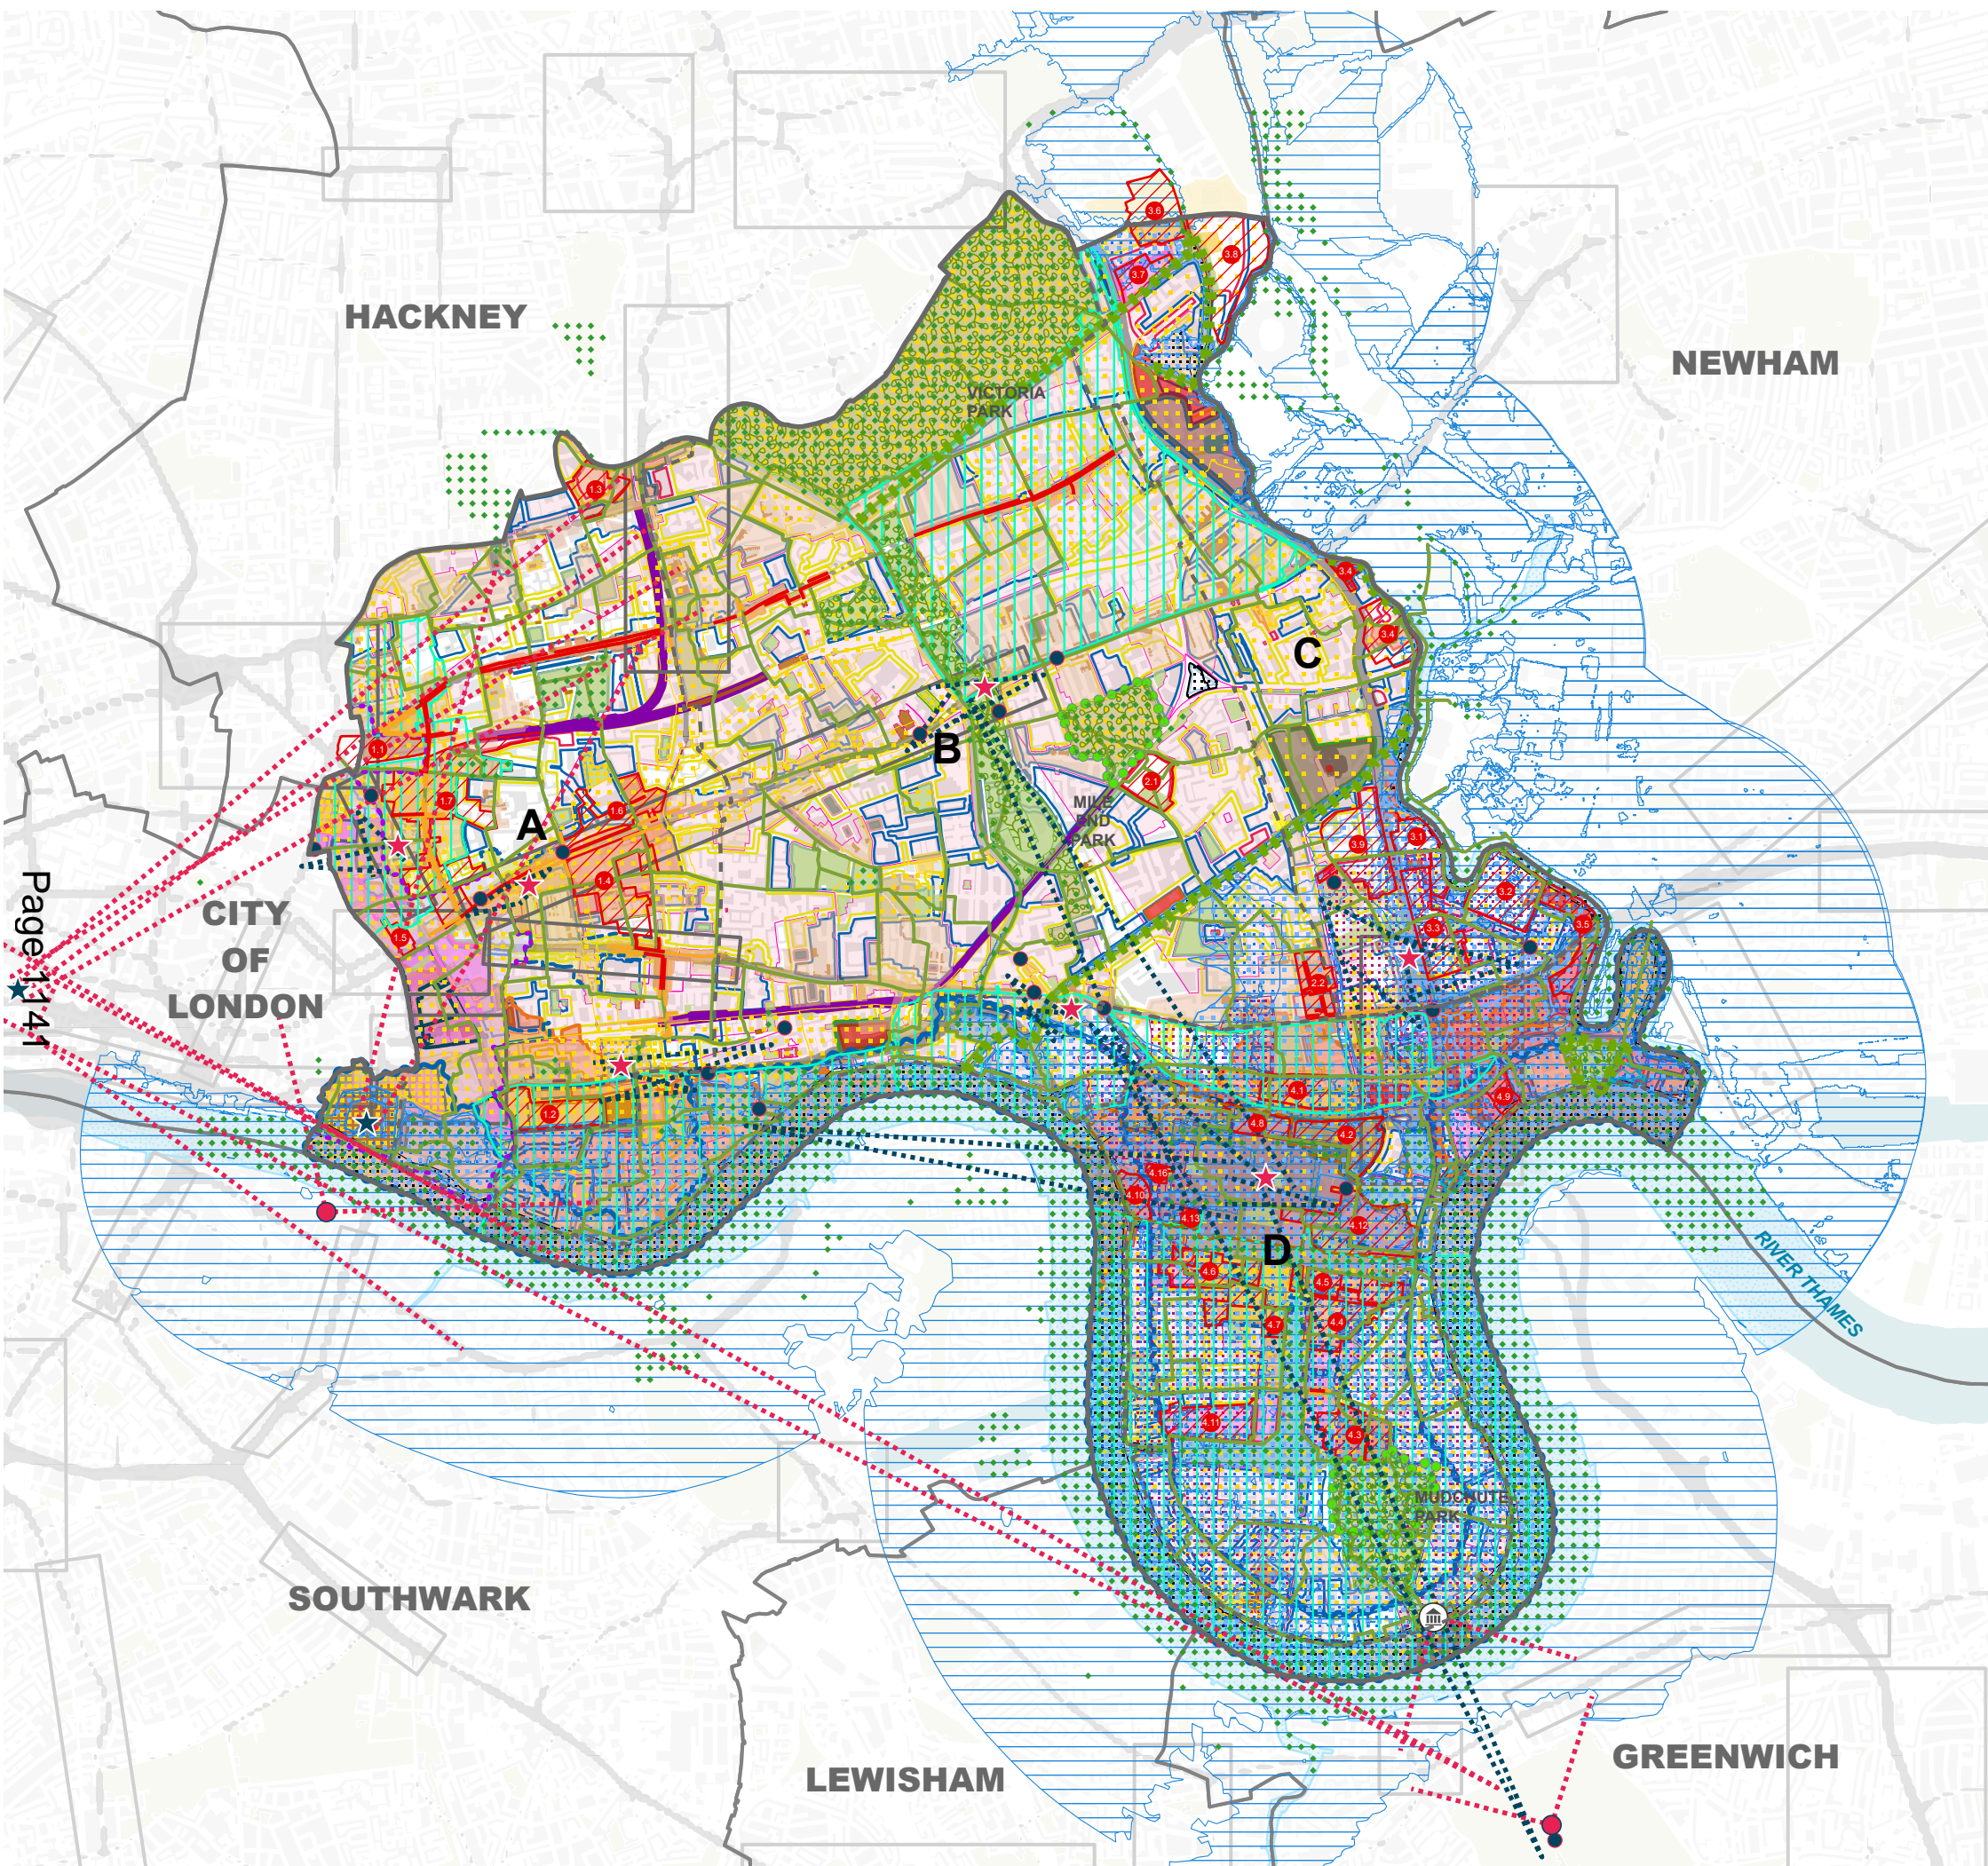

The current standards are Stage IV for construction machinery operating in the Central Activities Zone and Opportunity Areas (including Canary Wharf) and Stage IIIB in the rest of London. Stage IV standards will apply throughout London from 1st January 2025, and Stage V from 2030.

Prior to commencement of works, all NRMM must be registered on the NRMM register, which can be accessed at www.london.gov.uk/what-we-do/environment/pollution-and-air-quality/nrmm. A number of exemptions also apply to individual pieces of equipment.

1 Introduction

1.1 Overview

- 1.1.1 The London Borough of Tower Hamlets (here in referred to as LBTH) is in the process of preparing a new Local Plan for the borough. The new Local Plan will set out how development will be planned and managed across the borough through to 2038.
- 1.1.2 It will set out how the borough can sustainably develop, identifying the number of new homes, jobs and facilities needed to support the growing and changing population, as well as protecting all the features that the borough's communities cherish, such as town centres, parks and open spaces, waterways, cultural and historic buildings.

1.2 The New Local Plan

- 1.2.1 The new Local Plan will set out the vision for the future of the borough. It will cover a range of areas, from specifying the locations for new homes and businesses, to planning policies which address local issues to ensure development is achieved in a sustainable manner, supporting the protection and enhancement of the environment, green spaces and cultural and historic assets.
- 1.2.2 Once adopted, the Local Plan together with adopted Neighbourhood Plans (made by qualifying bodies) and the London Plan will form the Tower Hamlets Development Plan and be the basis for determining planning applications, shaping how the borough will develop through to 2040.
- 1.2.3 The Local Plan seeks to build upon feedback from public consultations and respond to the many ideas and key issues identified by local communities, and stakeholders that have contributed to the plan-making process so far. It sets out a shared vision for the future of the borough and includes the proposed strategy and planning policies that will help guide and manage development in the area over the new Local Plan period (2025 to 2040).
- 1.2.4 The new Local Plan includes 72 policies and 24 site allocations, with an additional 16 alternative sites.
- 1.2.5 Further details on the vision, objectives and policies can be found in **Section 2** of the main **IIA Report**.

2 Methodology

2.1 What is IIA?

2.1.1 Sustainability Appraisal is a systematic process that is undertaken during the preparation of a plan. Its role is to promote sustainable development by assessing environmental, social and economic impacts, as well as mitigating any potential adverse effects that the plan might otherwise have.

2.1.2 The IIA combines the following assessment processes:

- Strategic Environmental Assessment (SEA);
- Sustainability Appraisal (SA);
- Health Impact Assessment (HIA);
- Equalities Impact Assessment (EqIA); and
- Habitats Regulations Assessment (HRA).

2.1.3 **Figure 2-1** below shows the relationship of each of these IIA elements.

Figure 2-1 - Relationship of IIA Elements

2.1.4 An integrated assessment approach enables synergies and cross-cutting impacts to be identified and avoids the need to undertake and report on separate assessments and seeks to reduce any duplication of assessment work. A single process can improve efficiencies in

the assessment itself, as many of the issues covered in the different forms of assessment overlap. This process also helps to simplify outcomes and recommendations for policymakers.

2.1.5 Each component of the assessment has been described below:

- **SA:** The SA process is carried out during the preparation of local plans and spatial development strategies. Its role is to promote sustainable development by assessing the extent to which emerging plans will help to achieve relevant environmental, economic and social objectives.
- **EqIA:** The EqIA process focuses on assessing and recording the likely equalities effects as a result of a policy, project or plan. It seeks to ensure that the policy, project or plan does not discriminate or disadvantage people and enables consideration of how equality can be improved or promoted. It covers the following nine Personal Protected Characteristics:
 - Age;
 - Disability;
 - Gender;
 - Gender reassignment;
 - Marriage and civil partnership;
 - Pregnancy and maternity;
 - Race;
 - Religion or belief; and
 - Sexual orientation.
- **HIA:** The HIA process is used to identify the likely health effects of plans, policies or developments and to implement measures to avoid negative impacts and promote opportunities to maximise the benefits. There is no formally adopted methodology for HIA although there is a body of practice and guidance at a policy level.
- **HRA:** The HRA assessment is undertaken to identify whether plans or projects will be likely to have a significant effect on a designated site. The stages of HRA assessment are as follows:
 - Stage 1: Screening: initially identifies the likely impacts upon a Natura 2000 site (sites designated as Special Areas of Conservation (SACs) and Special

Protection Areas (SPAs) in the UK) of a plan or project, either alone or in combination with other plans or projects, and considers whether these impacts are likely to be significant;

- Stage 2: Appropriate Assessment: the detailed consideration of the impact on the integrity of the Natura 2000 sites of the plan or project, either alone or in combination with other plans or projects. This is to determine whether there will be adverse effects on the integrity of the site;
- Stage 3: Assessment of alternative solutions: the process which examines alternative ways of achieving the objectives of the plans or projects that avoid adverse impacts on the integrity of the Natura 2000 site; and
- Stage 4: Assessment where no alternative solutions exist and where adverse impacts remain: an assessment of whether the development is necessary for imperative reasons of overriding public interest (IROPI).

2.2 IIA Methodology

2.2.1 IIA is a continual process of gathering data and evidence, assessment of environmental effects, developing mitigation measures and making recommendations to refine plans or programmes in view of the predicted environmental effects.

2.2.2 The key stages of the IIA process are the following:

- **Stage A:** Production of a scoping report which sets the context of the local plan, identified other relevant policies, plans and programmes, baseline information and sustainability objectives. This was undertaken in August 2023.
- **Stage B:** Assessment of draft policies and alternative policies and strategic and alternative sites and the preparation of the IIA Report. HIA and EqlA assessments are undertaken at the same time and the findings incorporated into the IIA Report. The report is then consulted on alongside the draft Local Plan (also referred to as Regulation 18 consultation);
- **Stage C (this stage):** Assessment of preferred policies and sites and the preparation of the IIA Report. HIA and EqlA assessments are undertaken at the same time and the findings incorporated into the IIA Report;

- **Stage D:** Consultation on the preferred Local Plan and the IIA Report (also referred to as Regulation 19 consultation). The Local Plan and IIA then undergo independent examination; and
- **Stage E:** Monitoring the significant effects of implementing the Local Plan.

Full details on the methodology can be found in **Section 3** of the IIA Report.

Identification of Sustainability Issues and Opportunities

- 2.2.3 The IIA Scoping Report, outlined key baseline information, identified key sustainability issues in the borough and identified future trends which could occur without implementation of the Local Plan.
- 2.2.4 Following the findings identified at scoping, and updates based on changes in legislation and best practice guidance, an IIA Appraisal Framework has been produced, which was used to guide the assessment process of the plans and strategies.
- 2.2.5 This Appraisal Framework has guided the IIA assessment of the Local Plan and is shown below.
- **IIA1:** To build inclusive communities by reducing social exclusion, promoting equity and equality and respecting diversity.
 - **IIA2:** To improve physical and mental health and wellbeing and reduce health inequalities for all of LBTH's residents.
 - **IIA3:** To support a diverse local economy to foster sustainable economic growth and support Tower Hamlets' town centre and other district and local centres.
 - **IIA4:** To ensure that residents have employment opportunities and access to training.
 - **IIA5:** To meet the housing needs of all of the borough's residents inclusively.
 - **IIA6:** To reduce crime and the fear of crime for all residents inclusively.
 - **IIA7:** To promote traffic reduction, by encouraging more sustainable alternative transport modes, and supporting residents to live more locally.
 - **IIA8:** To protect and enhance access to essential services and facilities for all residents.

- **IIA9:** To protect and enhance protected habitats, species and valuable ecological networks that contribute to ecosystem functionality in Tower Hamlets, contributing to biodiversity net gain.
- **IIA10:** To protect and enhance the borough’s townscapes and landscapes.
- **IIA11:** To protect and enhance the historic environment, including heritage assets (designated, non-designated, and heritage at risk) and their settings.
- **IIA12:** To reduce the risk and vulnerability to flooding.
- **IIA13:** To maintain and enhance water quality.
- **IIA14:** To protect and enhance air quality.
- **IIA15:** Ensure that Tower Hamlets is resilient to the effects of climate change.
- **IIA16:** To reduce greenhouse gas emissions, support national and local decarbonisation initiatives and encourage energy efficiency.
- **IIA17:** To reduce the amount of waste produced and minimise the amount sent to landfill.
- **IIA18:** To ensure the efficient use of land, promote sustainable use of resources and seek opportunities to promote a circular economy.

3 IIA Assessment Findings

3.1 Assessment of Policies

- 3.1.1 The assessment of the Local Plan policies was carried out in relation to the IIA Objectives. A summary of the significant effects are detailed in **Table 3-1** below. No significant negative effects were identified.
- 3.1.2 It should be noted that the assessment of policies within themes have been standalone assessments, which purely assess the outcome of the application of those policies rather than their relationship with other policies within the Local Plan.
- 3.1.3 Further details on the assessment of the Local Plan policies can be found within **Section 6** of the main IIA Report and **Appendix F** to the main IIA Report.

Table 3-1 – Summary of Significant Effects – Policy Assessment

Significance	Number of Significant Effects	Summary of Effects
Significant Positive (++)	46	<ul style="list-style-type: none"> • Policies that build inclusive communities through the reduction of social exclusion, promotion of equity and equality, and respect diversity (IIA1). • Policies that could increase physical activity, healthy lifestyles or mental wellbeing, improving health (IIA2). • Policies that could increase employment opportunities, diversify the economy and encourage investment (IIA3). • Policies that improve employment opportunities and access to training (IIA4). • Policies that could increase the borough’s housing provision to meet the needs of residents inclusively (IIA5). • Policies that could improve crime rates and reduce the fear of crime for all residents inclusively (IIA6). • Policies that will promote traffic reduction through the promotion of sustainable transport modes and supporting residents to live more locally (IIA7).

Significance	Number of Significant Effects	Summary of Effects
		<ul style="list-style-type: none"> • Policies that could protect and enhance access to essential services and facilities (IIA8). • Policies that could result in the protection and enhancement of protected habitats, species and valuable ecological networks that contribute to ecosystem functionality in Tower Hamlets, contributing to biodiversity net gain (IIA9). • Policies that could protect and enhance the borough’s townscapes and landscapes (IIA10). • Policies that could protect and improve assets and their setting within the historic environment (IIA11). • Policies that could reduce the risk and vulnerability of flooding (IIA12). • Policies that could maintain and enhance water quality (IIA13). • Policies that could result in reductions in air pollutants, improving air quality (IIA14). • Policies that could improve the borough’s resilience to the effects of climate change (IIA15).

Significance	Number of Significant Effects	Summary of Effects
		<ul style="list-style-type: none"> • Policies that encourage net zero developments and could reduce carbon emissions and improve energy efficiency (IIA16). • Policies could reduce the amount of waste produced (IIA17). • Policies that ensure the efficient use of land, sustainable use of resources, and seek opportunities to promote a circular economy (IIA18).
Uncertain (?)	24	<ul style="list-style-type: none"> • Policies that have potential to result in decreases, or increases in car reliance (IIA7). • Policies where development design are unclear and could result in a decrease or increase in biodiversity and natural capital (IIA9). • Policies where visual, setting impacts or disturbance will largely be determined by individual scheme location and design (IIA10). • Policies where the enhancements or negative effects will be determined by scheme level design and location close to heritage assets (IIA11). • Policies where the enhancements or negative effects will be determined by scheme level design and location from areas of high flood risk (IIA12).

Significance	Number of Significant Effects	Summary of Effects
		<ul style="list-style-type: none"> • Policies where water quality will be determined by the nature and quantity of freight and transport on water. • Policies where measures to reduce GHG emissions and promote renewable energy are unclear. These measures will be determined by scheme level design (IIA16). • Policies where the location and design are unclear and could be resource intensive and generate a significant amount of construction waste (IIA17). • Policies where the location and design are unclear and could result in land take (IIA18).

3.2 Assessment of Site Allocations

3.2.1 The assessment of proposed site allocations was carried out in relation to the IIA Objectives. A summary of the findings is detailed in **Table 3-3** and **Table 3-4** below. The full assessment of proposed site allocations can be found in **Appendix G** to the **main IIA** report.

Table 3-2 - Summary of Significant Effects – Site Allocations Assessment

Significance	Number of Significant Effects	Summary of Effects
Significant Positive (++)	126	<ul style="list-style-type: none"> • Sites that contribute to LBTH’s housing target, provide affordable and adaptable homes, and provide new community facilities (IIA1). • Sites that improve housing provision, opportunities, open spaces and healthcare facilities (IIA2). • Sites that are located close to existing town centres and include retail space (IIA3). • Sites that are located close to existing employment areas and provide employment space (IIA4). • Sites where over 500 homes are provided, contributing towards LBTH’s housing target, at least 35% affordable homes, and accessible homes provided (IIA5).

Page 1159

Significance	Number of Significant Effects	Summary of Effects
		<ul style="list-style-type: none"> • Sites that deliver public realm improvements, increase natural surveillance, and include designing out crime principles (IIA6). • Sites that have good access to sustainable transport, high PTAL scores, and improve cycle and pedestrian access (IIA7). • Sites that have good access to transport, improve accessibility, permeability, and wayfinding (IIA8). • Sites that achieve biodiversity net gain through measures such as landscaping and green roofs (IIA9). • Sites that positively contribute to the townscape, provide open space enhancements, and public realm improvements (IIA10). • Sites located on previously developed land, support high-density housing and provide best use of land (IIA18).

Significance	Number of Significant Effects	Summary of Effects
Uncertain (?)	102	<ul style="list-style-type: none"> • Sites where housing provision, size, type and tenure is currently unknown (IIA1). • Sites where housing, healthcare and community space provisions provided are uncertain (IIA2). • Sites where the inclusion of retail space is currently unclear (IIA3). • Sites where it is unclear if employment space will be included within the development (IIA4). • Sites where housing provision, accessibility, size, type and tenure is unclear (IIA5). • Sites where it is unclear if designing out crime principles will be applied (IIA6). • Sites where it is unclear if additional sustainable transport will be included within development (IIA7). • Sites where it is unclear if construction will adversely affect habitats, or if 10% biodiversity net gain will be achieved (IIA9). • Sites where it is unclear if design will improve landscape and townscape settings (IIA10). • Sites that have potential to result in adverse effects on heritage assets, or improvements to the setting of heritage assets, but design details are unclear (IIA11).

Significance	Number of Significant Effects	Summary of Effects
		<ul style="list-style-type: none"> • Sites that are located within flood risk areas and it is unclear if mitigation measures will be included within development (IIA12). • Sites that are located close to water bodies but it is unclear if water quality mitigation measures will be included within development (IIA13). • Sites where climate resilience measures are currently unknown (IIA15). • Sites where it is unknown if development will include renewable energy sources or low carbon heat networks (IIA16). • Sites where it is unclear if existing buildings, structures and materials will be reused or recycled (IIA17). • Sites where the density of housing and use of sustainable materials is unknown (IIA18).
Significant Negative (- -)	13	<ul style="list-style-type: none"> • Sites that result in a loss of heritage assets (IIA11). • Sites that are located within flood zone 3 and a flood risk area, and no mitigation measures are outlined (IIA12). • Sites that have high climate risk and no climate resilience measures (IIA15).

3.3 Assessment of Alternatives

Assessment of Alternative Policies

- 3.3.1 The SEA Regulations require an assessment of the plan and its “reasonable alternatives”, in addition to those proposed within the preferred plan. Without this, there cannot be a proper environmental evaluation of the preferred plan. The assessment of reasonable alternatives does not need include all possible alternatives, but only those that are realistic.
- 3.3.2 The development of the Local Plan policies has not at this stage identified any key policy alternatives, so the assessment of policy alternatives has assessed two scenarios – the continuation of the existing Local Plan and the application of the London Plan.
- 3.3.3 In general, the continuation of the existing Local Plan and London Plan Policies have resulted in less significant positive effects. However, the policies within each plan do remain relevant and the majority are fit for purpose.
- 3.3.4 The London Plan lacks specific borough details, that the local plan can provide, whilst some of the existing Local Plan policies are outdated, and no longer reflect key issues such as the Covid-19 recovery, rising costs of living and increases in crime against women and girls.

Assessment of Alternative Site Allocations

Table 3-3 - Overall impact of all Local Plan site alternatives against IIA Objectives

Significance	Number of Significant Effects	Summary of Effects
Significant Positive (++)	2	<ul style="list-style-type: none"> • Sites that are well connected to community and healthcare facilities and are likely to include additional facilities and open space (IIA2). • Sites that provide additional employment space and are well located close to existing employment opportunities (IIA4).
Uncertain (?)	127	<ul style="list-style-type: none"> • Sites where the provision of homes does not meet the borough’s housing target, the size, type, and tenure of homes is unknown (IIA1). • Sites where the additional provision of community facilities and healthcare facilities is unknown (IIA2). • Sites where it is uncertain if retail or business space will be included within development (IIA3).

Significance	Number of Significant Effects	Summary of Effects
		<ul style="list-style-type: none"> • Sites where it is uncertain if employment space will be provided within development (IIA4). • Sites where housing provision is unclear and fall below LBTH's housing target (IIA5). • Sites where it is unclear if designing out crime principles will be applied (IIA6). • Sites where it is unclear if sustainable transport access or improvements will be included within development (IIA7). • Sites where it is unclear if accessible provision to facilities and services will be included within development (IIA8). • Sites where it is unknown if greenspace will be included, or if 10% biodiversity net gain will be achieved (IIA9). • Sites where design details are unknown and it is uncertain if high quality sustainable design and public realm improvements will be achieved (IIA10). • Sites where it is not clear if sensitive design will be implemented (IIA11). • Sites where flood risk mitigation measures are unknown (IIA12).

Significance	Number of Significant Effects	Summary of Effects
		<ul style="list-style-type: none"> • Sites where water quality measures are unknown (IIA13). • Sites where climate resilience measures are unknown (IIA15). • Sites where it is unclear if renewable energy or low carbon heat networks will be used (IIA16). • Sites where it is unclear if structures, buildings and materials will be reused or recycled within development (IIA17). • Sites where it is unclear if sites will encourage sustainable use of materials (IIA18).
Significant Negative (- -)	17	<ul style="list-style-type: none"> • Sites with a low PTAL score (between 0 and 1b) and has no proposed improvements to public transport provision (IIA7). • Sites with a low PTAL score (between 0 and 1b) and has the potential to exclude social groups (IIA8). • Sites that have the potential to result in disturbance or loss of heritage assets (IIA11). • Sites located within flood zone 3 and flood risk areas with no mitigation outlined (IIA12).

Significance	Number of Significant Effects	Summary of Effects
		<ul style="list-style-type: none"> <li data-bbox="663 405 1883 496">• Sites that have high climate and heat risk and have no climate resilience measures outlined (IIA15).

3.4 Findings from other IIA Assessments

EqlA

- 3.4.1 Overall, the policies will likely result in positive impacts on protected characteristic group members in the borough. The policies aim to address a wide range of issues, identified by the key themes within the EqlA baseline.
- 3.4.2 The main protected characteristic groups that will particularly benefit include:
- **Age** – A range of ages groups will experience benefits as a result of the proposed policies. Older people who have reduced mobility, suffer from social isolation and loneliness and require access to health and other services will benefit through improved access to services as well as provision of supported living including care homes. Young people seeking education, training and accessible employment opportunities will also experience positive impacts. Young children are likely to benefit from air quality improvements that numerous policies look to achieve;
 - **Disability** – people with a variety of disabilities including mobility issues will benefit from a more accessible public realm, including open spaces, pedestrian routes and key services. The NLP includes policies which support inclusive design which will help to improve connectivity and function, benefiting users with mobility limitations. The NLP ensures that 10% of all new units are wheelchair accessible, improving access to housing; and
 - **Deprivation** – Policies are likely to benefit people from low-incomes who require improved access to employment, education and housing. Policies geared towards the provision of a wide range of employment opportunities at all levels as well as closing the skills gap through upskilling will be useful to low-income groups who are currently positioned as unable to access higher paid jobs. Additionally, the provision of affordable homes and supported living such as homeless shelters will be beneficial to this group. The ambition of the NLP to deliver an affordable housing target would make a positive impact on deprivation, reducing barriers for low-income families to housing and rental markets.
 - **Gender reassignment, sex and gender and race** - people from a range of different diverse backgrounds will benefit from inclusive design, creation of safer and inclusive spaces and greater community engagement.

3.4.3 Some protected characteristics may be disproportionately adversely affected by the proposed policies. These include:

- **Age, Disability and Pregnancy and maternity** – The inclusion of public realm improvements and subsequent street furniture, addition of EV charging points and reduction in car parking and motorised vehicles could act as an obstacle to these groups; and
- **Deprivation** – Low income groups may be disproportionately affected by the development of large-scale purpose-built shared living as it has the potential to compromise the generation of affordable housing throughout the borough. Additionally, there is potential for low levels of engagement from the community in which estate regeneration schemes are proposed.

3.4.4 The assessment concludes that there will likely be a neutral impact for the following protected characteristic groups, assuming no unforeseen barriers emerge:

- Religion or belief;
- Sexual orientation; and
- Marriage and civil partnerships.

HIA

3.4.5 The HIA assessed the NLP policies and considered their impact on health. These have been detailed below:

- **Air Quality:** Positive effects associated with Clean Green Future policies as air quality improvements will help to minimise the negative effects upon those in the most vulnerable social groups. Conversely, urban intensification through the Homes for the Future policies drive for additional housing in LBTH could result in a higher number of cars on the city's roads.
- **Noise:** Mixed effects have been identified. The increase in housing in LBTH could result in higher numbers of cars, increasing road traffic noise in the area. Improvements to the night-time economy could also negatively contribute to increased noise levels throughout the borough. Additionally, construction related noise from developments may negatively impact upon the tranquillity. However, the NLP sets out to reduce noise and vibration as a result of construction throughout the borough.

- **Housing and Homelessness:** Positive effects have been identified as policies under the Homes for the Future theme will aid in meeting the growing demand for housing through new provision. Housing will be suitable for varying residential needs throughout the borough, including the provision of affordable housing, specialist and supported housing and purpose-built student accommodation.
- **Economy and employment:** Positive effects have been identified. Policies will encourage business investment in LBTH and improve the economy of the borough. Additional town centre developments is also likely to reduce unemployment in the borough.
- **Skills and education:** Positive effects have been identified. The development of education facilities under this sector will ensure young people in the borough continue to attain good qualifications. Additionally, Inclusive Economy and Good Growth policies intend to close the skills gap amongst the working population through improving access to education and training.
- **Social cohesion and community safety:** Positive health effects have been identified. The provision and improvement of community facilities such as community hubs will facilitate socialisation and cross-cultural engagement throughout the borough community. The development of open space and recreational facilities including parks and play spaces may also improve social cohesion and encourage those who are socially isolated to utilise facilities. Additionally, improvements to the public realm under the People, Places and Spaces theme include safety measurements.
- **Access to services:** Positive health effects have been identified. Policies under the Community Infrastructure theme support development proposals to maximise opportunities for the provision of high-quality community facilities.
- **Physical activity:** Positive health effects have been identified. The Movement and Connectivity theme policies propose many types of active travel. Improved accessibility and connectivity of current pedestrian routes throughout the borough will encourage the uptake of active travel, bring positive effects to the overall health of the population.
- **Green Infrastructure:** Positive health effects have been identified. Improvements to green infrastructure are supported through the Biodiversity and Open Space policies. Green infrastructure could be further promoted through additional requirements under the Homes for the Community theme.

- **Climate change resilience:** Mixed effects have been identified. The policies proposed within Clean Green Futures will attempt to limit the excessive heat generation and overheating potential of developments, therefore improving the resilience of all new buildings within the borough. However, this only accounts for new developments, leaving those in existing areas vulnerable to climate change events.

HRA

Stage 1 - HRA Screening (Regulation 18)

- 3.4.6 There are no Habitats sites within LBTH's administrative area, however there are two Habitats that fall within the identified 7.2km Zone of Influence of the borough boundary and as such there will be implications for some of these Habitats sites from the policies of the Local Plan.
- 3.4.7 A number of policies have been screened-out due to their nugatory or beneficial effects on Habitats sites, but three policies were screened-in (HFC1 – Meeting Housing Needs, EG2 – New Employment Space and BO2 Open Spaces and the Greed Grid networks) for their further consideration at Stage 2 AA. These policies have potential for LSE on nearby Habitats sites relating to increased traffic (and therefore impacts on air quality) and increased public access, recreational and development pressures.
- 3.4.8 Given the possibility of LSE associated with the screened-in interventions, further, detailed assessment was considered necessary to satisfy the requirements of the Habitats Regulations as the Local Plan emerges.
- 3.4.9 It is also not possible to rule out in-combination LSE on Habitats sites as a result of policies in the emerging LBTH Local Plan when considered with other strategic plans based on the findings of the screening assessment and a review of the HRAs supporting Local Plans for adjacent authorities.

Stage 2 - Appropriate Assessment (Regulation 19)

- 3.4.10 At Stage 2 Appropriate Assessment, further site-specific assessment was carried out relating to specific allocations under Policies HF1 and EG2, including in-combination effects considered with other strategic plans.
- 3.4.11 Policy BO2 was subject to further consultation with the LBTH and subsequently concluded based on the geographical limitations of that Policy that an impact pathway would not reasonably be present to result in adverse effects upon the integrity of the Habitats sites .
- 3.4.12 Following the Appropriate Assessment, site-specific consideration for site allocations and air quality under Policies EG2 and HF1, the evidence points towards no impact pathway which could give rise to any significant effects

- 3.4.13 Air quality considerations for Lee Valley Special Protection Area (SPA) and Ramsar concluded that there was no evidence of an adverse effect on qualifying features via this impact pathway.
- 3.4.14 Water resources pressures on Lee Valley SPA and Ramsar were considered to not result in an adverse effect on site integrity as a result of the LBTH Local Plan, considered through the outcomes of the in-combination growth as presented in the Thames Water adopted (2019) and Draft (2024) Water Resources Management Plans¹².
- 3.4.15 Recreational disturbance pressure was considered for both Epping Forest and for Lee Valley SPA and Ramsar at Appropriate Assessment. For Epping Forest, a conclusion of no adverse effect on site integrity has been reached due to a lack of pathways.
- 3.4.16 Recreational disturbance effects on Lee Valley SPA and Ramsar have been assessed as resulting in no adverse effect on site integrity due to the site elements being wholly within the managed environment of Walthamstow Wetlands and Thames Water reservoirs complex, with controlled and managed access.
- 3.4.17 The conclusion of this Habitats Regulations Assessment is that the majority of Local Plan Policies have no impact pathway relevant to the Habitats sites within proximity of LBTH and no Likely Significant Effect is expected.
- 3.4.18 For three Policies associated with site allocations and access to green space, further consideration has been necessary at Appropriate Assessment, resulting in a conclusion of no adverse effects on site integrity being identified.

4 Cumulative Effects

- 4.1.1 A cumulative effects assessment was undertaken for the IIA. This looked at two different types of cumulative effects – Intra-project and Inter-project. These are defined as follows:
- Consideration of how different proposed policies and sites within the LBTH may interact and cause cumulative effects on a receptor (Intra-project effects); and
 - How the proposed policies and sites within the LBTH could cause cumulative effects in association with other plans, policies and projects in the surrounding area (Inter-Projects Effects)

4.2 Intra-Project Effects

- 4.2.1 The proposed policies and sites within the Local Plan resulted in the following intra-project cumulative effects. Further details on the assessment of the inter-project cumulative effects can be found within **Section 9.2** of the main **IIA Report**.
- 4.2.2 Positive effects have largely been identified for IIA objectives where policies contribute to improving the current status of the borough, for example, improving biodiversity enhancements, improving energy efficiency or providing additional community infrastructure. Positive effects were identified for biodiversity, greenhouse gases (GHGs), energy efficiency and sustainable resources, climate resilience, historic environment, landscape and townscape, air quality, efficient use of land, water quality, community needs, inclusivity and equality, health and wellbeing, sustainable transport, economy and employment, crime and safety, and housing.
- 4.2.3 Negative effects have been identified for biodiversity, historic environment, flooding, water quality, GHGs, and waste as a result of the scale of development required to meet the borough's housing targets and requirements for employment generation . There is the potential that multiple developments could result in a cumulative amount of construction waste and emissions of GHGs. Construction of these developments may occur in close proximity to heritage assets and conservation, or increase the risk of flooding due to the cumulative increase in hardstanding surfaces. Additionally, the loss of land required for sites and housing allocation may segregate and damage habitats, resulting in a loss of habitats.

4.2.4 Mixed positive and negative effects were identified for human health, biodiversity and natural capital, landscape and townscape, historic environment, flooding, water quality, air quality, climate change, greenhouse gases, waste, and efficient use of resources.

4.3 Inter-Project Effects

4.3.1 An assessment of the potential cumulative effects of the Local Plan in association with other plans, policies and projects in the surrounding area was completed, looking at the potential impacts at a strategic level. Further details on the assessment of the inter-project cumulative effects can be found within **Section 9.3** of the main **IIA Report**.

4.3.2 The following plans were considered:

- The London Plan, 2021;
- Crossrail 2;
- Liverpool Street Station Redevelopment
- 55 Bishopsgate
- One Exchange Square
- Mayor of London, Mayor’s Transport Strategy, 2018;
- Neighbouring Local Plans (detailed within **Section 9.3** of the main **IIA Report**); and
- Neighbouring Local Transport Plans, Strategies and Implementation plans (detailed within **Section 9.3** of the main **IIA Report**).

4.3.3 Potential positive effects were identified for population and equalities, human health, economy and employment, housing, crime and safety, transport, accessibility, air quality, and climate change.

4.3.4 Potential negative effects were identified for landscape and townscape, historic environment, air quality, and waste.

4.3.5 Potential mixed positive and negative effects were identified for population and equalities, human health, biodiversity and natural capital, landscape and townscape, historic environment, flooding, water quality, air quality, climate change, greenhouse gases, waste, and efficient use of resources.

5 Mitigation, Enhancements and Monitoring

5.1 Mitigation and Enhancement Measures

- 5.1.1 Mitigation of significant negative effects of the plan and enhancement of positive effects are a key purpose of IIA. The SEA Regulations require that mitigation measures are considered to prevent, reduce or offset any significant adverse effects on the environment of implementing the plan.
- 5.1.2 Proposed mitigation and enhancement measures have been set out in **Table 5-1** below.

Table 5-1 -Proposed Mitigation and Enhancement Measures

IIA Objective	Mitigation/ Enhancement	Mechanism
IIA1 - Population and Equalities	Inclusive mobility guidance should be adhered to ensure designs are accessible for everyone.	Inclusion within preferred Local Plan policies Project level design and assessment and EqIA as part of subsequent EIA/ planning application
IIA1 - Population and Equalities IIA2 - Human Health	The loss of community facilities to make way for site allocations should be avoided. Where a loss can't be mitigated, these should be reprovioned elsewhere.	Inclusion within preferred Local Plan policies Project level design and assessment Community engagement
IIA1 - Population and Equalities IIA2 - Human Health	Further assessment as part of scheme level design, should incorporate an evaluation of the provision of healthcare and education, to ensure that the current supply is sufficient in supporting new communities.	Project level design and assessment as part of subsequent EIA/ planning application
IIA1 - Population and Equalities IIA4 – Employment and skills	Employment should be focused on local residents in the first instance. Policies should aim to increase employment for all protected groups where barriers to employment and education exist (low-incomes, younger people, disabled).	Inclusion within preferred Local Plan policies
IIA1 - Population and Equalities	Community safety, health and equalities should be considered in design, for example, pedestrian networks, including linking new developments into existing infrastructure, lighting and other	Inclusion within Local Plan policies

IIA Objective	Mitigation/ Enhancement	Mechanism
IIA2 - Human Health IIA6 – Crime and Safety	safety design considerations, materials used (contrasting colours, non-slip surfaces), accessibility for all including those with reduced mobility or disability, well-being, affordability of schemes, active travel.	Project level Community Safety Assessment, EqIA and HIA as part of subsequent EIA/ planning application
IIA1 - Population and Equalities IIA7 – Sustainable Transport IIA8 - Accessibility	<p>Active travel infrastructure should be accessible and inclusive. Cycleways should provide enough space for adapted cycles such as tricycles, tandems and wheelchair cycles.</p> <p>Consideration should be made for removing other barriers towards active travel for disabled people and low income groups, such as affordability. The council should work with charities and other representative groups to help lower the cost of adapted cycles.</p> <p>It is likely that other forms of sustainable travel will be prevalent in the future, such as electric scooters. Parking and facilities for these schemes should be accessible and not present physical barriers to users.</p> <p>The Local Plan should also support community engagement with various groups prior the development of transport infrastructure.</p>	Inclusion within preferred Local Plan policies Project level design and assessment and EqIA as part of subsequent EIA/ planning application Tower Hamlets Transport Strategy 2019-2041 The Mayor’s Transport Strategy
IIA1 - Population and Equalities IIA2 – Health and Wellbeing	Where policies and site allocations make provision for open spaces and public realm improvements, there is a need for these spaces to be well designed and well lit, to ensure that they are safe and feel safe for all users, particularly after dark.	Inclusion within preferred Local Plan policies

IIA Objective	Mitigation/ Enhancement	Mechanism
IIA6 – Crime and Safety	<p>Accessibility and safety could be improved in existing spaces by providing lighting, accessible signage, and auxiliary aids to people with reduced mobility.</p> <p>Accessible surfacing should be considered for wheelchair users and people with mobility restrictions.</p> <p>Opportunities for sensory stimulation should be maximised to ensure inclusive enjoyment of spaces.</p>	<p>Project level design and assessment as part of subsequent EIA/ planning application</p> <p>Community engagement</p>
IIA1 - Population and Equalities IIA10 - Landscape and Townscape	<p>Developments should seek to improve the public realm, including improving wayfinding and providing permeability through town centres to provide access to those with disabilities, or pushchairs.</p>	<p>Project level design and assessment as part of subsequent EIA/ planning application</p>
IIA3 – Economy and Town Centres	<p>Where sites are located within or in close proximity to local and neighbourhood shopping centres/ parades it is imperative that development does not detrimentally impact on the vitality of the designated centre.</p>	<p>Project level design and assessment</p> <p>Community engagement</p>
IIA3 – Economy and Town Centres IIA4 – Employment and Skills	<p>The loss of businesses should be avoided. Where it cannot be avoided, discussions with owners should be undertaken to ensure suitable alternative locations are identified and/or adequate compensation is provided particularly where businesses may need to be temporarily closed or relocated during construction.</p>	<p>Inclusion within preferred Local Plan policies</p> <p>Community engagement</p> <p>Project level design and assessment</p>

IIA Objective	Mitigation/ Enhancement	Mechanism
	Alternative units should where possible be equivalent in size, layout, rent and connectivity to the existing site and considered suitable by the occupier.	
IIA4 – Employment and skills	Where new development comes forward in close proximity to existing shop frontages and businesses, there’s a need to ensure that they can remain open and maintain their existing business hours.	Inclusion within Local Plan policies Project level design and assessment as part of subsequent EIA/ planning application
IIA6 – Crime and Safety	<p>Development should incorporate designing out crime principles, particularly for those potential development sites located in areas with high levels of crime deprivation.</p> <p>Although crime is incorporated within the Local Plan, it currently doesn’t currently have its own standalone policy. Given the high levels of crime in some areas of the borough, reductions in crime could be better supported by planning policies.</p> <p>Development should consider the Handbook Creating Places That Work For Women and Girls³.</p>	<p>Incorporation within the Local Plan policies</p> <p>Project level design and assessment as part of subsequent EIA/ planning application</p>

³ London Legacy Development Corporation, Creating places that work for women and girls, Handbook for Local Authorities, Developer and Designers, July 2024 [online] <https://www.queenelizabetholympicpark.co.uk/about-us/how-we-work/handbook-creating-places-work-women-and-girls>

IIA Objective	Mitigation/ Enhancement	Mechanism
IIA9 – Biodiversity and Natural Capital	<p>Consideration needs to be given to the potential effects of construction of developments (noise, vibration and air pollution) on biodiversity.</p> <p>A Lighting Strategy should be prepared to minimise light spill onto retained or newly created habitat features.</p>	<p>Inclusion within Local Plan policies</p> <p>Project level design and assessment (including noise assessments/ surveys)</p> <p>Lighting Strategy</p>
IIA9 – Biodiversity and Natural Capital	<p>For those sites that incorporate existing green space, Phase 1 habitat surveys should be undertaken to identify any habitats and species.</p>	<p>Project level assessment</p>
IIA10 - Landscape and Townscape	<p>Care must however be taken to ensure that tall buildings in clusters do not appear to coalesce in views as this can have a significant visual impact and undermine legibility. Particular attention must be given to designated views.</p> <p>As outlined in the draft Tall Buildings SPD⁴ Applications for tall buildings, due to their exceptional nature, will need to provide the following supporting information to enable a thorough assessment of the proposals and design: survey plan and calculations, a 3D massing model, Tall Buildings Statement, Design and Access Statement, Townscape and visual impact</p>	<p>Scheme level design and planning application</p> <p>Application of the Tall Buildings SPD</p>

⁴ London Borough of Tower Hamlets, Tall Buildings SPD, Consultation Draft [online] available at: <https://talk.towerhamlets.gov.uk/tallbuildings>

IIA Objective	Mitigation/ Enhancement	Mechanism
	assessment, Heritage impact statement, Physical impact assessment, Movement statement, Building services strategy and Sustainability Statement (such as BREEAM/ Home Quality Mark).	
IIA10 - Landscape and Townscape IIA11 - Historic Environment	New developments should seek to maximise sustainability benefits from existing landscape, townscape and heritage assets by valuing them inherently and for the wider services they provide. Development proposals should not harm, and should seek to make a positive contribution to, the characteristics and composition of Strategic Views and their landmark elements. Development proposals in designated views should comply with London Plan Policy HC4.	Historic Landscape Characterisation Project level landscape and visual impacts assessments as part of subsequent EIA/ planning application Heritage Impact Assessments
IIA10 - Landscape and Townscape	Buildings within the London City Airport Aerodrome Safeguarded zone need adhere to stipulated height restrictions.	Project level design and planning applications
IIA11 - Historic Environment	Promoters and designers should liaise closely with Tower Hamlets and Historic England to avoid or minimise negative effects, such as land take and light pollution, whilst seeking to maximise benefits, such as tranquillity. Where developments are being built and/or improved within, or close proximity to designated historic assets, visual effects assessment should be undertaken to determine magnitude of impact and possible mitigation.	Project level landscape and visual impacts assessments as part of subsequent EIA/ planning application Heritage Impact Assessments

IIA Objective	Mitigation/ Enhancement	Mechanism
IIA11 - Historic Environment	Development proposals with the potential to affect World Heritage Sites or their settings should be supported by Heritage Impact Assessments.	Project level landscape and visual impacts assessments as part of subsequent EIA/ planning application Heritage Impact Assessments
IIA11 – Historic Environment	<p>Characterisation work should be undertaken to understand the potential impact of site allocations on historic places and inform assessments of an area’s capacity to accommodate development.</p> <p>Site specific studies, such as archaeological desk-based assessment and fieldwork, may also be necessary to provide adequate information.</p>	Historic Landscape Characterisation Archaeological desk based assessment
IIA10 - Landscape and Townscape IIA11 - Historic Environment	Sensitive design should be considered for any new developments within town centres to ensure positive effects on local heritage assets and landscapes.	Historic Landscape Characterisation Project level landscape and visual impacts assessments as part of subsequent EIA/ planning application
IIA10 - Landscape and Townscape	Care must however be taken to ensure that tall buildings in clusters do not appear to coalesce in views as this can have a significant visual impact and undermine legibility. Particular attention must be given to designated views.	Scheme level design as part of subsequent EIA/ planning application

IIA Objective	Mitigation/ Enhancement	Mechanism
	As outlined in the draft Tall Buildings SPD ⁵ Applications for tall buildings, due to their exceptional nature, will need to provide the following supporting information to enable a thorough assessment of the proposals and design: survey plan and calculations, a 3D massing model, Tall Buildings Statement, Design and Access Statement, Townscape and visual impact assessment, Heritage impact statement, Physical impact assessment, Movement statement, Building services strategy and Sustainability Statement (such as BREEAM/ Home Quality Mark).	
IIA14: Air Quality	A Dust Management Plan should be compiled prior to demolition and construction of new sites.	Project level Construction Environmental Management Plan (CEMP)
IIA15 – Climate Change and Resilience IIA16 – GHG Emissions	Development should ensure design that is resilient to the current and future risks of climate change i.e. extreme heat, cold and precipitation. This could include the use of locally available, renewable, or reclaimed resources, as these are often more resilient. New developments should incorporate renewable energy generation	Project level design and assessment as part of subsequent EIA/ planning application

⁵ London Borough of Tower Hamlets, Tall Buildings SPD, Consultation Draft [online] available at: <https://talk.towerhamlets.gov.uk/tallbuildings>

IIA Objective	Mitigation/ Enhancement	Mechanism
	methods, such as solar panels, to reduce the carbon emissions of the site.	
IIA12 – Flood Risk	<p>Sequential testing should be undertaken, to avoid sites with the highest flood risk. Where this isn't viable and proposed sites are located within flood zones 2 or 3 a full flood risk assessment should be undertaken.</p> <p>Scheme level design should also consider the incorporation features to reduce flood risks, both now and in future, in light of future precipitation changes associated with climate change. This could include features such as sustainable urban drainage solutions (SuDs), permeable paving and natural engineering such as tree planting.</p>	<p>Project specific transport plans/assessments as part of subsequent EIA/ planning application</p> <p>Incorporation within the Local Plan policies</p>
IIA12 – Flooding	Flood Risk Assessments should be undertaken for all developments located in Flood Zone 2 or 3. The inclusion of SuDS should be implemented where developments are located in flood zones.	Project level design and assessment as part of subsequent EIA/ planning application
IIA13 – Water Quality IIA18 – Waste	Vessels used to facilitate the movement of waste will need to adhere to the Maritime and Coastguard Agency Merchant Shipping (Prevention of Pollution by Sewage and Garbage from Ships) Regulations 2008 and other best practice to minimise pollution and effects on water quality.	Project level design and assessment as part of subsequent EIA/ planning application

IIA Objective	Mitigation/ Enhancement	Mechanism
IIA15 – Climate Change and Resilience IIA16 – GHG Emissions IIA17 – Waste IIA18 – Efficient use of resource	<p>Any form of construction and operation should be undertaken as sustainably as possible, making use of tools and processes, such as circular economy, waste hierarchy and should consider BREEAM and BREEAM Infrastructure.</p> <p>Sustainable design and construction techniques should be promoted, such as low energy lighting and opportunities for renewable energy regeneration.</p>	<p>Project level design and assessment as part of subsequent EIA/ planning application</p> <p>CEMP/ OEMP</p>
IIA17 – Waste IIA18 – Efficient use of resource	<p>Proposed sustainable transport infrastructure such as cycle lanes, bus lanes and footpaths, should where appropriate, prioritise the reallocation of the highway network.</p>	<p>Project level design and assessment as part of subsequent EIA/ planning application</p> <p>Tower Hamlets Transport Strategy 2019-2041</p>
IIA17 – Waste IIA18 – Efficient use of resource	<p>A Site Waste Management Plan should be prepared as part of the CEMP and Operational Environmental Management Plan (OEMP).</p>	<p>Project level design and assessment – CEMP and OEMP</p>

5.2 Monitoring Measures

- 5.2.1 The SEA Regulations require that monitoring is undertaken on a plan so that the significant effects of applying the plan can be identified, and remedial action imposed. The purpose of the monitoring is to provide an important measure of the sustainability outcome of the final plan, and to measure the performance of the plan against sustainability objectives and targets. Monitoring is also used to manage uncertainty, improve knowledge, enhance transparency and accountability, and to manage sustainability information.
- 5.2.2 The aim of monitoring is to check whether the plan is having the significant effects that were predicted in the IIA, and to deal with any unforeseen problems. Those remaining significant effects (albeit uncertain effects) that remain following the implementation of the mitigation and enhancement measures above include the following:
- IIA1 and IIA2: The effects of a growing population on community facilities and services;
 - IIA5: The number of affordable and adaptable homes delivered;
 - IIA9: The number of new developments achieving biodiversity net gain from January 2024;
 - IIA10: The potential effects on key views;
 - IIA12: Flood risk of new development monitored through the Strategic Flood Risk Assessment;
 - IIA16: Levels of embodied carbon from new development; and
 - IIA18: Levels of waste generations on new developments.
- 5.2.3 It should be noted that these uncertain effects are generally where limited scheme information is currently available.
- 5.2.4 **Table 5-2** below sets out those monitoring measures which could be suitable in monitoring those uncertain residual effects outlined above. Targets have either been taken from the Local Plan or the London Plan.

Table 5-2 - Proposed Monitoring Measures

Potential Effects	Key Performance Indicators	Targets (as set out in the Local Plan or London Plan)
<p>IIA1 and IIA2: The effects of a growing population on community facilities and services</p>	<p>The number of new healthcare and community services provided.</p> <p>Ratio of patient-to-staff numbers at GP practices</p>	<p>No targets included as part of the Local Plan or London Plan</p> <p>The Infrastructure Delivery Plan may include targets. This will be delivered alongside the Local Plan.</p>
<p>IIA5: The number of affordable and adaptable housing provided</p>	<p>The number/ percentage of affordable homes being delivered within the borough.</p> <p>The number/ percentage of adaptable homes or specialist accommodation being delivered within the borough.</p>	<p>Policy HF2 of the Local Plan:</p> <ul style="list-style-type: none"> ■ Deliver a minimum of 40% affordable housing (by habitable room) on-site when seeking to provide 10 or more new residential units; ■ Deliver a minimum of 50% affordable housing (by habitable room) on-site through the redevelopment of affordable housing, estate regeneration schemes and industrial land for residential use; and ■ Deliver the required amount of affordable homes in accordance with a 85% social homes and 15% intermediate homes tenure split. <p>Policy D7 of the London Plan:</p>

Potential Effects	Key Performance Indicators	Targets (as set out in the Local Plan or London Plan)
		Delivery of at least 10% of dwellings meet Building Regulation requirement M4(3) ⁶ 'wheelchair user dwellings'
IIA9: The number of new developments achieving biodiversity net gain	The number of new developments achieving biodiversity net gain	Policy BO4 of the Local Plan: To deliver a minimum 2.5 biodiversity unit per hectare increase or 30% gain (whichever is higher) in habitat value for wildlife compared with the pre-development baseline
IIA10: The potential effects on key views	Number of tall building applications granted planning permission within key view areas/ protected views	No targets included as part of the Local Plan or London Plan

⁶ HM Government, The Building Regulations, Access to and Use of Buildings (M), 2011 [online] available at: https://assets.publishing.service.gov.uk/media/5a7f8a82ed915d74e622b17b/BR_PDF_AD_M1_2015_with_2016_amendments_V3.pdf

Potential Effects	Key Performance Indicators	Targets (as set out in the Local Plan or London Plan)
IIA11: Potential negative effects from new developments on heritage assets	Number of buildings on the 'At Risk Register'. Number of applications granted planning permission contrary to advice from Historic England.	No targets included as part of the Local Plan or London Plan
IIA12: Flood Risk	Number of Environment Agency objections to planning applications.	No targets included as part of the Local Plan or London Plan
IIA16: Levels of embodied carbon from new development.	The number of development proposals that meet London's Energy Transformation Initiative (LETI) 2020 best practice embodied carbon emission targets	Policy CG4 of the Local Plan: <ul style="list-style-type: none"> ■ Domestic buildings should achieve embodied carbon limits of 500kg CO2/m2 or less; and ■ Non-domestic buildings should achieve embodied carbon limits of 600kg CO2/m2 or less.

Potential Effects	Key Performance Indicators	Targets (as set out in the Local Plan or London Plan)
<p>IIA18: Uncertain effects of waste generations on new developments</p>	<p>The amount of construction and demolition waste going to landfill</p> <p>The number of new developments which incorporate waste saving initiatives</p> <p>Household and commercial waste and recycling figures for the borough</p>	<p>As per Policy SI7 of the London Plan:</p> <ul style="list-style-type: none"> ■ Zero biodegradable or recyclable waste to landfill by 2026 ■ Meet or exceed the municipal waste recycling target of 65% by 2030 ■ Meet or exceed the targets for each of the following waste and material streams: <ul style="list-style-type: none"> • a) construction and demolition – 95% reuse/ recycling/ recovery • b) excavation of material – 95% beneficial use

6 Next Steps

- 6.1.1 LBTH is seeking the views of statutory bodies, the public and other stakeholders on the results of the IIA. Consultation at this stage continues to ensure that the IIA provides a robust assessment of the Local Plan.
- 6.1.2 This IIA Interim Report will be issued to consultees for consultation alongside the preferred Local Plan (Regulation 19 Consultation) in summer 2024.
- 6.1.3 An indicative timetable of the remaining stages of the IIA and Local Plan have been included in **Table 6-1** below.

Table 6-1 – Indicative Local Plan and IIA Timetable

IIA/ Local Plan Stages	Timescales
Regulation 19 Consultation (IIA Stage D)	Summer 2024
Examination (IIA Stage D)	Early 2025

1 Introduction

1.1 Overview

- 1.1.1. The London Borough of Tower Hamlets (here in referred to as LBTH) is in the process of preparing a new Local Plan for the borough. The new Local Plan will set out how development will be planned and managed across the borough through to 2038.
- 1.1.2. It will set out how the borough can sustainably develop, identifying the number of new homes, jobs and facilities needed to support the growing and changing population, as well as protecting all the features that the borough’s communities cherish, such as town centres, parks and open spaces, waterways, cultural and historic buildings.
- 1.1.3. The borough boundary and the spatial extent of the new Local Plan is set out in **Figure 1-1** below.

Figure 1-1 - LBTH Borough Boundary

1.2 Local Plans

- 1.2.1. Section 3 of the National Planning Policy Framework (NPPF)¹ requires that each local planning authority should prepare a local plan for its area, which guides decisions on future development proposals and addresses the needs and opportunities of the area.
- 1.2.2. Topics that local plans usually cover include housing, employment and shops and they also identify where development should take place and areas where development should be restricted. Once in place, local plans become part of the statutory development plan, which is the starting point for determining local planning applications.
- 1.2.3. Paragraph 15 of the NPPF states that the *'planning system should be genuinely plan-led. Succinct and up-to-date plans should provide a positive vision for the future of each area and a framework for addressing housing needs and other economic, social and environmental priorities'*.
- 1.2.4. Part 2 of the Town and Country Planning Regulations 2012 makes provision in relation to the local plan and supplementary planning documents. Parts 4 and 5 of these regulations prescribe the form and content of local plans and supplementary planning documents (to be prepared by local planning authorities) and prescribes which documents are to be local plans.
- 1.2.5. The Local Plan must also be in 'general conformity' with the London Plan, and where appropriate, take account of Supplementary Planning Guidance (SPG). The Mayor of London produces other strategies to sit alongside the London Plan².

1.3 Purpose of this Report

- 1.3.1. LBTH has commissioned WSP to undertake an Integrated Impact Assessment (IIA) which will ensure that sustainability aspects are incorporated into their Local Plan. The IIA combines the following assessment processes:
 - Sustainability Appraisal (SA) (incorporating Strategic Environmental Assessment - SEA);
 - Equalities Impact Assessment (EqIA);
 - Health Impact Assessment (HIA); and
 - Habitats Regulations Assessment (HRA).
- 1.3.2. An integrated assessment approach enables synergies and cross-cutting impacts to be identified, avoiding the need to undertake and report on separate assessments and seeking to reduce any duplication of assessment work. A single process can improve efficiencies in

¹ Ministry of Housing, Communities and Local Government Framework, National Planning Policy Framework, 2021 [online] available at: <https://www.gov.uk/government/publications/national-planning-policy-framework--2>

² Mayor of London, The London Plan, 2021 [online] available at: <https://www.london.gov.uk/programmes-strategies/planning/london-plan>

the assessment itself, as many of the issues covered in the different forms of assessment overlap. This process also helps to simplify outcomes and recommendations for policymakers.

1.3.3. More detail on the IIA methodology is provided in **Section 3**.

1.3.4. This report sets out the second stage of the IIA/ local planning process, which is the assessment of the preferred Local Plan and preparation of the IIA Report (IIA Stage C). This stage includes the following:

- Assessment of preferred policies, objectives and spatial options;
- Assessment of reasonable alternatives;
- Assessment of cumulative effects;
- Outlining mitigation and enhancement measures;
- Outlining recommendations; and
- Setting out next steps.

2 The New Local Plan

2.1 Background

- 2.1.1. The new Local Plan will set out the vision for the future of the borough. It will cover a range of areas, from specifying the locations for new homes and businesses, to planning policies which address local issues to ensure development is achieved in a sustainable manner, supporting the protection and enhancement of the environment, green spaces and cultural and historic assets.
- 2.1.2. Once adopted, the Local Plan together with adopted Neighbourhood Plans (made by qualifying bodies) and the London Plan will form the Tower Hamlets Development Plan and be the basis for determining planning applications, shaping how the borough will develop through to 2038.

2.2 Work to Date

- 2.2.1. Work on the new Local Plan started in early 2022. Public consultation has already taken place to develop LBTH's new Local Plan.
- 2.2.2. Early engagement took place from Wednesday 25th January 2023 to Wednesday 8th March 2023 through the Early Engagement Platform, to seek the views of LBTH's varied communities and stakeholders about the future of the borough and what the local plan should contain. This was an important stage to ensure the local plan is shaped by early and effective engagement with a wide range of groups.
- 2.2.3. The public also had the option of attending one of the three online webinar sessions, an in-person public engagement session, in-person or virtual drop-in sessions, or by providing written comments by email and/or post. This early engagement is the start of the discussion which will support the production of the new Local Plan. The public's input is a valuable part of the preparation process and will inform the development of new policies.
- 2.2.4. Feedback from both public consultations has been used to shape this draft new Local Plan. It sets out a shared vision for the future of the borough and includes the proposed strategy and planning policies that will help guide and manage development in the area over the new Local Plan period (2023 to 2038).
- 2.2.5. The IIA Scoping Report was undertaken in April 2023, which set out the baseline and identified key issues and opportunities for the borough and the Local Plan. This underwent a separate consultation with the statutory consultees (Environment Agency, Historic England and Natural England) in which feedback was received on both the IIA process and the Local Plan.
- 2.2.6. LBTH consulted on the first draft version of the local plan, which was carried out in accordance with Regulation 18 of the Town and Country Planning (Local Planning)

(England) Regulations 2012³, and ran between the 6th of November and the 18th of December 2023. An Interim Integrated Impact Assessment was undertaken in support of this and was consulted on alongside the first draft version of the local plan.

2.2.7. Since consultation, the Local Plan has been revised and refined and this Report represents the assessment of the updated Preferred Local Plan for Regulation 19 consultation.

The indicative timeline for delivery of the Local Plan is shown in **Figure 2-1** below.

Figure 2-1 - Local Plan Timeline

³ UK Government, The Town and Country Planning (Local Planning) (England) Regulations 2012, [online] available at: https://www.legislation.gov.uk/uksi/2012/767/pdfs/uksi_20120767_en.pdf

2.3 Local Plan Vision and Objectives

2.3.1. The proposed vision for LBTH is set out in **Box 2.1** below.

Box 2-1 – Local Plan Vision

Our Proposed Vision for Tower Hamlets

Our vision for Tower Hamlets is to build a brighter future, to empower the next generation, and to promote a multicultural and diverse community that thrives within mixed, cohesive, and inclusive neighbourhoods. The council will prioritise inclusivity for people of all ethnicities, faiths, genders and sexual orientation, walks of life, designing our places to ensure that people are put first within the highest quality environments that meet the needs and ambitions of all our communities.

The council will strive to address overcrowding in the borough and meet the range of housing needs of our community by delivering a significant amount of high-quality new homes. The issues caused by overcrowding including poorer health and educational outcomes, increased impacts on mental health and greater incidences of depression and anxiety will be mitigated with the focus on an increased capacity for housing. We will consider a mix of housing products, types, tenures, layout, and size to best match the borough's population, with a focus on affordable and social housing, particularly family homes that can meet the needs of our overcrowded residents. We will seek to focus on the delivery of affordable and social housing through a 40% target on development sites to tackle the overcrowding and housing crisis.

Tower Hamlets will work towards a clean and green future where carbon emissions and overall energy usage are reduced. We will prioritise the reuse and adaptation of buildings and where not feasible, the recycling of building materials. We will support walking and cycling links alongside the use of, and improvements to, the public transport network. The transport needs of all residents will be considered as part of future development opportunities, particularly where this supports mobility needs or for the purposes of employment. The borough's network of green and blue spaces, including Victoria Park, Mile End Park, Mudchute Park, the Thames, River Lea, Dock Basins, and canals, will provide opportunities for leisure, relaxation, and entertainment with a variety of uses encouraged to support health and well-being while still ensuring their enjoyment and function as open spaces is retained.

The borough, having regained the planning powers for parts of Bromley-by-Bow, Fish Island, and Hackney Wick from the London Legacy Development Corporation (LLDC)⁴, will continue to integrate and grow the distinctive opportunities these areas offer.

⁴ The LLDC came into being on April 1, 2012. From October 1 2012 the LLDC became the Local Planning Authority for the Olympic Park and surrounding neighbourhoods, which includes Bromley-by-Bow and Fish Island. The LLDC functions and responsibilities include those related to plan making and decision making.

The borough’s small businesses, start-ups, and markets including Whitechapel Market, Petticoat Lane Market, Bethnal Green Markets, Roman Road Market, Columbia Road Market, Watney Market, Crisp Street Market, Brick Lane Market, and other local traders will be prioritised and at the heart of decision-making. The key employment areas of Canary Wharf, Whitechapel, and the City Fringe will continue to evolve into dynamic centres of innovation and global hubs for the financial, technology, professional, life-sciences, biotech, and digital sectors. The continued benefits of the Elizabeth line arrival will further unlock the unique opportunities available within the borough. A community wealth building approach will be adopted, alongside the provision of genuinely affordable workspace will be prioritised for local small businesses, local start-ups, makers, the creative industries, and emerging and thriving small and medium-sized enterprises.

We will identify and coordinate the provision of infrastructure necessary to support our growing population, including promoting the delivery of new parks, public transport improvements, educational, health, community, cultural, and recreational facilities across the borough.

Our unique town centres, markets, historical, and cultural attractions will be revitalised to support local communities and become some of London's top attractions. With the borough's growing population, young people will be at the forefront of anticipated regeneration with jobs, homes, spaces, and environments geared towards their success.

Exceptional design and architectural innovation will be ensured across the borough to ensure our distinct buildings, skylines, and streetscapes provide a high-quality environment for our residents and remain a recognisable feature of London. We will celebrate the vibrant history and urban landscape of Tower Hamlets through thoughtful design and placemaking, highlighting our rich, historic, and significant character areas. Tower Hamlets will emerge from the economic impacts of the COVID-19 pandemic and Brexit to maintain its status as an international hub for business, culture, and tourism. Our unique location, with strong links to the City of London, Stratford, London City Airport, and beyond, will allow for a rich mix of strategic functions that benefit the community.

By 2038, Tower Hamlets will have made significant strides in addressing overcrowding, delivered thousands of new homes to support the community, provided opportunity for markets and small local businesses to thrive, and improved the overall health and safety of residents. The borough will have continued to play a role in supporting London’s growth and economy through sustainable development. The borough’s strong and inclusive communities will be thriving within healthy environments, ensuring a brighter future for all.

2.3.2. The Local Plan’s strategic objectives provide a link to the delivery of the vision for Tower Hamlets. These objectives address the key challenges of the borough over the 15-year plan period. The objectives have been informed by and reflect many of the key documents prepared by the council, including the Strategic Plan (2022-2026)⁵. These objectives are as follows:

- Empowering our communities culturally, economically, and politically
- Tackling overcrowding and housing in our borough
- Supporting young people and accelerating education
- A thriving local and global economy that boosts jobs, skills, businesses and tackles inequalities
- Securing infrastructure delivery to protect and strengthen public services
- A clean and green future
- Healthy, safe and inclusive neighbourhoods

2.4 Local Plan Policies

2.4.1. In total the draft Local Plan puts forward 72 policies across 10 themes. These themes and policies have been outlined in **Table 2-1** below. Strategic policies have been denoted by an asterisk. These are the policies which address strategic priorities in line with the requirements of Section 19 (1B-E) of the Planning and Compulsory Purchase Act 2004⁶.

Table 2-1 – Proposed Draft Local Plan Policies

Draft Local Plan Policies
<i>Delivering the Local Plan</i>
DV1 - Areas of growth and opportunity within Tower Hamlets
DV2 - Delivering sustainable growth in Tower Hamlets
DV3 – Healthy Environments
DV4 - Planning and construction of new development

⁵ The Strategic Plan is the council’s main plan. It sets out the most important priorities for the council between 2022 and 2026. These priorities are translated from the Mayor’s vision and the administration’s manifesto. All local authorities must deliver certain services and make decisions: these are set out in law. The plan also includes important actions that the council will take to make sure these services and decisions are the best they can be.

⁶ UK Government, Planning and Compulsory Purchase Act 2004 [online] available at: <https://www.legislation.gov.uk/ukpga/2004/5/contents>

Draft Local Plan Policies
DV5 - Developer contributions
DV6 – Social value
DV7 – Utilities and digital connectivity
DV8 – Site allocations
<i>Homes for the Community</i>
HF1 – Meeting housing needs
HF2 – Affordable housing and housing mix
HF3 – Protection of existing housing
HF4 – Support and specialist housing
HF5 – Gypsy and traveller accommodation
HF6 – Purpose-built student accommodation
HF7 – Large-scale purpose-built shared living
HF8 – Housing with shared facilities (houses in multiple occupation)
HF9 – Housing Standards and Quality
<i>Clean and Green Future</i>
CG1 – Mitigating and adapting to a changing climate
CG2 – Low energy buildings
CG3 – Low carbon energy and heating
CG4 – Embodied carbon, retrofit and the circular economy

Draft Local Plan Policies
CG5 – Overheating
CG6 – Managing flood risk
CG7 – Sustainable drainage
CG8 – Water efficient design
CG9 – Air quality
CG10 – Noise and vibration
CG11 – Contaminated land
<i>People Places and Spaces</i>
PS1 – Design and infrastructure-led approach to development
PS2 – Tall Buildings
PS3 – Securing design quality
PS4 – Attractive streets, spaces and public realm
PS5 – Creating inclusive spaces
PS6 – Heritage and the historic environment
PS7 – World heritage sites
PS8 – Shaping and managing views
PS9 – Shopfronts
PS10 – Advertisements, hoardings and signage
PS11 – Siting and design of telecommunications infrastructure

Draft Local Plan Policies
<i>Inclusive Economy and Good Growth</i>
EG1 – Creating investment and jobs
EG2 – New employment space
EG3 – Affordable workspace
EG4 – Loss and redevelopment of employment space
EG5 – Railway Arches
EG6 – Data Centres
<i>Town Centres</i>
TC1 – Supporting the network and hierarchy of centres
TC2 – Protecting the diversity, vitality and viability of town centres
TC3 – Town centre uses outside centres
TC4 - Markets
TC5 – Food and drink
TC6 – Entertainment uses
TC7 – Evening and night-time economy
TC8 – Short-stay accommodation
<i>Community Infrastructure</i>
CI1 – Support community facilities
CI2 – Existing community facilities

Draft Local Plan Policies
CI3 – New and enhanced community facilities
CI4 – Public houses
CI5 – Arts and Culture facilities
<i>Biodiversity and open space</i>
BO1 – Green and blue infrastructure
BO2 – Open spaces and the Green Grid networks
BO3 – Water spaces
BO4 – Biodiversity and access to nature
BO5 – Urban greening
BO6 – Play and recreation spaces
BO7 – Food growing
<i>Movement and Connectivity</i>
MC1 – Sustainable travel
MC2 – Active travel and healthy streets
MC3 – Impacts on the transport network
MC4 – Parking and permit-free
MC5 – Sustainable delivery, servicing and construction
<i>Reuse, Recycling and Waste</i>
RW1 – Managing our waste

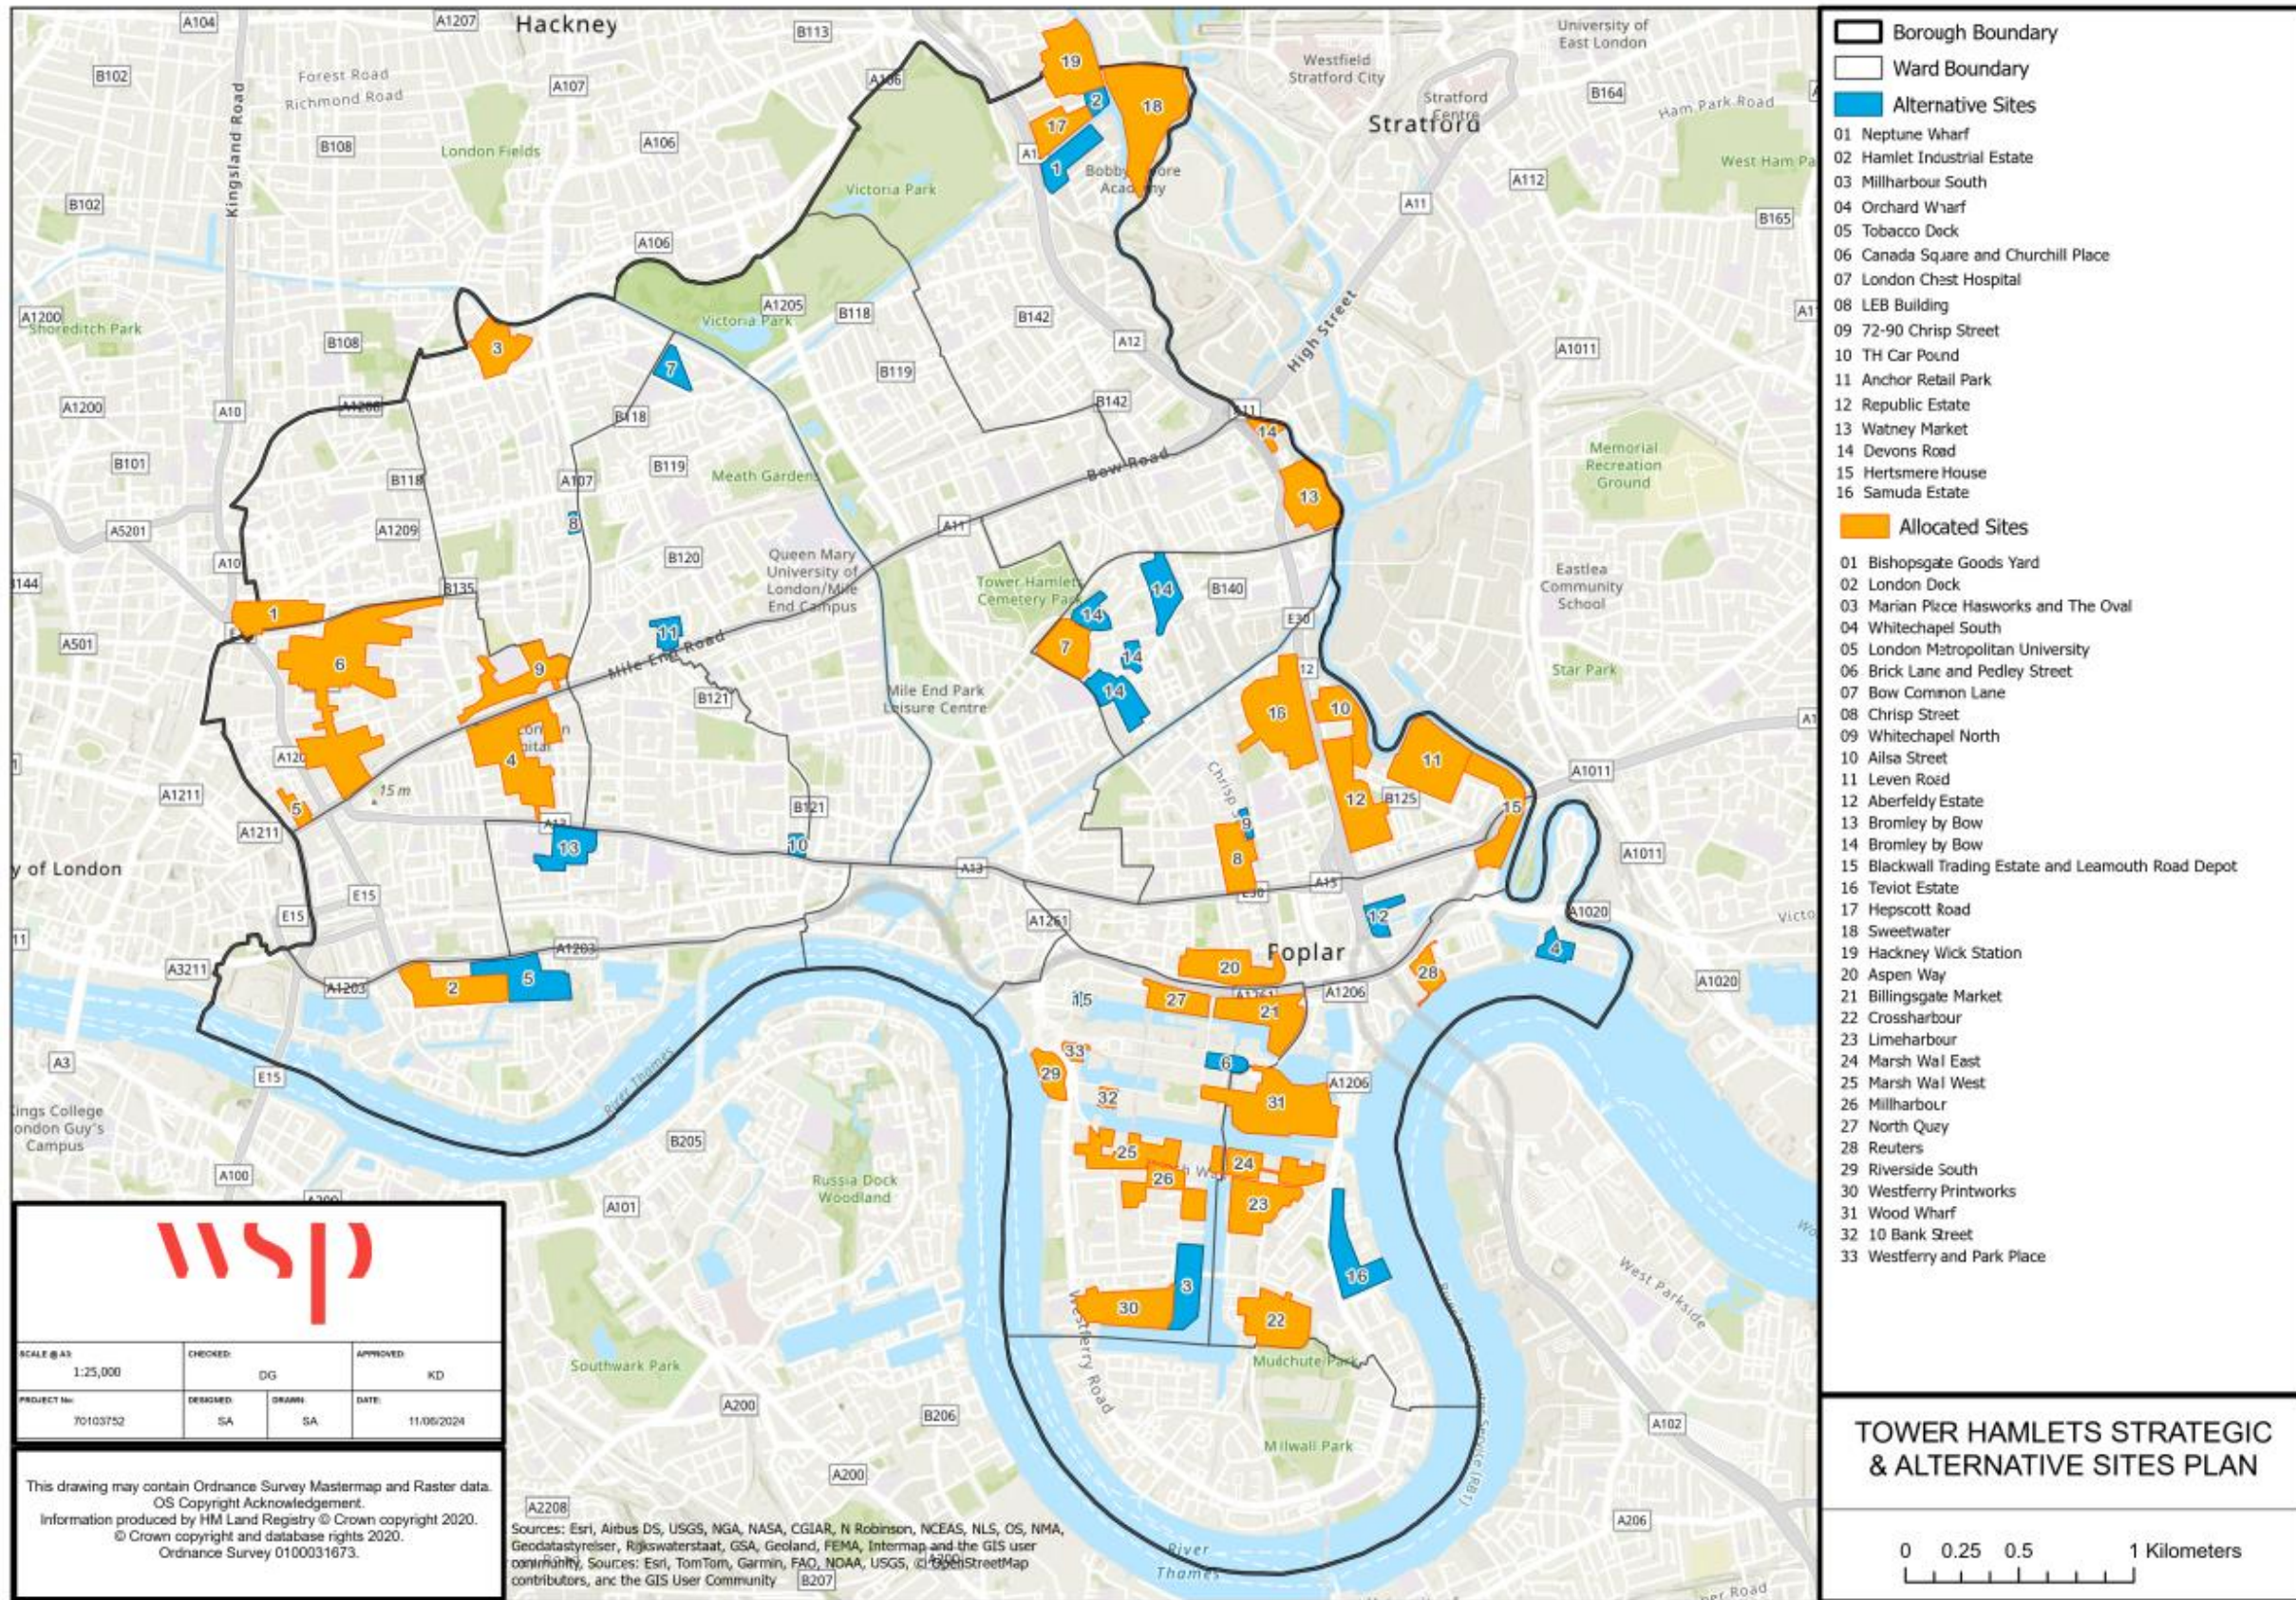

Draft Local Plan Policies
RW2 – New and enhanced waste facilities
RW3 – Waste collection facilities in new development

2.5 Local Plan Site Allocations and Alternatives

- 2.5.1. A key part of the local planning process is to identify key sites for development. The Local Plan proposes 32 site allocations, which are set out in **Figure 2-2** overleaf.
- 2.5.2. All proposed development sites underwent an initial sifting process by LBTH which identified potential key constraints as well as its ability to achieve a minimum of 500 new homes. Sites include those that have been previously allocated as part of the existing local plan and the LLDC Local Plan⁷ as well as those that have come forward since the adoption of these plans.
- 2.5.3. It should be noted that some of the proposed site allocations may be subject to further viability testing, but it is assumed that they will be able to achieve a minimum of 500 new homes.
- 2.5.4. As part of the SEA Regulations, reasonable alternatives need to be considered. The proposed site alternatives include those sites that are developable but do not meet the 500 minimum capacity targets of the proposed site allocations. There are 16 sites in total. These sites have the potential to come forward as windfall sites in the future if the proposed site allocations above do not provide adequate housing numbers.

⁷ LLDC Local Plan 2020-2036 [online] available at: <https://www.queenelizabetholympicpark.co.uk/planning-authority/planning-policy/local-plan-2020-2036>

Figure 2-2 - Proposed Site Allocations and Alternatives

Page 1213

3 Methodology

3.1 Introduction

3.1.1. Sustainability Appraisal is a systematic process that is undertaken during the preparation of a plan. Its role is to promote sustainable development by assessing environmental, social and economic impacts, as well as mitigating any potential adverse effects that the plan might otherwise have.

3.1.2. The IIA combines the following assessment processes:

- Strategic Environmental Assessment (SEA);
- Sustainability Appraisal (SA);
- Health Impact Assessment (HIA);
- Equalities Impact Assessment (EqIA); and
- Habitats Regulations Assessment (HRA).

3.1.3. **Figure 3-1** below shows the relationship of each of these IIA elements.

Figure 3-1 - Relationship of IIA Elements

3.2 Sustainability Appraisal

- 3.2.1. The SEA/SA process is carried out during the preparation of local plans and spatial development strategies. Its role is to promote sustainable development by assessing the extent to which emerging plans will help to achieve relevant environmental, economic and social objectives.
- 3.2.2. SEA is used to describe the application of environmental assessment to plans and programmes in accordance with the 'Environmental Assessment of Plans and Programmes Regulations' (SI 2004/1633, known as the SEA Regulations)⁸.
- 3.2.3. SEA is mandatory for plans and programmes which are prepared for agriculture, forestry, fisheries, energy, industry, transport, waste or water management, telecommunications, tourism, town and country planning or land use, and which set the framework for future development consent of projects listed in the Town and Country Planning (Environmental Impact Assessment) Regulations⁹.
- 3.2.4. SEA only considers the environmental effects of a plan whilst SA also considers a plan's wider economic and social effects. It is obligatory that SAs meet all of the requirements of the SEA Regulations.
- 3.2.5. The approach adopted for the SA element of the Local Plan follows that set out in the Practical Guide to SEA¹⁰ and the Planning Practice Guidance to SEA¹¹. SAs do however need to meet all of the requirements of the SEA Regulations, so a separate strategic environmental assessment should not be required.

3.3 Equalities Impact Assessment

- 3.3.1. The Equality Act 2010¹² includes a public-sector equality duty that requires public organisations and those delivering public functions to: '*show due regard to the need to eliminate unlawful discrimination, harassment and victimisation; advance equality of opportunity; and foster good relations between communities*'.
- 3.3.2. The EqIA process focuses on assessing and recording the likely equalities effects as a result of a policy, project or plan. It seeks to ensure that the policy, project or plan does not discriminate or disadvantage people and enables consideration of how equality can be

¹¹ Department for Communities and Local Government (2015) Strategic environmental assessment and sustainability appraisal. Available at: <http://planningguidance.communities.gov.uk/blog/guidance/strategic-environmental-assessment-and-sustainability-appraisal/>

¹² Equality Act, 2010, [online] available at: <https://www.legislation.gov.uk/ukpga/2010/15/contents>

improved or promoted. The Equality Duty came into force in April 2011 and covers the following nine Personal Protected Characteristics:

- Age;
- Disability;
- Gender;
- Gender reassignment;
- Marriage and civil partnership;
- Pregnancy and maternity;
- Race;
- Religion or belief; and
- Sexual orientation.

3.4 Health Impact Assessment

- 3.4.1. HIA is a process to identify the likely health effects of plans, policies or developments and to implement measures to avoid negative impacts and promote opportunities to maximise the benefits. There is no formally adopted methodology for HIA although there is a body of practice and guidance at a policy level. Assessment of health can be undertaken as a discrete process within an HIA and can also be embedded within environmental assessments.
- 3.4.2. HIA is not a statutory requirement of the Local Plan preparation process. However, Planning Practice Guidance¹³ states that ‘Local planning authorities should ensure that health and wellbeing and health infrastructure are considered in local and neighbourhood plans and in planning decision making’.
- 3.4.3. HIAs can be done at any stage in the development process but are best done at the earliest stage possible.

3.5 Habitat Regulations Assessment

- 3.5.1. Under Article 6(3) of the European Union Habitats Directive¹⁴ as transposed into the UK law by the Habitats Regulations¹⁵, an assessment (referred to as an HRA) needs to be undertaken in respect of any plan or project which:

¹³ Department for Levelling Up, Housing and Communities and Ministry of Housing, Communities & Local Government, Planning Practice Guidance, Healthy and Safe Communities, 2014 [online] available at:

<https://www.gov.uk/guidance/health-and-wellbeing>

¹⁴ European Union Council Directive 92/43/EEC on the conservation of natural habitats and of wild fauna and flora, 1992 [online] available at: <https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX%3A01992L0043-20130701>

¹⁵ The Conservation of Habitats and Species Regulations 2017, [online] Available at: <http://www.legislation.gov.uk/ukxi/2017/1012/contents/made>

- 3.5.2. “Either alone or in combination with other plans or projects would be likely to have a significant effect on a site designated within the Natura 2000 network – these are Special Areas of Conservation (SACs), candidate SACs (cSACs), and Special Protection Areas (SPAs). In addition, Ramsar sites (wetlands of international importance), potential SPAs (pSPA) and in England possible SACs (pSACs), are considered in this process as a matter of law or UK Government policy. These sites are collectively termed ‘European sites’ in Habitats Regulations Assessment (HRA); and is not directly connected with, or necessary to, the management of the site”.
- 3.5.3. Guidance on the Habitats Directive sets out four distinct stages for assessment under the Directive:
- Stage 1: Screening: the process which initially identifies the likely impacts upon a Natura 2000 site of a plan or project, either alone or in combination with other plans or projects, and considers whether these impacts are likely to be significant (undertaken at Regulation 18);
 - Stage 2: Appropriate Assessment: the detailed consideration of the impact on the integrity of the Natura 2000 sites of the plan or project, either alone or in combination with other plans or projects, with respect to the site’s conservation objectives and its structure and function. This is to determine whether there will be adverse effects on the integrity of the site (undertaken at this stage - Regulation 19);
 - Stage 3: Assessment of alternative solutions: the process which examines alternative ways of achieving the objectives of the plans or projects that avoid adverse impacts on the integrity of the Natura 2000 site ; and
 - Stage 4: Assessment where no alternative solutions exist and where adverse impacts remain: an assessment of whether the development is necessary for imperative reasons of overriding public interest (IROPI) and, if so, of the compensatory measures needed to maintain the overall coherence of the Natura 2000 network.
- 3.5.4. The first stage of the HRA (screening) was undertaken alongside the IIA Interim Report, to support Regulation 18 consultation. As the screening was unable to rule out LSE, Stage 2 (Appropriate Assessment) has been undertaken to support Regulation 19. This IIA Report outlines the key findings from this assessment.
- 3.5.5. The HRA is driven by separate legislation to the SEA/SA and other forms of assessment. This means the HRA Report will be published separately to the IIA Report and not included as an appendix to the IIA Report.

3.6 IIA Process and Requirements

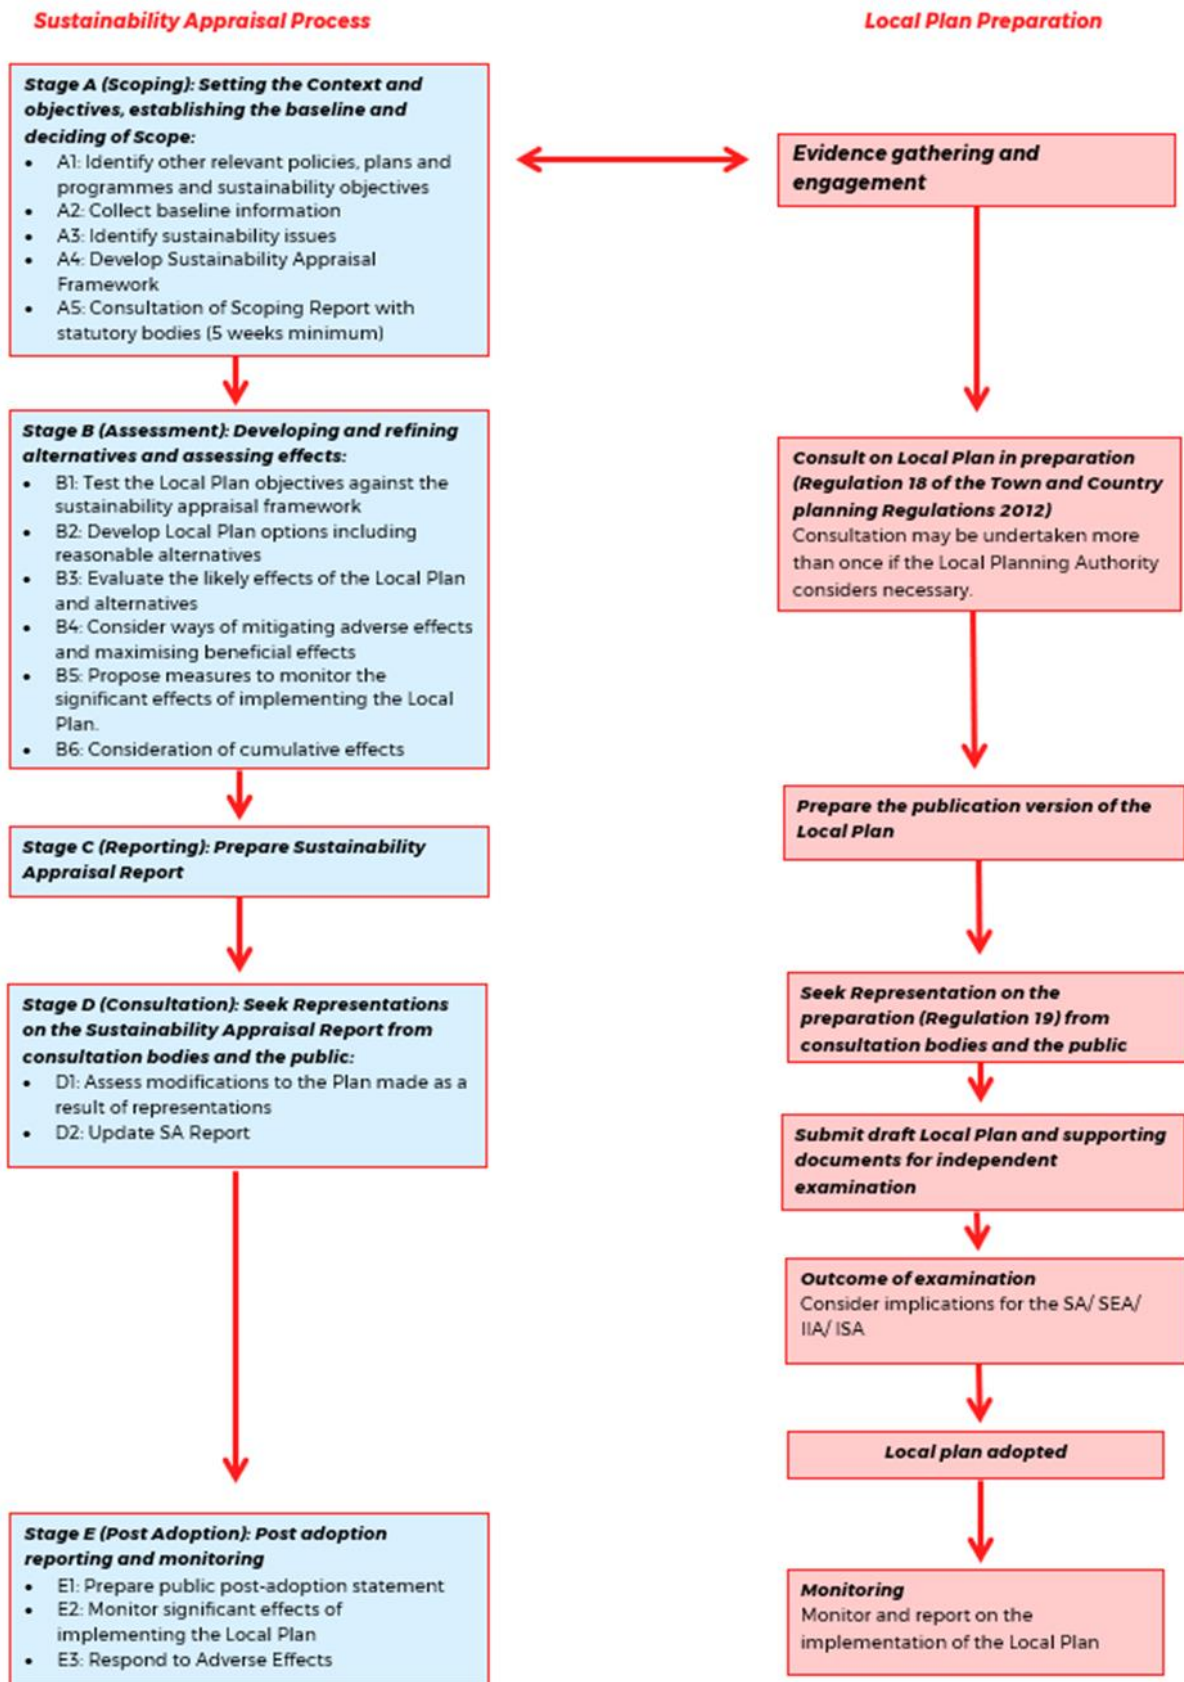

- 3.6.1. **Table 3-1** below sets out the IIA process. The integration of the IIA with the Local Plan process is shown in **Figure 3-1**. This Report represents Stage 2 of the Local Plan and IIA Stage B. **Appendix A** sets out more specifically how the IIA has met the requirements of the SEA Regulations.

Table 3-1 – IIA Stages

Local Plan Stage	IIA Stage and Tasks
<p>Stage 1: Evidence Gathering and Engagement</p>	<p>Stage A: Setting the context and objectives, establishing the baseline and deciding on the scope – Completed in 2023</p> <p>A1: Identifying other relevant policies, plans and programmes, and sustainability objectives</p> <p>A2: Collecting baseline information</p> <p>A3: Identifying sustainability issues and problems</p> <p>A4: Developing the IIA assessment framework</p> <p>A5: Consulting on the scope of the IIA</p>
<p>Stage 2: Draft Plan Preparation and Regulation 18 Consultation</p>	<p>Stage B: Developing and refining options/alternatives and assessing effects</p> <p>B1: Testing the draft plan objectives against the IIA assessment framework</p> <p>B2: Developing the draft Local Plan options and preparing an IIA Report (this report)</p> <p>B3: Predicting the effects of the draft Local Plan and its alternatives</p> <p>B4: Evaluating the effects of the draft Local Plan and its alternatives</p> <p>B5: HIA and EqlA assessments</p> <p>B6: Considering ways of mitigating adverse effects and maximising beneficial effects</p> <p>B7: Proposing measures to monitor significant effects of implementing local plans</p> <p>B8: Consultation of Interim IIA Report to accompany the Regulation 18 consultation</p>
<p>Stage 3: Preparation of the publication version of the Plan</p>	<p>Stage C: Prepare the Integrated Sustainability Appraisal Report – This Report</p> <p>C1: Testing the final objectives against the IIA framework</p> <p>C2: Predicting the effects of the final Local Plan and its alternatives</p> <p>C4: Evaluating the effects of the final Local Plan and its alternatives</p> <p>C5: Updated HIA and EqlA assessments</p> <p>C6: Development of mitigation and enhancement measures</p> <p>C7: Further development of monitoring measures</p> <p>C8: Consultation of IIA Report to accompany the Regulation 19 consultation</p>

Local Plan Stage	IIA Stage and Tasks
<p>Stage 4: Seek representation on the publication Plan (Regulation 19) from consultation bodies and the public</p>	<p><i>Stage D: Consulting on the preferred options of the Local Plan and IIA Report – This stage</i></p> <p>D1: Public participation on the preferred options of the Local Plan and the IIA Report</p> <p>D2 (i): Appraising any significant changes from consultation</p>
<p>Stage 5: Independent Examination</p>	<p><i>Stage D: Consulting on the preferred options of the Local Plan and IIA Report</i></p> <p>D2 (ii): Appraising any significant changes from representations</p> <p>D3: Preparation of an IIA Statement</p>
<p>Stage 6: Adoption and monitoring</p>	<p><i>Stage E: Monitoring the significant effects of implementing the Local Plan</i></p> <p>E1: Finalising aims and methods for monitoring</p> <p>E2: Responding to adverse effects</p>

Figure 3-2 - Local Planning Process Vs SA Process

3.7 IIA Report Methodology

- 3.7.1. Stage C (this report) comprises the assessment of the preferred Local Plan, against the IIA Appraisal Framework objectives identified within the Scoping Report. This follows on from the previous assessment undertaken at for the Regulation 18 Interim IIA Report.
- 3.7.2. As per the SEA regulations, the IIA also needs to consider and compare all reasonable alternatives as the plan evolves and assess these against the baseline environmental, economic and social characteristics of the borough. Reasonable alternatives are the different realistic options considered by the plan-maker in developing the policies in the plan.
- 3.7.3. There are not currently any alternative policies, therefore, the IIA has continued to assess two different scenarios – the continuation of the existing Local Plan and the application of the London Plan¹⁶. There are proposed alternative sites, which have been assessed alongside the proposed allocations.
- 3.7.4. This IIA Report will therefore cover the assessment of:
- Compatibility assessment of the Visions and Strategic Objectives;
 - Local Plan preferred policies;
 - Alternative policy scenarios;
 - Site allocations; and
 - Site alternatives.

Compatibility Assessment

- 3.7.5. Testing the compatibility of the preferred Local Plan's Strategic Policies and Objectives against the IIA Appraisal Framework help to identify both potential synergies and inconsistencies. This information can help in developing and refining the objectives of the Local Plan.

See **Section 5** for further details.

Assessment of Effects

- 3.7.6. The assessment of policies, sites and alternatives has considered the following:
- Overall effect significance (negative, positive, uncertain, potential for both negative and positive effect or negligible)
 - Nature of effect (direct, indirect)
 - Spatial Extent (local, regional, national)

¹⁶ Mayor of London, The London Plan, 2021 [online] available at:
https://www.london.gov.uk/sites/default/files/the_london_plan_2021.pdf

- Reversibility of effect:
 - Reversible: The receptor can return to baseline condition without significant intervention
 - Irreversible: The receptor would require significant intervention to return to baseline condition
- Duration (short, medium or long term) – Short term: 0-5 years, Medium term: 5-10 years (up to the end of the plan period) Long term: 10+ years (beyond the plan period).

3.7.7. **Table 3-2** sets out the key to the assessment, whilst the detailed Assessment criteria is set out in **Appendix B**.

Table 3-2 – Key to Assessment

Effect Significance	Key
Potential for significant positive effects	++
Potential for minor positive effects	+
Potential for minor negative effects	-
Potential for significant negative effects	--
Uncertain effects – Uncertain or insufficient information on which to determine the appraisal at this stage	?
Potential for both positive and negative effects	+/-
Negligible / No effect	0
Magnitude (High / Medium / Low)	H / M / L
Nature of effect (direct / indirect).	D / I
Spatial Extent (local – borough wide / regional – Greater London / national - England)	L / R / N
Reversibility of effect (reversible / irreversible)	R / I
Permanence (Permanent / Temporary)	P / T
Duration (short / medium / long term).	ST / MT / LT

- 3.7.8. It should be noted that where uncertain and negligible effects have been identified, it has not been possible to determine the nature of effect, the spatial extent, the reversibility or the duration of effect. In this instance, these cells have been left blank.

Assessment of Policies

- 3.7.9. The assessment of policies has been undertaken by themes which have been assessed together. The assessment of policies within themes and sub-themes have been standalone assessments, which purely assess the outcome of the application of those policies rather than the draft Local Plan as a whole.

Policy Alternatives

- 3.7.10. The assessment of policy alternatives will assess two scenarios – the continuation of the existing Local Plan and the application of just the London Plan. The assessment would not assess individual policies within these documents but will look at the application as a whole.
- 3.7.11. A high level summary of effects on each of the IIA objectives will be provided and each will be scored using the Key to Assessment set out in **Table 3-2** above. See **Section 6** for further details.

Assessment of Sites

- 3.7.12. An initial red, amber, green (RAG) assessment for both the site allocations and alternative sites was undertaken using spatial indicators for each of the IIA Appraisal Framework objectives.
- 3.7.13. Relevant data on spatial environmental, social and economic indicators, as well as those specifically relevant to health and equalities, have been loaded onto an online WebGIS platform, which has facilitated the site assessments.
- 3.7.14. Spatial calculations were undertaken following the RAG criteria (as set out in **Appendix B**). This has allowed a quick build-up of a RAG assessment of sites and build an overview matrix of the assessment and the performance against the spatial indicators.
- 3.7.15. It should be noted that the RAG assessment simply highlights the potential sensitivity of different indicators, it doesn't necessarily mean that the indicators are good or bad. For instance, an area of overall deprivation could be more highly sensitive to change so scored red (R), however, development of the site could in turn reduce levels of deprivation.
- 3.7.16. Due to this professional expertise has been used to review and validate this initial RAG rating to provide the final assessment of each site.
- 3.7.17. This RAG assessment provided a good overview of key environmental, social and economic constraints at each of the sites, allowing for a more thorough assessment. This assessment has been used as a key starting point for assessing the effects of sites against the IIA framework objectives.

Cumulative Effects

- 3.7.18. The SEA Regulations require that cumulative effects are considered when identifying likely significant effects. Therefore, a number of plans and policies (local, regional and national) have been reviewed for potential cumulative effects in addition to potential cumulative effects that could occur alongside the implementation of the draft Local Plan.
- 3.7.19. In addition, the assessment of sites has considered the cumulative effects of neighbouring development sites, including those beyond the borough boundary.
- 3.7.20. The assessment of cumulative effects has been identified in **Section 9** of this report.

Mitigation, Enhancement Measures and Monitoring

- 3.7.21. The SEA Regulations require that mitigation measures are considered to prevent, reduce or offset any significant adverse effects on the environment as a result of implementing the plan. The measures are known as 'mitigation' measures.
- 3.7.22. Mitigation measures have been identified in relation to the assessment of policies, place visions, site allocations and site alternatives. These include both proactive avoidance of adverse effects and actions taken after potential effects have been identified. These are set out in **Section 10** of this report.
- 3.7.23. **Section 10** also includes enhancement measures, which aim to optimise positive impacts and enhance sustainability. The mechanism for delivery will ensure the promotion, prevention, reduction and offset of any significant adverse effects or enhancement opportunities on the environment.
- 3.7.24. The SEA Regulations also require that monitoring is undertaken on a plan so that the significant effects of implementation can be identified, and remedial action imposed. The purpose of the monitoring is to provide an important measure of the sustainability outcome of the final plan, and to measure the performance of the plan against sustainability objectives and targets. Monitoring is also used to manage uncertainty, improve knowledge, enhance transparency and accountability, and to manage sustainability information.

3.8 Assumptions and Limitations

- 3.8.1. The preparation of the Local Plan alongside the IIA has allowed an iterative process of assessment and refinement in the narrative and policies within the Plan. Therefore, some of the recommendations set out in this report may already have been addressed in the Local Plan.
- 3.8.2. The assessment of policies, policy alternatives, sites and alternative sites, has been undertaken as a desk-based exercise using the baseline information from the Scoping Report. No site visits have been undertaken specifically for the purposes of the IIA.
- 3.8.3. WSP have ensured that effects are predicted accurately; however, this can be challenging given limited understanding of precisely how the plan will be implemented. Given

uncertainties there is inevitably a need to make some assumptions, however, these are made carefully and explained in detail within the assessment text.

- 3.8.4. In some instances, given reasonable assumptions, it is not possible to predict 'significant effects', but it is possible to comment on the potential positive and negative effects of the draft plan and its alternatives in more general terms.

4 Identification of Sustainability Issues and Opportunities and the IIA Framework

4.1 Introduction

- 4.1.1. This section sets out the sustainability issues and opportunities for the Local Plan and the IIA Appraisal Framework, against which the Local Plan has been assessed.
- 4.1.2. A Scoping Report, in support of the emerging Local Plan, was produced by WSP in 2023, which initiated the SEA process (see **Table 3-1**). This report reviewed relevant legislation, plans, and programmes baseline, identified baseline information as well as key issues and opportunities for the Local Plan and identified an assessment framework.
- 4.1.3. This report was consulted on with the Statutory Consultees (Environment Agency, Historic England and Natural England) in July 2023 and details on their consultation comments can be found in **Appendix B**. It should be noted that the Environment Agency have received the IIA Scoping Report but are yet to comment.

The baseline information used within the IIA Scoping Report is set out in **Appendix C**.

4.2 Review of Plans Policies and Programmes

- 4.2.1. A plan may be influenced in various ways by other plans, policies or programmes, or by external environmental protection objectives such as those laid down in policies or legislation. These relationships enable the Responsible Authority to take advantage of potential synergies and to deal with any inconsistencies and constraints.
- 4.2.2. The Scoping Report undertook an initial review of policies, plans, programmes, strategies and initiatives that may have an impact on the preparation of relevant policies being reviewed as part of the Local Plan update. This review has informed both the development of the Local Plan and the IIA framework.
- 4.2.3. Full details on the review of plans, policies and programmes is set out in **Appendix D**.

4.3 Sustainability Issues and Opportunities

- 4.3.1. The Scoping Report set out a number of issues and opportunities for the Local Plan, for each of the IIA topics outlined in the Scoping Report. These have been summarised in **Table 4-1** below.

Table 4-1 – Issues and Opportunities

Topic	Issues and Opportunities
Population and Equalities	<ul style="list-style-type: none"> ■ There will be a need for adequate support and greater access to services and facilities for the young population, families with young children, and single parent families on one income. ■ There are opportunities to improve access to facilities and services, as well as housing, for young adults and people with disabilities. ■ The population of Tower Hamlets is expected to increase both in number and diversity and decrease in age profile. ■ Changing work habits such as remote, internet-based jobs are likely to reduce current demands but may also increase social isolation and reliance on alternative social interaction.
Human Health	<ul style="list-style-type: none"> ■ LBTH reducing age profile will present a greater need for access to leisure facilities and outdoor space, as well as a greater pressure on healthcare and support to tackle loneliness, smoking, and Sexually Transmitted Infection (STI) treatment. ■ There are significant health inequalities amongst residents in LBTH. This is reflected in the variation of life expectancies between the most and least deprived residents. ■ Covid-19 has also exacerbated existing inequalities in the borough. ■ There are high levels of obesity within children aged 10-11 years.
Economy and Employment	<ul style="list-style-type: none"> ■ LBTH is a major location for employment in London, attracting a large daytime population of employees. ■ Compared to London and Great Britain, LBTH has a larger proportion of residents of working age, of which a similar amount are employed. Employed residents in LBTH have a higher gross value added (GVA) per head and gross weekly pay. ■ However, there is a higher economic activity rate, with more males economically active than females. ■ This also highlights that there may be a need to diversify employment within the borough, particularly to match the skills of existing residents. ■ In the recovery of Covid-19 it is important to continue to support the role of LBTH as a major attractor of employment and economic functioning, whilst encouraging the resident population to seek opportunities in the borough. ■ Maintaining the vitality and attractiveness of town centres and high streets will be an ongoing challenge as shopping patterns and service delivery models change, especially with the growth of online shopping.
Housing	<ul style="list-style-type: none"> ■ The average house price is over ten times higher than the average salary in the borough.

Topic	Issues and Opportunities
	<ul style="list-style-type: none"> ■ The population is increasing and becoming younger, with more residents requiring affordable housing. ■ Rising costs of living are affecting the number of residents able to afford to buy. ■ The Covid-19 pandemic and rising cost of living is increasing levels of homelessness and housing insecurity. ■ There is a lack of affordable housing, meaning young people and/or lower income groups are missing out.
Crime and Safety	<ul style="list-style-type: none"> ■ There is potential to increase engagement within communities to encourage the reporting of crimes. ■ Crime rates are significantly high within the borough, particularly with regards to violent crime and antisocial behaviour. ■ There are opportunities to improve neighbourhoods and reduce the prevalence of antisocial behaviours. ■ As the population within LBTH increases there are expected to be a greater number of vehicles on the borough’s roads, which may result in an increase in the number of accidents and those Killed or Seriously Injured (KSI) on roads. ■ Children in the most deprived neighbourhoods are nearly three times more likely to be KSI as a pedestrian compared to non-deprived neighbourhoods. ■ There are opportunities to increase the safety of active transport modes such as cycling and walking. ■ Vulnerable road users such as cyclists and pedestrians are more likely to be casualties. ■ There is potential to increase the standards and safety of housing within the borough.
Transport and Accessibility	<ul style="list-style-type: none"> ■ There is a need to improve sustainable transport modes (public and active) in line with THBC’s commitment to reach net-zero GHG emissions by 2045. ■ Electric vehicle (EV) charging infrastructure will need to improve to support the growing demand of residents switching from petrol and diesel to hybrid and EVs. ■ Transport issues affect different groups to varying extents, and there is potential that the barriers to accessing and using transport can be exacerbated by age, ethnicity and gender. ■ Changing work habits such as remote, internet-based jobs and working from home are likely to reduce transport demand. ■ Health inequalities are prevalent in the borough, therefore reducing significant issues with traffic and congestion and subsequent air pollution is of utmost importance.

Topic	Issues and Opportunities
Biodiversity and Natural Capital	<ul style="list-style-type: none"> ■ Light, air, and noise pollution from increasing urban development in the borough may put strains on nearby protected areas, notably the European designations. ■ Increasing population and associated developments may lead to fragmentation and urbanisation of natural habitats. ■ Increasing population and developments may result in worsening air quality that may degrade the borough’s valuable ecological receptors. ■ New legislation regarding biodiversity net gain will require developments to implement demonstratable increases in biodiversity. ■ The inclusion of Blue Green Infrastructure (BGI) can help with mitigating embodied carbon, improve air quality, reduce the Urban Heat Island (UHI) effects and help to make developments more climate resilient, especially when it comes to flood mitigation.
Landscape and Townscape	<ul style="list-style-type: none"> ■ Development has the potential to cause direct and indirect impacts on designated landscapes and townscapes, affecting the character and sense of place. ■ Future growth could risk compromising landscape and townscape character and features. However, a landscape-led design with GI principles in place could play a key role in the enhancement of the natural environment, visual amenity, and physical and mental health of the borough’s people. ■ The design of new developments requires a landscape-led approach to design, to ensure the best placement and integration of the proposed development into the existing landscape, especially in sensitive locations. Landscape-led designs can help contribute to the climate change agenda, health and wellbeing, and tackling pollution in all its forms (such as air, light and noise). ■ There is opportunity to increase access to green space and subsequently, to improve health and wellbeing, combat air pollution, provide storm water management and reduce flooding (contributing to climate change adaptation and mitigation) and provide connectivity through urban built form to the countryside for wildlife. It can also bring new audiences to tourist attractions and enable better appreciation of historic landscape assets through creating new views and vistas, providing information, and enhancing access. ■ The incorporation of landscape principles that are suitable for future challenges and landscape-led designs would help to ensure infrastructure is designed for longevity in the 21st century, for both its people and its natural environment.
Historic Environment	<ul style="list-style-type: none"> ■ There are opportunities for enhancing the setting of heritage assets through the development of schemes to reduce traffic noise and enhance accessibility through active modes and asset settings.

Topic	Issues and Opportunities
	<ul style="list-style-type: none"> ■ Trans-boundary matters should be noted and the impact that development in LBTH may have on heritage in other boroughs. ■ There is potential for development to encroach on assets, particularly affecting the setting of assets, for example through land take, and increased noise and visual effects. Although damage to the significance and setting of assets from development is not limited to these factors; Archaeological remains, whether designated or not, normally require preservation <i>in situ</i>. This clearly has implications and can represent a significant constraint to future scheme design, which should respect, retain and protect the remains (e.g., through avoidance and redesign). ■ Vehicle damage and pollution can adversely affect World Heritage Site's, listed buildings and scheduled monuments, so reducing vehicle movements within historic areas is also important to address. ■ The New Local Plan should ensure that the local historic environment (including the archaeological resource) informs design proposals, public realm and landscaping schemes to help ensure that heritage assets and their settings are enhanced. ■ There is potential for physical interventions to historic buildings intended to improve energy efficiency to adversely affect heritage significance if not carefully thought through and appropriate to the building in question
Water Environment	<ul style="list-style-type: none"> ■ The physical and chemical quality of water resources is an important aspect of the natural environment and can be adversely affected by pollution associated with surface water runoff from new or existing transport infrastructure, as well as by changes to waterbodies which can affect their quality as a habitat. ■ Upgrading existing infrastructure provides the opportunity to improve pollution control. ■ Increased development (including transport, housing and other infrastructure) can increase flood risk on a local and catchment scale. ■ Increasing population projections in the borough will increase demand for drinking water supply and place pressure on the already stressed capacity of sewer systems. ■ Climate change is likely to increase the occurrence of flooding from all sources and hence raise the flood risk in LBTH.
Air Quality	<ul style="list-style-type: none"> ■ The number of vehicles on the roads is likely to increase as the population rises, putting air quality at further risk of degradation. ■ More severe and frequent heat episodes as a result of climate change can contribute to the worsening of air quality. ■ Air pollution disproportionately affects the vulnerable in society, with the potential to exacerbate health inequalities further as the population increases.

Topic	Issues and Opportunities
	<ul style="list-style-type: none"> ■ The UK Government’s plan to end the sale of all new conventional petrol and diesel cars and vans by 2035 and support for work and home-based electric charging facilities, will promote use of hybrid and electric vehicles, with positive effects for air quality. ■ Air quality issues across LBTH can be addressed via a modal shift towards less polluting methods of transport (low carbon transport initiatives) and inclusive of active transport (e.g., cycling, walking etc.) thereby leading to a higher standard of air quality.
Climate Change and Greenhouse Gases	<ul style="list-style-type: none"> ■ Transport is the largest contributor to Greenhouse Gas (GHG) emissions in the UK. In LBTH, the largest contributor is from commercial uses. ■ Higher than average fuel poverty rates may continue to be a significant issue in the borough. ■ Since the Covid-19 pandemic, private car use has increased which contributes to GHG emissions. ■ The impacts of the Urban Heat Island (UHI) generated in London will increase as development increases, exacerbating health issues and reduce quality of life in overcrowded households. ■ There is the need to reduce GHG emissions of new infrastructure and housing that is required to accommodate prosperity and population growth within LBTH. ■ There is a need to ensure climate resilience of the infrastructure in LBTH. The extent of future climate change will be strongly affected by the amount of GHG that the population chooses to emit.
Material Assets (including Soil Resources)	<ul style="list-style-type: none"> ■ The growing population and associated need for development is likely to increase the use of mineral resources and waste generation. This is highly important considering the Belvedere Energy from Waste (EfW) facility processes waste from across London. ■ Materials are a finite resource and materials will be required for new housing developments to meet the demands of a growing population. ■ There is a continued increase in renewable energy supplies across the borough, of which needs to be managed efficiently to ensure the capacity requirements of this transition are met.

4.4 IIA Appraisal Framework

- 4.4.1. The review of relevant plans, policies and programmes, collation of baseline information and identification of issues and opportunities, has been used to inform the IIA Appraisal Framework, which is set out in **Table 4-2** overleaf.
- 4.4.2. This table also sets out the spatial indicators used to assess each of the objectives as part of the site assessments.

Table 4-2 – IIA Appraisal Framework

IIA Topic	IIA Objective	Supporting Questions	Relevant Spatial Indicators
<p>Population and Equalities</p>	<p>IIA1: To build inclusive communities by reducing social exclusion, promoting equity, and equality and respecting diversity.</p>	<p>Will the policy or proposal:</p> <ul style="list-style-type: none"> ■ Help to reduce inequalities, particularly for those people and communities most vulnerable? ■ Improve access to services, facilities and transport for all inclusively? ■ Support diversity? ■ Support population growth? 	<ul style="list-style-type: none"> ■ Population density ■ Indices of Multiple Deprivation (IMD) Overall Deprivation ■ Primary Schools ■ Secondary Schools ■ Higher Education ■ Healthcare Provision (GP, dentists, pharmacies and hospitals) ■ Children and Family Centres ■ Community Centres ■ Leisure Services ■ Social Services
<p>Human Health</p>	<p>IIA2: To improve physical and mental health and wellbeing and reduce health inequalities for all of LBTH’s residents.</p>	<p>Will the policy or proposal:</p> <ul style="list-style-type: none"> ■ Promote healthier lifestyles? ■ Increase walking and cycling? ■ Improve quality, quantity and equality of access to green and blue space and increase opportunities for recreation? ■ Promote health enhancing environments, behaviours and activities for local communities? ■ Reduce inequalities? ■ Increase inclusion and reduce loneliness? 	<ul style="list-style-type: none"> ■ IMD Health Deprivation ■ Life expectancy (males and females) ■ Primary Schools ■ Secondary Schools ■ Higher Education ■ Healthcare Provision (GP, dentists, pharmacies and hospitals) ■ Children and Family Centres ■ Community Centres ■ Allotments ■ Leisure Services ■ Social Services

IIA Topic	IIA Objective	Supporting Questions	Relevant Spatial Indicators
		<ul style="list-style-type: none"> ■ Help prevent risks to human health, which arise from noise and air pollution? ■ Support the UK’s levelling up agenda? ■ Reduce the pressure of the rising cost of living? ■ Increase exposure to noise and air pollution? 	<ul style="list-style-type: none"> ■ Sports Facilities ■ Areas Deficient in Nature
<p>Economy and Employment</p>	<p>IIA3: To support a diverse local economy to foster sustainable economic growth and support Tower Hamlets’ town centre and other district and local centres.</p> <p>IIA4: To ensure that residents have employment opportunities and access to training.</p>	<p>Will the policy or proposal:</p> <ul style="list-style-type: none"> ■ Increase job availability? ■ Improve access to employment centres? ■ Improved connectivity between business clusters and housing markets? ■ Support flexible working patterns? ■ Help support changing retail patterns? ■ Increase retail floorspace? ■ Increase footfall and local spending from commuters, residents and tourists? ■ Meet the skills needs and future demand for labour? ■ Diversify the labour market? 	<ul style="list-style-type: none"> ■ IMD Employment ■ IMD Income ■ Local Industrial Location ■ Strategic Industrial locations ■ Employment sites ■ Local Employment Location ■ Higher Education ■ Central Activities Zone ■ Tower Hamlets Activity Zone ■ Primary Shopping Areas ■ Neighbourhood Parades ■ Primary Shopping Areas ■ Town Centres (major, district and neighbourhood)

IIA Topic	IIA Objective	Supporting Questions	Relevant Spatial Indicators
Housing	IIA5: To meet the housing needs of all of the borough's residents inclusively.	Will the policy or proposal: <ul style="list-style-type: none"> ■ Help to sufficiently meet the borough's housing target? ■ Increase affordability? ■ Optimise proposed sites to maximise housing delivery? ■ Reduce housing deprivation? ■ Meet the needs of all groups inclusively (elderly residents, young families, disabled, ethnic minorities etc.)? ■ Support those with protected characteristics (e.g., the gypsy and traveller community) ■ Increase the quality of existing housing stock? ■ Reduce overcrowding? 	<ul style="list-style-type: none"> ■ IMD Barriers to housing (LSOA) ■ House Prices (wards)
Crime and Safety	IIA6: To reduce crime and the fear of crime for all residents inclusively	Will the policy or proposal: <ul style="list-style-type: none"> ■ Improve safety? ■ Ensure that residents feel safe, particularly after dark? ■ Support designing out crime principals? ■ Reduce levels of crime derivation? ■ Improve road safety and reduce the number of people KSI on the roads, 	<ul style="list-style-type: none"> ■ IMD Crime ■ Crime Rate by ward

IIA Topic	IIA Objective	Supporting Questions	Relevant Spatial Indicators
		particularly children from deprived backgrounds? ■ Create spaces where women and girls feel safe and included?	
Transport and Accessibility	IIA7: To promote traffic reduction, by encouraging more sustainable alternative transport modes, and supporting residents to live more locally. IIA8: To protect and enhance access to essential services and facilities for all residents.	Will the policy or proposal: <ul style="list-style-type: none"> ■ Support the use of sustainable transport modes? ■ Improve access to services, facilities and transport? ■ Reduce demand for use of the private car and facilitate a modal shift to more sustainable modes? ■ Ensure that all groups can access services and facilities inclusively? ■ Support EV infrastructure? 	<ul style="list-style-type: none"> ■ Public Transport Accessibility Levels (PTAL) ■ Bus Stops ■ National Rail Train Station/ Tube Station ■ Primary Schools ■ Secondary Schools ■ Higher Education ■ Healthcare Provision ■ Children and Family Centres ■ Community Centres ■ Leisure Services ■ Social Services ■ Sports Facilities ■ Primary Shopping Areas ■ Neighbourhood Parades ■ Primary Shopping Areas ■ Town Centres (major, district and neighbourhood)
Biodiversity and Natural Capital	IIA9: To protect and enhance protected habitats, species and valuable ecological networks that contribute to	Will the policy or proposal: <ul style="list-style-type: none"> ■ Cause damage to locally and nationally designated sites through infrastructure provision, increased 	<ul style="list-style-type: none"> ■ Local Nature Reserve (LNR) ■ National Nature Reserve (NNR) ■ Priority Habitat ■ Site of Importance for Nature Conservations (SINC)

IIA Topic	IIA Objective	Supporting Questions	Relevant Spatial Indicators
	ecosystem functionality in Tower Hamlets, contributing to biodiversity net gain.	development, recreational pressures, traffic or maintenance? <ul style="list-style-type: none"> ■ Maintain and enhance biodiversity in the borough? ■ Seek opportunities for biodiversity for at least 10% net gain? ■ Increase provision of ecosystem services from the borough’s natural capital? ■ Prevent fragmentation of habitats and promote ecological networks? ■ Result in developments which will improve biodiversity on site? ■ Fragment habitat connectivity and reduce the ability for biodiversity to thrive? 	<ul style="list-style-type: none"> ■ SAC ■ Site of Special Scientific Interest (SSSI) ■ SPA ■ Green Grid Network
Landscape and Townscape	IIA10: To protect and enhance the borough’s townscapes and landscapes.	Will the policy or proposal: <ul style="list-style-type: none"> ■ Respect, maintain and strengthen local character and distinctiveness? ■ Achieve high quality sustainable design for buildings, spaces and the public realm? ■ Improve the quality and condition of the townscape and landscape? ■ Improve the quality of parks and open spaces? ■ Incorporate green and blue infrastructure into design? 	<ul style="list-style-type: none"> ■ Borough Designated Views ■ London View Management Framework ■ Tall Building Zone ■ Strategically Important Skyline ■ London Squares ■ Local Open Space ■ Metropolitan Open Land ■ Green Grid Network

IIA Topic	IIA Objective	Supporting Questions	Relevant Spatial Indicators
Historic Environment	IIA11: To protect and enhance the historic environment, including heritage assets (designated, non-designated, and heritage at risk) and their settings.	Will the policy or proposal: <ul style="list-style-type: none"> ■ Conserve and/or enhance heritage assets, their setting and the wider historic environment? ■ Contribute to the better management of heritage assets and contribute to conserving heritage at risk? ■ Improve the quality and condition of the historic environment? ■ Respect, maintain and strengthen local character and distinctiveness? 	<ul style="list-style-type: none"> ■ Listed Buildings ■ Registered Parks and Gardens ■ Scheduled Monuments ■ Heritage at risk ■ Conservation areas ■ Archaeological Priority Area
Water Environment	IIA12: To reduce the risk and vulnerability to flooding. IIA13: To maintain and enhance water quality.	Will the policy or proposal: <ul style="list-style-type: none"> ■ Reduce the risk of flooding? ■ Result in urban creep? ■ Increase surface runoff? ■ Result in the reduction of water quality (including groundwater)? ■ Support the protection and enhancement of water bodies (including groundwater)? ■ Encroach on the 10m buffer zone next to a watercourse? ■ Alter the natural state of the river corridor? ■ Re-naturalise the river corridor and promote geomorphological 	<ul style="list-style-type: none"> ■ Statutory Main River ■ Water Spaces ■ Flood Zones (2, 3, 3a) ■ Flood Risk Area ■ Critical drainage area

IIA Topic	IIA Objective	Supporting Questions	Relevant Spatial Indicators
		<p>processes which enhance and protect biodiversity?</p> <ul style="list-style-type: none"> ■ Support a natural form of flood management which also promotes biodiversity of the watercourse? 	
<p>Air Quality</p>	<p>IIA14: To protect and enhance air quality.</p>	<p>Will the policy or proposal:</p> <ul style="list-style-type: none"> ■ Support measures to reduce levels of air pollution? ■ Help to improve air quality? ■ Support measures for the reduction of congestion and traffic levels particularly in AQMAs and congestion hot-spots? 	<ul style="list-style-type: none"> ■ Nitrogen dioxide (NO2) ■ Particulate Matter (PM10) ■ Motor Vehicle restricted area ■ Air Quality Focus Areas ■ Ultra Low Emission Zone (ULEZ)
<p>Climate Change and Greenhouse Gases</p>	<p>IIA15: Ensure that Tower Hamlets is resilient to the effects of climate change.</p> <p>IIA16: To reduce GHG emissions, support national and local decarbonisation initiatives and encourage energy efficiency.</p>	<p>Will the policy or proposal:</p> <ul style="list-style-type: none"> ■ Support low carbon and energy efficient design? ■ Contribute further to the urban heat island effect? ■ Ensure new development is designed to mitigate overheating risk? ■ Increase the resilience of infrastructure and material assets to the impacts of climate change (including flood risk, extreme weather, heat and cold)? 	<ul style="list-style-type: none"> ■ Overall Climate Risk ■ Overall Heat Risk ■ Flood Zone ■ Flood Risk Area ■ NO₂ ■ PM₁₀ ■ Motor Vehicle restricted area ■ ULEZ

IIA Topic	IIA Objective	Supporting Questions	Relevant Spatial Indicators
		<ul style="list-style-type: none"> ■ Contribute to reducing emissions as per the Paris Agreement? ■ Support the borough's Net Zero ambitions by 2045? 	
Material Assets (including Soil Resources)	<p>IIA17: To reduce the amount of waste produced and minimise the amount sent to landfill.</p> <p>IIA18: To ensure the efficient use of land, promote sustainable use of resources and seek opportunities to promote a circular economy.</p>	<p>Will the policy or proposal:</p> <ul style="list-style-type: none"> ■ Support the use of brownfield land? ■ Support the use of sustainable materials? ■ Minimise the amount of waste? ■ Increase renewable energy generation? ■ Support low carbon, energy efficient design? ■ Reduce levels of embodied carbon? 	<ul style="list-style-type: none"> ■ Brownfield Land ■ Waste management sites ■ Safeguarded Wharves

5 Compatibility Assessment of Strategic Policies and Objectives

5.1 Introduction

- 5.1.1. This section assesses the compatibility of the Objectives and Strategic Policies against the IIA Appraisal Framework objectives.
- 5.1.2. The Strategic Policies and Objectives have been individually tested against the IIA Appraisal Framework objectives to identify both potential synergies and inconsistencies. This information can help in developing and refining the objectives of the Local Plan.
- 5.1.3. **Table 5-1** below sets out the key to appraisal, whilst **Table 5-2** overleaf sets out the findings of the compatibility testing of the Strategic Policies and the Strategic Objectives.

Table 5-1 – Key to Compatibility Assessment

Effect	Key
Compatible	✓
Incompatible/ potential conflict	✗
No relationship	0
Uncertain/ more than one potential outcome	?

Table 5-2 – Compatibility Assessment

Objective 6: A clean and green future	✓	✓	0	0	0	0	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	0	✓
Objective 7: Healthy, safe and inclusive neighbourhoods	✓	✓	✓	0	0	✓	0	0	0	0	0	0	0	0	0	0	0	0

5.2 Compatibility Assessment Summary

- 5.2.1. In general, the Vision and Objectives have performed well against the majority of the IIA objectives and clearly demonstrate their compatibility. Whilst the assessment has not identified any incompatible effects, some uncertainties have been identified.
- 5.2.2. On the whole, the Vision and supporting Objectives have predominantly resulted in a positive effect as it covers the three key pillars of sustainability (economy, social and environment) and aims to tackle key issues such as climate change, net zero, biodiversity loss, inequalities, overcrowding and affordable housing, which aligns with the aims and aspirations of the IIA objectives.
- 5.2.3. Due to the cross-cutting nature of the 'clean and green future' objective (Objective 6), this is the most compatible across all objectives. LBTH aim to reduce their dependence on cars and improve both the natural and built environment to make walking and cycling attractive for local journeys, providing greater accessibility. This will allow residents to live their lives more locally, creating more inclusive neighbourhoods, having positive effects on population and equalities (IIA1) and human health (IIA2). Reducing the need to travel will also result in positive outcomes for IIA7 (sustainable transport) and IIA8 (accessibility).
- 5.2.4. Objective 6 also aims to improve air quality (IIA14), set high energy standards and support zero carbon developments (IIA16 and IIA18). Further support is also provided to ensuring climate resilience through greater mitigation for flood risk both now and in the future.
- 5.2.5. The Vision and Objectives 2 and 5 have identified the potential for uncertain effects on a number of IIA objectives. This is due to the potential for these policies to result in large scale development and infrastructure to support the borough's communities. These sites are likely to require land take, which may negatively affect biodiversity and natural capital (IIA9) and depending upon the location, the surrounding landscape and townscape (IIA10) and historic environment (IIA11). Similarly, the increase in development may increase levels of embodied carbon and operational GHG (IIA16), generate large amounts of waste (IIA17) and may contribute to increases levels of flood risk (IIA12).
- 5.2.6. However, as this is a high-level Vision and overarching objectives, there is no certainty to how such development might arise, and there may be potential for developments to bring about positive effects on these objectives.
- 5.2.7. Waste (IIA17) is the only IIA objective which does not have any compatibility with either the vision or any objectives. Neither the vision or objectives make reference to minimising waste or encourage the use of sustainable materials.

6 Assessment of Policies

6.1 Introduction

- 6.1.1. The assessment of the Local Plan policies is summarised below and presented in full in **Appendix F**. A matrix approach has been used for the assessment which has used the significance criteria identified in **Table 6-1** below. It should be noted that the Policy themes have been assessed as a whole against each of the IIA objectives, rather than each individual policy.
- 6.1.2. Each of the policy themes have been assessed in isolation, without mitigation. The assessment purely assesses the outcome of the application of those policies rather than their relationship with other policies within the plan. Further details on the combination effects with other policies have been identified in within the individual assessment summaries in **Appendix F** as well as **Section 9 – Cumulative Effects**.
- 6.1.3. **Table 6-2** overleaf provides an overview on the performance of the Local Plan policy themes against each IIA objective and **Table 6-3** outlines significant effects based on each IIA objective. For the purpose of the IIA, significant effects are deemed to be the following:
- Significant Positive effects;
 - Significant Negative effects; and
 - Uncertain effects.
- 6.1.4. Further details on the insignificant effects i.e., minor positive, minor negative, mixed and neutral effects are detailed in **Appendix F**. The Appendix also sets out the nature of effects such as magnitude, spatial extent and duration.

Table 6-1 – Significance of Effect

Effect Significance	Key
Potential for significant positive effects	++
Potential for minor positive effects	+
Potential for minor negative effects	-
Potential for significant negative effects	--
Uncertain effects – Uncertain or insufficient information on which to determine the appraisal at this stage	?
Potential for both positive and negative effects	+/-

Effect Significance	Key
Negligible / No effect	0

6.2 Summary of Effects

Table 6-2 provides an overview on the performance of the Local policy themes against each IIA objective and Table 6-3 outlines significant effects based on each IIA objective.

Table 6-2 – Overview of Policies

IIA Objective	Delivering the Local Plan	Homes for the Community	Clean and Green Future	People Places and Spaces	Inclusive Economy and Good Growth	Town Centres	Community Infrastructure	Biodiversity and Open Space	Movement and Connectivity	Reuse, Recycling and Waste
IIA1: Population & Equalities	++	++	+	++	+	++	++	++	++	0

Table 6-3 – Summary of Significant Effects

IIA Objective	Number of Significant Effects			Summary of Significant Effects
	++	--	?	
IIA1: Population & Equalities	7	0	0	<p>Out of all of the IIA Objectives, IIA1 has resulted in the highest number of significant positive effects. These effects are generally attributed to the support provided to the needs of all of the borough’s residents inclusively, both now and in the future. Both the Town Centre and Community Infrastructure policies will increase community facilities.</p> <p>More specifically, Policy PS4 within People, Places and Spaces theme will ensure that all genders are able to access community spaces equally. Additionally, both MC1 and MC2 (within the Movement and Connectivity theme) provide improved accessibility to all social groups, including disabled, elderly, women and girls and other marginalised groups.</p>
IIA2: Human Health	7	0	0	<p>Seven out of the ten policy themes have resulted in significant positive effects on IIA2. Most of these effects have been identified for those policies which aim to provide more community infrastructure and green spaces, enable greater levels of physical activity and improve standards of living. Not only will policies improve physical health but also mental wellbeing.</p> <p>More specifically, Policy PS3 (within the People, Places and Spaces theme), Policy BO2 (within the Biodiversity and Open Space theme), and Policies G2, CG3 and CG4 (within Clean and Green Future) tackle adverse effects that environmental factors such as overheating, wind, air pollution, light pollution noise pollution, and odours which can have harmful effects on human health.</p>

IIA Objective	Number of Significant Effects			Summary of Significant Effects
	++	--	?	
IIA3: Economy & Town Centres	5	0	0	<p>The Town Centre Policies have had significant positive effects on IIA3 as they contribute to increasing footfall and improving the diversity of the economy within Tower Hamlets, encouraging economic growth through a range of sectors across the borough. Similarly, the Policies within the Inclusive Economy and Good Growth theme have resulted in significant positive effects through creating jobs, employment spaces and attracting inward investment into the borough.</p> <p>Further indirect significant positive effects have been derived from the Homes for the Community, Delivering the Local Plan and Community Infrastructure policy themes, as these will likely bring new facilities and services to support the local population and increase economic output and productivity.</p>
IIA4: Employment & Skills	4	0	0	<p>Four out of the ten policy themes have resulted in Significant positive effects on IIA4. Those significant positive effects are generally attributed to those policies which aim to increase employment opportunities across a number of sectors and provide learning and development opportunities.</p> <p>More specifically Policy EG1 will provide improved job opportunities for all groups of the working population, including those with current low levels of education. The policy also provides jobs across the borough, providing jobs for a range of communities. Similarly, Policy DV1 (within the Delivering the Local Plan theme) protects and enhances existing employment locations within the borough, as well as supporting a mix of new employment opportunities including affordable workspaces, to encourage a diverse range of employment opportunities.</p>

IIA Objective	Number of Significant Effects			Summary of Significant Effects
	++	--	?	
IIA5: Housing	1	0	0	<p>Whilst a number of minor positive effects have been identified for IIA5, it is just the Homes for the Community policies which have resulted in Significant positive effects. All policies within this theme will help to deliver a wide variety of housing to suit the needs of all residents and exceeds the borough's housing targets.</p> <p>In addition to the delivery of new housing, Policy HFC3 aims to protect existing housing, particularly ensuring that the supply of self-contained homes and in particular family-sized homes is maintained. Similarly, HC4 will ensure that any existing homes meet the latest Decent Homes Standard.</p>
IIA6: Crime & Safety	2	0	0	<p>The People Places and Spaces and Movement and Connectivity policy themes have resulted in significant positive effects on IIA6. These effects have been identified for those policies such as PS4 and MC2 that directly tackle crime and improve safety, as well as those policies that support improvements to the public realm. Improvements to the public realm and incorporation of high-quality design can engender a sense of pride in a place, which in turn can help to discourage crime.</p>
IIA7: Sustainable Transport	1	0	1	<p>The Inclusive Economy and Good Growth policy theme is the only themes that has resulted in significant positive effects on IIA7. Policies within these themes will help to reduce reliance upon the private vehicles and contribute to a modal shift.</p> <p>Whilst the Movement and Connectivity policy theme has the potential to result in significant positive effects through enhanced sustainable transport and support of a modal shift, there is some uncertainty around the additional provision of parking as</p>

IIA Objective	Number of Significant Effects			Summary of Significant Effects
	++	--	?	
				a result of MC4, and whether this could lead to an increase in the reliance and convenience of motorised vehicles. This will very much depend on the implementation and the number of additional spaces provided.
IIA8: Accessibility	4	0	0	<p>Of the ten policy themes, four have resulted in significant positive effects on IIA8. Policies will improve accessibility by provide greater connectivity to active transport as well as enhancing and increasing access to essential services and facilities for all residents. This will not only result in a modal shift but allow residents to live their lives more locally.</p> <p>Policy PS4 specifically outlines the requirements for development to maintain accessible street networks and enhance connectivity through developments. This includes connectivity to public transport hubs and improving accessibility around the borough.</p>
IIA9: Biodiversity & Natural Capital	2	0	4	<p>All policies within the Biodiversity and Open Space policy theme contribute to improving biodiversity and natural capital across the borough, including improving and enhancing blue and green spaces, green infrastructure, and contributing towards biodiversity net gain (BNG). This has resulted in significant positive effects on IIA9. Additionally, Policy CG9 within Clean and Green Future has resulted in significant positive effects on IIA9 through improvements to biodiversity as a result of reduce air pollution and utilisation of nature-based solutions.</p> <p>Four of the policy themes have however, resulted in uncertain effects. This is generally where policies may result in developments which could give rise to the</p>

IIA Objective	Number of Significant Effects			Summary of Significant Effects
	++	--	?	
				loss of biodiversity and natural capital, but as the overall design of proposals is not yet known uncertain effects have been identified. There may be opportunities to provide green infrastructure as part of design.
IIA10: Landscape & Townscape	1	0	2	<p>The Biodiversity and Open Space has resulted in Significant positive effects on IIA10. These policies will help to maintain and enhance the landscape and townscape character in the borough, by enhancing the public realm and preserving Metropolitan Open Land (MOL) and green and blue spaces.</p> <p>Two of the policy themes have however, resulted in uncertain effects. This is generally where policies may result in developments which could be insensitively designed and/ or result in the loss of greenspace, but as the location and overall design of proposals is not yet known uncertain effects have been identified.</p>
IIA11: Historic Environment	1	0	4	<p>The People, Places and Spaces policies are the only policy theme that has resulted in significant positive effects on IIA11. Within this groups Policy PS6 specifically outlines the preservation and enhancement of designated and non-designated heritage assets, including archaeological areas and heritage at risk. Policy PS7 also requires the safeguarding of the two World Heritage Sites within the borough, resulting in positive effects.</p> <p>Four of the policy themes have however, resulted in uncertain effects. This is generally where policies may result in developments which could be insensitively designed and/ or result in the degradation and loss of the historic environment. As the location and overall design of proposals is not yet known uncertain effects have been identified.</p>

IIA Objective	Number of Significant Effects			Summary of Significant Effects
	++	--	?	
IIA12: Flooding	3	0	2	<p>The Developing the Local Plan, Clean and Green Future and Biodiversity and Open Space policy themes have both resulted in Significant positive effects on IIA12. Policies within these themes (specifically DV4, CG6, CG7, BO2 and BO3) aim to address flood risk and incorporate measures such as Sustainable Urban Drainage Systems (SuDs) and soft landscaping.</p> <p>Uncertain effects have arisen where there is it is not clear on the number of sites and developments which may come forward as a result of policies. Urban intensification and additional development within the borough could increase flood risk due to more hard standing surfaces. However, exact details of these impacts will depend on the scheme level designs which come forward and mitigation measures implemented.</p>
IIA13: Water Quality	2	0	2	<p>The Clean and Green Future and Biodiversity and Open Space policy themes have both resulted in Significant positive effects on IIA12. Policies within these themes (specifically CG8, CG7, BO1 and BO3) aim to protect the water environment and its habitats and ensure that development does not adversely affect the water quality within the borough. Policies also aim to reduce the pressure on the fresh and wastewater systems through reducing demand and increasing water efficiency.</p> <p>Due to the proposed use of water transport, the Reuse, Recycling and Waste and the Movement and Connectivity policy themes have resulted in uncertain effects. There is potential that increase waterborne transport could result in an increase in water pollution and decrease in overall water quality. However, at this stage the potential increase in water transport is not known, so uncertain effects have been identified.</p>

IIA Objective	Number of Significant Effects			Summary of Significant Effects
	++	--	?	
IIA14: Air Quality	1	0	1	<p>The Clean and Green Future policy theme has resulted in significant positive effects. Policies within these themes (specifically CG9 and MC3) address the poor air quality within the borough and the need for developments to mitigate and improve air quality, including promoting low or zero emission transport and reducing vehicle reliance.</p> <p>Whilst the Movement and Connectivity policy theme has the potential to result in significant positive effects through enhanced sustainable transport, there is some uncertainty around the additional provision of parking as a result of MC4, and whether this could lead to an increase in air pollution in areas with existing public transport connectivity issues. This will very much depend on the implementation and the number of additional spaces provided.</p>
IIA15: Climate Change & Resilience	2	0	0	<p>The Biodiversity and Open Space and Clean and Green Future policy themes have resulted in significant positive effects on IIA15. Both themes (specifically policies BO5, CG1, CG5 and CG6) promote measures such as green roofs and walls, SuDS, and soft landscaping, which will help to address issues such as flooding, pollution and overheating.</p>
IIA16: GHG Emissions	1	0	3	<p>The Clean and Green Futures theme is the only policy theme to result in significant positive effects on IIA16. These policies contribute to reducing GHG emissions through the reduction in energy usage, and vehicle reliance.</p> <p>Due to the potential for significant levels of development and potential increases in embodied carbon, the Movement and Connectivity, Community Infrastructure and Homes for the Community policy themes have resulted in uncertain effects. At this</p>

IIA Objective	Number of Significant Effects			Summary of Significant Effects
	++	--	?	
				stage it is not clear whether developments include measures to reduce GHG emissions and include renewable energy generation. As many of these measures will be determined by scheme level design, uncertain effects have been identified.
IIA17: Waste	2	0	4	<p>The Clean Green Future and Reuse, Recycling and Waste policy themes have resulted in significant positive effects on IIA17. These policies will help to improve waste facilities, minimise the amount of waste going to landfill, by supporting re-use and recycling and promoting more efficient use of materials.</p> <p>Some proposals which may come forward as a result of the Movement and Connectivity, Homes for the Communities, Community Infrastructure and Inclusive Economy and Good Growth policy themes may be resource intensive and could generate a significant amount of construction waste. As the location and design of some proposals that may come forward as a result of these policies are not yet known, uncertain effects have been identified.</p>
IIA18: Efficient use of Land and Resources	1	0	1	<p>The Clean and Green Future policy theme is the only theme to result in significant positive effects on IIA18. Policies CG1 and CG11 aim to minimise the use of natural resources, support a circular economy, remediate contaminated land, improve the quality of land within Tower Hamlets and contribute to the utilisation of brownfield land.</p> <p>There are some uncertain effects associated with the Movement and Connectivity policy theme as the location of some proposals that may come forward as a result of these policies is not yet known. Whilst it is likely that the majority may result in the reallocation of the existing road network, there could be potential for some land</p>

IIA Objective	Number of Significant Effects			Summary of Significant Effects
	++	--	?	
				take. If a preference for road network reallocation is sought there is potential for positive effects.

6.3 Assessment of Policy Alternatives

- 6.3.1. The SEA Regulations require an assessment of the plan and its “reasonable alternatives”, in addition to those proposed within the draft plan. Without this, there cannot be a proper environmental evaluation of the preferred plan. The assessment of reasonable alternatives does not need include all possible alternatives, but only those that are realistic.
- 6.3.2. The development of the Local Plan policies has not at this stage identified any key policy alternatives, so the assessment of policy alternatives has assessed two scenarios – the continuation of the existing Local Plan and the application of the London Plan. Both of these plans have undergone examination and proven to be robust and at this stage provide a realistic alternative scenario.
- 6.3.3. In general, the continuation of the existing Local Plan and London Plan Policies have resulted in less significant positive effects. However, the policies within each plan do remain relevant and the majority are fit for purpose.
- 6.3.4. The London Plan lack specific borough details, that the local plan can provide, whilst some of the existing Local Plan policies are outdated, and no longer reflect key issues such as the Covid-19 recovery, rising costs of living and increases in crime against women and girls.
- 6.3.5. The assessment demonstrates a clear need for an updated Local Plan in order to better guide decisions on future development proposals and addresses the needs and opportunities within the borough.
- 6.3.6. **Table 6-4** below provides a summary of the application of these scenarios. It uses the same key to effects outline in **Table 3-2**.

Table 6-4 - Assessment of Policy Alternative Scenarios

IIA Objective	Application of Existing Local Plan Summary of Effects	Sig.	Application of London Plan Summary of Effects	Sig.
IIA1: Population and Equalities	<p>The existing Local Plan includes policies such as S.CF1, D.CF2, and D.CF3 that include the supporting of existing community facilities and the development of new community facilities. These policies are likely to preserve the existing community facilities, but also provide facilities such as early education, primary and secondary education, and care facilities. The development of facilities such as this will continue to provide for the future population of Tower Hamlets.</p> <p>Policy S.CF1 also includes measures to ensure accessible facilities and services, providing access for various population groups. However, the existing local plan does not include a specific policy relating to equalities. Minor positive effects have therefore been identified.</p>	+	<p>There are a number of policies within the London Plan, including GG1, GG4 and GG5 that contribute to improvements to communities within Tower Hamlets. The London Plan also aims to improve growth and inclusive development within the Borough, including accessible design with policy D5.</p> <p>The application of the London Plan policies is likely to be sufficient in supporting the population in Tower Hamlets, however they may be too strategic in implementation and lack a local approach, this has therefore resulted in minor positive effects. Additionally, as the population in Tower Hamlets is predicted to grow by 8.4%, with more people living on their own and increased in diversity within communities, the policies within the London Plan may not include sufficient infrastructure to provide for future population growth within Tower Hamlets. Therefore, resulting in minor positive effects.</p>	+
IIA2: Human Health	<p>A number of policies within the existing Local Plan will indirectly contribute to improving the health of residents within the Borough through encouraging healthy lifestyles. Policy S.SG1 also includes supporting the delivery of new healthcare facilities, providing for current and future residents of Tower Hamlets.</p> <p>The Plan also includes policy D.SG3 (Health Impact Assessments) which aims to ensure development contributed to a healthy built environment. The policy also requires the enhancement of positive impacts of development and mitigation of negative impacts.</p> <p>The development of new health infrastructure and promotion of healthy communities, alongside Health Impact Assessments, results in significant positive effects.</p>	++	<p>Policy GG3 identifies the need for new developments to assess the potential impacts of development proposals and Development Plans on the mental and physical health and wellbeing of communities, in order to mitigate any potential negative impacts, maximise potential positive impacts, and help reduce health inequalities, for example through the use of Health Impact Assessments.</p> <p>The Plan also sets out policies for the provision of housing (Chapter 4), the protection and provision of community facilities, education and health care (S2, S3, GG3), the provision and protection of sports facilities and open spaces (S5, S11), and healthy streets (T2).</p> <p>The application of the London Plan policies is likely to be sufficient in supporting the health and wellbeing in Tower Hamlets, however they may be too strategic in implementation and lack a local approach, this has therefore resulted in minor positive effects.</p>	+
IIA3: Economy	<p>There are a number of policies within the Plan that will contribute to growing the economy in Tower Hamlets. This includes those policies within Chapter 10 (delivering economic growth) and Chapter 11 (revitalising our town centres). The development of policies within these chapters include the chapter policy D.CF4 (public houses), and a number of policies to preserve and enhance the vitality of town centres within Tower Hamlets.</p> <p>The revitalisation of town centres is likely to encourage users into these areas and encourage economic growth within the Borough. Additionally, the preservation of unique high streets such as Columbia Road and Redchurch Street contribute to enhancing the diversity of Tower Hamlets economy. However, since the Covid-19 pandemic, and a rise in interest rates, the economy has changed significantly. Therefore the developments proposed may not reflect the current economic needs of these areas. Minor positive effects are therefore identified.</p>	+	<p>Policy GG5 aims to conserve and enhance London's global economic competitiveness and ensure that economic success is shared amongst all Londoners.</p> <p>There are also a number of strategies within the London Plan, namely those within Chapter 6 (Economy) such as E1, E8, E2, and E3 that contribute to improving economic growth and business investment within London.</p> <p>However, since the Covid-19 pandemic, the economy has changed significantly, and the London may not be robust enough to address these issues. Effects are therefore limited to minor positive effects.</p>	+

IIA Objective	Application of Existing Local Plan Summary of Effects	Sig.	Application of London Plan Summary of Effects	Sig.
IIA4: Employment	<p>The following policies within the existing Local Plan contribute to employment improvements within the Borough; S.EMP1 (creating investment and jobs), D.EMP2 (new employment space), D.EMP3 (loss of employment space), and D.EMP4 (re-development within designated employment areas).</p> <p>The development of additional employment space provides new opportunities for jobs within the Borough for current and future populations. Additionally, the development of new, and redevelopment of existing, employment spaces may provide a range of workspaces for businesses of varying sizes, providing a diverse range of job opportunities.</p>	+	<p>Policy GG5 plans for sufficient employment and industrial space in the right locations to support economic development and regeneration. The London Plan proposes Growth Corridors and Opportunity Areas which are described as large scale development to provide substantial numbers of new employment and housing, each typically more than 5,000 jobs and/or 2,500 homes, with a mixed and intensive use of land and assisted by good public transport accessibility. There is one opportunity area located in Tower Hamlets, the Isle of Dogs.</p>	+
IIA5: Housing	<p>All policies within Chapter 9 of the existing Local Plan improve housing within the Borough, including housing standards. Policy S.H1 (meeting housing needs) outlines the delivery of at least 58,965 new homes across the borough (3,931) per year up to 2031. Within this new housing is a required provision of affordable housing and different housing types. This contributes to supplying housing that fits the needs of residents within the borough, for example, single occupancy rental accommodation.</p> <p>Policy D.H4 also includes measures for specialist housing, including the preservation of existing housing and the development of new specialist housing. Additional policies such as D.H5 (gypsies and travellers accommodation) and D.H6 (student housing) support the needs of a number of groups inclusively.</p> <p>However, as the population of Tower Hamlets is anticipated to grow by 8.4%, the outlined provision of housing may not support the needs of the growing population. Minor positive effects are therefore identified.</p>	+	<p>The London Plan 2021 identifies a 10-year minimum housing supply target of 34,730 homes within the borough over the period 2019/20 to 2028/29. This is equivalent to a minimum requirement of 3,473 homes per year. This is likely to help increase the supply within the borough. A number of policies, including H1, H4, H6 and H7 include the provision of increased and affordable housing, supporting housing requirements within London.</p> <p>The requirement of 50% of all new homes delivered across London to be genuinely affordable, will also help more people access housing and could help to reduce levels of housing deprivation. Policies also support specialist housing for older people (H13), gypsy and traveller accommodation (H14) student accommodation (H15) and shared living (H16), supporting good development to meet the needs of a number of groups inclusively.</p> <p>The application of the London Plan policies is likely to be sufficient in supporting housing in Tower Hamlets, however they may be too strategic in implementation and lack a local approach, this has therefore resulted in minor positive effects.</p>	+
IIA6: Crime and Safety	<p>There is no specific policy within the existing local plan that addresses crime within Tower Hamlets. However, policy D.DH2 (attractive streets, spaces and public realm) does include prime prevention security measures that should be included within developments.</p> <p>The lack of policy relating to crime within the Borough has resulted in significant negative effects.</p>	--	<p>The London Plan does not benefit from a standalone policy on crime and safety; however it is an underlying theme in a number of policies such as supporting the night time economy (HC6) building strong and inclusive communities (GG1) and Safety, security and resilience to emergency (D11).</p> <p>Given the rising crime rates across London, the Plan does not adequately address these issues. Policies are unlikely to significantly address crime within Tower Hamlets, therefore minor negative effects have been identified.</p>	-
IIA7: Transport	<p>Policies within Chapter 16 of the existing Local Plan address travel within the Borough. Policy S.TR1 includes the provision of sustainable travel modes, including walking and cycling. However, the policy does not include detailed measures to address the significant issues on the highway network, including congestion. The policies also try to limit disruptions to the transport network where possible.</p> <p>However, the application of these policies across Tower Hamlets does not include additional new infrastructure to improve transport measures.</p>	+/-	<p>The London Plan sets out measures to meet the Mayor's target of 80 per cent of all trips in London to be made by foot, cycle or public transport by 2041. Policies set out in Chapter 10 set out ways in which to reduce the need to travel for both existing and future developments. The Plan also sets out the ambitions of Crossrail 2 and the opportunities this may bring to Tower Hamlets.</p> <p>The application of the London Plan policies is likely to be sufficient in supporting sustainable transport in Tower Hamlets and has therefore resulted in significant positive effects.</p>	++

IIA Objective	Application of Existing Local Plan Summary of Effects	Sig.	Application of London Plan Summary of Effects	Sig.
IIA8: Accessibility	<p>There is no specific policy within the existing Local Plan that addresses accessibility of public transport from all social groups. However, policy S.TR1 (sustainable travel) includes indirect effects on accessibility through encouraging accessible public and active travel modes.</p> <p>The Borough is generally well connected through public transport. However, as with the transport policies, the Plan does not include specific implementation measures to ensure accessibility across the Borough.</p>	+/-	<p>Policies within Chapter 10 (Transport) aim to improve the public transport within London. Within this, measures are outlined in order to preserve accessibility for all groups, including disabled and low income users. This also includes the availability for disabled parking spaces.</p> <p>However, these policies have not specifically outlined measures of improving accessibility within Tower Hamlets. Therefore it is likely that accessibility to transport and spaces within the Borough will be preserved, but improvements are less likely to reflect the needs of the population. Therefore minor positive effects have been identified.</p>	+
IIA9: Biodiversity and Natural Capital	<p>Chapter 13 within the existing local plan includes policies that enhance open spaces within Tower Hamlets (S.OWS1, S.OWS2, D.OWS3, D.OWS4). These policies help to enhance biodiversity and protect open space within the Borough, including Metropolitan Open Land. This also includes improving the quality of open spaces in line with the Local Biodiversity Action Plan.</p>	+	<p>There are a number of policies within the London Plan that support the protection, enhancement and net gain in biodiversity (specifically G5, G6, G7, GG2, D8). The London Plan also includes a supplementary design guide (Urban Greening for Biodiversity Net Gain: A Design Guide¹⁷) which sets out ways in which biodiversity net gain can be achieved through new developments.</p> <p>The London Plan does set out plans for new developments and has set out a housing target of 34,730 new homes by 2028/29. This could lead to significant levels of development which have potential for negative effects on biodiversity. Some of these effects may be temporary during construction, but without a local approach, some sites could result in the loss and degradation of biodiversity. Both positive and negative effects have therefore been identified.</p>	+/-
IIA10: Landscape and Townscape	<p>There are a number of policies (namely, S.DH1, D.DH2, D.DH6, and D.DH10) that improve the landscape and townscape of Tower Hamlets through high quality design, attractive streets, spaces and public realm; enhancing the townscapes within Tower Hamlets. Additionally, Policy S.OWS1 (Creating a network of open spaces) contributes to preserving the landscape within Tower Hamlets, including the open space and MOL within the Borough. Policy S.DH4 (Shaping and managing views) also contributes to the enhancement and protection of the Tower Hamlets views and landscape, enhancing the public realm.</p> <p>Preserving and enhancing the local landscape and townscape contributes to high quality streetscapes within the Borough and improves the current condition of the landscape and townscape. Significant positive effects are therefore identified.</p>	++	<p>The London Plan understands the pivotal role that the City's unique landscape and townscape plays in shaping its character and sense of place. The plan does not benefit from one specific landscape policy; however, it does underpin a number of policies such as D8, HC1, HC3, G1, G3 and G9. These are aimed at improving the historic and natural environment, which in turn will benefit the landscape and townscape.</p> <p>The London Plan does set out plans for new developments and has set out a housing target of 34,730 new homes by 2028/29. This could lead to significant levels of development which have potential for negative effects on landscape and townscape. Some of these effects may be temporary during construction, but without a local approach, some sites could result in the loss and degradation of the local landscape and townscape. Both positive and negative effects have therefore been identified.</p>	+/-
IIA11: Historic Environment	<p>Policies S.DH3 (heritage and the historic environment) aims to preserve and enhance the Borough's designated and non-designated heritage assets, including</p>	+	<p>Chapter 7 of the London Plan sets out heritage and culture policies which aim to sensitively management London's heritage assets, whilst design policies aim to</p>	+/-

¹⁷ London Wildlife Trust, Mayor of London, Urban Greening for Biodiversity Net Gain: A Design Guide [online] available at: https://www.london.gov.uk/sites/default/files/urban_greening_and_bng_design_guide_march_2021.pdf

IIA Objective	Application of Existing Local Plan Summary of Effects	Sig.	Application of London Plan Summary of Effects	Sig.
	<p>archaeology and parks and gardens. Additionally, Policy S.DH5 (world heritage sites) safeguards the world heritage sites within the Borough (the Tower of London and Maritime Greenwich). This preserves the sites within the Borough and aims to enhance them where possible through development.</p> <p>However, the policies do not consider heritage at risk assets. Therefore minor positive effects are identified.</p>		<p>avoid harm to, the significance of London’s heritage assets and their settings. These could help to preserve and enhance the borough’s heritage assets.</p> <p>The London Plan does set out plans for new developments and has set out a housing target of 34,730 new homes by 2028/29. This could lead to significant levels of development which have potential for negative effects on the historic environment. Some of these effects may be temporary during construction, but without a local approach, some sites could result in the loss and degradation of the historic environment. Both positive and negative effects have therefore been identified.</p>	
IIA12: Flooding	<p>Policy D.ES4 (flood risk) aims to restrict development that is located within flood zone 3a (high risk of flooding). The policy also requires a flood risk assessment for developments that are located within flood zone 2 or 3a. In addition to this, flood risk management measures are required within developments in order to mitigate flood risk from the River Thames and River Lea. Additionally, Policy D.ES5 (sustainable drainage) outlines measures to reduce the risk of surface water flooding and achieve specific run-off rates. However, the policies do not outline specific measures that should be included within developments to minimise flood risk.</p>	+	<p>Policy SI 12 (flood risk management) and SI 13 (sustainable drainage) aim to minimise and mitigate flood risk from developments. The implementation of these policies within Tower Hamlets is likely to contribute to reducing flood risk and be sufficient in minimising flood risk as a result of new developments.</p>	+
IIA13: Water Quality	<p>Policy D.ES6 (sustainable water and wastewater management) outlines reductions in water consumption as part of new developments (maximum of 105 litres per person per day). Additionally, developments should meet BREEAM water efficiency credits. There is also a requirement for new developments to minimise pressure on the combined water network.</p> <p>However, despite preserving water resource, this policy does not enhance water quality. Mixed positive and negative effects have therefore been identified as the existing Local Plan may be insufficient in supporting the preservation and enhancement of water quality within the Borough.</p>	+/-	<p>There are a number of policies within the London Plan that aim to protect and enhance the water environment. Most significantly is Policy SI 17 which explicitly aims to protect and enhance London’s waterways. This aims for new developments to support river restoration including opportunities to improve water quality.</p> <p>Additionally Policy SI 5 (water infrastructure) states that new development should promote the protection and improvement of the water environment in line with the Thames River Basin Management Plan, whilst Policy SI 13 (sustainable drainage) states that drainage should be designed and implemented in ways that promote multiple benefits including increased water use efficiency, improved water quality, and enhanced biodiversity, urban greening, amenity and recreation.</p> <p>The application of the London Plan policies is likely to be sufficient in supporting the efficient use of land in Tower Hamlets and has therefore resulted in significant positive effects.</p>	++
IIA14: Air Quality	<p>Policy D.ES2 (Air quality), specifically, requires development to meet or exceed the ‘air quality neutral’ standard, including promoting the use of low or zero emission transport and reducing the reliance on private motor vehicles. The aim of this policy is to improve the Borough’s air quality.</p> <p>Additionally, the acknowledgement of required air quality improvements within the plan are likely to contribute to mitigating poor air quality where possible. The application of this plan is likely to be sufficient in tackling air pollution in the Borough.</p>	++	<p>Policy SI 1 (improving air quality) sets out a key criteria for dealing with poor air quality within the city. It states that new developments must not lead to further deterioration of existing poor air quality, create any new areas that exceed air quality limits, or create unacceptable risk of high levels of exposure to poor air quality.</p> <p>The cross cutting nature of air quality is acknowledged within the plan, as it features in other policies such as creating a health city (GG3) public realm (D8) and protecting and enhancing London’s waterways (SI17). Policies that support a reduce need to travel and encourage an increase in walking and cycling will also benefit this objective.</p>	++

IIA Objective	Application of Existing Local Plan Summary of Effects	Sig.	Application of London Plan Summary of Effects	Sig.
			The application of the London Plan policies is likely to be sufficient in tackling air pollution in Tower Hamlets and has therefore resulted in significant positive effects.	
IIA15: Climate Change	Policy D.ES10 (overheating) and D.ES4 (flood risk) are likely to contribute to positive effects as these policies indirectly. Climate change is likely to result in increased warming and flood events, as well as presenting an increased water requirement. Therefore, these policies are likely to help address the chronic and acute effects of climate change.	+	Policy GG6 (increasing efficiency and resilience) aims to help London become a more efficient and resilient city. This will ensure buildings and infrastructure are designed to adapt to a changing climate, making efficient use of water, reducing impacts from natural hazards like flooding and heatwaves, while mitigating and avoiding contributing to the urban heat island effect.	+
IIA16: Greenhouse Gases	Policies within the existing Plan acknowledge the need to reduce greenhouse gases and emissions within the Borough. Specifically, Policy D.ES7 (a zero carbon borough) includes measures to reduce carbon-dioxide emissions on sites within Tower Hamlets, including within residential and non-residential developments. However, the Plan does not include measures for localised improvements across the borough, including additional emitters. Mixed positive and negative effects are therefore identified.	+/-	Policy SI 2 (minimising greenhouse gas emissions) states that all new major development should be net zero-carbon, by reducing GHGs in operation and minimising both annual and peak energy demand in accordance with an energy hierarchy. However, the London Plan is working towards becoming a net zero city by 2050, which is 12 years longer than the council's ambition of 2038. Without localised initiatives it's unlikely that the London Plan will help to reach the Council's net zero ambitions, resulting in minor negative effects.	-
IIA17: Waste	There are three policies within the existing Plan that contribute to reducing waste within the Borough (S.MW1, D.MW2, and D.MW3). These policies aim to manage and minimise the waste within Tower Hamlets, identifying a need for waste reduction, and suitable waste facilities. Additionally, new waste facilities will be designed to contribute towards sustainable waste management in line with the Waste Hierarchy.	+	Policies SI 7 (reducing waste and supporting the circular economy) and SI 8 (waste capacity and net waste self-sufficiency) identify the needs for waste reduction and sustainability within London. This will aim to reduce waste and promote circular economy principles within London, managing waste and minimising where possible. Additionally, Policy SI9 (safeguarded waste sites) ensures the protection of London's waste sites.	+
IIA18: Efficient use of Resources	Whilst the Plan does not include a specific policy in reference to the efficient use of resources, including land, other policies are designed to indirectly positively affect resources. Policy S.SG1, as well as other policies, includes specification to utilise brownfield sites within the Borough. The plan also seeks to utilise circular economy principles, reusing and recycling construction materials where possible (policy S.MW1, managing our waste).	+	The London Plan includes Policy GG2 which supports making the best use of land. This aims to enable development on brownfield land, avoid development on greenbelt land and MOL and where appropriate intensify development to make the best use of available site. Policy H1 (increasing housing supply) also aims to optimise the potential for housing delivery on all suitable and available brownfield sites. The application of the London Plan policies is likely to be sufficient in supporting the efficient use of land in Tower Hamlets and has therefore resulted in significant positive effects.	++

7 Assessment of Site Allocations

7.1 Introduction

- 7.1.1. The assessment of the Local Plan sites is summarised below and presented in full in **Appendix G**. A matrix approach has been used for the assessment which has used the significance criteria identified in **Table 7-1** below.
- 7.1.2. **Table 7-2** overleaf provides an overview on the performance of the Local Plan policy themes against each IIA objective and **Table 7-3** outlines significant effects based on each IIA objective. For the purpose of the IIA, significant effects are deemed to be the following:
- Significant Positive effects;
 - Significant Negative effects; and
 - Uncertain effects.
- 7.1.3. Further details on the insignificant effects i.e., minor positive, minor negative, mixed and neutral effects are detailed in **Appendix G**. The Appendix also sets out the nature of effects such as magnitude, spatial extent and duration. It should be noted that those effect recorded below are pre-mitigated effects. Details on the specific mitigation measures are included in **Appendix G**, which includes the application of proposed draft policies.

Table 7-1 – Significance of Effect

Effect Significance	Key
Potential for significant positive effects	++
Potential for minor positive effects	+
Potential for minor negative effects	-
Potential for significant negative effects	--
Uncertain effects – Uncertain or insufficient information on which to determine the appraisal at this stage	?
Potential for both positive and negative effects	+/-
Negligible / No effect	0

7.2 Proposed Site Allocations – Summary of Effects

Table 7-2 provides an overview on the performance of the Local policy themes against each IIA objective and Table 7-3 outlines significant effects based on each IIA objective.

Table 7-3 – Summary of Significant Effects

IIA Objective	Number of Significant Effects			Summary of Significant Effects
	++	--	?	
IIA1: Population & Equalities	19	0	1	<p>Significant positive effects have been identified for 19 proposed sites. Generally, these sites provide at least 500 new homes per site, including 40% affordable homes and the development of wheelchair adaptable homes. In addition, these sites provide additional retail and employment opportunities, healthcare facilities, new parks and open spaces and improvements to the public realm. These sites also have good existing access to community services and will likely reduce levels of inequalities and provide new facilities which will help to bring communities together and support a changing demographic.</p> <p>Uncertain effects have been identified for the London Metropolitan University site as these units will only benefit only benefit students and the delivery may compromises the ability to deliver other priorities, in particular affordable housing and facilities which will benefit the wider community. However, the introduction of student housing could potentially complement the existing mix of uses and the provision of local services, including public transport.</p>
IIA2: Human Health	21	0	2	<p>Significant positive effects have been identified for 21 proposed site allocations. These sites all provide a housing provision improving health and have the potential to include new retail and employment opportunities, healthcare facilities, new parks and open spaces and improvements to the public realm. These sites will reduce levels of health inequalities and provide new facilities, improving physical and mental health and wellbeing and reduce levels of loneliness. They will ensure that the needs of all groups will be met both now and in the future.</p>

Page 1268

IIA Objective	Number of Significant Effects			Summary of Significant Effects
	++	--	?	
				Uncertain effects have been identified for two sites – Billingsgate Market and London Metropolitan University. Generally, these sites have existing good access to health services, however there are high levels of health deprivation. It is not clear whether the current provision will meet the needs of the new population. There is limited information of the type of housing and the additional provisions the site may make e.g. public realm, employment, health facilities.
IIA3: Economy & Town Centres	16	0	3	<p>Significant positive effects have been identified for 16 sites. These sites are well located close to existing town centres and include additional retail development spaces. Generally, this also includes public realm improvements at the ground and platform level. These sites will improve and enhance connectivity between business clusters and the housing market and improve town centre viability.</p> <p>Uncertain effects have been identified for three proposed sites (London Metropolitan University, Ailsa Street and Blackwall Trading Estate). Generally, the details of these developments are currently unknown. However, there could be potential to provide a mixed-use development which may include retail offering, helping to improve the viability of the town centre.</p>
IIA4: Employment & Skills	20	0	2	Significant positive effects upon employment have been identified for 20 sites. Generally, this is where sites are well located close to existing employment areas, such as the City Fringe Activity Area, Central Activity Zone, or Isle of Dogs Activity Area. These sites are also likely to include employment space as well as retail. This will likely increase employment opportunities.

IIA Objective	Number of Significant Effects			Summary of Significant Effects
	++	--	?	
				Uncertain effects have been identified for two proposed sites (London Metropolitan University and Blackwall Trading Estate). The details of these developments are currently unclear. However, there is potential to provide a mixed-use development which may include employment space and retail offering, which may help to improve employment opportunities.
IIA5: Housing	14	0	5	<p>Significant positive effects have been identified for 14 sites. Generally, these sites all provide at least 500 homes per site, helping towards meeting LBTH's housing target. These sites also include at least 35% affordable homes, including wheelchair accessible homes. The size, type and tenure of housing takes into account different groups in the community including, but not limited to, those who require affordable housing, families with children, older people and people with disabilities.</p> <p>Uncertain effects have been identified for five sites (London Metropolitan University, Limeharbour, Crossharbour, Riverside South and Westferry Printworks). Generally, this has been attributed where limited information is currently known on the affordability, accessibility, size, type and tenure of homes.</p>
IIA6: Crime & Safety	1	0	5	<p>The majority of sites have resulted in minor positive effects upon crime and safety. This has been detailed in full in Appendix G.</p> <p>One site has resulted in significant positive effects upon crime and safety (North Quay). This site is expected to deliver improvements to public realm and active frontages. This is likely to improve natural surveillance within the site and in turn</p>

IIA Objective	Number of Significant Effects			Summary of Significant Effects
	++	--	?	
				<p>improve rates of crime. It is expected that the site will be delivered in accordance with designing out crime principles.</p> <p>Uncertain effects have been identified for five sites (Whitechapel South, London Metropolitan University, Whitechapel North, Brick Lane and Pedley Street, and Aspen Way). It is currently unclear if designing out crime principles will be applied as part of these developments. However, developing these sites from their existing use and providing housing and public realm improvements is likely to help to reduce crime and create a safer community.</p>
IIA7: Sustainable Transport	8	0	1	<p>The majority of sites have resulted in minor positive effects upon sustainable transport. This has been detailed in full in Appendix G.</p> <p>Significant positive effects have been identified for eight sites (Marian Place Gasworks and the Oval, North Quay, Wood Wharf, Reuters and Bromley by Bow). These sites generally have very good access to sustainable transport modes, and high PTAL scores of between 4 and 6a. These sites also include the development of improved cycle and pedestrian access.</p> <p>Uncertain effects have been identified for one site (Teviot Estate) as this site has average access to public transport and it is not clear whether additional sustainable transport will be included within the development of the site.</p>
IIA8: Accessibility	15	0	0	<p>The majority of sites have resulted in minor positive effects upon accessibility. This has been detailed in full in Appendix G.</p>

IIA Objective	Number of Significant Effects			Summary of Significant Effects
	++	--	?	
				Significant positive effects have been identified for 15 sites. Generally, these sites have existing good access to transport facilities and services and include the provision for additional improvements to accessibility, including active travel permeability and improvements to wayfinding.
IIA9: Biodiversity & Natural Capital	5	0	2	<p>Five sites have resulted in significant positive effects due to their regard for biodiversity and inclusion of green infrastructure and landscaping, which are expected to provide a significant net gain in biodiversity.</p> <p>The Whitechapel North and Teviot Estate resulted in uncertain effects upon biodiversity as it is currently uncertain whether these sites will have adverse effects on local habitats, or if the sites will meet the required 30% net gain as set out within the Local Plan.</p>
IIA10: Landscape & Townscape	4	0	13	<p>Four sites have resulted in significant positive effects upon landscape and townscape (Sweetwater, Aberfeldy Estate, Teviot Estate and Leven Road). Generally, these sites will have a positive contribution to the townscape, with open space provision to deliver enhancements to the character and appearance of the surrounding area. Active frontages and green landscapes may also be created and maintained.</p> <p>Thirteen sites have resulted in uncertain effects as at this stage the design details of developments are unknown, however, it is assumed that the developments may improve townscape and landscape setting.</p>

IIA Objective	Number of Significant Effects			Summary of Significant Effects
	++	--	?	
IIA11: Historic Environment	0	1	2	<p>Significant negative effects on the historic environment have been identified for the Westferry/Park Place site. This site is located in close proximity to a number of heritage assets, including archaeological priority areas, conservation areas, and a Grade 2 listed gate. There is potential for the loss of the Grade 2 listed gate and buried archaeology as a result of development at this site.</p> <p>Uncertain effects have been identified for two sites (10 Bank Street and Whitechapel North). Generally, there is potential for these sites to temporarily adversely affect local heritage assets. However, design details are currently unclear and there is potential for enhancements to the public realm which may improve the setting of the local historic environment.</p>
IIA12: Flooding	0	12	3	<p>In total 12 sites have resulted in significant negative effects for flooding. These sites are all located within areas of flood zone 3 and flood risk areas and there are no detailed flood risk mitigation measures outlined for the developments at this stage.</p> <p>Three sites (Chrip Street, Marsh Wall West and Millharbour) have resulted in uncertain effects on flooding. These sites are located within flood risk areas and it is currently unclear whether these sites will include flood risk mitigation measures.</p>
IIA13: Water Quality	0	0	7	<p>Uncertain effects upon water quality have been identified for seven sites, which are located within close proximity to watercourses. It is currently unclear if any measures to mitigate against water quality impacts will be included within development.</p>

IIA Objective	Number of Significant Effects			Summary of Significant Effects
	++	--	?	
IIA14: Air Quality	0	0	0	All proposed site allocations have resulted in mixed positive and negative effects upon air quality. This has been detailed in full in Appendix G .
IIA15: Climate Change & Resilience	0	0	3	Three sites (Mariane Place Gasworks and the Oval, Riverside South, and Westferry Printworks) have resulted in uncertain effects on climate change and resilience. Generally, these sites have low overall climate and heat risks, and have some resilience to climate change. However, not all climate resilience measures are known at this stage.
IIA16: GHG Emissions	0	0	20	Uncertain effects have generally been identified for 20 sites where there is potential for significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. However, it is not clear whether the development will utilise renewable energy sources or low carbon heat networks once operational.
IIA17: Waste	0	0	31	The majority of sites have resulted in uncertain effects on waste. Demolition, excavation, and construction are likely to result in the generation of a significant amount of waste. However, at this stage it is not clear if existing buildings and structures will be re-used or recycled and whether recycled materials will be supported as part of construction.

IIA Objective	Number of Significant Effects			Summary of Significant Effects
	++	--	?	
IIA18: Efficient use of Land and Resources	3	0	2	<p>The majority of sites have resulted in minor positive effects upon efficient use of land and resources. This has been detailed in full in Appendix G.</p> <p>Three sites (Sweetwater, Hackney Wick Station, and Bow Common Lane) have resulted in significant positive effects on land use. These sites are on previously developed land and will support high density housing and mixed-use development which will help to make the best use of the land within the Borough.</p> <p>Uncertain effects have been identified for two sites (10 Bank Street and Westferry/Park Place). These sites are predominantly on previously developed land, however the density of housing is not currently known nor is it clear whether sustainable use of materials will be encouraged.</p>

7.3 Alternative Site Allocations

- 7.3.1. The SEA Regulations require an assessment of the plan and its “reasonable alternatives”, in addition to those proposed within the draft plan. Without this, there cannot be a proper environmental evaluation of the preferred plan. The assessment of reasonable alternatives does not need include all possible alternatives, but only those that are realistic.
- 7.3.2. The proposed site alternatives include those sites that are developable but do not meet the 500 minimum capacity targets of the proposed site allocations. There are 12 sites in total. These sites have the potential to come forward as windfall sites in the future if the proposed site allocations above do not provide adequate housing numbers. The sites have therefore, been assessed in the same level of details as the proposed allocations and the summary of effects is presented below.

7.4 Summary of Effects – Alternative Allocations

- 7.4.1. The assessment of alternative sites has resulted in a higher proportion of significant negative effects compared to the proposed site allocations and are less likely to sustainably support development. These effects have been identified for IIA15 (climate change and resilience), IIA12 (flooding), IIA11 (historic environment), IIA8 (accessibility), and IIA7 (sustainable transport).
- 7.4.2. Generally, sites that are located within flood zone 3 have resulted in significant negative effects upon IIA12 (flooding). Similarly, sites located within flood zone 3 and that have high climate and heat risks have resulted in significant negative effects on IIA15 (climate change and resilience).
- 7.4.3. Additionally, a small number of sites have the potential to result in damage or loss of heritage assets located in the site boundaries (IIA11). Significant negative effects have been identified for these sites.
- 7.4.4. Minor negative effects have also been identified where schemes are located in close proximity to priority habitats (IIA9). Development here is likely to result in disturbance to these habitats and species within them.
- 7.4.5. There are a larger proportion of uncertain effects associated with alternative sites when compared to preferred sites. This has largely been identified for IIA1 (population and equalities), IIA2 (human health), and IIA5 (housing) where it is currently unclear what the provision of homes at sites will entail, including the number of homes, affordability and adaptability of homes.
- 7.4.6. A number of uncertain effects have also been identified across IIA objectives where the nature of development at sites is currently unclear, and the provision of additional services is unknown.

Table 7-5 – Summary of Significant Effects – Site Alternatives

IIA Objective	Number of Significant Effects			Summary of Significant Effects
	++	--	?	
IIA1: Population & Equalities	0	0	10	Alternative sites have largely resulted in uncertain effects on population and equalities. Generally, these uncertain effects have been attributed where the provision of homes does not meet the borough’s housing target and there are uncertainties surrounding site developments. These uncertainties include how many housing units will be affordable and adaptable, and whether additional community facilities will be provided at the site.
IIA2: Human Health	1	0	15	<p>The Millharbour South alternative site has resulted in significant positive effects on human health. The site is well connected to healthcare and community facilities, and is likely to lead to additional community facilities and open spaces, improving health and wellbeing of the local community.</p> <p>Uncertain effects have been identified for 15 alternative sites. Generally, this is as there is potential for the site to increase pressure on existing healthcare and community facilities and it is unclear if additional provisions will be included within development.</p>
IIA3: Economy & Town Centres	0	0	4	<p>The majority of alternative site allocations have resulted in minor positive effects on economy and town centres, this is detailed in full in Appendix G.</p> <p>Four site alternatives have resulted in uncertain effects on economy and town centres (Neptune Wharf, Hamlet Industrial Estate, London Chest Hospital and Watney Markey). There is potential for these sites to include mixed-use</p>

IIA Objective	Number of Significant Effects			Summary of Significant Effects
	++	--	?	
				development, providing employment and/or retail space. However, this is currently uncertain.
IIA4: Employment & Skills	1	0	8	<p>Millharbour South has resulted in significant positive effects on employment and skills. The site is well located close to employment opportunities, and the area is amongst the 30-50% most deprived areas. The site also has the potential to include additional employment opportunities. Therefore, providing improved opportunities for employment.</p> <p>Uncertain effects have been identified for eight sites. These sites are generally within good access to existing employment areas, however, there is potential for the inclusion of additional employment facilities within the proposed sites although this is currently unclear.</p>
IIA5: Housing	0	0	12	Thirteen alternative sites have resulted in uncertain effects on housing. This has been attributed where housing provisions fall below the borough's targets and the affordability, accessibility, size, type and tenure of homes is unclear.
IIA6: Crime & Safety	0	0	8	Eight alternative sites have resulted in uncertain effects upon crime (Neptune Wharf, Hamlet Industrial Estate, Canade Square/Churchill Place, Anchor Retail Park, Republic Estate, Watney Market, Hertsmere House, and Samuda Estate). These sites have limited detail as to whether designing out crime principles will be applied as part of developments, or whether there will be improvements to the public realm.

IIA Objective	Number of Significant Effects			Summary of Significant Effects
	++	--	?	
IIA7: Sustainable Transport	0	1	3	<p>Orchard Wharf has resulted in significant negative effects upon sustainable transport. The site is not well located for public transport use and has a PTAL score of between 0 and 1b. This is likely to increase the need for residents to travel by car to access local services and facilities. It is also unclear if any additional public transport provision will be proposed as part of the site.</p> <p>Uncertain effects have been identified for Neptune Wharf, Samuda Estate and Hamlet Industrial estate. Despite these sites having a PTAL score of 2, and access to public transport, it is unclear if improvements to sustainable transport access will be included within development.</p>
IIA8: Accessibility	0	1	1	<p>Orchard Wharf has resulted in significant negative effects upon accessibility as the site has a PTAL score of between 0 and 1b. Therefore, there is potential for the exclusion of social groups who rely on public transport.</p> <p>Republic Estate has resulted in uncertain effects as the site has average access to facilities and service. However, at this stage it is not known if any accessible provision will be included as part of the site.</p>
IIA9: Biodiversity & Natural Capital	0	0	8	<p>Eight sites have resulted in uncertain effects on biodiversity. None of the alternative sites will result in the direct loss of habitats, but they could disturb nearby sites, habitats and species. At this stage, no details have been provided on the provision of green infrastructure and/or open space which could enhance biodiversity, or whether BNG targets will be met on site.</p>

IIA Objective	Number of Significant Effects			Summary of Significant Effects
	++	--	?	
IIA10: Landscape & Townscape	0	0	6	Hamlet Industrial Estate, Anchor Retail Park, Watney Market, Hertsmere House, Samuda Estate and Republic Estate have all resulted in uncertain effects on landscape and townscape. They are located in areas which have low landscape and townscape values, but currently, the design details for these sites are unknown and whether there will be any inclusion of green spaces or significant enhancements to the public realm.
IIA11: Historic Environment	0	2	4	<p>Both Tobacco Dock and London Chest Hospital have resulted in significant negative effects upon the historic environment. Both these sites have the potential to disturb local heritage assets, and result in the loss of heritage assets as a result of development at these sites.</p> <p>Uncertain effects have been identified for Neptune Wharf, Watney Market, Samuda Estate and Hamlet Industrial Estate as these at this stage it is not clear whether development will include measures to enhance and restore the local historic environment, or whether sensitive design will be implemented.</p>
IIA12: Flooding	0	7	1	Seven alternative sites have resulted in significant negative effects upon flooding (Hamlet Industrial Estate, Orchard Wharf, Tobacco Dock, Canada Square/Churchill Place, 72-90 Chrisp Street, Hertsmere House and Samuda Estate). These sites are all located within areas of flood zone 3 and flood risk areas, and there are no detailed flood risk mitigation measures outlined within the developments at this stage.

IIA Objective	Number of Significant Effects			Summary of Significant Effects
	++	--	?	
IIA13: Water Quality	0	0	6	Uncertain effects upon water quality have been identified for a number of sites located near to water bodies as it is currently unclear if any measures to mitigate against water quality impacts will be included within development. There is potential that surface water runoff from construction could affect water quality.
IIA14: Air Quality	0	0	0	No alternative sites have resulted in significant or uncertain effects upon air quality. All alternative sites have resulted in mixed positive and negative effects upon air quality, detailed in Appendix G .
IIA15: Climate Change & Resilience	0	5	4	<p>Five sites have resulted in significant negative effects upon climate change and resilience (Hamlet Industrial Estate, Millharbour South Tobacco Dock, Samuda Estate and 72-90 Chrisp Street). Generally, these sites all have medium-high or high overall climate risk and heat risk ratings as well as being at risk of flooding meaning that they have a diminishing resilience to climate change. No climate resilience measures are known at this stage.</p> <p>Four sites have resulted in uncertain effects on climate change and resilience (Neptune Wharf, Orchard Wharf, , Tower Hamlets Car Pound and Watney Market). Generally, these sites have low overall climate and heat risks, and have some resilience to climate change. However, not all climate resilience measures are known at this stage.</p>
IIA16: GHG Emissions	0	0	16	All alternative sites have resulted in uncertain effects upon GHGs. For all developments, there are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as

IIA Objective	Number of Significant Effects			Summary of Significant Effects
	++	--	?	
				carbon emissions from construction traffic and construction plant. At this stage, it is not clear whether developments will utilise renewable energy sources or low carbon heat networks once operational.
IIA17: Waste	0	0	16	All alternative sites have resulted in uncertain effects upon waste. The demolition, excavation, and construction of sites are likely to result in the generation of a significant amount of waste. At this stage it is not clear if the existing buildings and structures will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land and Resources	0	0	2	<p>No alternative sites have resulted in significant effects upon efficient use of land and resources. The majority of alternative sites have resulted in minor positive effects, with three sites resulting in mixed positive and negative effects, detailed in Appendix G.</p> <p>Uncertain effects have been identified for Watney Market and Samuda Estate as the density of housing is not currently known nor is it clear whether the sites will encourage sustainable use of materials.</p>

8 Findings from Other IIA Assessments

8.1 Introduction

- 8.1.1. This section presents the findings from the EqIA, HIA and HRA assessments. Further details on these assessments can be found in **Appendix H (EqIA)** **Appendix I (HIA)** and the HRA Screening Report, which has been published separately.

8.2 EqIA Findings

- 8.2.1. Overall, the policies will likely result in positive impacts on protected characteristic group members in the borough. The policies aim to address a wide range of issues, identified by the key themes within the EqIA baseline.
- 8.2.2. The main protected characteristic groups that will particularly benefit include:
- Age – older people who have reduced mobility and require access to health and other services. Also, children who are likely to benefit from air quality improvements that numerous policies look to achieve;
 - Disability – people with a variety of disabilities will benefit from a more accessible environment; and
 - Deprivation – people from low-incomes who require access to employment, education and housing and people with underlying health issues.
 - Sex, Gender reassignment and Race – women and girls, gender diverse people, and people from a range of different diverse backgrounds will benefit from inclusive design, creation of safer and inclusive spaces and greater community engagement.
- 8.2.3. Some protected characteristics may be disproportionately adversely affected by the proposed policies. These include:
- Age, Disability and Pregnancy and maternity – The inclusion of public realm improvements and subsequent street furniture, addition of EV charging points and reduction in car parking and motorised vehicles could act as an obstacle to these groups.
 - Deprivation – Low income groups may be disproportionately affected by the development of large-scale purpose-built shared living as it has the potential to compromise the generation of affordable housing throughout the borough. Additionally, there is potential for low levels of engagement from the community in which estate regeneration schemes are proposed.
- 8.2.4. The assessment concludes that there will likely be a neutral impact for the following protected characteristic groups, assuming no unforeseen barriers emerge:
- Religion or belief;
 - Sexual orientation; and
 - Marriage and civil partnerships.

8.3 HIA Findings

8.3.1. The HIA assessed the NLP policies and considered their impact on the key determinants of health. These have been detailed below:

- **Air Quality:** Positive effects associated with Clean Green Future policies as air quality improvements will help to minimise the negative effects upon those in the most vulnerable social groups. Conversely, urban intensification through the Homes for the Community policies drive for additional housing in LBTH could result in a higher number of cars on the city's roads, which could contribute to a worsening of air quality.
- **Noise:** Mixed effects have been identified. The increase in housing in LBTH could result in higher numbers of cars, contributing to increased road traffic noise in the area. Improvements to entertainment venues and the night-time economy will also negatively contribute to increased noise levels throughout the borough. Additionally, construction related noise from developments may negatively impact upon the tranquillity. However, the NLP sets out to reduce noise and vibration as a result of construction and developments throughout the borough, reducing the levels of nuisance felt to those living in close proximity to developments.
- **Housing and Homelessness:** Positive effects have been identified as policies under the Homes for our Community theme will aid in meeting the growing demand for housing through new provision. Housing will be suitable for varying residential needs throughout the borough, including the provision of affordable housing, specialist and supported housing and purpose-built student accommodation. This could have positive effects for many vulnerable groups, predominantly working aged adults (18-64) and those who are homeless.
- **Economy and employment:** Positive effects have been identified. Policies will encourage business investment in LBTH and improve the economy of the borough. In particular, the provision and protection of affordable workspaces will aid in supporting new and emerging economic sectors in the borough. Additional town centre developments and an increase in shops, entertainment venues and food and drink facilities under the NLP is also likely to reduce unemployment in the borough, having positive effects for the unemployed and low-income residents in the borough.
- **Skills and education:** Positive effects have been identified. The development of education facilities under this sector will ensure young people in the borough continue to attain good qualifications. Additionally, Inclusive Economy and Good Growth policies intend to close the skills gap amongst the working population through improving access to education and training. Upskilling opportunities will be particularly beneficial to the health of young people throughout the borough.
- **Social cohesion and community safety:** Positive health effects have been identified. The provision and improvement of community facilities such as community hubs will facilitate socialisation and cross-cultural engagement throughout the borough community. The development of open space and recreational facilities including parks and play spaces may also improve social cohesion and encourage those who are socially isolated

to utilise facilities. Additionally, improvements to the public realm under the People, Places and Spaces policy theme include safety measurements such as appropriate signage of public areas, good lighting and surveillance. The promotion of a safe living environment will contribute positively to the physical and mental wellbeing of all residents.

- **Access to services:** Positive health effects have been identified. It is assumed that new community housing developments within the borough will have suitable access to community facilities and shops. Additionally, policies under the Community Infrastructure policy theme support development proposals to maximise opportunities for the provision of high-quality community facilities. Access to services will improve the health of elderly residents, improving health and reducing loneliness.
- **Physical activity:** Positive health effects have been identified. The Movement and Connectivity theme policies propose many types of active travel, from commuting to work to walking for pleasure. Improved accessibility and connectivity of current pedestrian routes throughout the borough will encourage the uptake of active travel, bring positive effects to the overall health of the population. Further, the inclusion of town centres within the 15-minute neighbourhood principle may improve physical activity rates.
- **Green Infrastructure:** Positive health effects have been identified. Improvements to green infrastructure are supported through the Biodiversity and Open Space policy theme. This includes the protection and enhancement of existing biodiversity throughout the borough as well as new provisions to contribute a 30% BNG. The maintenance of green infrastructure and accessible open spaces contributes to improving mental wellbeing by providing spaces for physical activity and social interaction. Green infrastructure could be further promoted through additional requirements under the Homes for the Community policy theme.
- **Climate change resilience:** Mixed effects have been identified. The policies proposed within Clean Green Futures will attempt to limit the excessive heat generation and overheating potential of developments, therefore improving the resilience of all new buildings within the borough. However, this only accounts for new developments, leaving those in existing areas vulnerable to climate change events.

8.4 HRA Findings

Stage 1 - HRA Screening (Regulation 18)

- 8.4.1. There are no Habitats sites within LBTH's administrative area, however there are two Habitats that fall within the identified 7.2km Zone of Influence of the borough boundary and as such there will be implications for some of these Habitats sites from the policies of the Local Plan.
- 8.4.2. A number of policies have been screened-out due to their nugatory or beneficial effects on Habitats sites, but three policies were screened-in (HF1 – Meeting Housing Needs, EG2 – New Employment Space and BO2 Open Spaces and the Greed Grid networks) for their further consideration at Stage 2 AA. These policies have potential for LSE on nearby Habitats sites relating to increased traffic (and therefore impacts on air quality) and increased public access, recreational and development pressures.
- 8.4.3. Given the possibility of LSE associated with the screened-in interventions, further, detailed assessment was considered necessary to satisfy the requirements of the Habitats Regulations as the Local Plan emerges.
- 8.4.4. It is also not possible to rule out in-combination LSE on Habitats sites as a result of policies in the emerging LBTH Local Plan when considered with other strategic plans based on the findings of the screening assessment and a review of the HRAs supporting Local Plans for adjacent authorities.

Stage 2 - Appropriate Assessment (Regulation 19)

- 8.4.5. At Stage 2 Appropriate Assessment, further site-specific assessment was carried out relating to specific allocations under Policies HF1 and EG2, including in-combination effects considered with other strategic plans.
- 8.4.6. Policy BO2 was subject to further consultation with the LBTH and subsequently concluded based on the geographical limitations of that Policy that an impact pathway would not reasonably be present to result in adverse effects upon the integrity of the Habitats sites .
- 8.4.7. Following the Appropriate Assessment, site-specific consideration for site allocations and air quality under Policies EG2 and HF1 resulted in a conclusion when taking into account the qualitative evidence, policy drivers (including London Plan and Local Plan policies) and measures within Tower Hamlets' Transport Strategy, the evidence points towards no impact pathway which could give rise to effects above a 'de minimis' threshold.
- 8.4.8. Air quality considerations for Lee Valley SPA and Ramsar concluded that there was no evidence of an adverse effect on qualifying features via this impact pathway, but also that the qualifying feature (Bittern) for which air quality is indicated as a possible pressure or threat is not anticipated to be present within the components of the SPA/Ramsar within the Zone of Influence of LBTH.

- 8.4.9. Water resources pressures on Lee Valley SPA and Ramsar were considered to not result in an adverse effect on site integrity as a result of the LBTH Local Plan, considered through the outcomes of the in-combination growth as presented in the Thames Water adopted (2019) and Draft (2024) Water Resources Management Plan¹⁸¹⁹.
- 8.4.10. Recreational disturbance pressure was considered for both Epping Forest and for Lee Valley SPA and Ramsar at Appropriate Assessment. For Epping Forest, a conclusion of no adverse effect on site integrity has been reached due to a lack of pathways between LBTH (as opposed to 'as the crow flies' distances), the reasons for visits to Epping Forest as derived from published visitor surveys, and the presence of more extensive and equally attractive green spaces closer to LBTH for those activities.
- 8.4.11. Recreational disturbance effects on Lee Valley SPA and Ramsar have been assessed as resulting in no adverse effect on site integrity due to the site elements within the Zone of Influence of LBTH (a component of the overall SPA and Ramsar in the Lee Valley) being wholly within the managed environment of Walthamstow Wetlands and Thames Water reservoirs complex, with controlled and managed access.
- 8.4.12. The conclusion of this Habitats Regulations Assessment is that the majority of Local Plan Policies have no impact pathway relevant to the Habitats sites within proximity of LBTH and no Likely Significant Effect is expected.
- 8.4.13. For three Policies associated with site allocations and access to green space, further consideration has been necessary at Appropriate Assessment, resulting in a conclusion of no adverse effects on site integrity being identified. In two instances this has included consideration of mitigation, but these measures are already in place and functioning, or proposed to address in-combination effects as part of strategic infrastructure delivery, not reliant on specific actions undertaken by LBTH.

9 Cumulative Effects

9.1 Introduction

9.1.1. The SEA Regulations require that cumulative effects are considered when identifying likely significant effects. Cumulative effects arise, for instance:

- Where several individual policies and sites have a combined effect on an objective; or
- Where several policies and sites each have insignificant effects but together have a significant effect.

9.1.2. The significance of cumulative effects resulting from a range of activities, or multiple incidences of one activity, may vary based on factors such as the nature of the proposed sites and policies and the sensitivity of the receiving communities and environment.

9.1.3. This section therefore presents the findings of the following:

- Consideration of how different proposed policies and sites within the LBTH may interact and cause cumulative effects on a receptor (Intra-project effects); and
- How the proposed policies and sites within LBTH could cause cumulative effects in association with other plans, policies and projects in the surrounding area (Inter-project effects).

9.2 Intra-Project Effects

9.2.1. The IIA assessment of both policies and strategic sites drew out potential intra-project cumulative effects. These have been identified in **Table 9-2** below.

9.2.2. **Table 9-1** below outlines the key to effects for intra-project cumulative effects.

Table 9-1 – Key to Cumulative Effects

Effect	Key
Positive cumulative effect	+
Negative cumulative effects	-
Mixed cumulative effects	+/-
No overall cumulative effects	0

Table 9-2 - Intra-Project Effects Summary

IIA Objective	Site Allocations	Delivering the Local Plan	Homes for the Community	Clean and Green Future	People Places and Spaces	Inclusive Economy and Good Growth	Town Centres	Community Infrastructure	Biodiversity and Open Space	Movement and Connectivity	Reuse, Recycling and Waste	Summary of Effects
IIA1: Population and Equalities	+	+	+	+	+	+	+	+	+	+	0	<p>There is potential for positive cumulative effects if multiple developments were to arise from the Local Plan. These developments are likely to provide improved infrastructure for current and future populations within Tower Hamlets.</p> <p>However, pressure could be placed on existing services due to increased population demands arising from multiple developments, leading to cumulative negative effects. There is also potential for a cumulative increase in disturbance to existing local residents.</p> <p>Additionally, the Local Plan promotes inclusive design, particularly through the people places and spaces, town centres, and community infrastructure policies, improving access to all social groups inclusively.</p>
IIA2: Human Health	+/-	+	+	+	+	+	+	+	+	+	+	<p>There is a potential for negative cumulative effects to result if multiple housing developments were to come forward due to the increased strain on existing community health facilities and the potential increased demand from new populations.</p> <p>However, community infrastructure policies and some of the proposed developments include the provision of new community facilities and services, such as health provisions and public leisure facilities. Therefore, this could result in positive cumulative effects on health and wellbeing.</p> <p>The provision and improvements to the public realm and open spaces, as part of some of developments and policies, would result in positive effects on the health and wellbeing of the population in Tower Hamlets.</p>
IIA3: Economy	+	+	+	0	+	+	+	+	0	+	0	<p>There is the potential for positive effects on the economy if multiple large-scale developments were to come forward. These developments will provide a substantial amount of office space and jobs, as well as housing provisions, which will help to improve connectivity between employment centres and the housing markets. Multiple site allocations well located to retail centres will likely improve footfall in these areas, improving their vitality.</p> <p>Developments are further supported by the Local Plan's economy and town centre policies which aim to support existing office, industrial and warehouse spaces. This coupled with potential new developments could help to attract further inward investment and provide employment opportunities.</p>

IIA Objective	Site Allocations	Delivering the Local Plan	Homes for the Community	Clean and Green Future	People Places and Spaces	Inclusive Economy and Good Growth	Town Centres	Community Infrastructure	Biodiversity and Open Space	Movement and Connectivity	Reuse, Recycling and Waste	Summary of Effects
IIA4: Employment	+	+	+	+	0	+	+	+	0	0	+	There is potential for positive cumulative effects on employment if multiple employment and economic developments were to come forward. These developments also have the potential to increase access to public transport which will help communities within Tower Hamlets to be better connected to jobs, services and facilities.
IIA5: Housing	+	+	+	+	+	0	0	0	0	0	+	There is potential for positive effects if multiple housing developments within Tower Hamlets were to come forward. These developments will help to meet Tower Hamlets housing target of 52,125 new homes across the borough between 2023-2038 and increase the provision of affordable homes, reducing the significant barriers to housing prevalent in many areas of the borough. There is also potential for cumulative improvements to housing quality and standards across the borough, by taking into account the needs of different groups in the community Adequate provision of wheelchair adaptable homes have the potential to raise accessibility standards and promote inclusion and community cohesion.
IIA6: Crime and Safety	+	+	+	0	+	0	+	+	+	+	+	<p>It is assumed that all new developments will be built to a high standard of safety. There may be potential for positive cumulative effects positive from developing the land to provide housing and public realm improvements, particularly if designing out crime principles are applied.</p> <p>There is potential for negative cumulative effects where the provision of student rooms is brought forward simultaneously, especially in areas with existing student accommodation. Adverse effects on the amenity of neighbouring residents and businesses, particularly in relation to noise and anti-social behaviour, is of particular concern.</p> <p>Policies support high quality design and landscaping which can also help to generate a sense of pride and ownership within the community, resulting in the potential to reduce crime rates further.</p>
IIA7: Transport	+/-	+	+	+	+	+	+	+	+	+/-	+	<p>There is the potential for positive cumulative effects on sustainable transport if multiple large scale housing developments were to come forward within Tower Hamlets.</p> <p>Most new developments will help to improve access to sustainable transport through improvements to pedestrian and cycle connections, making active travel more appealing to the population within Tower Hamlets. Access to public transport (tube, bus, and rail) will also be improved as part of the developments.</p>

IIA Objective	Site Allocations	Delivering the Local Plan	Homes for the Community	Clean and Green Future	People Places and Spaces	Inclusive Economy and Good Growth	Town Centres	Community Infrastructure	Biodiversity and Open Space	Movement and Connectivity	Reuse, Recycling and Waste	Summary of Effects
												<p>This is further supported by the Local Plan policies which will ensure that new development is located in suitable areas where the transport requirements can be met in a sustainable manner, and which actively encourages travel by sustainable modes.</p> <p>The maximisation of parking in some locations with poor PTAL scores (as per Policy MC4) could see a cumulative increase in private vehicle use particularly at those sites which are located in areas with low PTAL scores such as Ailsa Road, Leven Road and Aberfeldy Estate.</p>
IIA8: Accessibility	+	+	+	0	+	+	+	+	+	+	0	<p>There is the potential for positive cumulative effects on accessibility if multiple developments were to come forward. The Local Plan supports enhancements to connectivity and accessibility of public transport, as well as walking and cycling. People, places and spaces and town centres in particular includes measures for accessible public spaces, improving access to all groups inclusively</p>
IIA9: Biodiversity and Natural Capital	-	+	+/-	+	+	-	0	+/-	+	+/-	+/-	<p>There is the potential for negative cumulative effects on biodiversity if multiple large scale housing developments and employment developments were to come forward. Given that a large number of housing allocations are located within Sites of Importance for Nature Conservation, there's potential for a cumulative loss of these sites.</p> <p>Depending upon the number and type of options selected and their proposed location, there is potential for a cumulative loss of land, which could lead to damaged and fragmented habitat connectivity.</p> <p>However, there is the potential for positive cumulative effects. There is potential for the development of additional green spaces, and the inclusion of green infrastructure within developments, that may provide biodiversity enhancements and comply with upcoming Biodiversity Net Gain requirements. Natural capital enhancements are possible through the connection of green spaces and protection of habitats linking population centres which may otherwise be lost or severed through a lack of maintenance or through other development.</p>
IIA10: Landscape and Townscape	+/-	+	+/-	+	+	+/-	+	+/-	+	+/-	+/-	<p>There is the potential for negative cumulative effects on landscapes and townscapes if multiple housing developments were to come forward in close proximity to parks and open spaces and areas with high townscape values. Neighbouring sites within areas designated for the management of views could result in adverse effects on the skyline. During construction of these new developments there is the potential for disturbance to the setting and tranquillity of these areas, temporarily harming the visual amenity.</p>

IIA Objective	Site Allocations	Delivering the Local Plan	Homes for the Community	Clean and Green Future	People Places and Spaces	Inclusive Economy and Good Growth	Town Centres	Community Infrastructure	Biodiversity and Open Space	Movement and Connectivity	Reuse, Recycling and Waste	Summary of Effects
												<p>However, positive cumulative effects may arise due to good design of the proposed housing developments, other developments such as employment, and improvements to the public realm, parks and open spaces and the natural environment. In combination, such improvements could enhance the landscape and townscape character over the long term.</p>
IIA11: Historic Environment	-	+	+/-	+	+	+/-	+/-	+/-	+	+/-	+/-	<p>There is the potential for negative cumulative effects on the historic environment if multiple developments were to come forward in close proximity to heritage assets. During construction of these new developments there is the potential for disturbance to the historic environment due to noise, vibration and temporary reductions in air pollution (dust soiling). During operation, these developments have the potential to negatively impact the setting of heritage assets if not sensitively designed.</p> <p>There is also potential for the loss of heritage assets (designated, non-designated and buried archaeology) through land take for housing developments.</p> <p>However, positive cumulative effects may arise due to the historically sensitive design of developments to fit in with the setting of any surrounding designated heritage assets. This will be further supported by People, Places and Spaces policies, which preserves and enhances the historic environment. Additionally, cumulative improvements to the public realm improve the setting of heritage assets. Proposals that prioritise the restoration of existing listed buildings will cumulatively maintain the built heritage for future generations, preserving Tower Hamlets' cultural and aesthetic history.</p> <p>Policies may also result in a cumulative improvement in air quality, and reduction in the degradation of heritage assets.</p>
IIA12: Flooding	+/-	+	+/-	+	+	-	0	0	+	0	0	<p>There is potential for cumulative increases in flood risk arising from housing developments, urban intensification and additional employment developments, due to increases in hard standing and sealed surfaces. Therefore, a large number of new developments could result in potential negative cumulative effects on flooding, particularly for those sites located within flood zone 3..</p> <p>Drainage measures are likely to be specific to each development, but there may be cumulative benefits if implemented borough-wide, particularly through the implementation of sustainable development, climate change and environmental sustainability and natural environment policies. The application of sustainable drainage</p>

IIA Objective	Site Allocations	Delivering the Local Plan	Homes for the Community	Clean and Green Future	People Places and Spaces	Inclusive Economy and Good Growth	Town Centres	Community Infrastructure	Biodiversity and Open Space	Movement and Connectivity	Reuse, Recycling and Waste	Summary of Effects
												systems (SuDS) across multiple schemes, especially in combination with green infrastructure (GI), can mitigate the impacts of flooding as a nature-based solution (NbS), contributing to urban resilience and climate change adaptation.
IIA13: Water Quality	-	+	0	+	+	0	0	0	+	-	-	<p>There is potential for cumulative increases in water transportation as a result of movement and connectivity and reuse, recycling and waste policies, increasing water pollution and decreasing water quality. There is also potential for decreases in water quality from housing developments as a result of increases in surface water runoff and impacts on surface water and groundwater, particularly from physical alteration as a result of development from housing allocations.</p> <p>Water quality measures are likely to be specific to each development, but there may be cumulative benefits if implemented borough-wide, particularly through the implementation of sustainable development, climate change and environmental sustainability and natural environment policies.</p> <p>There are potential cumulative benefits arising from delivering the local plan, clean and green future, people places and spaces, and biodiversity and open space policies through promoting water efficiency and improving water quality.</p>
IIA14: Air Quality	+/-	+	+/-	+	+	+/-	+	+	+	+/-	+/-	<p>Temporary negative cumulative effects have the potential to result during the construction phase, if multiple housing or employment developments, with overlapping construction periods, were to come forward. Construction of these developments may temporarily reduce the air quality and worsen air pollution from construction plant emissions, dust and construction traffic.</p> <p>However, if these developments are located with good connectivity to public transport facilities it will enable more people to use public transport modes instead of the use of a private car, helping to improve air quality. Improvements to pedestrian and cycle connections may further reduce reliance on private cars and encourage low-emission sustainable and active travel, in turn providing health benefits. Therefore, there is also the potential for positive cumulative effects to result if multiple housing developments were to come forward.</p> <p>The maximisation of parking in some locations with poor PTAL scores (as per Policy MC4) could see a cumulative increase in private vehicle use particularly at those sites which are located in areas with low PTAL scores such as Ailsa Road, Leven Road and Aberfeldy Estate. This may lead to</p>

IIA Objective	Site Allocations	Delivering the Local Plan	Homes for the Community	Clean and Green Future	People Places and Spaces	Inclusive Economy and Good Growth	Town Centres	Community Infrastructure	Biodiversity and Open Space	Movement and Connectivity	Reuse, Recycling and Waste	Summary of Effects
												Policies set out within Delivering the Local Plan, Clean and Green Future, People, Places and Spaces, Town Centres, Community Infrastructure, Biodiversity and Open Space, and Movement and Connectivity themes all help to improve air quality, through measures including low or zero emission transport, increasing accessibility to public transport, increase green infrastructure which will help to reduce air pollution.
IIA15: Climate Change	+/-	+	+	+	+	0	0	0	+	0	0	<p>The addition of increased use of hard standing surfaces as part of the proposed housing developments will increase surface water runoff. Therefore, a large number of new developments could result in potential negative cumulative effects on flooding, particularly for those developments located within flood zone 3.</p> <p>However, a number of policies within delivering the local plan, homes for the community, clean and green future, people places and spaces, and biodiversity and open space help to improve climate resilience through encourage the incorporation of SUDs which will help to reduce overall flood risk within the Borough. These policies also aim to manage heat risk, both internally and externally. These policies will help to provide a cumulative increase in resilience to climate change and the urban heat island (UHI) effect within the borough.</p>
IIA16: Greenhouse Gases	+/-	+	+/-	+	+	-	0	-	+	+/-	+/-	<p>If multiple developments were to come forward there is the potential for these developments to be resource intensive and have high levels of embodied carbon.</p> <p>However, policies set out in clean and green future, people places and spaces, delivering the local plan, and biodiversity and open space all support a transition towards reducing GHG emissions through reductions in energy use, vehicle reliance, or low levels of embodied carbon. These alongside the support for sustainable transport modes, could cumulatively reduce GHGs within the borough.</p>
IIA17: Waste	+/-	+	-	+	+	-	0	-	0	-	+	<p>The Local Plan supports the re-use of materials and the minimisation of waste within developments, predominantly through the Reuse, Recycling and Waste policies. The implementation of circular economy principles and the re-use of materials within developments also contributes to positive cumulative effects.</p> <p>There is potential for cumulative increases in waste produced by demolition, excavation, and construction resulting from developments arising from the Local Plan, including housing and employment developments</p>

IIA Objective	Site Allocations	Delivering the Local Plan	Homes for the Community	Clean and Green Future	People Places and Spaces	Inclusive Economy and Good Growth	Town Centres	Community Infrastructure	Biodiversity and Open Space	Movement and Connectivity	Reuse, Recycling and Waste	Summary of Effects
IIA18: Efficient use of Resources	+/-	0	+/-	+	+	+	+	+	+/-	-	0	<p>The Local Plan promotes the efficient use of land and resources where possible, in a way that makes as much use of previously developed land and brownfield sites as possible. The majority of site allocations are located on either previously developed land or brownfield sites, resulting in positive cumulative effects. However, there are a number of new allocations where there is potential for land take to occur.</p> <p>Some other developments which may arise out of the Movement and Connectivity and Homes for the Community, could result in developments which may not occur on previously developed land or brownfield sites and could result in a cumulative loss of more valuable land, including MOL.</p>

9.3 Inter-Project Effects

9.3.1. **Table 9-3** below outlines the sources of potential inter-cumulative effects, whilst **Table 9-4** details the cumulative effects identified for each of the IIA Topics in relation to these policies and plans. This uses the same key to effects as set out in **Table 9-1** above.

Table 9-3 – Sources of Inter-Cumulative Effects

Policy or Plan	Plan Details
The London Plan, 2021	<p>The London Plan is the Spatial Development Strategy for Greater London and acts as a framework and a vision for the development of London over the next 20-25 years.</p> <p>The London Plan supports major development of London’s growth corridors and Opportunity Areas (areas that will see the most significant change), which have the potential to deliver a substantial number of new homes and jobs in London. The Plan sets out three Opportunity Areas (associated with Crossrail 2) which have the potential to cause cumulative effects in the borough. The boundaries of these Opportunity Areas are yet to be defined. The borough also sits within the Crossrail 2 South Growth Corridor.</p>
Crossrail 2	<p>Crossrail 2 is a proposed rail route in the South East, running from nine stations in Surrey to three in Hertfordshire, providing a new North–South rail link across Greater London, and helping to reduce congestion.</p> <p>The route would free up space on the existing congested SW mainline and would enable more local services to central London that bypass the most congested stations. Trains would likely run south west of Wimbledon serving lines to Epsom, Chessington South, Hampton Court and Shepperton.</p>
Liverpool Street Station	<p>Liverpool Street Station is located in the neighbouring City of London. The station is the busiest nationally, with up to 135 million people using the station annually. Passengers already experience overcrowding, poor accessibility, and limited connectivity. The proposed transformation of the station will deliver greater accessibility and a world-class passenger experience.</p>
55 Bishopsgate	<p>The scheme comprises a 63 storey and 22 storey mixed-use buildings, that will feature a free to visit public roof top, 103,000 sq metres of workspace, auditorium, meeting spaces and spaces to support events and pop-ups. At 284 meters tall, 55 Bishopsgate will become the third tallest tower in the Square Mile.</p>

Policy or Plan	Plan Details
One Exchange Square	<p>Located in the City of London, the 13-storey building will deliver 428,000 sq ft of high-quality workspace and 15,000 sq ft of retail, fronting both Bishopsgate and the newly redesigned Exchange Square.</p>
Mayor of London, Mayor's Transport Strategy, 2021/22	<p>The Mayor's Transport Strategy sets out policies and proposals to reshape transport in London over the next two decades (up to 2038).</p> <p>This sets out plans to transform London's streets, improve public transport and create opportunities for new homes and jobs. Its aim is for 80% of all trips in London to be made on foot, by cycle or using public transport by 2041.</p> <p>The Strategy introduces a Healthy Streets approach. This aims to improve air quality, reduce congestion and help make London's diverse communities greener, healthier and more attractive places to live, work, play and do business.</p>
Neighbouring Local Plans	<p>Local plans in neighbouring boroughs (City of London, Hackney and Newham) influence cross-boundary development improvements.</p> <p>The plans include:</p> <ul style="list-style-type: none"> ■ City of London draft Local Plan (adoption June/July 2025) ■ Hackney Local Plan 2033 (adopted July 2020) ■ Newham Local Plan Review (Regulation 19) ■ London Legacy Development Corporation Local Plan 2020-2036 (adopted July 2020)
Tower Hamlets Transport Strategy and Neighbouring Local Transport Plans, Strategies and Implementation Plans	<p>Local Transport Plans and Implementation Plans enable Local Authorities to plan for transport in their areas. They can identify both strategic policy and implementation plans for delivering this policy. Therefore, they identify policy options for implementing transport improvements, including different modes of transport. They also prioritise a number of areas and schemes for development over the plan period.</p> <p>Local Implementation Plans in neighbouring boroughs (City of London, Hackney and Newham) influence cross-boundary transport improvements and major road networks.</p> <p>The plans include:</p> <ul style="list-style-type: none"> ■ Tower Hamlets Transport Strategy 2019-41 ■ City of London Transport Strategy, 2019 ■ Hackney Transport Strategy 2015-2025 ■ Newham Local Implementation Plan

Table 9-4 - Inter-Project Effects Summary

IIA Objective	The London Plan, 2021	Crossrail 2	Liverpool Street Station Redevelopment	55 Bishopsgate	One Exchange Square	Mayor of London, Mayor's Transport Strategy, 2021/22	Neighbouring Local Plans	Tower Hamlets Transport Strategy and Neighbouring Local Transport Plans, Strategies and Implementation Plans	Summary of Effects
IIA1: Population and Equalities	+/-	+	+	+	+	+	+/-	+	<p>There is a potential for negative cumulative effects to result if multiple developments were to come forward across the borough and within neighbouring local authorities due to the increased strain on existing community facilities due to the increased demand from new populations.</p> <p>Positive effects would result from the provision of new community facilities, employment opportunities and services as part of these major developments. New transport schemes (Crossrail 2) will improve access and connectivity to community facilities and services, especially for the people who cannot drive or do not have access to a private car.</p> <p>If multiple housing developments within the borough were to come forward, more people will be placed closer to community facilities and employment opportunities. This will result in positive cumulative effects.</p>
IIA2: Human Health	+/-	+	+	+	+	+	+/-	0	<p>There is a potential for negative cumulative effects to result if multiple housing developments were to come forward, due to the increased strain on existing community health facilities resulting from the increased demand from new populations.</p> <p>The provision and improvements to the public realm and open spaces, as part of some of these housing developments, will result in positive effects on the health and wellbeing of the population in the region. This is because access to greenspace can provide better mental health and wellbeing outcomes including reduced levels of depression, anxiety and enhanced quality of life, as well as helping to bind communities together, reduce loneliness, and mitigate the negative effects of air pollution and excessive noise.</p>
IIA3: Economy	+	+	+	+	+	+	+	+	<p>There is the potential for positive effects on the economy if multiple large-scale developments were to come forward, such as those in opportunity areas. These developments will provide a substantial amount of office space and jobs, as well as housing provisions, which will help to improve connectivity between employment centres and the housing markets.</p> <p>Greater cumulative connectivity will result through investments in sustainable transport developments such as Liverpool Street Station redevelopment and Crossrail. This will help communities to gain greater access to jobs, services and facilities. Access to</p>

IIA Objective	The London Plan, 2021	Crossrail 2	Liverpool Street Station Redevelopment	55 Bishopsgate	One Exchange Square	Mayor of London, Mayor's Transport Strategy, 2021/22	Neighbouring Local Plans	Tower Hamlets Transport Strategy and Neighbouring Local Transport Plans, Strategies and Implementation Plans	Summary of Effects
									activities provides the potentiality for people to participate in education, work, social, leisure, cultural, etc. Greater connectivity to Tower Hamlets may also bring about greater tourism opportunities.
IIA4: Employment	+	+	+	+	+	+	+	+	<p>There is the potential for positive effects on employment if multiple large-scale developments were to come forward, such as those in opportunity areas. These developments will provide a substantial amount of office space (particularly 55 Bishopsgate and One Exchange Square) and jobs, which will help to improve connectivity between employment centres.</p> <p>Greater cumulative connectivity will result through investments in sustainable transport developments such as Liverpool Street Station redevelopment and Crossrail. This will help communities to gain greater access to jobs, services and facilities.</p>
IIA5: Housing	+	+	0	0	0	0	+	0	Significant positive effects will result if multiple housing developments, such as those in opportunity areas, were to come forward in combination with Tower Hamlets' proposed development sites. These developments will help to meet Borough specific housing targets set out in their local plans and increase the provision of affordable housing.
IIA6: Crime and Safety	+	0	+	+	+	+	+	0	<p>It is assumed that all schemes and projects will be built to a high standard of safety. There may be potential for positive cumulative effects from developing the land to provide housing and public realm improvements, particularly if designing out crime principles are applied.</p> <p>Using high quality design and landscaping can also help to generate a sense of pride and ownership within the community, resulting in the potential to reduce crime rates further.</p>
IIA7: Transport	+	+	+	+	+	+	+	+	There is the potential for positive cumulative effects on sustainable transport if multiple transport schemes were to come forward, such as Crossrail 2 and neighbouring local transport/implementation plan. These developments will help to increase and improve the offering and connectivity of sustainable transport modes in the region.
IIA8: Accessibility	+	+	+	+	+	+	+	+	There is the potential for positive cumulative effects on accessibility if multiple transport schemes were to come forward, including Crossrail 2 and neighbouring local transport/implementation plan. These developments will help to increase and improve

IIA Objective	The London Plan, 2021	Crossrail 2	Liverpool Street Station Redevelopment	55 Bishopsgate	One Exchange Square	Mayor of London, Mayor's Transport Strategy, 2021/22	Neighbouring Local Plans	Tower Hamlets Transport Strategy and Neighbouring Local Transport Plans, Strategies and Implementation Plans	Summary of Effects
									the accessibility within Tower Hamlets and the wider London area, offering increased connectivity. Additionally, there is potential for positive cumulative effects as a result of accessibility to all users, including disabled and low-income users who may rely on public transportation through improved transportation.
IIA9: Biodiversity and Natural Capital	+/-	+/-	+/-	+/-	+/-	+/-	+/-	+/-	<p>Potential for cumulative loss, damage or fragmentation of statutory and non-statutory sites and habitats if multiple developments, across similar timeframes were to come forward. Although it is assumed that protected species would be mitigated at a project level, there are wider impacts on biodiversity.</p> <p>Positive cumulative effects may result through BNG over multiple development plans. These are likely to be driven by the London Plan 2021 policies where green infrastructure should be incorporated in design to increase biodiversity and if biodiversity is lost on site this should be mitigated by improving the quality or management of the rest of the site or deliver off-site compensation of better biodiversity value.</p> <p>Further positive cumulative effects will result from the development of sustainable transport schemes (Crossrail 2). This will increase access to public transport modes, reducing the use of a private car, and therefore reducing greenhouse gas emissions, journey times and congestion, resulting in increased tranquillity and air quality.</p>
IIA10: Landscape and Townscape	+/-	-	+/-	+/-	+/-	+/-	+/-	+/-	The provision of public realm improvements through the London Plan, Local Plans and transport/implementation plans could help to increase and improve the open space offering as well as the setting of the borough's townscape and landscape. This will result in positive cumulative effects; however, multiple developments could result in a cumulative loss of open spaces, and obstructions to key views, particularly from tall buildings without height restrictions.
IIA11: Historic Environment	+/-	-	+/-	+/-	+/-	+/-	+/-	+/-	<p>There is the potential for temporary negative cumulative effects on the historic environment if multiple housing developments and transport schemes were to come forward. During construction of these developments there is the potential for disturbance to the historic environment due to noise and air pollution.</p> <p>Positive cumulative effects will arise due to the historically sensitive design of the proposed housing developments to fit in with the setting of any surrounding designated heritage assets and Conservation Areas, including World Heritage Sites.</p>

IIA Objective	The London Plan, 2021	Crossrail 2	Liverpool Street Station Redevelopment	55 Bishopsgate	One Exchange Square	Mayor of London, Mayor's Transport Strategy, 2021/22	Neighbouring Local Plans	Tower Hamlets Transport Strategy and Neighbouring Local Transport Plans, Strategies and Implementation Plans	Summary of Effects
									<p>Positive cumulative effects will also result from the development of sustainable transport schemes (Crossrail 2). This will increase access to public transport modes, reducing the use of a private car, and therefore reducing greenhouse gas emissions, journey times and congestion, resulting in increased tranquillity and setting of the historic environment.</p> <p>Further potential positive effects could result due to the improved access to the historic environment by the new transport schemes which could present opportunities to generate activity and vitality.</p>
IIA12: Flooding	+/-	+/-	+/-	+/-	+/-	+/-	+/-	+/-	<p>The addition of increased use of hard standing surfaces as part of the proposed opportunity areas and transport developments will increase surface water runoff, therefore, resulting in potential negative effects on flooding.</p> <p>However, the proposed developments are likely to incorporate permeable surfaces and SUDs which will help to reduce flood risk if implemented county-wide. These are likely to be driven by the London Plan 2021 policies regarding flood risk management.</p>
IIA13: Water Quality	+/-	+/-	+/-	+/-	+/-	+/-	+/-	+/-	<p>There is potential for cumulative increase in surface water runoff and flood risk, and impacts on surface water and groundwater, particularly from physical alteration as a result of development. Drainage and water quality measures are likely to be specific to each development, but there may be cumulative benefits if implemented borough-wide.</p>
IIA14: Air Quality	+	+/-	+/-	+/-	+/-	+	-	+/-	<p>Temporary negative cumulative effects have the potential to result during the construction phase, if multiple developments were to come forward. Construction of these developments may reduce the air quality through an increase in particulate matter and dust.</p> <p>Positive cumulative effects will result through the development of sustainable transport schemes (Crossrail 2). In combination with new Local Plan sites and policies, this will increase access to public transport modes, reducing the use of a private car, and therefore reducing greenhouse gas emissions and improving air quality. Further positive cumulative effects will result from the reduction in journey times and congestion on the highway network.</p>

IIA Objective	The London Plan, 2021	Crossrail 2	Liverpool Street Station Redevelopment	55 Bishopsgate	One Exchange Square	Mayor of London, Mayor's Transport Strategy, 2021/22	Neighbouring Local Plans	Tower Hamlets Transport Strategy and Neighbouring Local Transport Plans, Strategies and Implementation Plans	Summary of Effects
IIA15: Climate Change	+	+	+	+/-	+/-	+	+/-	+/-	<p>Climate change adaptation measures are likely to be specific to each development, but there may be cumulative benefits if implemented across multiple plans (as set out in the London Plan, Mayor's Transport Strategy and neighbouring Local Plans).</p> <p>Temporary negative cumulative effects have the potential to result during the construction phase if multiple housing and commercial developments were to come forward. Construction of these developments may increase levels of greenhouse gas emissions through the embodied carbon associated with the construction and maintenance of the development. Investment in sustainable transport schemes, such as Crossrail 2, will have positive cumulative effects on climate change due to the reduction of private car use and therefore, greenhouse gas emissions.</p> <p>Positive cumulative effects have the potential to result if multiple housing and commercial developments were to come forward, due to the provision of public realm improvements and enhancements to biodiversity as part of the design. Further positive effects may result from low carbon and energy efficient design, which is resilient to the effects of climate change. Climate change adaptation measures are likely to be specific to each development,</p>
IIA16: Greenhouse Gases	+/-	+/-	+/-	+/-	+/-	+/-	+/-	+/-	<p>There may be cumulative benefits from transport initiatives (including Crossrail 2 and proposals set out in Mayor's Transport Strategy, and neighbouring transport/implementation plans) and low carbon developments (as set out in the London Plan and neighbouring local plans) in reducing greenhouse gases, however, increased development is also likely to increase transport related greenhouse gas emissions, particularly where this leads to increases in vehicular traffic as well as embodied carbon due to development.</p>
IIA17: Waste	+/-	-	-	-	-	-	+/-	+/-	<p>There is potential for negative cumulative effects on waste as a number of large-scale projects, such as HS2 and Crossrail 2 coupled with development in the borough, could lead to a large cumulative use of resources and production and disposal of waste during construction. There is potential for developments to encourage the sustainable use of resources and encourage re-use and recycling initiatives to minimise waste going to landfill.</p>

IIA Objective	The London Plan, 2021	Crossrail 2	Liverpool Street Station Redevelopment	55 Bishopsgate	One Exchange Square	Mayor of London, Mayor's Transport Strategy, 2021/22	Neighbouring Local Plans	Tower Hamlets Transport Strategy and Neighbouring Local Transport Plans, Strategies and Implementation Plans	Summary of Effects
IIA18: Efficient use of Resources	+/-	+/-	+/-	+/-	+/-	+/-	+/-	+/-	There is potential for negative cumulative effects on the efficient use of land as a number of large-scale projects, such as Crossrail 2, Liverpool Station, 55 Bishopsgate, One Exchange Square and Tower Hamlets Opportunity Area coupled with other development in the borough, could lead to a large cumulative loss of land, some of which may not be brownfield land. However, positive cumulative effects could arise if the majority of the of proposed developments are situated on brownfield sites.

10 Mitigation, Enhancements and Monitoring

10.1 Mitigation and Enhancement Measures

- 10.1.1. Mitigation of significant negative effects of the plan and enhancement of positive effects are a key purpose of IIA. The SEA Regulations require that mitigation measures are considered to prevent, reduce or offset any significant adverse effects on the environment of implementing the plan. The measures are known as ‘mitigation’ measures. Mitigation measures include both proactive avoidance of adverse effects and actions taken after potential effects are identified.
- 10.1.2. The mitigation measures proposed in **Table 10-1** are designed to avoid or reduce the effects identified as potentially negative through the policy assessments on the IIA Objectives. The table also includes enhancement measures, that aim to optimise positive impacts and enhance sustainability. Both enhancement and mitigation measures do not always sit within the control of the Local Plan and can be achieved through other plans and strategies.
- 10.1.3. Policy and site-specific mitigation measures have been included within **Appendix F and G**.

Table 10-1 – Proposed Mitigation and Enhancement Measures

IIA Objective	Mitigation/ Enhancement	Mechanism
IIA1 - Population and Equalities	Inclusive mobility guidance should be adhered to ensure designs are accessible for everyone.	Inclusion within preferred Local Plan policies Project level design and assessment and EqIA as part of subsequent EIA/ planning application
IIA1 - Population and Equalities IIA2 - Human Health	The loss of community facilities to make way for site allocations should be avoided. Where a loss can't be mitigated, these should be reprovisioned elsewhere.	Inclusion within preferred Local Plan policies Project level design and assessment Community engagement
IIA1 - Population and Equalities IIA2 - Human Health	Further assessment as part of scheme level design, should incorporate an evaluation of the provision of healthcare and education, to ensure that the current supply is sufficient in supporting new communities.	Project level design and assessment as part of subsequent EIA/ planning application
IIA1 - Population and Equalities IIA4 – Employment and skills	Employment should be focused on local residents in the first instance. Policies should aim to increase employment for all protected groups where barriers to employment and education exist (low-incomes, younger people, disabled).	Inclusion within preferred Local Plan policies
IIA1 - Population and Equalities	Community safety, health and equalities should be considered in design, for example, pedestrian networks, including linking new developments into existing infrastructure, lighting and other	Inclusion within Local Plan policies

IIA Objective	Mitigation/ Enhancement	Mechanism
IIA2 - Human Health IIA6 – Crime and Safety	safety design considerations, materials used (contrasting colours, non-slip surfaces), accessibility for all including those with reduced mobility or disability, well-being, affordability of schemes, active travel.	Project level Community Safety Assessment, EqIA and HIA as part of subsequent EIA/ planning application
IIA1 - Population and Equalities IIA7 – Sustainable Transport IIA8 - Accessibility	<p>Active travel infrastructure should be accessible and inclusive. Cycleways should provide enough space for adapted cycles such as tricycles, tandems and wheelchair cycles.</p> <p>Consideration should be made for removing other barriers towards active travel for disabled people and low income groups, such as affordability. The council should work with charities and other representative groups to help lower the cost of adapted cycles.</p> <p>It is likely that other forms of sustainable travel will be prevalent in the future, such as electric scooters. Parking and facilities for these schemes should be accessible and not present physical barriers to users.</p> <p>The Local Plan should also support community engagement with various groups prior the development of transport infrastructure.</p>	Inclusion within preferred Local Plan policies Project level design and assessment and EqIA as part of subsequent EIA/ planning application Tower Hamlets Transport Strategy 2019-2041 The Mayor’s Transport Strategy
IIA1 - Population and Equalities IIA2 – Health and Wellbeing	Where policies and site allocations make provision for open spaces and public realm improvements, there is a need for these spaces to be well designed and well lit, to ensure that they are safe and feel safe for all users, particularly after dark.	Inclusion within preferred Local Plan policies Project level design and assessment as part of subsequent EIA/ planning application

IIA Objective	Mitigation/ Enhancement	Mechanism
IIA6 – Crime and Safety	<p>Accessibility and safety could be improved in existing spaces by providing lighting, accessible signage, and auxiliary aids to people with reduced mobility.</p> <p>Accessible surfacing should be considered for wheelchair users and people with mobility restrictions.</p> <p>Opportunities for sensory stimulation should be maximised to ensure inclusive enjoyment of spaces.</p>	Community engagement
IIA1 - Population and Equalities IIA10 - Landscape and Townscape	Developments should seek to improve the public realm, including improving wayfinding and providing permeability through town centres to provide access to those with disabilities, or pushchairs.	Project level design and assessment as part of subsequent EIA/ planning application
IIA3 – Economy and Town Centres	Where sites are located within or in close proximity to local and neighbourhood shopping centres/ parades it is imperative that development does not detrimentally impact on the vitality of the designated centre.	Project level design and assessment Community engagement
IIA3 – Economy and Town Centres IIA4 – Employment and Skills	The loss of businesses should be avoided. Where it cannot be avoided, discussions with owners should be undertaken to ensure suitable alternative locations are identified and/or adequate compensation is provided particularly where businesses may need to be temporarily closed or relocated during construction.	Inclusion within preferred Local Plan policies Community engagement Project level design and assessment

IIA Objective	Mitigation/ Enhancement	Mechanism
	Alternative units should where possible be equivalent in size, layout, rent and connectivity to the existing site and considered suitable by the occupier.	
IIA4 – Employment and skills	Where new development comes forward in close proximity to existing shop frontages and businesses, there’s a need to ensure that they can remain open and maintain their existing business hours.	Inclusion within Local Plan policies Project level design and assessment as part of subsequent EIA/ planning application
IIA6 – Crime and Safety	<p>Development should incorporate designing out crime principles, particularly for those potential development sites located in areas with high levels of crime deprivation.</p> <p>Although crime is incorporated within the Local Plan, it currently doesn’t currently have its own standalone policy. Given the high levels of crime in some areas of the borough, reductions in crime could be better supported by planning policies.</p> <p>Development should consider the Handbook Creating Places That Work For Women and Girls²⁰.</p>	<p>Incorporation within the Local Plan policies</p> <p>Project level design and assessment as part of subsequent EIA/ planning application</p>

²⁰ London Legacy Development Corporation, Creating places that work for women and girls, Handbook for Local Authorities, Developer and Designers, July 2024 [online] <https://www.queenelizabetholympicpark.co.uk/about-us/how-we-work/handbook-creating-places-work-women-and-girls>

IIA Objective	Mitigation/ Enhancement	Mechanism
IIA9 – Biodiversity and Natural Capital	<p>Consideration needs to be given to the potential effects of construction of developments (noise, vibration and air pollution) on biodiversity.</p> <p>A Lighting Strategy should be prepared to minimise light spill onto retained or newly created habitat features.</p>	<p>Inclusion within Local Plan policies</p> <p>Project level design and assessment (including noise assessments/ surveys)</p> <p>Lighting Strategy</p>
IIA9 – Biodiversity and Natural Capital	<p>For those sites that incorporate existing green space, Phase 1 habitat surveys should be undertaken to identify any habitats and species.</p>	<p>Project level assessment</p>
IIA10 - Landscape and Townscape	<p>Care must however be taken to ensure that tall buildings in clusters do not appear to coalesce in views as this can have a significant visual impact and undermine legibility. Particular attention must be given to designated views.</p> <p>As outlined in the draft Tall Buildings SPD²¹ Applications for tall buildings, due to their exceptional nature, will need to provide the following supporting information to enable a thorough assessment of the proposals and design: survey plan and calculations, a 3D massing model, Tall Buildings Statement, Design and Access Statement, Townscape and visual impact assessment, Heritage impact statement, Physical impact</p>	<p>Scheme level design and planning application</p> <p>Application of the Tall Buildings SPD</p>

²¹ London Borough of Tower Hamlets, Tall Buildings SPD, Consultation Draft [online] available at: <https://talk.towerhamlets.gov.uk/tallbuildings>

IIA Objective	Mitigation/ Enhancement	Mechanism
	assessment, Movement statement, Building services strategy and Sustainability Statement (such as BREEAM/ Home Quality Mark).	
IIA10 - Landscape and Townscape IIA11 - Historic Environment	<p>New developments should seek to maximise sustainability benefits from existing landscape, townscape and heritage assets by valuing them inherently and for the wider services they provide.</p> <p>Development proposals should not harm, and should seek to make a positive contribution to, the characteristics and composition of Strategic Views and their landmark elements. Development proposals in designated views should comply with London Plan Policy HC4.</p>	<p>Historic Landscape Characterisation</p> <p>Project level landscape and visual impacts assessments as part of subsequent EIA/ planning application</p> <p>Heritage Impact Assessments</p>
IIA10 - Landscape and Townscape	Buildings within the London City Airport Aerodrome Safeguarded zone need adhere to stipulated height restrictions.	Project level design and planning applications
IIA11 - Historic Environment	<p>Promoters and designers should liaise closely with Tower Hamlets and Historic England to avoid or minimise negative effects, such as land take and light pollution, whilst seeking to maximise benefits, such as tranquillity.</p> <p>Where developments are being built and/or improved within, or close proximity to designated historic assets, visual effects assessment should be undertaken to determine magnitude of impact and possible mitigation.</p>	<p>Project level landscape and visual impacts assessments as part of subsequent EIA/ planning application</p> <p>Heritage Impact Assessments</p>

IIA Objective	Mitigation/ Enhancement	Mechanism
IIA11 - Historic Environment	Development proposals with the potential to affect World Heritage Sites or their settings should be supported by Heritage Impact Assessments.	Project level landscape and visual impacts assessments as part of subsequent EIA/ planning application Heritage Impact Assessments
IIA11 – Historic Environment	<p>Characterisation work should be undertaken to understand the potential impact of site allocations on historic places and inform assessments of an area’s capacity to accommodate development.</p> <p>Site specific studies, such as archaeological desk-based assessment and fieldwork, may also be necessary to provide adequate information.</p>	Historic Landscape Characterisation Archaeological desk based assessment
IIA10 - Landscape and Townscape IIA11 - Historic Environment	Sensitive design should be considered for any new developments within town centres to ensure positive effects on local heritage assets and landscapes.	Historic Landscape Characterisation Project level landscape and visual impacts assessments as part of subsequent EIA/ planning application
IIA10 - Landscape and Townscape	Care must however be taken to ensure that tall buildings in clusters do not appear to coalesce in views as this can have a significant visual impact and undermine legibility. Particular attention must be given to designated views.	Scheme level design as part of subsequent EIA/ planning application

IIA Objective	Mitigation/ Enhancement	Mechanism
	As outlined in the draft Tall Buildings SPD ²² Applications for tall buildings, due to their exceptional nature, will need to provide the following supporting information to enable a thorough assessment of the proposals and design: survey plan and calculations, a 3D massing model, Tall Buildings Statement, Design and Access Statement, Townscape and visual impact assessment, Heritage impact statement, Physical impact assessment, Movement statement, Building services strategy and Sustainability Statement (such as BREEAM/ Home Quality Mark).	
IIA14: Air Quality	A Dust Management Plan should be compiled prior to demolition and construction of new sites.	Project level Construction Environmental Management Plan (CEMP)
IIA15 – Climate Change and Resilience IIA16 – GHG Emissions	Development should ensure design that is resilient to the current and future risks of climate change i.e. extreme heat, cold and precipitation. This could include the use of locally available, renewable, or reclaimed resources, as these are often more resilient. New developments should incorporate renewable energy generation	Project level design and assessment as part of subsequent EIA/ planning application

²² London Borough of Tower Hamlets, Tall Buildings SPD, Consultation Draft [online] available at: <https://talk.towerhamlets.gov.uk/tallbuildings>

IIA Objective	Mitigation/ Enhancement	Mechanism
	methods, such as solar panels, to reduce the carbon emissions of the site.	
IIA12 – Flood Risk	<p>Sequential testing should be undertaken, to avoid sites with the highest flood risk. Where this isn't viable and proposed sites are located within flood zones 2 or 3 a full flood risk assessment should be undertaken.</p> <p>Scheme level design should also consider the incorporation features to reduce flood risks, both now and in future, in light of future precipitation changes associated with climate change. This could include features such as sustainable urban drainage solutions (SuDs), permeable paving and natural engineering such as tree planting.</p>	<p>Project specific transport plans/assessments as part of subsequent EIA/ planning application</p> <p>Incorporation within the Local Plan policies</p>
IIA12 – Flooding	Flood Risk Assessments should be undertaken for all developments located in Flood Zone 2 or 3. The inclusion of SuDS should be implemented where developments are located in flood zones.	Project level design and assessment as part of subsequent EIA/ planning application
IIA13 – Water Quality IIA18 – Waste	Vessels used to facilitate the movement of waste will need to adhere to the Maritime and Coastguard Agency Merchant Shipping (Prevention of Pollution by Sewage and Garbage from Ships) Regulations 2008 and other best practice to minimise pollution and effects on water quality.	Project level design and assessment as part of subsequent EIA/ planning application

IIA Objective	Mitigation/ Enhancement	Mechanism
IIA15 – Climate Change and Resilience IIA16 – GHG Emissions IIA17 – Waste IIA18 – Efficient use of resource	Any form of construction and operation should be undertaken as sustainably as possible, making use of tools and processes, such as circular economy, waste hierarchy and should consider BREEAM and BREEAM Infrastructure. Sustainable design and construction techniques should be promoted, such as low energy lighting and opportunities for renewable energy regeneration.	Project level design and assessment as part of subsequent EIA/ planning application CEMP/ OEMP
IIA17 – Waste IIA18 – Efficient use of resource	Proposed sustainable transport infrastructure such as cycle lanes, bus lanes and footpaths, should where appropriate, prioritise the reallocation of the highway network.	Project level design and assessment as part of subsequent EIA/ planning application Tower Hamlets Transport Strategy 2019-2041
IIA17 – Waste IIA18 – Efficient use of resource	A Site Waste Management Plan should be prepared as part of the CEMP and Operational Environmental Management Plan (OEMP).	Project level design and assessment – CEMP and OEMP

10.2 Monitoring Measures

- 10.2.1. The SEA Regulations require that monitoring is undertaken on a plan so that the significant effects of implementation can be identified, and remedial action imposed. The purpose of the monitoring is to provide an important measure of the sustainability outcome of the final plan, and to measure the performance of the plan against sustainability objectives and targets. Monitoring is also used to manage uncertainty, improve knowledge, enhance transparency and accountability, and to manage sustainability information.
- 10.2.2. The aim of monitoring is to check whether the plan is having the significant effects that were predicted in the IIA, and to deal with any unforeseen problems. Those remaining significant effects (albeit uncertain effects) that remain following the implementation of the mitigation and enhancement measures above include the following:
- IIA1 and IIA2: The effects of a growing population on community facilities and services;
 - IIA5: The number of affordable and adaptable housing provided;
 - IIA9: The number of new developments achieving biodiversity net gain;
 - IIA10: The potential effects on key views;
 - IIA12: Flood risk of new development;
 - IIA16: Levels of embodied carbon from new development; and
 - IIA18: Levels of waste generations on new developments.
- 10.2.3. It should be noted that these uncertain effects are generally where limited scheme information is currently available.
- 10.2.4. **Table 10-2** below sets out those monitoring measures which could be suitable in monitoring those uncertain residual effects outlined above. Targets have either been taken from the preferred Local Plan or the London Plan. These are subject to change as the plan develops.

Table 10-2 – Proposed Monitoring Measures

Potential Effects	Potential Key Performance Indicators	Targets (as set out in the draft Local Plan or London Plan)
IIA1 and IIA2: The effects of a growing population on community facilities and services	<p>The number of new healthcare and community services provided.</p> <p>Ratio of patient-to-staff numbers at GP practices</p>	No targets included as part of the Local Plan or London Plan
IIA5: The number of affordable and adaptable housing provided	<p>The number/ percentage of affordable homes being delivered within the borough.</p> <p>The number/ percentage of adaptable homes or specialist accommodation being delivered within the borough.</p>	<p>Policy HF2 of the Local Plan:</p> <ul style="list-style-type: none"> ■ Deliver a minimum of 40% affordable housing (by habitable room) on-site when seeking to provide 10 or more new residential units; ■ Deliver a minimum of 50% affordable housing (by habitable room) on-site through the redevelopment of affordable housing, estate regeneration schemes and industrial land for residential use; and ■ Deliver the required amount of affordable homes in accordance with a 85% social homes and 15% intermediate homes tenure split. <p>Policy D7 of the London Plan:</p>

Potential Effects	Potential Key Performance Indicators	Targets (as set out in the draft Local Plan or London Plan)
		<ul style="list-style-type: none"> Delivery of at least 10% of dwellings meet Building Regulation requirement M4(3)²³ 'wheelchair user dwellings'
IIA9: The number of new developments achieving biodiversity net gain	The number of new developments achieving biodiversity net gain	<p>Policy BO4 of the draft Local Plan:</p> <p>To deliver a minimum 2.5 biodiversity unit per hectare increase or 30% gain (whichever is higher) in habitat value for wildlife compared with the pre-development baseline</p>
IIA10: The potential effects on key views	Number of tall building applications granted planning permission within key view areas	No targets included as part of the Local Plan or London Plan
IIA11: Potential negative effects from new developments on heritage assets	<p>Number of developments within a conservation area</p> <p>Number of applications granted planning permission contrary to advice from Historic England</p>	No targets included as part of the Local Plan or London Plan

²³ HM Government, The Building Regulations, Access to and Use of Buildings (M), 2011 [online] available at: https://assets.publishing.service.gov.uk/media/5a7f8a82ed915d74e622b17b/BR_PDF_AD_M1_2015_with_2016_amendments_V3.pdf

Potential Effects	Potential Key Performance Indicators	Targets (as set out in the draft Local Plan or London Plan)
IIA12: Flood Risk	Number of Environment Agency objections to planning applications.	No targets included as part of the Local Plan or London Plan
IIA16: Levels of embodied carbon from new development.	The number of development proposals that meet London’s Energy Transformation Initiative (LETI) 2020 best practice embodied carbon emission targets	Policy CG4 of the draft Local Plan: <ul style="list-style-type: none"> ■ Domestic buildings should achieve embodied carbon limits of 500kg CO2/m² or less; and ■ Non-domestic buildings should achieve embodied carbon limits of 600kg CO2/m² or less.
IIA18: Uncertain effects of waste generations on new developments	<p>The amount of construction and demolition waste going to landfill (through Site Waste Management Plans or BREEAM Infrastructure)</p> <p>The number of new developments which incorporate waste saving initiatives</p> <p>Household and commercial waste and recycling figures for the borough</p>	As per Policy SI 7 of the London Plan: <ul style="list-style-type: none"> ■ Zero biodegradable or recyclable waste to landfill by 2026 ■ Meet or exceed the municipal waste recycling target of 65% by 2030 ■ Meet or exceed the targets for each of the following waste and material streams: <ul style="list-style-type: none"> • a) construction and demolition – 95% reuse/ recycling/ recovery • b) excavation – 95% beneficial use

11 Recommendations

- 11.1.1. This section sets out the recommendations identified throughout the IIA assessment. These have been taken from the IIA Report, HIA, EqIA and HRA. It should be noted that these are different from the mitigation measure outline in **Section 11** above, as they focus on potential changes to the Local Plan, rather than measures identified in response significant effects.
- 11.1.2. Some of these changes have been made to the Local Plan since the Regulation 18 consultation, whilst some additional measures from the preferred plan have since been identified. Some recommendations fall out of scope of the Local Plan and may be delivered by other plans and strategies.
- 11.1.3. **Table 11-1** below outlines these recommendations.

Table 11-1 – IIA Recommendations

Item	Recommendation	Source Document
Policy HF1	<p>If using mandatory ballots, residents need to be informed and engaged in the process of change for it to be a meaningful process. It is suggested that resources are allocated to allow assistance with the co-design of schemes with the community.</p> <p>Where engagement is low, measures should be explored to increase this and low engagement should not form a barrier to schemes being approved. It could be beneficial to use consultants for this exercise who are experienced in working with groups where engagement may be low.</p>	EqIA
Policy CG4	<p>Appropriate subsidies should be considered to ensure low-income groups can access sustainable retrofitting with no additional financial barriers.</p> <p>Retrofitting should not increase property prices in order that first time buyers remain able to buy into the property market and not be priced out.</p>	EqIA

Item	Recommendation	Source Document
Policy CG6	Part 8 could be reworded to <i>'Nature based solutions such as natural drainage systems and planted landscapes...'</i>	IIA Policy Assessment Appendix F
Policy CG9	Policy CG9 could benefit from including the promotion of public or active travel modes within the policy, rather than just stating electric vehicles or sustainable movement patterns.	IIA Policy Assessment Appendix F
Policy PS5	For Part G, it may be more inclusive to include all local groups and genders rather than specifically women. Policy supporting text could also include further statistics on LGBTQIA+ communities as it is currently quite focused on male and female genders. Additional reference could be made to the Tackling Violence Against Women and Girls Strategy (2021) and Inclusive Spaces and Places for Girls and Young People, An Introduction for Local Government (2023).	IIA Policy Assessment Appendix F
Policy PS1, PS3 and PS4	These policies could incorporate elements of climate resilient design. This could include specific aspects such as rainwater and flood attenuation, SuDs, permeable paving, green roofs etc. Reference could also be made to urban creep.	IIA Policy Assessment Appendix F
Policy PS1	In instances where tall buildings are required to meet high density requirements of this policy, potential for social isolation must be addressed through the provision of high quality private communal open space as well as shared ground floor facilities occupants of the building can use.	EqIA/ HIA
Policy PS2	Accessibility must be considered at all stages of tall building design, construction and operation so as to not exclude groups such as wheelchair users.	EqIA/ HIA

Item	Recommendation	Source Document
	Potential for social isolation must be addressed through the provision of high quality private communal open space as well as shared ground floor facilities occupants of the building can use.	
Policy PS3	PS3 touches on efficiency as part of design which could be strengthened by inclusion (either within the policy or supporting text) on what type of efficiency measure these could include i.e. water efficient measures, energy efficient measures etc.	IIA Policy Assessment Appendix F
Policy PS9	Shopfronts act as key sites to reduce sensory overload for the neurodivergent population of the borough. Enhancement of appearance should not compromise the accessibility of neurodivergent people.	EqIA
Policy PS10	Advertisement content including hot food takeaway and betting should consider placement away from areas where vulnerable groups such as children and low-income groups may frequent.	EqIA/ HIA
Policy EG1	This policy could benefit from including new employment space to provide a range of diverse employment opportunities, from a range of sectors.	IIA Policy Assessment Appendix F
Policy TC2	This policy could benefit from including accessibility requirements for town centres under 4 (b).	IIA Policy Assessment Appendix F
Policy TC7	More emphasis should be placed on ensuring that night time uses are safe for all, not just women and girls but also minority ethnic groups and members of the LGBTIQ+ community. An additional point could therefore be added to Policy	IIA Policy Assessment Appendix F EqIA

Item	Recommendation	Source Document
	TC7 which outlines more specific safety measures such as additional policing or citizen type patrols, CCTV and lighting.	
Policy CI1	The policy should ensure that improvements to existing community facilities are made evenly across space in the borough so that all residents have access to improved facilities.	EqIA
Policy CI2	<p>the explanation of Part 2 could benefit from including further explanation as to how inclusive design can improve access to disabled users and those with mobility issues.</p> <p>Policy CI2, Part 2 could also benefit from including the promotion of schemes to provide access to low-income groups.</p>	IIA Policy Assessment Appendix F
Policy BO1	<p>Part b could be changed to "maintain and enhance" the open character of MOL</p> <p>Part d (ii) could be amended to include safety measures, such as lighting and clear lines of sight.</p>	IIA Policy Assessment Appendix F
Policy BO2	<p>Accessible surfacing should be considered as part of the policy for mobility aid users and people with mobility restrictions.</p> <p>Opportunities for sensory stimulation should be maximised to ensure inclusive enjoyment of spaces.</p> <p>Where practicable, sensory planting should be encouraged to aid the neurodiverse population in the borough.</p>	EqIA/ HIA
Policy BO4	This policy should also make reference to the requirements of BNG under the Environment Act 2021 and Defra's Biodiversity Metric. Part 2 of the policy is quite complicated and some of the text could be moved to the supporting text.	IIA Policy Assessment Appendix F

Item	Recommendation	Source Document
Policy BO6	Part 2 (b) could include mention of suggested barriers to tackle barriers to inclusion and equality. Recreational spaces should be accessible by pushchair so parents with younger children are still able to access facilities.	IIA Policy Assessment Appendix F EqIA/ HIA
Policy BO7	Food growing sites should be located in areas of best air quality in order that food grown is of a high standard and achieves good dietary nutrition and health.	EqIA/ HIA
Policy RW2	Policy RW2 could benefit from acknowledging and implementing circular economy principles within the development of new waste sites.	IIA Policy Assessment Appendix F
Policy MC2	The policy could benefit from including mention of how sustainable transport can improve access to those on low-incomes.	IIA Policy Assessment Appendix F
Policy MC4	This policy should reconsider the maximisation of car parking, and focus on improving sustainable transport links where PTAL scores are low, rather than encourage further use of private vehicles. This will disproportionately affect those groups (such as low income groups) who may not have access to private vehicles.	IIA Policy Assessment Appendix F EqIA
Policy MC4	Policy should ensure that cycle parking should be high-quality and suitable for a range of cycles including adapted cycles and cargo bikes as per the London Cycling Design Standards ²⁴ .	EqIA

²⁴ Transport for London, London Cycling Design Standards, 2014 [online] available at: <https://content.tfl.gov.uk/lcds-chapter1-designrequirements.pdf>

Item	Recommendation	Source Document
	<p>Management should protect priority bays to maintain accessibility for protected groups.</p> <p>Policy should ensure that EV charging points should adhere to the British Standards Institution’s Electric vehicles Accessible charging – Specification (PAS 1899:2022)²⁵</p>	
Homes for the Community	<p>It should be noted that the Decent Home Standard is currently applicable to the social rented sector whilst the Decent Homes Standard in the private rented sector is undergoing consultation.</p> <p>More information could be provided on what the policies mean by 'sustainable' residential development i.e., does this include renewable energy regeneration, use of sustainable materials, well located to sustainable transport etc.</p>	IIA Policy Assessment Appendix F
Policy HF1	Like Policy HF6, HF1 should also ensures that developments employ high quality design and is sympathetic to local character and heritage.	IIA Policy Assessment Appendix F
Policy DV6	The policy could incorporate community engagement within the policy. It is implied within the supporting text but the important role it plays in adding social value to new developments isn't overly clear.	IIA Policy Assessment Appendix F

²⁵ British Standards Institution’s Electric vehicles Accessible charging – Specification (PAS 1899:2022) [online] available at: <https://www.bsigroup.com/en-GB/our-services/events/webinars/pas-1899-launch/#:~:text=PAS%201899%3A2022%20is%20a, and%20indicators%20to%20be%20provided.>

Item	Recommendation	Source Document
All Sites	Where possible, further details should be provided on the proposed Site Allocations to ensure a more accurate assessment. This includes quantum and types of housing, percentage of affordable housing as well as additional community facilities.	IIA Site Assessment Appendix G
Bishopsgate Goods Yard Housing Allocation	The 5-a-side football pitches should be re-provisioned elsewhere in the borough, to avoid a loss in community facilities.	IIA Site Assessment Appendix G

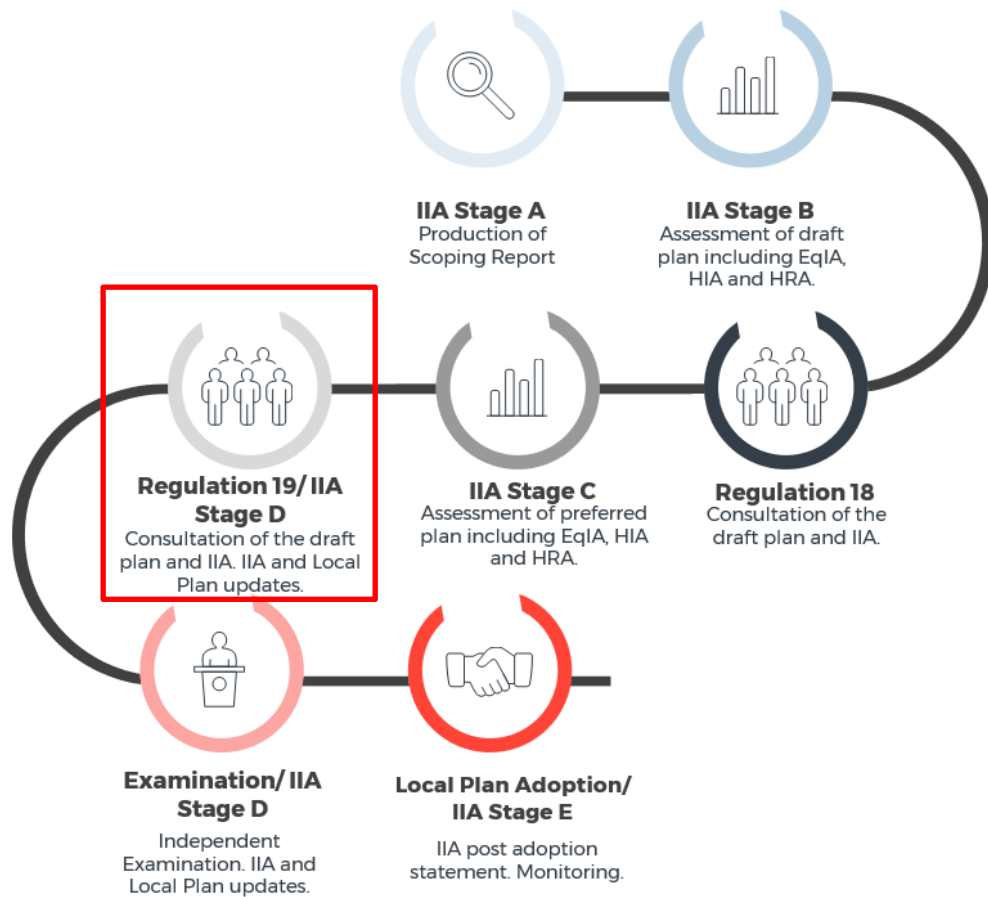

12 Next Steps

- 12.1.1. LBTH is seeking the views of statutory bodies, the public and other stakeholders on the results of the IIA. Consultation at this stage continues to ensure that the IIA provides a robust assessment of the Local Plan.
- 12.1.2. This IIA Report will be issued to consultees for consultation alongside the draft Local Plan (Regulation 19 Consultation) in Summer 2024.
- 12.1.3. An indicative timetable of the remaining stages of the IIA and Local Plan have been included in **Table 12-1** below.

Table 12-1 – Indicative Local Plan and IIA Timetable

IIA/ Local Plan Stages	Timescales
SA Report (IIA Stage C)	Spring/Summer 2024
Regulation 19 Consultation (IIA Stage D)	Summer 2024
Examination (IIA Stage D)	Early 2025
IIA Post Adoption Statement (Stage E)	Autumn/Winter 2025

Figure 12-1 - Local Plan and IIA Stages – Next Steps

Appendix A

Assurance Checklist

Table A-1 sets out the quality assurance checklist, taken from the Office of the Deputy Prime Minister’s Practical Guide to the Strategic Environmental Assessment Directive²⁶.

Table A-1 – Quality Assurance Checklist

Item	Where this has been addressed
<i>Objectives and Context</i>	
The plan’s purpose and objectives are made clear.	Section 2.3 of the Environmental Report sets out the plan’s vision and objectives.
Environmental issues and constraints, including international and environmental protection objectives, are considered in developing objectives and targets	Key sustainability issues have been identified through a review of relevant plans and programmes (see Appendix E, Section 4.2 and 4.4) and analysis of baseline conditions (see Appendix D). These have informed the development of the IIA Framework presented in Section 4.4.
SEA objectives, where used, are clearly set out and linked to indicators and targets where appropriate	Section 4 sets out in detail how the IIA framework has been devised.

²⁶ Office of the Deputy Prime Minister’s Practical Guide to the Strategic Environmental Assessment Directive, 2005 [online] available at: https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/7657/practicalguidesea.pdf

Item	Where this has been addressed
Links with other related plans, programmes and policies are identified and explained.	A review of plans policies and programmes is set out in Appendix E.
Conflicts that exist between SEA objectives, between SEA and plan objectives and between SEA objectives and other plan objectives are identified and described.	Section 5 tests the compatibility of the IIA framework objectives against the Local Plan’s draft vision and objectives.
<i>Scoping</i>	
Consultation Bodies are consulted in appropriate ways and at appropriate times on the content and scope of the Environmental Report	The statutory consultees were consulted on the Scoping Report between July and August 2023. Details of this have been provided in Section 4.1 and comments received are presented in Appendix C.
The assessment focuses on significant issues.	Key sustainability issues have been identified in the baseline analysis contained in Appendix D. Section 4.3 summarises the key sustainability issues identified.
Technical, procedural and other difficulties encountered are discussed; assumptions and uncertainties are made explicit	Section 3.7 discusses the assumptions and limitations encountered.
Reasons are given for eliminating issues from further consideration.	No issues have been knowingly eliminated from the assessment at this stage.

Item	Where this has been addressed
Alternatives	
Alternatives include 'do minimum' and/or 'business as usual' scenarios wherever relevant.	Section 6.3 assesses the policy alternative, which for this reflected a 'do minimum scenario' – Application of the London Plan and a 'business as usual scenario' – Application of the existing Local Plan. Section 7.3 assess the alternative sites.
The environmental effects (both adverse and beneficial) of each alternative are identified and compared	Alternative policies and sites have both been assessed using the same criteria as the proposed policies and sites. A summary in Section 6.3 and 7.3 is provided that details their performance against the proposed allocations.
Inconsistencies between the alternatives and other relevant plans, programmes or policies are identified and explained	Where possible, this has been highlighted within the assessment of policies and site alternatives and detailed in Sections 6.3 and 7.3.
Reasons are given for selection or elimination of alternatives.	A summary in Section 2.5, Section 6.3 and 7.3 is provided that details their performance against the proposed allocations.
Baseline Information	
Relevant aspects of the current state of the environment and their likely evolution without the plan or programme are described.	Appendix D of this IIA Report presents the baseline analysis of the borough's social, economic and environmental characteristics including their likely evolution without the Local Plan.

Item	Where this has been addressed
Environmental characteristics of areas likely to be significantly affected are described, including areas wider than the physical boundary of the plan area where it is likely to be affected by the plan.	Section 3.7 sets out the criteria for assessing the spatial extent of effects. This has been further documented throughout the assessment in Appendix F and G.
Difficulties such as deficiencies in information or methods are explained.	Section 3.8 discusses the assumptions and limitations encountered.
<i>Prediction and evaluation of likely significant environmental effects</i>	
Effects identified include the types listed in the Directive (biodiversity, population, human health, fauna, flora, soil, water, air, climate factors, material assets, cultural heritage and landscape), as relevant; other likely environmental effects are also covered, as appropriate	Sections 5 to 7 summarise the appraisal of the sustainability performance of the Local Plan. The Vision and Key objectives Policies and strategic sites are appraised. Detailed appraisal matrices are also provided at Appendix F (policies) and G (strategic sites and alternatives).
Both positive and negative effects are considered, and the duration of effects (short, medium or long-term) is addressed.	Positive and negative effects are considered within the appraisal matrices and within Sections 6 and 7. Potential effects are identified in the short, medium and long-term. The temporal scope for short-, medium- and long-term effects is defined in Section 3.7.

Item	Where this has been addressed
Likely secondary, cumulative and synergistic effects are identified where practicable.	The potential for cumulative and synergistic effects is considered in Section 9. These have also been highlighted within the assessment of policies (Appendix F) and sites (Appendix G)
Inter-relationships between effects are considered where practicable.	Inter-relationships between effects are identified in the assessment commentary, where appropriate. These have also been assessed as part of the Intra-project cumulative effects.
The prediction and evaluation of effects makes use of relevant accepted standards, regulations, and thresholds	These have been detailed in Appendix B and identified where appropriate within the commentary for assessment.
Methods used to evaluate the effects are described.	These have been detailed in Section 3.7 and Appendix B
<i>Mitigation Measures</i>	
Measures envisaged to prevent, reduce and offset any significant adverse effects of implementing the plan or programme are indicated.	These have been outlined in Section 10.
Issues to be taken into account in project consents are identified.	These have been outlined in Section 10.
<i>The Environmental Report</i>	

Item	Where this has been addressed
Is clear and concise in its layout and presentation	The IIA Report is clear and concise.
Uses simple, clear language and avoids or explains technical terms	Clear non-technical language has been used throughout.
Uses maps and other illustrations where appropriate.	Figure and tables have been used to present information where appropriate.
Explains the methodology used.	Methodology is set out in Section 3.7 and the thresholds for assessment are detailed in Appendix B – Scoring Criteria.
Explains who was consulted and what methods of consultation were used.	Section 2.2 sets out the work and consultation undertaken to date. The statutory consultees were consulted on the Scoping Report between July and August 2023. Details of this have been provided in Section 4.1 and comments received are presented in Appendix C. Limited responses were received from consultees for the Regulation 18 consultation.
Identifies sources of information, including expert judgement and matters of opinion	Section 3.7 and Appendix B identify sources of information used to inform the assessment.
Contains a non-technical summary covering the overall approach to the SEA, the objectives of the plan, the main options considered, and any changes to the plan resulting from the SEA.	A non-technical summary has been included separately.

Item	Where this has been addressed
<i>Consultation</i>	
The SEA is consulted on as an integral part of the plan-making process	The statutory consultees were consulted on the Scoping Report between July and August 2023. This IIA Report was consulted on alongside the draft Local Plan at Regulation 18 and will be consulted on again alongside the preferred Plan at Regulation 19.
Consultation Bodies and the public likely to be affected by, or having an interest in, the plan or programme are consulted in ways and at times which give them an early and effective opportunity within appropriate time frames to express their opinions on the draft plan and Environmental Report.	This IIA Report was consulted on alongside the draft Local Plan and Regulation 18 and will be consulted on again as part of Regulation 19 consultation, alongside the preferred Local Plan. This will give opportunities for statutory consultees, stakeholders and members of the public to comment on the findings of the IIA.
<i>Decision-making and information on the decision</i>	
The environmental report and the opinions of those consulted are taken into account in finalising and adopting the plan or programme	Responses received to this IIA Report to date have been set out in Appendix C.
An explanation is given of how they have been taken into account.	This will be detailed in the post-adoption statement, which will be produced once the Local Plan has been adopted.

Item	Where this has been addressed
Reasons are given for choosing the plan or programme as adopted, in the light of other reasonable alternatives considered.	This will be detailed in the post-adoption statement, which will be produced once the Local Plan has been adopted.
<i>Monitoring measures</i>	
Measures proposed for monitoring are clear, practicable and linked to the indicators and objectives used in the SEA.	Proposed monitoring measures are set out in Section 10.2. This details potential indicators and where possible are linked targets within the draft Local and London Plan.
Monitoring is used, where appropriate, during implementation of the plan or programme to make good deficiencies in baseline information in the SEA.	This will be detailed in the post-adoption statement, which will be produced once the Local Plan has been adopted.
Monitoring enables unforeseen adverse effects to be identified at an early stage. (These effects may include predictions which prove to be incorrect.)	Proposed monitoring measures are set out in Section 10.2. These are proposed for those residual significant effects – in this case these are just uncertain effects.
Proposals are made for action in response to significant adverse effects.	

Appendix B

Assessment Criteria

This Appendix sets out the scoring criteria which has been applied to the assessment of both the policies and sites. Table B-1 sets out the overarching approach to dealing with uncertain, neutral and positive and negative effects and Table B-2 sets out the assessment thresholds for all other effects.

Table B-1 – Uncertain, Neutral and Positive/Negative Effects

Significance	Scoring Criteria
Uncertain (?)	Effects are currently uncertain as more information is needed that is not currently available or it may be dependent upon implementation.
Neutral (0)	Site/ Policy would neither help nor hinder the achievement of objectives, or there is no impact pathway.
Positive and Negative (+/-)	There are opportunities for both positive and negative effects that won't cancel each other out. Effects could be different for construction and operation. Like uncertain effects this may come down to implementation.

Table B-2 – Assessment Criteria

IIA Topic	IIA Objective	IIA Supporting Appraisal Questions	RAG Datasets	Significance	Scoring Considerations
Population and Equalities	IIA1: To build inclusive communities by reducing social exclusion, promoting equity, equality and respecting diversity.	Will the policy or proposal: <ul style="list-style-type: none"> Help to reduce inequalities, particularly for those people and communities most vulnerable? Improve access to services, facilities and transport for all inclusively? Support diversity? Support population growth? 	<ul style="list-style-type: none"> Population density IMD) Overall Deprivation Primary Schools Secondary Schools Higher Education Healthcare Provision (GP, dentists, pharmacies and hospitals) Children and Family Centres Community Centres Leisure Services Social Services 	Significant Positive (++)	<ul style="list-style-type: none"> The policy/ site will substantially reduce levels of inequalities and provide new facilities which will help to bring communities together and support a changing demographic. The site has existing good access to community facilities and services (predominantly G) It will ensure that the needs of all groups will be met both now and in the future. No issues identified within the EqIA.
				Minor Positive (+)	<ul style="list-style-type: none"> The policy/ site will actively reduce levels of inequalities. No new facilities are provided; however, existing facilities may be improved. It will ensure that the current needs of all groups are met. No issues identified within the EqIA, however, some recommendations/ refinements may need to be considered.
				Significant Negative (--)	<ul style="list-style-type: none"> The policy/ site will not be fully inclusive and excludes most minority groups. It will not be sufficient in meeting the needs of the local community both now and in the future and will result in a significant population growth without the facilities to support the new community. Some existing community facilities may be lost, with no further provision provided. Site may be located far away from existing community facilities and an area that is scored R for population density. No consideration has been given to the borough's changing demographic.

IIA Topic	IIA Objective	IIA Supporting Appraisal Questions	RAG Datasets	Significance	Scoring Considerations
					<ul style="list-style-type: none"> Substantial issues are identified within the EqIA, which are not mitigatable.
				Minor Negative (-)	<ul style="list-style-type: none"> The policy/ site will not be fully inclusive and excludes some minority groups. It will be sufficient in meeting the needs of the local community now, but not necessarily in the future. Some existing facilities are located nearby. Limited consideration has been given to the borough's changing demographic. Some issues are identified within the EqIA, which are mitigatable.
Human Health	IIA2: To improve physical and mental health and wellbeing and reduce health inequalities for all of LBTH's residents.	Will the policy or proposal: <ul style="list-style-type: none"> Promote healthier lifestyles? Increase walking and cycling? Improve quality, quantity and equality of access to green and blue space and increase opportunities for recreation? Promote health enhancing environments, behaviours and activities for local communities? Reduce inequalities? Increase inclusion and reduce loneliness? Help prevent risks to human health, which arise from noise and air pollution? Support the UK's levelling up agenda? Reduce the pressure of the rising cost of living? Increase exposure to noise and air pollution? 	<ul style="list-style-type: none"> IMD Health Deprivation Life expectancy (males and females) Primary Schools Secondary Schools Higher Education Healthcare Provision (GP, dentists, pharmacies and hospitals) Children and Family Centres Community Centres Allotments Leisure Services Social Services Sports Facilities Areas Deficient in Nature 	++	<ul style="list-style-type: none"> The policy/ site will substantially reduce levels of health inequalities and provide new facilities which will improve physical and mental health and wellbeing and reduce levels of loneliness. It will ensure that the needs of all groups will be met both now and in the future. No issues identified within the HIA.
				+	<ul style="list-style-type: none"> The policy/ site will actively reduce levels of health inequalities. No new facilities are provided; however, existing facilities may be improved. It will ensure that the current needs of all groups are met. No issues identified within the HIA, however, some recommendations/ refinements may need to be considered.
				--	<ul style="list-style-type: none"> The policy/ site will not be sufficient in meeting the health and wellbeing needs of the local community both now and in the future. It will result in a significant population growth without the facilities to support the new community. Site is located in an area of high loneliness and lacks access to or consideration of new facilities and services. Site is located in an area with high noise and air pollution. Some existing community facilities may be lost, with no further provision provided. Site may be located far away from existing community facilities. No consideration has been given to the borough's changing demographic. Substantial issues are identified within the HIA, which aren't mitigatable.
				-	<ul style="list-style-type: none"> The policy/ site will be sufficient in meeting the needs of the local community now, but not necessarily in the future. Some existing facilities are located nearby. Limited consideration has been given to the borough's changing demographic. Some issues are identified within the HIA, which are mitigatable.

IIA Topic	IIA Objective	IIA Supporting Appraisal Questions	RAG Datasets	Significance	Scoring Considerations
Economy and Employment	IIA3: To support a diverse local economy to foster sustainable economic growth and support Tower Hamlets' town centre and other district and local centres.	Will the policy or proposal: <ul style="list-style-type: none"> ■ Improved connectivity between business clusters and housing markets? ■ Help support changing retail patterns? ■ Increase retail floorspace? ■ Increase footfall and local spending from commuters, residents and tourists? 	<ul style="list-style-type: none"> ■ Central Activities Zone ■ Tower Hamlets Activity Zone ■ Primary Shopping Areas ■ Neighbourhood Parades ■ Primary Shopping Areas ■ Town Centres (major, district and neighbourhood) 	++	<ul style="list-style-type: none"> ■ The policy/ site will improve and enhance connectivity between business clusters and the housing market. ■ The policy/ site will include proposals that will improve town centre viability and support changing retail patterns. ■ The policy/ site will provide new opportunities for a variety of different markets e.g., tourism, arts, entertainment and recreation etc.
				+	<ul style="list-style-type: none"> ■ The policy/ site will improve connectivity between business clusters and the housing market. ■ The policy/ site will include proposals that will support minor town centre improvements.
				--	<ul style="list-style-type: none"> ■ The policy/ site will decrease the connectivity between business clusters and the housing market. ■ The site/policy would result in the decline of town and local centres. ■ The policy/ site won't provide opportunities for a variety of different markets.
				-	<ul style="list-style-type: none"> ■ The policy/ site will indirectly decrease the connectivity between business clusters and the housing market. ■ The site/policy would indirectly result in the decline of town and local centres.
	IIA4: To ensure that residents have employment opportunities and access to training.	Will the policy or proposal: <ul style="list-style-type: none"> ■ Increase job availability? ■ Improve access to employment centres? ■ Support flexible working patterns? ■ Meet the skills needs and future demand for labour? ■ Diversify the labour market? 	<ul style="list-style-type: none"> ■ IMD Employment (LSOA) ■ IMD Income (LSOA) ■ Local Industrial Location ■ Strategic Industrial locations ■ Employment sites ■ Local Employment Location ■ Higher Education 	++	<ul style="list-style-type: none"> ■ Implementation of policy will result in a significant increase in the number and diversity of jobs. ■ Site is well located to existing employment areas, and it will include some mixed used development which will provide additional employment opportunities.
				+	<ul style="list-style-type: none"> ■ Implementation of policy could indirectly result in an increase in employment opportunities. ■ Site is well located to existing employment areas which will provide additional employment opportunities.
				--	<ul style="list-style-type: none"> ■ The site/policy would result in substantial loss in job opportunities. For sites this could mean the loss of employment land for development without further employment provision being made. ■ Site is located away from other employment areas, with no employment provision made. ■ Result in the stagnation of the labour market.
				-	<ul style="list-style-type: none"> ■ The site/policy would result in some loss in job and training opportunities. ■ For sites this could mean a loss in some employment land for development with some additional employment with some additional employment opportunities being offered as part of the new development. ■ Site is located in close proximity to other employment areas.

IIA Topic	IIA Objective	IIA Supporting Appraisal Questions	RAG Datasets	Significance	Scoring Considerations
Housing	IIA5: To meet the housing needs of all of the borough's residents inclusively.	Will the policy or proposal: <ul style="list-style-type: none"> ■ Help to sufficiently meet the borough's housing target? ■ Increase affordability? ■ Optimise proposed sites to maximise housing delivery? ■ Reduce housing deprivation? ■ Meet the needs of all groups inclusively (elderly residents, young families, disabled, ethnic minorities etc.)? ■ Support those with protected characteristics (e.g., the gypsy and traveller community)? ■ Increase the quality of existing housing stock? ■ Reduce overcrowding? 	<ul style="list-style-type: none"> ■ IMD Barriers to housing (LSOA) ■ House Prices (wards) 	++	<ul style="list-style-type: none"> ■ Policy/ site will help to meet the borough's housing target. ■ Housing will be meet the needs of all groups inclusively, both now and in the future. ■ Exceeds the NPPF affordability target of at least 10% of the total number of homes at major housing sites²⁷ ■ The size, type and tenure of housing takes into account different groups in the community including, but not limited to, those who require affordable housing, families with children, older people, students, people with disabilities, service families and travellers. ■ Policy/site will provide significant improvements to the quality of existing housing stock.
				+	<ul style="list-style-type: none"> ■ Policy/ site will help to work towards meeting the borough's housing target. ■ Meets the NPPF affordability target of at least 10% of the total number of homes at major housing sites. ■ The size, type and tenure of housing takes into account different groups in the community. ■ Policy/site will provide some minor improvements to the quality of existing housing stock.
				--	<ul style="list-style-type: none"> ■ Policy/ site will fall significantly short of the borough's housing target. ■ No consideration for affordable housing and site is scored R for house prices. ■ The size, type and tenure of housing doesn't take into account different groups.
				-	<ul style="list-style-type: none"> ■ Policy/ site will fall short of meeting the borough's housing target. ■ Limited consideration for affordable housing. ■ Some consideration for size, type and tenure of housing has been made but it doesn't take into account all groups inclusively.
Crime and Safety	IIA6: To reduce crime and the fear of crime for all residents inclusively	Will the policy or proposal: <ul style="list-style-type: none"> ■ Improve safety? ■ Ensure that residents feel safe, particularly after dark? ■ Support designing out crime principals? 	<ul style="list-style-type: none"> ■ IMD Crime (LSOA) ■ Crime Rate (Ward) 	++	<ul style="list-style-type: none"> ■ Policy/ site includes designing out crime principles and measures that will significantly improve levels of safety for all residents, including the safety of women and girls. ■ Policy/ site includes measures that will improve road safety and will actively help to reduce the number of people KSI on the roads.
				+	<ul style="list-style-type: none"> ■ Policy/ site includes measures that will indirectly improve levels of safety e.g., public realm improvements. ■ Policy/ site includes measures that will improve road safety and will indirectly help to reduce the number of people KSI on the roads.

²⁷ Major is defined as 10 or more homes or a site that has an area of 0.5 hectares or more

Appendix C

Consultation Comments

Table C-1 below sets out the consultation comments received from the Statutory consultees on the IIA Scoping Report. The table sets out how and where these comments have been addressed. No specific comment on the IIA were received from the Regulation 18 consultation.

Table C-1 –Consultation Comments

ID	Consultee	Comment	Response
1	Natural England	Natural England have no comments to make on this consultation.	Noted – no response required
2	Historic England	In terms of the historic environment, we consider that the Report has identified the majority of plans and programmes which are of relevance to the development of the Local Plan, that it has established an appropriate Baseline against which to assess the Plan’s proposals and that it has put forward a suitable set of Objectives and Indicators. Overall, therefore, we believe that it provides the basis for the development of an appropriate framework for assessing the significant effects which this plan might have upon the historic environment.	Noted – no response required
3	Historic England	<p>Historic England strongly advises that the conservation team of your authority and your archaeological advisors are closely involved throughout the preparation of the SA of this Plan.</p> <p>They are best placed to advise on; local historic environment issues and priorities, including access to data held in the HER (formerly SMR); how the policy or proposal can be tailored to minimise potential adverse</p>	The team will continue to engage and consult with Historic England throughout the IIA/ Local Plan process.

ID	Consultee	Comment	Response
		<p>impacts on the historic environment; the nature and design of any required mitigation measures; and opportunities for securing wider benefits for the future conservation and management of heritage assets. Historic England has produced guidance for all involved in undertaking SEA/SA exercises which gives advice on issues relating to the historic environment.</p>	
4	Historic England	<p>Table 4-1 Key Messages - Policy D9 of the London Plan 2021 is clear that in assessing and identifying appropriate locations for tall buildings, local plans should ensure that they avoid adverse impacts on the historic environment.</p>	<p>Table 4-1 in the IIA Report has been amended to the following “Ensure tall buildings are designed acceptably and situated in appropriate areas that avoid adverse impacts on heritage assets; ...’</p>
5	Historic England	<p>Table 4-1 Key Messages - A number of policies in the London Plan 2021 (notably D3 Optimising Site Capacity through the design-led approach and HC1 Heritage conservation and growth) also indicate that an understanding of heritage significance should be used to help inform and shape the design of new development to respond to context.</p>	<p>Table 4-1 in the Interim IIA Report has been amended to the following</p> <p>Addition of an extra bullet point which states</p> <p>‘Ensure that new development uses existing historic character and heritage significance to guide new development and respond appropriately to its context’</p> <p>Added at end of final existing bullet point</p> <p>‘ .. and positive place-shaping, including through using heritage assets as visitor attractions and the provision of visitor infrastructure.’</p>

ID	Consultee	Comment	Response
6	Historic England	Table 5-11 Issues and opportunities for the historic environment - See comments above in relation to London Plan policies D3 and HC1	Table D-11 and Table 4-1 in the IIA Interim report have been updated to include the following additional bullet - The NLP should ensure that the local historic environment (including the archaeological resource) informs design proposals, public realm and landscaping schemes to help ensure that heritage assets and their settings are enhanced.
7	Historic England	Table 6-1 IIA Appraisal Framework - Climate change is acknowledged as a risk for the historic environment earlier in the document. It should be made explicit here that well-intentioned but inappropriate interventions on historic buildings should be avoided.	Table D-11 and Table 4-1 in the IIA Interim report have been updated to include the following additional bullet - Climate change is acknowledged as a risk for the historic environment earlier in the document. It should be made explicit here that well-intentioned but inappropriate interventions on historic buildings should be avoided.
8	Historic England	Table A9 – Add Historic England Advice Note 4 (March 2022) Tall Buildings and London Borough of Tower Hamlets conservation area appraisals	Both documents have been added to Table E9 in the Interim IIA Report
9	Environment Agency	Table 4-1 Key Messages – Biodiversity and Natural Capital – Support inclusion of the important role of habitat connectivity. Suggest including wording in relation to Biodiversity Net Gain (BNG) to explain how	Table 4-1 in the IIA Interim Report has been updated to include the following Added within the first existing bullet point

ID	Consultee	Comment	Response
		developments must ensure appropriate habitat is created.	<p>‘...along with the important role habitat connectivity plays in building strong green and blue networks that protect and enhance biodiversity and natural capital...’</p> <p>Added at the end of the final existing bullet point</p> <p>‘...Developments must ensure appropriate habitat is created that will be of importance to habitat connectivity, provide ecologically enhanced green and blue spaces, and incorporate long-term management plans.’</p>
10	Environment Agency	Table 4-1 Key Messages – Material Assets – Note that whilst protecting groundwater quality has been considered, the need to protect groundwater quantity should also be addressed.	<p>Table 4-1 in the IIA Interim Report has been updated to include the following</p> <p>Addition of an extra bullet point (note: within Water Environment not Material Assets) which states</p> <p>‘Protect and enhance groundwater quantity and ensure that development does not place a burden on groundwater flow or quantity’.</p>
11	Environment Agency	5 Baseline – Transport and Accessibility – Recommend consideration is given to site selection for new infrastructure; to be located away from areas of high flood risk and where road drainage may impact on water, and to account for future climate change. Opportunity to advocate maximising opportunities to integrate	<p>Table 5-7 in the IIA Interim Report has been updated to include the following</p> <p>‘Site selection should account for future climate change, and consider locating transport infrastructure away from areas of</p>

ID	Consultee	Comment	Response
		connected blue and green infrastructure (BGI) along transport corridors.	<p>high flood risk, or where road drainage may impact on water quality issues</p> <p>The NLP should maximise opportunities to integrate connected blue and green infrastructure along transport corridors’</p>
12	Environment Agency	5 Baseline – Biodiversity and Natural Capital – Biodiversity Net Gain (BNG) – Worth mentioning the frameworks that underpin BNG, particularly in relation to watercourses.	<p>Table 5-8 in the IIA Interim Report and Table 4-1 in the IIA Interim report have been updated to include the following</p> <p>‘...including consideration of watercourses from the start of the design process in order to maintain the increase in biodiversity over the statutory 30 year period. Developments that seek to create habitat to support species identified as declining should be prioritised.’</p>
13	Environment Agency	5 Baseline – Biodiversity and Natural Capital – Tree Planting – Note that trees planted under council initiatives must be diverse and native species.	<p>Section 8 of Appendix D of the IIA Interim Report has been updated to include the following</p> <p>Addition of an extra sentence which states ‘Trees that are planted must be diverse and native species.’</p>
14	Environment Agency	5 Baseline – Biodiversity and Natural Capital – Issues and Opportunities – Recommend stronger, more detailed wording. Refer to the expectation of development	Table D-8 and Table 4-1 in the IIA Interim Report have been updated to include the following

ID	Consultee	Comment	Response
		adjacent to watercourses to contribute to achieving Water Framework Directive (WFD) objectives.	Addition of an extra bullet point which states ‘Development adjacent to watercourses are expected to contribute to achieving Water Framework Directive objectives relating to ecological status; this includes connectivity for fish and removal of invasive species’
15	Environment Agency	5 Baseline – Biodiversity and Natural Capital – Implications for the NLP – Support the inclusion of wording to reduce the use of hard engineering for future development.	Table D-8 in the IIA Interim Report has been amended to include the following ‘The NLP will need to encourage development opportunities to remove in-channel structures when present within the watercourse, the use of hard engineering should require strong justification’
16	Environment Agency	5 Baseline – Biodiversity and Natural Capital – Key Risks/Opportunities – Recommend actions in relation to the Water Framework Directive (WFD) are considered. Suggest a map of the watercourses and associated WFD status would be useful. Also recommend consideration is made regarding invasive non-native species and their management.	WFD has been considered within the ‘Water Environment’ section of the baseline (Appendix D). This include the ecological status of water bodies. A map of waterbodies hasn’t been included but will be used as part of the site assessments.
17	Environment Agency	5 Baseline – Water Environment – Recommend it is made clear that the WFD also includes groundwater water bodies. Refer to Greenwich Tertiaries and Chalk and its classification.	Appendix D of the IIA Interim Report have been updated to include the following ‘The WFD also includes groundwater water bodies, with the objective of achieving ‘good’

ID	Consultee	Comment	Response
			<p>quantitative and chemical status. The borough contains one such groundwater body, Greenwich Tertiaries and Chalk, which currently has 'poor' chemical and quantitative classification.'</p>
18	Environment Agency	<p>5 Baseline – Water Environment – Issues and Opportunities – Water quality and flood risk should have their own separate subsections. Details are given on the recommended content for each theme.</p>	<p>Table D-13 in the IIA Report and Table 4-1 in the IIA Interim Report have been amended to include the following</p> <p>'...in addition to existing residual flood risk in the event of a breach or failure of the flood defences.'</p> <p>Table D-13 in the IIA Report has been updated to include the following</p> <p>Addition of extra bullet points that state</p> <p>'The NLP should promote that development in close proximity to a watercourse should include the addition of naturalised features to buffer zones to connect the river to the riparian zone, create natural flood management (NFM) schemes, and promote biodiversity.'</p> <p>'The NLP should seek to protect groundwater quality as a water resource. '</p> <p>'The NLP should ensure that development in close proximity to a watercourse should</p>

ID	Consultee	Comment	Response
			<p>include provision of natural, undeveloped buffer zones. These can help contribute to natural flood management (NFM) whilst also allowing access for maintenance and emergency works.'</p> <p>'The Thames Estuary 2100 Plan has requirements to raise flood defences in line with sea level rises across the Thames.'</p>
19	Environment Agency	5 Baseline – Air Quality – Recommend the borough commits to and considers how to deliver an air quality neutral and air quality positive approach. Encourage consideration is also given to how an air quality approach can be linked to other policies.	For consideration by LBTH
20	Environment Agency	5 Baseline – Climate Change and Greenhouse Gases – Issues and Opportunities – Expand the point regarding flooding under the need to implement and facilitate climate change adaptation. Opportunity to discuss the implementation of Nature-based solutions (NbS) to build resilience to climate impacts. Consider habitat connectivity and ensuring wild refuge areas are maintained as fundamentals of creating resilient functioning ecosystems. Recommend creation of new re-naturalised areas. Advise setting a target for the percentage of wild cover within green spaces.	<p>Table D-16 has been updated to include the following:</p> <p>'The NLP should promote the implementation of Nature-based solutions (NbS) to build resilience to facilitate climate change adaptation, whilst providing a feasible method to sequester and store carbon in line with net zero ambitions.'</p> <p>Table D-12 has been updated to include the following</p>

ID	Consultee	Comment	Response
			‘The NLP should set a target for the percentage of wild cover within green spaces to help prevent further biodiversity decline.’
21	Environment Agency	5 Baseline – Material Assets – Geology and soil – Discussion of geology should be expanded to include discussion of the protection of superficial deposits.	Appendix D of the IIA Interim Report have been updated to include the following Addition of an extra sentence which states ‘The Taplow and Kempton Park Gravels in the borough are classified as Secondary A aquifers and are therefore protected superficial deposits.’
22	Environment Agency	5 Baseline – Material Assets – Contaminated Land – Clarify that remediation should seek to protect and improve both groundwater and land quality.	Appendix D of the IIA Interim Report have been updated to include the following Added at end of existing sentence which states ‘...and remediation should seek to protect and improve both groundwater and land quality.’
23	Environment Agency	5 Baseline – Material Assets – Issues and Opportunities – Consider NPPF paragraphs 174 and 183 and promote relevant guidance from the Environment Agency with respect to groundwater and land quality issues. The requirements expected of developers under policies is also noted.	These paragraphs have been considered within the review of plans, policies and programmes. Groundwater issues have been considered within the ‘Water Environment’ topic in Appendix D.

ID	Consultee	Comment	Response
24	Environment Agency	6 IIA Appraisal Framework – Biodiversity and Natural Capital – Note two points to be added to the ‘Key Sustainability Issues and Opportunities’.	<p>The IIA Appraisal Framework has been updated to include the following</p> <p>Addition of two extra bullet points which state</p> <p>‘Developments which encroach on the 10m buffer zone next to a watercourse will fragment habitat connectivity and reduce the ability for biodiversity to thrive.</p> <p>In-channel structures such as weirs and culverts inhibit fish passage and alter the natural state of the river corridor.’</p>
25	Environment Agency	6 IIA Appraisal Framework – Biodiversity and Natural Capital – Note one point to be added to the ‘IIA Supporting Appraisal Questions’ relating to watercourses and river corridors.	<p>The IIA Appraisal Framework has been updated have been updated to include the following</p> <p>‘Re-naturalise the river corridor and promote geomorphological processes which enhance and protect biodiversity?’</p>
26	Environment Agency	6 IIA Appraisal Framework – Water Environment – Sequential approach to decisions on policies and proposals in supporting appraisal questions should be suggested. Similarly to ID17, it is recommended that the issues and opportunities surrounding groundwater are considered. Specific reference to groundwater quality is also recommended.	<p>The IIA Appraisal Framework has been updated to include effects on groundwater.</p>

ID	Consultee	Comment	Response
27	Environment Agency	6 IIA Appraisal Framework – Water Environment – Note one point to be added to the ‘Key Sustainability Issues and Opportunities’ relating to the riparian buffer zone.	The IIA Appraisal Framework has been updated to include the following ‘Increased development which encroaches on a natural riparian buffer zone next to a watercourse, or one which is within a 10m distance from the watercourse, will have a negative effect on water quality and can increase flood risk.’
28	Environment Agency	6 IIA Appraisal Framework – Water Environment – Note one point to be added to the ‘IIA Supporting Appraisal Questions’ relating to natural forms of flood management.	The IIA Appraisal Framework has been updated been updated to include the following ‘Support a natural form of flood management which also promotes biodiversity of the watercourse?’
29	Environment Agency	6 IIA Appraisal Framework – Material Assets – Expand the supporting appraisal questions to consider groundwater and land quality.	The IIA Appraisal Framework has been updated been updated to include the following ‘Protect and enhance groundwater and land quality?’
30	Environment Agency	Appendix A – Table A-7 – Biodiversity and Natural Capital – Recommendation for additional specific information about the Water Framework Directive (WFD).	The WFD has been added to Table E-7 of the IIA Interim Report.

ID	Consultee	Comment	Response
31	Environment Agency	Appendix A – Table A-10 – Water Environment – The Metropolitan Flood Act 1879 should be included.	As this has been superseded this has not been included within Appendix E.
32	Environment Agency	Appendix A – Table A-13 – Material Assets – NPPF paragraph 183 should be included. Note that the Environment Agency will apply the position statements outlined in their Approach to Groundwater Protection.	<p>Table E-13 in the IIA Interim Report have been updated to include the following</p> <p>Paragraph 183 states: <i>“Planning policies and decisions should ensure that:</i></p> <ul style="list-style-type: none"> (a) a site is suitable for its proposed use taking account of ground conditions and any risks arising from land instability and contamination. This includes risks arising from natural hazards or former activities such as mining, and any proposals for mitigation including land remediation (as well as potential impacts on the natural environment arising from that remediation) (b) after remediation, as a minimum, land should not be capable of being determined as contaminated land under Part IIA of the Environmental Protection Act 1990; and (c) adequate site investigation information, prepared by a competent person, is available to inform these assessments.

Appendix D

Baseline

Introduction

This appendix sets out the baseline information and issues and opportunities. Both the baseline and issues and opportunities have been updated following consultation of the Scoping Report in July 2023.

Population and Equalities

Summary of Current Baseline

The borough has a total population of approximately 310,300 people³⁴. Out of the boroughs within London, LBTH has the highest population density of 15,695 people per square kilometre. This is significantly higher than the regional and national population density averages of 5,598 people per square kilometre, and 434 people per square kilometre, respectively.

The highest proportion of people in the borough are aged between 25-29 years, who make up 14.3% of the total population, as conceptualised in **Figure D-1** overleaf. The percentage of those aged 65 years and over (5.6%) is lower than the London average of 11.9% and the national average of 18.4%.

Within LBTH, approximately 49.8% of the population are females and 50.8% are males. This is comparable to both the London average (51.5% females, 48.5% males) and the national average (51.0% females, 49% males).

³⁴ Office for National Statistics Population and household estimates, England and Wales: Census 2021. Available online at: <https://www.ons.gov.uk/peoplepopulationandcommunity/populationandmigration/populationestimates/datasets/populationandhouseholdestimatesenglandandwalescensus2021>

Bangladesh making up the biggest migrant group³⁹. LBTH has a highly mobile population, with 23.5% moving to, from and within the borough each year⁴⁰.

The majority of residents in LBTH are Muslim (39.9%), followed by 'no religion' (26.6%), Christian (22.3%), Hindu (2%), Buddhist (0.95%), other religion (0.53%), Jewish (0.43%), and Sikh (0.31%)⁴¹. However, 6.9% of people did not answer the 2021 Census question about religious belief. Since the 2011 Census, the proportion of Christian residents has fallen by -7.7% (from 30%), and people with 'no religion' has risen by +5.6% (from 21%)⁴². The other faith groups have remained largely unchanged between Census'.

Looking at the Indices of Multiple Deprivation in 2019 (IMD2019), LBTH has become considerably less deprived since IMD2015, ranking 175 in IMD2019 compared to 24 in IMD2015 out of 317 Local Authorities, indicating that the neighbourhoods within the authority have become less deprived relative to other neighbourhoods in England⁴³.

Both the wards of St Peter's and Stepney Green have Lower Super Output Areas (LSOAs)⁴⁴ located within the top 10% of most deprived neighbourhood nationally, whilst there are 13 LSOAs located within the top 20% of most deprived neighbourhoods nationally. Island Gardens is the only ward which has a LSOA located within the top 10% of least deprived neighbourhoods nationally.

The borough has the highest income deprivation affecting older people in England, with 43.9% living in deprived households. The proportion of older persons living in income deprived families is also significantly higher than national averages⁴⁵. Older people in the borough are also much more sensitive to fuel poverty, in line with 1 in 10 older households in the UK are in fuel poverty⁴⁶, with this demographic much more likely to be vulnerable to the issue.

Child poverty within the borough is also significant problem. LBTH has high rates of children living within both relative and absolute low income families⁴⁷, with 27.3% of children in relative low income families and 21.4% within absolute low income families⁴⁰. The borough has the highest rate of child poverty in the UK, with 31% of children living below the national poverty line⁴⁸.

Future Trends and evolution of the baseline without the NLP

The population of LBTH has grown by 22.1% since 2011⁴⁹, the largest percentage growth in population in England, and is predicted to see a population increase of 8.4% by mid-2028⁵⁰. The population isn't just growing it is also becoming younger and more diverse, with the current largest age demographic 25-29 years projected to increase by 11.3%, and almost half of the population by mid-2028 in the 20-39 years bracket. This equates to an increased working age population and a more economically active borough, likely stimulating a higher demand for career opportunities.

By 2033 it is expected that more people will be living on their own, constituting 41% of all households nationally⁵¹. With this statistic in mind, LBTH, along with the rest of the country, is facing a housing crisis. The demand for specific housing which meets need will continue to rise over the coming years.

By 2031, ethnic minority populations are predicted to rise to 37% of the total population of London⁵². LBTH is already a diverse and culturally rich borough, and with this proportion expected to increase, the demand for the provision of cultural spaces and facilities will be prevalent.

The NLP will allow for better management of the types of housing being built in the borough to ensure there is suitable housing to meet the needs of residents both now and in future, reflecting the changing demographic. It would also allow for LBTH to better target community services and facilities to the areas where growth is most likely to occur and/or aid in better dispersing the projected growth in population across more of the borough. This

⁴⁷ Relative low income: This refers to people living in households with income below 60% of the median in that year. Absolute low income: This refers to people living in households with income below 60% of median income in a base year, usually 2010/11. This measurement is adjusted for inflation.

⁴⁸ Tower Hamlets Council (2015) Child poverty in Tower Hamlets – research briefing. Available at: [2015_Child_Poverty_Briefing.pdf \(towerhamlets.gov.uk\)](https://www.towerhamlets.gov.uk/2015_Child_Poverty_Briefing.pdf)

⁵² Wohland, P. et al. (2010). Research paper. 'Ethnic population projections for the UK and local areas, 2001-2015'. University of Leeds.

will also help to support community cohesion which will likely become more pertinent as the population becomes more ethnically diverse.

Issues and Opportunities

Issues and opportunities for population and equalities and the implications for the Local Plan have been identified in **Table D-1**.

Table D-1 – Issues and Opportunities for Population and Equalities

Key Risks/Opportunities	Implications for the NLP
<ul style="list-style-type: none"> ■ There will be a need for adequate support and greater access to services and facilities for the young population, families with young children, and single parent families on one income; ■ There are opportunities to improve access to facilities and services, as well as housing, for young adults and people with disabilities; ■ The population of the borough is expected to increase both in number and diversity, and decrease in age profile; and ■ Changing work habits such as remote, internet-based jobs are likely to reduce current demands but may also increase social isolation and reliance on alternative social interaction. 	<ul style="list-style-type: none"> ■ The NLP will need to address any necessary housing and service development to ensure provisions to young adults and socially excluded population groups; ■ Development will need to support future demographic change, tackle overcrowding and increase affordable housing stock; and ■ The NLP will need to ensure there are adequate provisions of services and facilities within the borough, particularly for young adults, socially excluded groups and people with disabilities.

Human Health

Summary of Current Baseline

The average life expectancy at birth in LBTH is similar but slightly higher than the national average at 79.9 years for male and 83.3 years for females⁵³. This is slightly lower than the average for the London region at 80.3 years and 84.3 years respectively. Health inequalities are prevalent, with life expectancy lower in the most deprived areas than the least deprived areas for both men and women, at 11.4 years and 4.8 years respectively. This indicates human health disparity between gender and socio-economic groups.

In LBTH, 67.2% of adults (aged 19+) are physically active⁵⁴. This is higher than both the regional and national averages at 66.4% and 66.3% respectively. The proportion of adults (aged 18+) classified as overweight or obese in LBTH is 49.1% and is significantly better than the national average. This is lower than the regional average of 55.9% and significantly lower than the national average of 62%. In year six children (aged 10-11 years) the prevalence of obesity (including severe obesity) is 25.3%, significantly worse than the national average of 20.2%. The percentage of children in low-income families is also significantly worse than the England average, at 30.3%. The regional and national averages are 18.8% and 17.0% respectively.

The IMD2019 health domain measures the risk of premature death and the impairment of quality of life through poor physical or mental health. LBTH is ranked 95th out of 317 local authorities²¹. Of the 144 Lower Super Output Areas (LSOAs) in the borough, one is located within the top 10% of most deprived neighbourhoods nationally in terms of health deprivation, whilst 25 are located in the top 20%²¹.

Poor air quality is a significant public health issue⁵⁵ and there is clear evidence that particulate matter has a significant contributory role in mortality. Each year in the UK between 28,000 and 36,000 deaths a year are attributed to long-term exposure to poor air quality⁵⁶. Air pollution can also be linked to cardiovascular disease, diabetes, and dementia. Sufferers of chronic respiratory diseases such as Chronic Obstructive Pulmonary Disease (COPD) and asthma are especially vulnerable to the effects of air pollutants. Air

⁵⁶ Gov.uk, Public Health England publishes air pollution evidence review, 2019 [online] available at: <https://www.gov.uk/government/news/public-health-england-publishes-air-pollution-evidence-review>

pollution has also been shown to have an increased health impact on those in lower socio-economic groups.

The entirety of LBTH is situated within an Air Quality Management Area (AQMA) declared in 2000 for Particulate Matter (PM10) and Nitrogen dioxide (NO₂)⁵⁷. The AQMA identifies areas of higher air pollution that may affect health, from transport and industrial sources.

The borough has a higher rate of emergency hospital admissions for COPD when compared to the national average, with the majority of wards above the national average. LBTH as a borough admits 166.0 people per 100,000 people for COPD, higher compared to the national average (100.0 people per 100,000 people)⁵⁸. St Peter's area has the highest admission rate of any ward within the borough, at 311.3 people per 100,000 people. Conversely, St Katherine's and Wapping performs better than the national average with 43.3 people per 100,000 people admitted.

The mortality rate (under 75 years) from all causes in LBTH is 361.1 people per 100,000 people⁵³. This is significantly higher than the regional average of 303.3 people per 100,000 people and the national average of 330.5 people per 100,000 people.

The prevalence of smoking in LBTH among adults (aged 18+) is 20.3%⁵³. This is higher than the regional average (13.9%) and the national average (14.4%).

Social isolation can lead to loneliness which has the potential to undermine well-being thereby impacting negatively on people's quality of life. Loneliness can have a huge impact on the wellbeing of many people particularly older people, those with disabilities and new and expectant mothers. It can often result in unhappiness, lowering of self-confidence and ability to reach out for help.

According to Age UK, the majority of the people aged 65 and over in the south of LBTH are within very low and low risk areas for loneliness with areas in the UK ranked from 1 high risk to 32,844 very low risk⁵⁹. However, the centre and north of LBTH are within medium, high risk, and very high risk of loneliness. The heat map in **Figure D-2** overleaf visualises this trend.

⁵⁷ Department for Environment Food and Rural Affairs, UK AIR, Tower Hamlets AQMA. Available online at: https://uk-air.defra.gov.uk/aqma/details?aqma_ref=141#132

Figure D-2 – Heat Map of Relative Risk of Loneliness⁵⁹

The spread of COVID-19 in the UK has resulted in significant pressure upon NHS resources, particularly hospitals, and has resulted in additional wait times for routine healthcare appointments across services. Since the start of the Covid-19 pandemic, 114,550 positive cases and 646 deaths (194.6 people per 100,000 people) have been recorded within the borough, lower than the regional (283 people per 100,000) and national (326.4 people per 100,000) figures⁶⁰.

In total, 604,248 vaccinations have been given – 238,909 people have received one dose (66.1% of 12+ year olds), 218,819 people have received two doses (60.5% of 12+ year olds) and 146,520 (40.5% of 12+ year olds) have received either a booster or a third dose⁴⁶. The uptake of vaccinations is lower than the national average (78.1% one dose, 74.5% two doses and 59.2% booster or a third dose) and regional averages (68.1% one dose, 64% two doses and 46.8% booster or a third dose)⁶⁰.

Fuel poverty is determined if a household has required fuel costs that are above average (the national median level) and were they to spend that amount, they would be left with a

⁶⁰ UK Government (2022). Coronavirus (COVID-19) in the UK – Cases in Tower Hamlets. [online] Available at: <https://coronavirus.data.gov.uk/details/cases?areaType=itla&areaName=Stockport>

residual income below the official poverty line⁶¹. 14.2% of households in LBTH are estimated to be in fuel poverty, compared to the national average of 13.4%⁶².

Future Trends And Evolution Of The Baseline Without The NLP

The increasing population of LBTH and the observed active nature of its adults will likely result in increased demand for exercise facilities and open access outdoor space.

Social isolation and loneliness are also likely to become more prevalent in LBTH as more people work from home, particularly due to and following the COVID-19 pandemic. This has the potential to undermine well-being, thereby impacting negatively on people’s quality of life. Social isolation and loneliness are also associated with increasing the likelihood of sensory and mobility impairments and deteriorating health.

Covid-19 has also exacerbated existing inequalities in LBTH. Without preparedness and effective response to resurgence of Covid-19, including increased vaccine rollout, issues such as social isolation and loneliness could be exacerbated. The rising cost of living, or ‘Cost-of-Living Crisis’, is also predicted to impact those with pre-existing mental health problems, as they are among those at greatest risk⁶³. It is well documented that recessions increase social inequalities, which are drivers of poor mental health⁶⁴.

The prevalence of obesity in Year 6 children is also a concern that must be addressed, without healthy child weight strategies these particularly bad health incomes for children will persist.

The anticipated population growth and the increasing affordability and convenience of car travel is likely to result in an increase in the number of private vehicles on the roads. This could have cumulative effects on air quality, noise pollution and public health if current trends continue.

Air pollution has been linked to diabetes and dementia – both chronic illnesses in the UK are expected to rise in future. Increased mortality and morbidity amongst diabetics are associated with increased NO2 concentrations with long term exposure to traffic borne air

⁶⁴ Wahlbeck, K. & McDauid, D. (2012), ‘Actions to alleviate the mental health impact of the economic crisis’, World Psychiatry Available at: <https://doi.org/10.1002/j.2051-5545.2012.tb00114.x>

pollution positively correlating with incidence of type two diabetes and increased mortality among diabetics⁶⁵.

In 2022, the government published the Levelling Up white paper⁶⁶, setting out a broad approach to rebalancing the UK economy and addressing significant regional inequalities that restrict people, places, and prosperity. If the Levelling Up and Regeneration Bill come into force, there is potential to reduce inequalities within the borough, improving health outcomes.

Due to the population density within the borough and high number of high-rise buildings, the urban heat island effect is a prevalent issue in the borough. The urban heat island effect reduces the ability for cities to cool subsequently having adverse effects on health the health of the local populations, particularly for more those vulnerable groups such as older people, young children and those with pre-existing health conditions such as asthma and/or cardiovascular disease.

In addition to the urban heat island effect, climate change is projected to increase the probability of overheating in London⁶⁷. As the population increases and the effects of climate change become more prevalent, there is a need to manage heat risk in new developments as well as increases the amount of green space and vegetation.

Without a NLP it is likely that health issues within the borough will continue to persist. The plan would allow for LBTH to better target community services, greenspaces and sports/recreational facilities to the areas where growth is most likely to occur and/or aid in better dispersing the projected growth in population across more of the borough. This will also help to support community cohesion and reduce isolation.

Issues and Opportunities

Issues and opportunities for human health and the implications for the NLP have been identified in **Table D-2**.

Table D-2 – Issues and Opportunities for Human Health

Key Risks/Opportunities	Implications for the NLP
<ul style="list-style-type: none"> ■ LBTH’s reducing age profile will present a greater need for access to leisure facilities and outdoor space, as well as a greater pressure on healthcare and support to tackle loneliness, smoking, and STI treatment; ■ There are significant health inequalities amongst residents in LBTH. This is reflected in the variation of life expectancies between the most and least deprived residents; ■ Covid-19 has also exacerbated existing inequalities in the borough; ■ There are high levels of obesity within children aged 10-11 years; and ■ The urban heat island effect is having adverse effects on the health of the local population, particularly those more vulnerable groups. 	<ul style="list-style-type: none"> ■ The NLP should maximise opportunities to enhance walking and cycling routes and encourage the use of non-motorised forms of transport. This will help to improve levels of physical activity within the borough; ■ There will be a need to improve public transport users’ confidence in returning to public transport post-Covid19; ■ The NLP should ensure developments contribute positively to accessible neighbourhoods, reducing health inequalities in accessibility; ■ There will be an ongoing need to provide services and affordable housing facilities in order to meet the needs of younger residents; ■ There is a need for the NLP address issues with inequalities and ‘level up’ the borough following the Covid-19 pandemic; ■ There is a requirement for implementation of healthy child weight initiatives; ■ The NLP should provide early support for individuals at risk of loneliness and subsequent poor mental health, treating them with the same level of care as physical conditions; ■ There is a need to provide more greenspaces and high quality public

Key Risks/Opportunities	Implications for the NLP
	<p>realm which can provide social spaces; and</p> <ul style="list-style-type: none"> There is a need to manage heat risk in new developments as well as increases the amount of green space and vegetation.

Economy and Employment

Summary of Current Baseline

In 2021, 76.9% of the population within the LBTH were of working age (between 16-64 years) which is slightly higher than both the regional and national averages of 70.0% and 64.2% respectively³⁴. Employment rates for people of working age (between 16-64 years) is in line with but slightly lower than the regional average (75.8%) and national average (75.7%) at 72.8%. Between 2011 and 2021, there has been a 2.0% increase in the number of economically active people in the borough⁶⁸.

LBTH has a diverse employment market, with large clusters of offices in Canary Wharf and the City Fringe, and industrial areas that provide logistics support for the whole of Central London. In 2017, LBTH economic output was £29.7bn, with the economy growing by 49% across the decade prior⁶⁹.

This brings a significant amount of employment opportunities, with job density in LBTH recorded as 1.31 which is higher than the regional job density of 1.02 and significantly higher than the national job density of 0.85⁷⁰.

Despite this, LBTH has a relatively high economic inactivity rate. From 2021 to 2022, 24.5% of the borough’s working age population were economically inactive, compared to 20.6% in London and 21.6% in Great Britain⁷⁰. There is also gender disparity in the economically active population, with 25.4% more males than females economically active.

⁶⁸ Office for National Statistics. Employment in local authorities, England and Wales: Census 2021. Available at: <https://www.ons.gov.uk/employmentandlabourmarket/peopleinwork/employmentandemployeetypes/articles/employmentinlocalauthoritiesenglandandwales/census2021>

⁶⁹ Tower Hamlets Council (2020) Borough Profile 2020: Economy. Available at: https://www.towerhamlets.gov.uk/ignl/community_and_living/borough_statistics/Borough_profile.aspx

⁷⁰ Nomis (2021) Labour Market Profile. Available online at: <https://www.nomisweb.co.uk/reports/lmp/la/contents.aspx>

As of 2021, there are 311,000 jobs in LBTH⁷⁰, however the vast majority are filled by non-residents and employees commuting from outside the borough⁷¹, with approximately 15% taken by local residents⁷². The borough's daytime population increases by about 60% as a result of the large working weekday population⁷³. However, since the Covid-19 pandemic, 50.3% of people aged 16+ in employment in the borough work mainly at or from home⁷⁴.

LBTH performs better than the medium for gross median weekly pay (£718.70) compared to the regional average (£645.80) and national average (£536.60)⁷⁵. Gross disposable household income (GDPI) per head is however considerably lower than the regional average (£29,890) at £26,175, but significantly higher than the national average £21,962.

LBTH has a high level of productivity, with £112,559 gross value added (GVA) per head in 2020 which is higher than the London average of £52,239 GVA per head⁷⁶. However, although this has increased by 9.8% since 2015, it has decreased by 10.8% since 2017. Despite this, GVA in LBTH is significantly higher than the 2020 national average of £29,757 per head.

Table D-3 shows the borough's key economic sectors compared to regional and national averages. Financial and insurance activities are the largest economic sector in the LBTH, with a higher employment rate than the regional and national averages. This is followed by professional, scientific and technical activities, information and communication, administrative and support services activities, human health and social work activities, education and wholesale and retail trade.

Q : Human Health And Social Work Activities	7.6	10.6	13.7
R : Arts, Entertainment And Recreation	1.5	2.8	2.3
S : Other Service Activities	1.5	2.5	1.9

The financial and insurance industry is the largest in LBTH based on the number of jobs, accounting for 23.7% of roles in the borough. The high level of employment in professional, scientific and technical industries is not surprising given that the borough’s population are highly skilled.

Of the population in LBTH, 52.1% have obtained level 4 qualifications or above which is higher than the national average by 8.4%⁷⁰. However, the percentage of the population with no qualifications is in line with the national average (6.6%) at 6.5%, and higher than the regional average of 5.5%.

The Covid-19 crisis impacted nearly all residents and local businesses in the borough. LBTH has implemented the Mayor’s Covid Recovery Fund initiative, a multi-million-pound scheme to kickstart the economic, health and social recovery from Covid-19⁷⁷. It consists of grants to support the recovery of residents, businesses, and community organisations from the impact of the pandemic, supporting 25 vital projects in the borough. The pandemic has also changed the way people are working with many employers now allowing employees to work from home, increasing flexibility and resilience in the workforce.

⁷⁷ Tower Hamlets Council (2021) £3million boost to kickstart the borough's path out of the pandemic. Available at: https://www.towerhamlets.gov.uk/News_events/2021/July-2021/3million-boost-to-kickstart-the-boroughs-path-out-of-the-pandemic.aspx

In March 2020, in line with the Equalities Act 2010, the gender pay gap figures for women in LBTH were that they were earning 92.83% of the average (mean) pay of men⁷⁶. However, there is no one reason behind the gender pay gap, with caring responsibilities, a divided labour market, discrimination, and men tending to work in senior roles all contributing factors.

Future Trends and evolution of the baseline without the NLP

The rising population in the region is accelerating the need for the delivery of additional housing, services, and infrastructure. Growth in jobs is also anticipated in order to close the gap between increases in population and the need for employment. There is a need for improving accessibility to these jobs and training opportunities, particularly given that the levels of non-resident workers commuting into LBTH is significant.

The population is becoming younger, and the working age is increasing. However, the working age population has a relatively high economic inactivity rate. The increase in the percentage of the population that is of working age is expected to increase local economic activity levels and the supply of labour.

A NLP would allow for the delivery of new employment opportunities within the borough that are more targeted to the specific residents' needs and will help to tackle economic inactivity. The construction of new development will provide opportunities for employment within the borough. In addition to this, new developments will help to maximise social value outcomes for the local community by considering benefits to existing residents, businesses and other stakeholders as well as those expected to use the new development.

During and since the Covid-19 pandemic, homeworking has been encouraged for those who are able, changing the way people work. This trend will likely continue as employers look to maintain flexible working conditions in future. However, with the Cost-of-Living Crisis and rising energy bills, this is difficult for some households to maintain, not helped by 29,000 employees earning less than the London Living Wage (LLW)⁷².

Maintaining the vitality and attractiveness of town centres and high streets will be an ongoing challenge as shopping patterns and service delivery models change, especially with the growth of online shopping. This issue may not be addressed without the presence of the local plan and specific developments and policies targeting town centres and high streets.

Issues and Opportunities

Issues and opportunities for economy and employment and the implications for the NLP have been identified in **Table D-4**.

Table D-4 – Issues and Opportunities for Economy and Employment

Key Risks/Opportunities	Implications for the NLP
<ul style="list-style-type: none"> ■ LBTH is a major location for employment in London, attracting a large daytime population of workers; ■ Compared to London and Great Britain, LBTH has a larger proportion of residents of working age, of which a similar amount are employed. Employed residents in LBTH have a higher gross value added (GVA) per head and gross weekly pay; ■ However, there is a higher economic activity rate, with more males economically active than females; ■ This also highlights that there may be a need to diversify employment within the borough, particularly to match the skills of existing residents; ■ It is important to continue to support the role of LBTH as a major attractor of employment and economic functioning, whilst encouraging the resident population to seek opportunities in the borough; and ■ Maintaining the vitality and attractiveness of town centres and high streets will be an ongoing challenge as shopping patterns and service delivery models change, especially with the growth of online shopping. 	<ul style="list-style-type: none"> ■ The NLP should endeavour to improve connectivity between business clusters and housing markets (both planned and existing) in the borough, which will help to improve access to the skills pool as well supporting improvements in productivity; ■ The NLP should support the development of new employment sites and maintain vitality in key centres; ■ The NLP should seek to boost jobs and business, by supporting small businesses, start-ups, and markets, and creating jobs and training opportunities; ■ The NLP should encourage new developments to maximise social value benefits; and ■ The NLP should maintain the vitality and attractiveness of town centres by supporting their recovery from Covid-19 through the provision and protection of retail, shops, and businesses, with the provision of affordable retail and commercial space encouraged.

Housing

Summary of Current Baseline

LBTH position within London and its good transport links make it attractive to commuters and non-resident workers. However, this puts pressure on house prices. People from outside the area buying houses closer to work to shorten commuting time, limits the availability of housing that is affordable for younger buyers 'First Homes' and/or those on lower incomes.

House prices in LBTH have increased by 9.6% between January 2022 and January 2023, from £445,861 to £488,833⁷⁸. This is substantially higher than the England average of £310,159 (January 2023). However, house prices in LBTH are lower than the London average of £533,986. Annual price changes of a property in LBTH (9.6%) are significantly higher than both London (3.2%) and England (6.9%). The average house price in LBTH has increased by £118,333 since April 2013⁷⁹.

Figure D-3 compares the average house prices (as of January 2023) of the surrounding local authorities⁸⁰. This shows that of the 32 London boroughs, and the City of London, that make up London, Barking and Dagenham has the lowest average house prices. Kensington and Chelsea have significantly higher average house prices compared to the other local authorities in London. LBTH is the 21st least affordable borough in London. The sales volume for LBTH has decreased from November 2021 (245 sales) to November 2022 (185 sales), as it has for London over the same period (8,130 sales to 6,129 sales).

⁷⁸ HM Land Registry (2023) UK House Price Index England: January 2023. Available at: <https://www.gov.uk/government/statistics/uk-house-price-index-for-january-2023/uk-house-price-index-england-january-2023>

⁷⁹ Tower Hamlets Council (2013) House prices: Private rental market and House price trends in Tower Hamlets. Available at: https://www.towerhamlets.gov.uk/ignl/community_and_living/borough_statistics/housing.aspx

⁸⁰ Land Registry Data (2023) UK House Price Index. Available at: <https://landregistry.data.gov.uk/app/ukhpi>

Figure D-3 – Average House Prices by Local Authority Area⁸⁰

Figure D-4 overleaf shows the changes in property prices in LBTH across the different housing types since 2017. Overall, prices have increased for detached houses, semi-detached houses, and terrace houses, with detached housing seeing the largest increase, especially during and after the Covid-19 pandemic hit in 2020, where homes with more space and a garden become more of a priority. All property types and flats and maisonettes have plateaued.

Figure D-4 – Average House Prices in Tower Hamlets (2017-2022)⁸⁰

**Average house prices based on January values*

The average mean salary in 2022 in LBTH was £46,716⁸¹. According To Tower Hamlet’s draft Local Housing Needs Assessment (LHNA)⁸², in order to be able to buy a property in the borough (assuming a 10% deposit), the estimated annual household income required is £75,000. This increases to £82,000 within the City Fringe area and £98,000 in the Isle of Dogs and South Poplar area.

In terms of renting privately, the estimated annual household income required to rent in the borough is £56,600. Again, this increases to £60,000 in the City Fringe area and £64,000 in Isle of Dogs and South Poplar area.

The LHNA has identified that 29,000 households in need of housing. The greatest proportion of those in need of housing (66.1%) is due to overcrowding. Over three-quarters of those households in need are unlikely to be able to afford market housing to buy or rent and therefore there is a current need from 22,515 households. As of November 2022, there were over 12,000 claimants of housing benefit, which has increased since Covid-19⁶⁷.

⁸¹ Annual Survey of Hours and Earnings (ASHE) 2023 [online] available at: <https://www.ons.gov.uk/surveys/informationforbusinesses/businesssurveys/annualsurveyofhoursandearningsashe>

⁸² Icenl on behalf of Tower Hamlets, Draft Local Housing Needs Assessment, 2023

The primary underlying reason for homelessness within LBTH is the lack of affordable accommodation. LBTH has a statutory responsibility under the Homelessness Reduction Act 2017⁸³ to provide advice and information about homelessness and the prevention of homelessness within the borough. Out of 610 total initial assessments, 265 households in LBTH were threatened with homelessness between July-September 2022⁸⁴. As of 2017/18, 375 people were rough sleeping in LBTH as identified in the Homelessness and Rough Sleeping Strategy 2018-2023⁸⁵.

LBTH is seeking to provide more affordable housing and their Housing Strategy 2016-21 (Section 4 – Delivery Theme 1) states that the council has a strategic target of affordable housing of 50% from all new housing developments⁸⁶. The Strategic Plan 2022-26 develops upon this, indicating that LBTH will work with developers and housing associations to deliver a minimum of 1000 social homes for rent each year.

Future Trends And Evolution Of The Baseline Without The NLP

The London Plan 2021 **Error! Bookmark not defined.** has identified a 10-year housing supply target of 34,730 new homes for LBTH (2019/20 -2028/29). In 2018, LBTH identified a need for over 54,000 new homes expected to be built in the borough by 2030/31³⁹, with the majority of projected units in the Canary Wharf ward.

LBTH's population becoming younger and more diverse is happening at a higher rate than regional and national averages. Projections show that almost half of the population will be aged 20-39 by mid-2028. Therefore, the demand on affordable housing will increase.

There is also an increased risk of homelessness due to the effects of the decline in incomes that have resulted from the pandemic and the increased cost of living. There were 2,690 people estimated to be sleeping rough on a single night in autumn in 2020 (during the pandemic)⁸⁷. This declined by 9% in 2021, however, the levels of homelessness in England are still 38% higher than 2010 levels. Providing affordable housing is critical to tackling homelessness, among other issues such as overcrowding.

The current cost of living crisis in the UK is set to continue, which is likely to reduce residents' disposable income, particularly if inflation continues to outstrip increases in

⁸³ Legislation.gov.uk (2017) Homelessness Reduction Act 2017. Available at: <https://www.legislation.gov.uk/ukpga/2017/13/contents/enacted>

⁸⁴ Gov.uk (2023) Tables on homelessness. Available at: <https://www.gov.uk/government/statistical-data-sets/live-tables-on-homelessness>

⁸⁵ Tower Hamlets Council (2018) Homelessness and Rough Sleeping Strategy 2018-2023 https://www.towerhamlets.gov.uk/Documents/Homelessness_and_Rough_Sleeping_Strategy_2018_2023.pdf

⁸⁶ Tower Hamlets Council (2016) London Borough of Tower Hamlets 2016-21 Housing Strategy https://www.towerhamlets.gov.uk/Documents/Housing/THHF/TH_Housing_Strategy_document_v5.pdf

⁸⁷ Department for Levelling UP, Housing & Communities (2022) Official Statistics – Rough sleeping snapshot in England: autumn 2021. Available at: <https://www.gov.uk/government/statistics/rough-sleeping-snapshot-in-england-autumn-2021/rough-sleeping-snapshot-in-england-autumn-2021>

nominal wages. The Bank of England has forecasted that real household disposable income fell by 2.5% in 2022 and is anticipated to fall by a further 2.6% in 2023⁸⁸. Wage growth in the last year has not been sufficient to keep pace with inflation, with underlying pay growth of only 4% in February 2022.

Rising costs of living is likely to widen levels of inequality in the borough. However, with the Levelling Up and Regeneration Bill that have come into force, there is potential to reduce inequalities within the borough, although, this will be highly dependent upon the schemes and initiatives that come forward.

The absence of the NLP would not halt the delivery of housing in borough as applications for planning permission would be determined in accordance with both the NPPF and the London Plan. However, without specific local policies guiding the quantum, type and location of new development, the extent to which new development meets the needs of the Borough would be more uncertain. This could give rise to inappropriately located developments and missed opportunities to tackle deprivation, affordability and provide community services and facilities.

Issues and Opportunities

Issues and opportunities for housing and the implications for the NLP have been identified in **Table D-5**.

Table D-5 – Issues and Opportunities for Housing

Key Risks/Opportunities	Implications for the NLP
<ul style="list-style-type: none"> ■ There is significant need for affordable properties to buy and rent, however rising costs of living and above average house prices are affecting the number of residents able to afford to buy; ■ There are significant levels of overcrowding in the borough with 66% of those in need of housing currently living in overcrowded conditions; ■ The Covid-19 pandemic and rising cost of living are increasing levels of homelessness; and 	<ul style="list-style-type: none"> ■ The NLP will need to ensure housing requirements are being worked towards, especially by expanding increasing the availability of affordable housing. ■ The NLP will need to consider differing population needs, including the demands of a young and diverse population.

⁸⁸ Institute for Government, Cost of Living Crisis, [online] available at: <https://www.instituteforgovernment.org.uk/explainers/cost-living-crisis>

Key Risks/Opportunities	Implications for the NLP
<ul style="list-style-type: none"> ▪ The lack of affordable housing, means that young people and/or lower income groups are missing out. 	

Crime and Safety

Summary of Current Baseline

Ensuring community safety is key for achieving a positive state of well-being among people within social and physical environments. It is as much about reducing and preventing crime as it is about building strong and vibrant communities. This means the perception of safety within the borough’s communities is as important as measuring crime rates.

The number of casualties in LBTH killed and seriously injured (KSI) on roads for 2021 was 302.1 people (per 100,000 resident population)⁵⁸. This is higher and worse than both the regional (194.0 people per 100,000) and the national (95.6 people per 100,000) averages.

Crime rates in LBTH are high, with over 127.5 crimes per 1,000 people in the last year (February 2022-February 2023)⁸⁹, making the borough among the top 10 most dangerous London boroughs, and 6% more dangerous than the average for London⁹⁰.

As of January 2023, the most dominant crime in LBTH was violent crime, with antisocial behaviour (ASB) the second highest reported crime. Hospital admissions for violence (including sexual violence) are higher than the regional (44.3 per 100,000 people) at 59.9 admissions per 100,000⁵⁸. **Figure D-5** shows the current crime breakdown for LBTH.

⁸⁹ Metropolitan Police Service (2023) Monthly Crime Data New Cats. Available at: <https://public.tableau.com/app/profile/metropolitan.police.service/viz/MonthlyCrimeDataNewCats/Coversheet>

⁹⁰ CrimeRate. Tower Hamlets Crime Statistics. Available online at: <https://crimerate.co.uk/london/tower-hamlets>

Figure D-5 - Crime Breakdown for Tower Hamlets January 2023⁹¹.

According to IMD19⁴³, LBTH is ranked 28th out of 317 local authorities nationally (where 1 is the most deprived), placing it within the top 10% of most deprived local authorities nationally. Of the 144 LSOAs in LBTH, 31 are in the top 10% and a further 72 are top 20% of most deprived neighbourhoods nationally. With regards to crime deprivation, 25% of the 120 LSOAs in LBTH are in the most deprived 10% of LSOAs in the UK.

The main focus of Tower Hamlets Community Safety Partnership Plan 2021-2024⁹² is to reduce crime and anti-social behaviour by working to prevent crime and disorder, address substance misuse, reduce reoffending, and support young and vulnerable people from being drawn into extremist behaviour. Community Safety Partnerships are a requirement of the Crime and Disorder Act 1998⁹³.

⁹¹ UK Crime Stats – Tower Hamlets 2023 [online] Available at: <https://www.ukcrimestats.com/Subdivisions/LBO/11185/>

⁹² Tower Hamlets Community Safety Partnership Plan 2021-2024 (2021) Available at: https://www.towerhamlets.gov.uk/lgnl/community_and_living/community_safety_crime_preve/anti-social_behaviour/community_safety_partnership/csp-plan.aspx

⁹³ Legislation.gov.uk, 1998. Crime and Disorder Act 1998. Available at: <https://www.legislation.gov.uk/ukpga/1998/37/contents>

Future Trends And Evolution Of The Baseline Without The Nlp

It is predicted that crime rates will likely increase post Covid-19⁹⁴, with increases in anti-social behaviour and violent crime rates, including sexual assault and domestic abuse, seeing the largest increases. The Council's Strategic Plan 2021-2026 (Priority 6: Empower Communities and Fight Crime) outlines that the LBTH will assist with more council-funded uniformed police officers to tackle crime.

As the population of LBTH increases, there are expected to be a greater number of vehicles on the borough's roads, which may result in an increase in the number of accidents and those KSI on roads. LBTH implements a number of road safety measures to support prevention of collision. These include⁹⁵:

- Providing road safety education in schools;
- Providing road safety information to members of the public;
- Promoting the children's traffic club;
- Running the junior road safety officers club; and
- Providing and managing the school crossing patrol service.

A new Local Plan could better support improvements to community areas and facilities to aid in reducing crime and anti-social behaviour and increase opportunities for community cohesion.

Issues and Opportunities

Issues and opportunities for crime and safety and the implications for the NLP have been identified in **Table D-6**.

Table D-6 – Issues and Opportunities for Crime and Safety

Key Risks/Opportunities	Implications for the NLP
<ul style="list-style-type: none"> ■ There is potential to increase engagement within communities to encourage the reporting of crimes; 	<ul style="list-style-type: none"> ■ The NLP will need to ensure improvements to community areas to aid in reducing crime and anti-social behaviour;

⁹⁴ Office for National Statistics, 2022. Crime in England and Wales: year ending March 2022. Available at: <https://www.ons.gov.uk/peoplepopulationandcommunity/crimeandjustice/bulletins/crimeinenglandandwales/yearendingmar-ch2022>

⁹⁵ Tower Hamlets Council. Road Safety. Available online at: https://www.towerhamlets.gov.uk/lgnl/transport_and_streets/road_safety/road_safety.aspx

Key Risks/Opportunities	Implications for the NLP
<ul style="list-style-type: none"> ■ Crime rates are significantly high within the borough, particularly with regards to violent crime and antisocial behaviour; ■ There are opportunities to improve neighbourhoods and reduce the prevalence of antisocial behaviours; ■ As the population within LBTH increases there are expected to be a greater number of vehicles on the borough’s roads, which may result in an increase in the number of accidents and those KSI on roads; ■ Children in the most deprived neighbourhoods are nearly three times more likely to be KSI as a pedestrian compared to non-deprived neighbourhoods⁹⁶; ■ There are opportunities to increase the safety of active transport modes such as cycling and walking; ■ Vulnerable road users such as cyclists and pedestrians are more likely to be casualties; and ■ There is potential to increase the standards and safety of housing within the borough. 	<ul style="list-style-type: none"> ■ The NLP will need to ensure improvements to transport networks, including improving lighting, to ensure safety on networks; and ■ The NLP should seek opportunities to increase the safety of active transport modes such as cycling and walking.

⁹⁶ Centre for Transport Studies, Road Safety Research Briefing 1: Children and Traffic: Those in deprived areas still at disproportionate risk. Available online at: <https://www.ucl.ac.uk/transport/sites/transport/files/deprivation-and-road-safety-children.pdf>

Transport and Accessibility

Summary of Current Baseline

LBTH has excellent transport links and is a well-connected borough. The borough has access to the London Underground, Docklands Light Railway (DLR), National Rail connections, and the Elizabeth Line at Whitechapel and Canary Wharf stations. The DLR is a fully accessible railway, with stations having lift or ramp access to platforms. The borough has invested in making connections and access to stations more attractive, pleasant and easier to use⁹⁷.

Generally, the borough has relatively high Public Transport Accessibility Levels (PTALS). The southwest of the borough, in Spitalfields and Whitechapel, there are 'best' PTALS of 6b⁹⁸. Patchy areas traversing the north and south, in areas such as Bow, north of Poplar, and Isle of Dogs have lower PTAL outputs of 1a, indicating a lower rating by distance from frequent public transport services.

There is an extensive highways network throughout the borough, traversed by trunk roads such as the A11, A12 and A13 which carry large numbers of vehicles. The borough also benefits from 11km of cycle tracks along roads physically separated from traffic and pedestrians. There are about 53km of dedicated cycle routes in the borough (11km of which are physically separated from traffic and pedestrians) and 32.5km of pedestrian walkways⁹⁹.

LBTH is also within close proximity of major airports, including London City Airport (approx. 3.5 miles), London Heathrow (approx. 17 miles), and London Gatwick (approx. 25 miles).

As of 2021, there were approximately 45,768¹⁰⁰ registered cars in LBTH¹⁰¹, which represents an increase of +7.4% since 2019. The number of licenced vehicles in London also increased over this period, but by a greater percentage of +9.8%.

The borough is attempting to expand its electric vehicle (EV) charging infrastructure to support its net zero ambitions and air pollution reduction targets, along with associated health benefits. The demand for EVs in the borough is high and growing, making investment

⁹⁷ Tower Hamlets Council (2019) London Borough of Tower Hamlets Third Local Implementation Plan. Available at: <https://democracy.towerhamlets.gov.uk/mgConvert2PDF.aspx?ID=143901>

⁹⁸ Transport for London, WebCAT. Available at: <https://tfl.gov.uk/info-for/urban-planning-and-construction/planning-with-webcat/webcat>

⁹⁹ Sustrans, Bike Life – Tower Hamlets, 2019 [online] available at: https://www.sustrans.org.uk/media/5954/bikelife19_tower-hamlets_web.pdf

¹⁰⁰ Vehicles are allocated to a local authority according to the postcode of the registered keeper. This is the keeper's address for privately owned vehicles or the company's registered address for company owned vehicles. The address does not necessarily reflect where the vehicle is located. This is especially true for large fleets kept by companies involved with vehicle management, leasing or rentals.

¹⁰¹ London Datastore (2021) Department for Transport, Licensed Vehicles - Type, Borough. Available at: <https://data.london.gov.uk/dataset/licensed-vehicles-type-0>

in the network paramount. Since 2018, LBTH have installed 23 fast charging points¹⁰², with the majority in the borough comprising Type 2 (5kW) chargers¹⁰³.

Despite LBTH having the third highest (66%) annual growth in EV registrations in inner London, the borough has the fourth highest (65%) of households more than 5 minutes walk from the nearest charger in inner London¹⁰⁴. There are evidently accessibility issues that need to be resolved to meet the needs of the growth of EVs in the borough.

The vast majority of jobs in LBTH are filled by non-residents and employees commuting from outside the borough, causing a major problem with congestion through LBTH. Excessive road traffic leads to congestion, air and noise pollution and contributes further to climate change. Provisional estimates show motor vehicles travelled 299.3 billion vehicle miles in Great Britain in 2021 which was 16.1% lower than pre Covid-19 levels (the year ending December 2019)¹⁰⁵. Government policy is focusing on promoting sustainable transport and encouraging walking and cycling for those journeys where these are realistic alternatives.

Since the Covid-19 pandemic the way people travel has changed, especially with 50.3% of people now working mainly at or from home¹⁰⁶. The borough has good levels of sustainable travel, with the borough coming 7th out of the London boroughs on the Healthy Streets Scorecard in 2022¹⁰⁷. The Healthy Streets Scorecard ranks London boroughs on how healthy their streets are according to ten indicators. However, this may change with the consultation on Low Traffic Neighbourhoods (LTNs) undertaken in January 2023 in the borough¹⁰⁸.

The most popular method of travel to work in LBTH is by train, underground, metro, light rail, or tram, with over 60.9% of residents using this mode of public transport¹⁰⁹. This is lower than the London average where 15.2% use this method of travel to work and may be the result of 42.1% of people working mainly at or from home. Comparing the most popular

¹⁰⁸ Healthy Streets Scorecard (2022) Tower Hamlets. Available at: https://www.healthystreetscorecard.london/your_borough/tower-hamlets/

¹⁰⁹ Office for National Statistics (2020) Method of travel to work. Available at: [Method used to travel to work - Office for National Statistics \(ons.gov.uk\)](#)

method of travel to work in the borough to the national average indicates considerably lower proportions of people using train, underground, metro, light rail, or tram to travel to work, at 3.9% (-57%). The most popular method of travel to work in England is by driving a car or van, at 44.5%.

Although there are many dedicated cycle routes and pedestrian walkways in the borough, only 10.7% use bicycles or travel on foot to work (as of 2020), and only 11% of residents cycle at least once a week⁹⁹. Despite this, residents in the borough cycling each day takes up to 2,600 cars off the road, and there is ambition amongst the population to increase the use of this mode of transport, with 36% feeling they should cycle more⁹⁹.

Future Trends and evolution of the baseline without the NLP

During the Covid-19 pandemic homeworking has been encouraged for those who are able, leading to a short-term reduction in travel demand and increased financial pressure on the operators. This trend will likely continue as employers look to maintain flexible working conditions in future. In addition, peak periods for traffic congestion are likely to change with less people commuting for work. Public transport will need to adapt to these altered working and lifestyle patterns and encourage more passengers.

As the population in LBTH is becoming younger, and the majority of the population will continue to be of working age, there is likely to be additional demand on the borough's services and transport infrastructure. With public transport infrastructure already under stress with overcrowding and congestion, the transport industry will need to adapt meet the differing needs of this demographic change.

Transport must become accessible and affordable for all that live and work in the borough to reduce inequalities and meet Outcome 6 of the Tower Hamlets Transport Strategy 2019-2041¹¹⁰.

The borough has a commitment to become net-zero by 2045 or sooner through the Net Zero Carbon Partnership Action Plan¹¹¹. This will require modal shifts to active transport, to shift the dependency of commuters away from cars and public transport. LBTH Cycling Strategy endeavours to increase the proportion of residents cycling to work to 12 per cent by 2025¹¹².

As part of the council's and wider London's commitment to improving air quality the borough is situated within the Ultra Low Emission Zone (ULEZ) that operates 24 hours a day, seven

¹¹⁰ Tower Hamlets Council (2019) Tower Hamlets Transport Strategy 2019-2041. Available at: <https://democracy.towerhamlets.gov.uk/ieDecisionDetails.aspx?ID=7286>

¹¹¹ Tower Hamlets Council (2021) Net Zero Carbon Partnership Action Plan. Available at: <https://democracy.towerhamlets.gov.uk/ieDecisionDetails.aspx?Id=7524>

¹¹² Tower Hamlets Council (2016) Tower Hamlets – A Cycling Borough. Available at: https://www.towerhamlets.gov.uk/lgnl/transport_and_streets/cycling/cycling_strategy.aspx

days a week, every day of the year (except Christmas Day)¹¹³, which involves daily penalties for non-compliant vehicles.

To help meet this target, electric and hybrid vehicles are expected to become dominant (with the ban on new petrol and diesel car vehicle sales in the UK by 2035), requiring provisions such as electric charging points to be made for these vehicles across the borough.

Without the NLP transport improvements and developments will likely still come forward in the borough, due to the overarching Transport Strategy⁸⁰ and supplementary plans such as the Cycling Plan⁸². However, the NLP will enable the borough to better plan any necessary, large and small-scale improvements to its public transport and active travel networks and put in plan policies that support new developments and increasing demand.

Issues and Opportunities

Issues and opportunities for transport and accessibility and the implications for the NLP have been identified in **Table D-7**.

Table D-7 – Issues and Opportunities for Transport and Accessibility

Key Risks/Opportunities	Implications for the NLP
<ul style="list-style-type: none"> ■ There is a need to improve sustainable transport modes (public and active) in line with LBTH’s commitment to reach net-zero GHG emissions by 2045; ■ Electric vehicle (EV) charging infrastructure will need to improve to support the growing demand of residents switching from petrol and diesel to hybrid and EVs; ■ Transport issues affect different groups to varying extents, and there is potential that the barriers to accessing and using transport can be exacerbated by age, ethnicity and gender; 	<ul style="list-style-type: none"> ■ There is a need to support the reduction of GHG emissions within the transport industry towards net-zero through the better provision of sustainable transport; ■ Site selection should account for future climate change, and consider locating transport infrastructure away from areas of high flood risk, or where road drainage may impact on water quality issues; ■ The NLP should maximise opportunities to integrate connected blue and green infrastructure along transport corridors;

¹¹³ Transport for London, Ultra Low Emission Zone. Available at: <https://tfl.gov.uk/modes/driving/ultra-low-emission-zone>

Key Risks/Opportunities	Implications for the NLP
<ul style="list-style-type: none"> ■ Changing work habits such as remote, internet-based jobs and working from home are likely to reduce transport demand; and ■ Health inequalities are prevalent in the borough, therefore reducing significant issues with traffic and congestion and subsequent air pollution is of utmost importance. 	<ul style="list-style-type: none"> ■ Improving availability, connectivity, reliability and affordability of public transport; and ■ There is a need to support greater access to services and facilities for the changing demographics.

Biodiversity and Natural Capital

Summary of Current Baseline

LBTH is a predominantly urban area and contains no internationally or European designated sites. There are numerous nationally designated sites within the greater London area, notably Site of Special Scientific Interest (SSSI), designated under the Wildlife and Countryside Act (1981)¹¹⁴, as amended. Gilbert's Pit (Charlton) SSSI in Greenwich is in closest proximity to LBTH, a geological SSSI covering 5.2Ha.

There are also the following European protected sites within 10km of the borough boundary:

- Special Protection Area (SPA): Lee Valley
- Ramsar Sites: Lee Valley
- Special Area of Conservation (SAC): Epping Forest

Lee Valley SPA is designated for Bittern (*Botaurus stellaris*), Gadwall (*Anas strepera*), and Shoveler (*Anas clypeata*). Lee Valley Ramsar Site is also designated for Gadwall and Shoveler, along with Water boatman (*Micronecta minutissima*) and Whorled water-milfoil (*Myriophyllum verticillatum*). All three bird species are list as amber on the Birds of Conservation Concern 5 (BoCC5)¹¹⁵, with Bittern showing a decreasing population trend on the IUCN Red List¹¹⁶.

¹¹⁴ Wildlife and Countryside Act 1981. Available at: <https://www.legislation.gov.uk/ukpga/1981/69/contents>

¹¹⁵ Stanbury, A. J. et al. (2021) The status of our bird populations: the fifth Birds of Conservation Concern in the United Kingdom, Channel Islands and Isle of Man and second IUCN Red List assessment of extinction risk for Great Britain. Available at: <https://www.bto.org/our-science/publications/birds-conservation-concern/status-our-bird-populations-fifth-birds>

¹¹⁶ IUCN Red List, The IUCN Red List of Threatened Species. Available at: <https://www.iucnredlist.org/en>

Epping Forest SAC supports Northern Atlantic wet heaths, European dry heaths, Atlantic acidophilous beech forests, and Stag beetle (*Lucanus cervus*) as qualifying habitats and species. All European designations within 10km of the borough boundary are legally underpinned by their respective SSSIs.

LBTH has an abundance of parks and open spaces which provide important habitat for wildlife, many of which are designated as Local Nature Reserves (LNRs). These include Tower Hamlets Cemetery Park, Ackroyd Drive, and Mudchute Park Farm, and cumulatively comprise an area of 25.78Ha.

The borough also has Sites of Importance for Nature Conservation (SINCs) which are London's equivalent of Local Wildlife Sites (LWSs) and are non-statutory designations. SINCs are identified in a four-tier system: Sites of Metropolitan Importance, Sites of Borough Importance (Grades 1 and 2) and Sites of Local Importance. There are 35 SINCs in LBTH¹¹⁷, benefitting from a high level of protection within the planning system, including:

- Six Sites of Metropolitan Importance;
- Four Sites of Borough Importance (Grade 1);
- 12 Sites of Borough Importance (Grade 2); and
- 13 Sites of Local Importance.

The habitat of LBTH is predominantly urban, however, there are a range of habitats in parks, cemeteries, waterways, brownfield sites, and gardens. There are also discrete sections of Priority Deciduous Woodland scattered across the borough. Epping Forest SAC woodland site is one of the best examples of Atlantic acidophilous beech forest in its UK range, and Lee Valley SPA / Ramsar wetland site is composed of a series of reservoirs and reedbed habitat.

The loss, fragmentation, and deterioration of natural habitats in the UK has caused a decline in the provision of many ecosystem services, with 41% of all UK species having declined since the 1970s¹¹⁸. Habitat loss has been prevalent for open mosaic habitats resulting from derelict sites being redeveloped, and the reason for the decline of species such as the House Sparrow (*Passer domesticus*) in the borough as well as London is largely unknown but could be attributed to habitat loss, pollution, predation and possibly disease¹¹⁹.

¹¹⁷ [Sites of importance for nature conservation \(towerhamlets.gov.uk\)](https://towerhamlets.gov.uk)

¹¹⁸ NBN (2019) State of Nature Report. Available at: <https://nbn.org.uk/stateofnature2019/reports/>

¹¹⁹ Tower Hamlets Council (2019) Tower Hamlets Local Biodiversity Action Plan 2019-2024. Available at: <https://www.towerhabitats.org/wp-content/uploads/2020/09/TowerHamletsLocalBiodiversityActionPlan2019-24.pdf>

According to the Natural Environment Valuation Online (NEVO) tool species richness data¹²⁰, LBTH has 32 species present in the current decade, out of 100 priority species chosen by the Joint Nature Conservation Committee (JNCC). These are broken down as follows:

- Plants – 14 out of 38 species;
- Invertebrates – 8 out of 25 species;
- Birds – 6 out of 17 species;
- Mammals – 4 out of 14 species;
- Lichen – 0 out 5 species; and
- Herptiles – 0 out of 1 species.

The NEVO tool also indicates that out of the 2,000ha comprising the borough, 80% of the land cover is urban, with only 0.9% consisting of semi-natural grassland or woodland.

Natural capital is a key theme in the Government's 25-year Environment Plan: A Green Future¹²¹. The UK's natural capital accounts show that approximately 20-25 million tonnes of carbon have been sequestered by vegetation in the UK each year between 2007 and 2015, while around 1.5 million tonnes of air pollutants have been removed each year. This equates to a monetary value of approximately £1.5 billion for carbon sequestration and £1 billion for pollution removal in 2015. By comparison, according to the NEVO tool, LBTH sequestered just 17 tonnes of CO₂ a year, equating to a monetary value of £113. Natural capital can play a significant part in mitigating the effects of emissions and climate change.

The important role of natural capital is also prevalent for London, with London's public green spaces having a gross asset value of more than £91 billion, providing services valued at £5 billion per year¹²². The total value of publicly accessible greenspace in LBTH is £2.0 billion, with associated benefits in carbon storage (£0.11 million) and temperature regulation (£20 million)¹²³.

Green Infrastructure (GI) provides a strategically planned network of nature and semi-natural areas, designed, and managed to deliver ecosystem services, and provides a wide range of environmental, economic, health and wellbeing benefits for nature, climate, and communities. GI in LBTH includes parks and playing fields, nature reserves and natural

¹²⁰ University of Exeter, NEVO, [online] available at: <https://www.exeter.ac.uk/research/leep/research/nevo/>

¹²² Mayor of London (2017) Natural capital accounts for public green space in London: Report prepared for Greater London Authority, National Trust and Heritage Lottery Fund. Available at: [11015viv_natural_account_for_london_v7_full_vis.pdf](https://www.london.gov.uk/asset-upload/11015viv_natural_account_for_london_v7_full_vis.pdf)

¹²³ Mayor of London (2017) Natural capital accounts for public green space in London: Local authority summaries. Available at: [11015viv_nca_by_borough.pdf](https://www.london.gov.uk/asset-upload/11015viv_nca_by_borough.pdf) (london.gov.uk)

habitats, and allotments and urban greening. However, due to the urban density of the borough there is a sense of open space deficiency.

In addition to GI, the borough has a substantial amount of blue infrastructure (BI) which can provide important habitats and ecosystem services. Key areas include Millwall Outer Dock, South Dock, Blackwell Basin, Poplar Dock Marina, North Dock, Limehouse Basin and the River Lea. Combining blue and green Infrastructure (BGI) elements together is an effective way of providing a sustainable natural solution to urban and climatic challenges.

Urban greening is measured using the Urban Greening Factor (UGF) tool which evaluates both quality and quantity of proposed urban greening. This system will enable LBTH to comply with Policy G5 Urban Greening of the London Plan **Error! Bookmark not defined.**, making the urban greening required for a development measurable.

The Tower Hamlets Green Grid Strategy¹²⁴ aims to create a framework for the design and delivery of appealing walking routes and associated GI across the borough. This strategy is essential to reduce the sense of open space deficiency, with the borough having less than the local open space standard of 1.2 hectares per 1,000 residents¹²⁵. Design considerations for interventions which respect the local character and are designed to be low maintenance will enable the benefits of GI to be maximised in the future. The purpose of the Parks and Open Space Strategy 2017-2027¹²⁶ is:

- Managing the impact of population growth on the provision of open spaces;
- Attracting and guiding investment in parks and open spaces to the best effect for Tower Hamlets;
- Contributing to sustainable development;
- Addressing competing demands on parks and open spaces; and
- Mitigating the revenue costs for the council of providing parks and open spaces in Tower Hamlets.

Future Trends and evolution of the baseline without the NLP

The 2019 State of Nature Report¹¹⁸ highlights the general decrease in biodiversity in the UK. Since 1970, species abundance has decreased by 13% and species distribution has decreased by 5%. Of the 8,431 species that have been assessed using the International

Union for Conservation of Nature (IUCN) Regional Red List criteria, 15% are currently threatened with extinction from Great Britain and 2% are already extinct.

Rising population and urbanisation of natural areas can further exacerbate habitat fragmentation and decreases in biodiversity. Species distribution may shrink in LBTH if developments continue to separate habitat corridors connecting the LNRs, specifically Tower Hamlets Cemetery Park and Ackroyd Drive. There are a number of areas which are considered to be deficient in nature, a trend that could continue to rise. This highlights the need for green spaces.

Climate change presents another threat to ecosystem services and biodiversity. Current IPCC¹²⁷ predictions for temperature increases are expected to be 2°C by the middle of the 21st century. This increase in temperature is expected to lead to increases in flooding events and northward colonisation of species in the UK. Increased flooding will need to be mitigated, especially as large parts of LBTH are situated within a flood risk zone 3. In order to preserve biodiversity and natural habitats, soft engineering and nature-based solutions will need to be used over traditional hard engineering.

The Environment Act¹²⁸ specifies a mandatory 10% increase in biodiversity net gain (BNG) for new developments. This will apply from January 2023 for developments¹²⁹ that fall under the Town and Country Planning Act 1990¹³⁰. Biodiversity on development sites will need to be preserved, with additional mitigation put in to increase biodiversity. This increase in biodiversity may be provided on site enhancement, or through off-site compensation.

As part of the LBTHs Net Zero Carbon Plan¹³¹ in response to declaring a climate emergency, the following ambitions relevant to biodiversity and natural capital were identified:

- 2025: Average UGF of 0.3
- 2035: Average UGF of 0.4
- 2050: Average UGF of 0.4

The council has identified that it is not possible to plant enough trees to meaningfully offset total emissions, so as many trees as possible should be planted¹³². Trees that are planted

must be diverse and native species. LBTH would need further reductions in emissions from forestry in other local authorities, potentially through a future national trading scheme.

London is implementing a Rewild London Fund 2022¹³³, providing £850,000 of funding to create new habitats in line with London Environment Strategy¹³⁴ targets, with local authorities eligible to apply for funding to support projects.

The Tower Hamlets Local Biodiversity Action Plan (LBAP)¹¹⁹ sets out a series of actions for the built environment, gardens and grounds, rivers and standing water, and parks, squares and burial grounds. The LBAP identifies priority habitats and species in the borough, and sets objectives and, where appropriate, targets for what needs to be done to ensure their conservation and inform the implementation of future projects and actions.

It is clear that there are a number of ongoing initiatives and plans within the borough that will help to conserve and enhance biodiversity and natural capital and which would be expected to continue without the NLP. However, there is potential that without the NLP some sites and habitats could be threaten by development in inappropriate locations. The NLP may also provide opportunities to increase biodiversity and natural capital assets.

Issues and Opportunities

Issues and opportunities for biodiversity and natural capital and the implications for the NLP have been identified in **Table D-8**.

Table D-8 – Issues and Opportunities for Biodiversity and Natural Capital

Key Risks/Opportunities	Implications for the NLP
<ul style="list-style-type: none"> ■ Light, air, and noise pollution from increasing urban development in the borough may put strains on nearby protected areas, notably the European designations; ■ Increasing population and developments may result in worsening air quality that may degrade the borough’s valuable ecological receptors; ■ Development adjacent to watercourses are expected to contribute to achieving Water 	<ul style="list-style-type: none"> ■ Developments will need particular attention to potential environmental impacts. ■ Development and site allocation of the new NLP will need to include stringent standards for the protection and enhancement of biodiversity and natural capital. ■ The NLP should look to develop new green spaces to support the

Key Risks/Opportunities	Implications for the NLP
<p>Framework Directive objectives relating to ecological status; this includes connectivity for fish and removal of invasive species;</p> <ul style="list-style-type: none"> ■ New legislation regarding biodiversity net gain will require developments to implement demonstratable increases in biodiversity, including consideration of watercourses from the start of the design process in order to maintain the increase in biodiversity over the statutory 30 year period. Developments that seek to create habitat to support species identified as declining should be prioritised; and ■ The inclusion of BGI can help with mitigating embodied carbon, improve air quality, reduce the Urban Heat Island (UHI) effects and help to make developments more climate resilient, especially when it comes to flood mitigation. 	<p>borough's growing population and reduce open space deficiency.</p> <ul style="list-style-type: none"> ■ The NLP should prioritise the connection of green spaces in the borough by implementing green corridors to improve GI. ■ The NLP will need to encourage development opportunities to remove in-channel structures when present within the watercourse, the use of hard engineering should require strong justification; ■ The NLP will need to address plans for flood mitigation. Creation and use of nature-based solutions and ecosystems services for flooding can be included. ■ The NLP should establish guidelines for biodiversity net gain to support developers

Landscape and Townscape

Summary of Current Baseline

Landscape and townscape is the visual aesthetic of the natural or built environment. The landscape takes its character from a combination of elements, including topography, watercourses, land use and pattern, vegetation, open space, and cultural heritage features. The topography of the borough is generally flat along the river front to the south, with some sections of the Isle of Dogs at sea level or below (< 0m)¹³⁵. The elevation of the land increases towards the northwest and at discrete locations such as Canary Wharf (up to 39m). The average elevation in the borough is 9m.

¹³⁵ [London Borough of Tower Hamlets topographic map, elevation, terrain \(topographic-map.com\)](#)

LBTH is predominantly urban; however, there are over 200 parks and greenspaces within the borough, and 170 are publicly accessible, most notably Victoria Park and Mile End Park. Victoria Park is the borough’s largest park, covering over 80Ha¹³⁶.

Metropolitan Open Land (MOL) is strategic open land within the urban area, afforded the same level of protection as the Green Belt. Despite there being no designated Green Belt land within the borough, 7.6% of LBTH is MOL¹³⁷. These designations restrict development to heavily developed areas in LBTH.

LBTH falls within two of Natural England's National Character Areas (NCAs)¹³⁸. These are defined in **Table D-9** below.

Table D-9 – National Character Areas within Tower Hamlets

NCA	Description
81: Greater Thames Estuary	<ul style="list-style-type: none"> Predominantly a remote and tranquil landscape of shallow creeks, drowned estuaries, low-lying islands, mudflats and broad tracts of tidal salt marsh and reclaimed grazing marsh that lies between the North Sea

NCA	Description
	<p>suffer a shortage of green space close to where they live. The Thames Path National Trail also provides extensive walking opportunities following the river together with strategic walking routes such as the Capital Ring and the Jubilee Walkway.</p>

The Green Flag Award® is a non-profit international accreditation programme that recognises and rewards well managed parks and green spaces¹³⁹, and 13 of the borough’s parks benefit from such award. The London in Bloom campaign have also provided nine gold awards to the borough, with the borough awarded the ‘City’ category for 2022¹⁴⁰.

Townscape includes the buildings and the activities and spaces between them, with the public realm an important feature of the townscape. Views are considered as intrinsic to local character, and London Boroughs are required to designate local views and landmarks. The London View Management Framework SPG¹⁴¹ identifies the silhouette of Canary Wharf as a recognisable feature in numerous panoramic views of London and is designated as a “Skyline of Strategic Importance”. There are a total of 39 landmarks and 92

¹³⁹ Green Flag Award (2023) Available at: <https://www.greenflagaward.org/#>

¹⁴⁰ London In Bloom (2023) <https://londoninbloom.co.uk/>

¹⁴¹ Mayor of London (2012) London View Management Framework. Available at: [London View Management Framework | London City Hall](#)

views identified in conservation area appraisals and management guidelines for the borough¹⁴².

LBTH includes some of London's destination high streets including Columbia Road Flower Market, Brick Lane's curry houses, Bethnal Green's craft beer pubs and night life, Whitechapel's growing transport and civic hub and the rich East End history linked to Chrisp Street and Roman Road¹⁴³. Town centres are the economic, transport, social and civic hearts of the borough, with the borough having eight district centres:

- Bethnal Green
- Brick Lane
- Chrisp Street
- Middlesex Street
- Roman Road East
- Roman Road West
- Watney Market
- Whitechapel
 - The borough has number of major tourist attractions which include:
 - The Museum of London Docklands;
 - The Tower of London;
 - Tower Bridge;
 - Canary Wharf;
 - Victoria Park; and
 - Whitechapel Gallery.

Future Trends and evolution of the baseline without the NLP

Landscape and townscape character and quality is under particular threat from future development through, for example, loss of tranquillity, increased lighting, visual intrusion and the incremental loss of landscape features and characteristic elements.

¹⁴² Tower Hamlets Council (2018) Local Plan Topic Paper D.DH4 Managing and Shaping Views. Available at: [Topic Paper Views and Landmarks 2018.pdf \(towerhamlets.gov.uk\)](#)

¹⁴³ Tower Hamlets Council. Tower Hamlets High Streets & Town Centres Strategy 2017 – 2022. Available at: [6.6a%20-%20App1%20-%20High%20Streets%20Town%20Centre%20Strategy%202017-2022.pdf \(towerhamlets.gov.uk\)](#)

Similarly, pressures from expanding populations put more strain on existing systems, and more pressure on recreational landscapes and tourist attractions.

Growth will also increase the demand for open spaces, and place challenges on LBTH to meet this demand, especially when faced with the current financial pressures experienced nationwide. Despite this, residents will need access to high quality open space, increasing the provisions required.

The Parks and Open Space Strategy 2017-2027 acknowledges the need to attract investment for the borough’s increasing demand for open space¹⁴⁴.

Without a NLP there may be reduced opportunities for new development to enhance and support the local landscape and townscape character through, quality design, provision of green infrastructure and/or habitat creation.

Issues and Opportunities

Issues and opportunities for landscape and townscape and the implications for the NLP have been identified in **Table D-10**.

Table D-10 – Issues and Opportunities for Landscape and Townscape

Key Risks/Opportunities	Implications for the NLP
<ul style="list-style-type: none"> ■ Development has the potential to cause direct and indirect impacts on designated landscapes and townscapes, affecting the character and sense of place; ■ Future growth could risk compromising landscape and townscape character and features. However, design that incorporates public realm and GI principles could play a key role in the enhancement of the natural environment, visual amenity and physical and mental health of the borough’s people; ■ There is opportunity to increase greenspace access and subsequently, to improve health and wellbeing, combat air pollution, provide 	<ul style="list-style-type: none"> ■ The NLP must consider the setting of landscape and townscape assets and tourist destinations, ensuring development enhance setting. ■ The NLP must consider the importance of landscape and townscape character when outlining options, ensuring development does not erode the quality and key characteristics of the landscape and townscape, and instead respects it. ■ The NLP must protect the views that comprise the urban skyline, including the visibility of important

Historic Environment

Summary of Current Baseline

LBTH possesses a great diversity of heritage assets of international to local importance and priority. The borough takes its name from the historical association with the Tower of London and the surrounding hamlets, characterised by a long history of maritime and trade activity, and migration and change. LBTH has a comprehensive strategy for regeneration and enhancement of such heritage assets¹⁴⁵.

Heritage assets make a significant contribution to the quality of life for those living, working or visiting LBTH. There are a number of designated assets throughout LBTH¹⁴⁶, including:

- Two World Heritage Sites;
- Nine Scheduled Monuments;

¹⁴⁵ Tower Hamlets Council (2017) Conservation Strategy 2017-2027. Available at: https://www.towerhamlets.gov.uk/lgn/planning_and_building_control/conservation_and_urban_design.aspx

¹⁴⁶ Historic England - Search the list. Available at: <https://historicengland.org.uk/>

- 13 Grade I Listed Buildings;
- 40 Grade II* Listed Buildings;
- 2,000 Grade II Listed Buildings¹⁴⁷;
- 210 Locally Listed Buildings;
- 58 Conservation Areas; and
- Five Registered Parks and Gardens.

The Tower Hamlets Local List identifies locally important heritage assets that are valued by the local community, these are also referred to as non-designated heritage assets (visible, buried or submerged). Although not designated, these assets are material planning considerations and the NPPF and draft policies contain references to them. There are currently 210 locally listed buildings and 44 locally listed war memorials within the borough.

The Greater London Historic Environment Record (GLHER)¹⁴⁸ is a comprehensive and dynamic resource for the historic environment of Greater London, with data supporting the work of the Greater London Archaeological Advisory Service (GLAAS). The record contains over 87,000 entries, with 1,122 of these in LBTH.

The two designated World Heritage Sites were designated by UNESCO for their 'Outstanding Universal Value', which have been inscribed on the World Heritage List by the World Heritage Committee. World Heritage Status is a high accolade that brings international scrutiny. The designated World Heritage Site's situated partially or wholly within the borough, and occupying buffer zones, are:

- Tower of London World Heritage Site, The Tower of London (inscribed 1988)
- Maritime Greenwich World Heritage Site, Island Gardens (inscribed 1997)

Historic England's Heritage at Risk (HAR)¹⁴⁹ programme helps to understand the overall state of England's heritage sites. It identifies those sites that are most at risk of being lost as a result of neglect, decay or inappropriate development. In LBTH, there are 36 assets on the HAR register; one Scheduled Monument, five Conservation Areas, 24 Grade II listed buildings, four Grade II* listed buildings, and two Grade I listed buildings.

Historic England provides specific guidance on managing change within the settings of heritage assets, including archaeological remains and historic buildings, sites, areas, and landscapes, set against the background of the National Planning Policy Framework (NPPF)

¹⁴⁷ Grade I Listed Buildings are of exceptional interest. Grade II* Listed Buildings are particularly important buildings of more than special interest. Grade II buildings are of special interest.

¹⁴⁸ Greater London Historic Environment Record (GLHER) Available at: <https://historicengland.org.uk/services-skills/our-planning-services/greater-london-archaeology-advisory-service/greater-london-historic-environment-record/#Online>

¹⁴⁹ Heritage at Risk (2022) Available at: <https://experience.arcgis.com/experience/cb50293b60cd42e98f7d312cec9115a9/>

and the related guidance given in the Planning Practise Guide (PPG). In addition to the visual setting, 'setting' can also include intangible such as sound, smells, and historic associations / relationship

An Archaeological Priority Area (APA) is a defined area where, according to existing information, there is significant known archaeological interest or potential for new discoveries¹⁵⁰. All parts of the borough fall into one of four different tiers of archaeological significance and potential (Tier 1-3 constituting an APA, and Tier 4 outside an APA). There are a total of 31 APAs in the borough, of which six are Tier 1 APA, 23 are Tier 2 APAs and two are Tier 3 APAs, cumulatively covering approximately 74% of the borough¹⁵¹.

Future Trends and evolution of the baseline without the NLP

Protection of the historic environment is firmly embedded in national and local policy, and this has been the case since 1990. This policy has developed independently of the European Union and is unlikely to change with the Retained EU Law Bill. However, whilst harm to the significance of heritage assets is largely restricted, harm to the setting of heritage assets still occurs; for example, relating to visual intrusion, or aspects such as traffic, lighting, and noise. This can be a sensitive planning issue.

One trend over the last few years which may well continue, is the reduction in funding for Historic England and county and local authorities, with increased pressure on the case workload of Archaeological Officers, Conservation Officers, and Historic England advisors. This can have an impact on the response times for the provision of planning advice.

The reduction in funding for Historic England also has an impact on the number of and the scale of grants for the Historic Environment, this includes to grants to heritage assets at risk. Therefore, these heritage assets likely to see a decline in their preservation, and an increase in heritage at risk that is lost.

The number of vehicles on the roads is likely to increase as the borough's population rises, increasing air pollution and road traffic. This has the potential to harm the settings of World Heritage Sites, listed buildings, scheduled monuments and parks and gardens, as well as conservation areas.

Expansion of roads and the development of new residential and commercial areas, to accommodate the increased number of private vehicles, road traffic, and population increase, will put pressure on land space and could result in land take from heritage assets. Depending on the scale and nature of land take, as this may harm both the setting and characteristics of assets.

¹⁵⁰ [Greater London Archaeological Priority Areas | Historic England](#)

¹⁵¹ Historic England (2017) London Borough of Tower Hamlets: Archaeological Priority Areas Appraisal. Available at: <https://historicengland.org.uk/content/docs/planning/apa-tower-hamlets-pdf/>

Climate change also poses a risk of harm to heritage assets, their characteristics, and settings, particularly through increased flooding, extreme heat events, and changes to energy requirements. Historic England have outlined guidance to achieving net zero targets and adapting the heritage environment to climate change – this is focussed on reusing UK homes built before 1919 (approximately 20% of the UK’s housing resource) and adapting their energy needs¹⁵².

Protection of the historic environment is likely to be maintain through existing local, regional and national plans and policies, however without the NLP there may be reduced opportunities for new development to enhance and support the local heritage character and strike the right balance between protection and enhancement the need for development.

Issues and Opportunities

Issues and opportunities for the historic environment and the implications for the NLP have been identified in **Table D-11**.

Table D-11 – Issues and Opportunities for Historic Environment

Key Risks/Opportunities	Implications for the NLP
<ul style="list-style-type: none"> ■ There are opportunities for enhancing the setting of heritage assets through the development of schemes to reduce traffic noise and enhance accessibility through active modes and asset settings; ■ Trans-boundary matters should be noted and the impact that development in LBTH may have on heritage in other boroughs; ■ There is potential for development to encroach on assets and their settings, particularly through land take, increased noise and visual effects. Although damage to the significance and setting of assets from development is not limited to these factors; Archaeological remains, whether designated or not, can require preservation in situ. This clearly has implications and can represent a 	<ul style="list-style-type: none"> ■ There are opportunities for enhancing the setting of heritage assets through the development of schemes to reduce traffic noise and enhance accessibility through active forms of transport. ■ The NLP should preserve and enhance the current settings of heritage assets, both designated and non-designated. ■ The NLP must consider the importance of local historic character when outlining options, ensuring that development doesn't erode the quality and key characteristics of assets.

¹⁵² Historic England, 2022. Climate Change: Mitigation, Adaptation and Energy Measures. [online] Available at: <https://historicengland.org.uk/whats-new/features/climate-change/>

Key Risks/Opportunities	Implications for the NLP
<p>significant constraint to future scheme design, which should respect, retain and protect the remains (e.g. through avoidance and redesign); and</p> <ul style="list-style-type: none"> Vehicle damage and pollution can adversely affect World Heritage Site’s, listed buildings and scheduled monuments, so reducing vehicle movements within historic areas is also important to address. 	<ul style="list-style-type: none"> The NLP should include measures to minimise climate change impacts on the historic environment. The NLP should ensure that development adjacent, or in close proximity to the local conservation areas, designated assets, archaeological remains or listed buildings, respects their character and setting, and does not detract from the quality of the built environment.

Water Environment

Summary of Current Baseline

The borough falls within the Thames River Basin District, and the London Management Catchment. The Lee Lower Rivers and Lakes Operational Catchment feeds into the Lee (Tottenham Locks to Bow Locks/Three Mills Locks) Water Body. This is a heavily modified water body and has a catchment area of 45.185 km¹⁵³, with the River Lee Navigation draining into Limehouse Basin.

The Water Framework Directive (WFD)¹⁵⁴ sets an objective of aiming to achieve at least ‘good’ status for all waterbodies by a set deadline specific for each waterbody. Most of the monitored waterbodies are ‘main rivers’ that are under the jurisdiction of the Environment Agency. **Table D-12** below show the water quality (ecological and chemical) of the 27 waterbodies in the Lee Lower Rivers and Lakes Operational Catchment for the 2019 Cycle 3.

Table D-12 – Water quality (ecological and chemical status) of the Lee Lower Rivers and Lakes Operational Catchment¹⁵³

¹⁵³ Environment Agency. Catchment Data Explorer - Thames River Basin District. Available at: <https://environment.data.gov.uk/catchment-planning/RiverBasinDistrict/6>

¹⁵⁴ Department for Environment, Food & Rural Affairs (2014) Water Framework Directive implementation in England and Wales: new and updated standards to protect the water environment. Available at: https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/307788/river-basin-planning-standards.pdf

Operational Catchment	Classification							
	Ecological Status					Chemical Status		
	Total Water Bodies	High	Good	Moderate	Poor	Bad	Fail	Good
Lee Lower Rivers and Lakes	27	0	1	16	9	1	27	0

Of the 27 water bodies, just one has 'good' ecological status, falling far short of the WFD target of 100%. The percentage of waterbodies achieving 'moderate' status was 59.3%, whilst 37.0% were 'poor' or 'bad' status. All water bodies failed based on their chemical status.

The Lee (Tottenham Locks to Bow Locks/Three Mills Locks) Water Body is the only water body in the operational catchment achieving 'bad' ecological status. It is also 'high' for all specific pollutants, including Arsenic (As) and Copper (Cu).

The reasons for not achieving good (RNAG) is predominantly due to urban development associated with urban and transport, sewage discharge by the water industry, use of restricted substance by navigation, and misconnections by the domestic general public.

The WFD also includes groundwater water bodies, with the objective of achieving 'good' quantitative and chemical status. The borough contains one such groundwater body, Greenwich Tertiaries and Chalk, which currently has 'poor' chemical and quantitative classification.

The Thames River Basin Management Plan (2021-2027)¹⁵⁵, developed in 2009 and updated in 2022, is required if 93.6% of surface waters in England are to achieve 'good or better' ecological status by 2027 or beyond¹⁵⁶.

National flood zone data correlates with the location of main rivers and ordinary watercourses as areas with the greatest risk of flooding. The government's flood map¹⁵⁷ for planning shows that a sustainable portion of the borough lies within in flood risk zone 3, meaning it has a high probability of flooding. The borough has almost 37,000 properties located within areas defined as being at risk of flooding, with the potential risk of flooding from other (non-river related) sources including sewer surcharge and surface water flooding as a result of heavy rainfall prevalent. Areas of the borough are also thought to be susceptible to elevated groundwater levels, which may additionally interact with and exacerbate other sources of flood risk¹⁵⁸.

The LBTH Local Flood Risk Management Strategy¹⁵⁹ identifies critical drainage areas (CDAs) that are predicted to be at an increased risk of flooding relative to the rest of the borough. Due to large parts of the borough being urbanised and well developed, and the limited capacity of the sewer system, surface water flooding is thought to pose the most significant risk. The Isle of Dogs is one area of high-level flood risk as a result of its low-lying topography.

Future Trends and evolution of the baseline without the NLP

In terms of water quality, the requirements of the WFD should lead to continued improvements to water quality in watercourses. However, water quality is also likely to continue to be affected by pollution incidents in the area; runoff from urban and transport; the presence of non-native species; and physical modifications to water bodies.

Meeting water supply demand over the next 25 years will be challenging in London. Deficits may develop across England by the 2050s due to climate change alone; these would be exacerbated by population growth.

At a regional level, the future implications of climate change projections include increased surface water and fluvial flooding leading to damage to property and disruption to economic

¹⁵⁵ Environment Agency (2022) Thames river basin district river basin management plan: updated 2022. Available at: <https://www.gov.uk/guidance/thames-river-basin-district-river-basin-management-plan-updated-2022>

¹⁵⁶ Environment Agency (2022) River basin management plans updated 2022: progress report. Available at: <https://www.gov.uk/government/publications/river-basin-management-plans-updated-2022-progress-report/river-basin-management-plans-updated-2022-progress-report>

¹⁵⁸ Environment Agency and Tower Hamlets Borough Resilience Forum (2017) London Borough of Tower Hamlets: Multi-Agency Flood Plan v1.0. Available at: [LBTH_MAFP_Sept_17 \(towerhamlets.gov.uk\)](https://www.towerhamlets.gov.uk/Documents/Environmental-protection/Monitoring/Local_Flood_Risk_Management_Strategy.pdf)

¹⁵⁹ Tower Hamlets Council (2017) Local Flood Risk Management Strategy: London Borough Tower Hamlets 2016-2022. Available at: https://www.towerhamlets.gov.uk/Documents/Environmental-protection/Monitoring/Local_Flood_Risk_Management_Strategy.pdf

activity; water shortages; and higher incidence of damage to transportation, utilities, property and communications infrastructure caused by an increase in the number of extreme weather events (e.g., heat, high winds, and flooding). It is expected that changing climate patterns will have a substantial impact on the level of flood risk from all sources within the borough.

A NLP presents opportunities to provide a targeted approach to addressing flood risk and water quality issues. It could support sustainable urban drainage systems (SUDs) and GI requirements within new developments in order to adapt to climate change and counteract flood risk.

Issues and Opportunities

Issues and opportunities for the water environment and the implications for the NLP have been identified in **Table D-13**.

Table D-13 – Issues and Opportunities for the Water Environment

Key Risks/Opportunities	Implications for the NLP
<p>Water quality</p> <ul style="list-style-type: none"> ■ The physical and chemical quality of water resources is an important aspect of the natural environment and can be adversely affected by pollution associated with surface water runoff from new or existing transport infrastructure, as well as by changes to waterbodies which can affect their quality as a habitat; ■ Of the 27 waterbodies in the borough, just 3.7% are achieving ‘good’ status, falling far short of the WFD target; and ■ Upgrading existing infrastructure provides the opportunity to improve pollution control. <p>Flood risk</p> <ul style="list-style-type: none"> ■ Increased development near a watercourse (including transport, housing and other infrastructure) can increase flood risk on a local and catchment scale; ■ Increasing population projections in the borough will increase demand for drinking water supply and place pressure on the 	<p>Water quality</p> <ul style="list-style-type: none"> ■ The NLP should promote that development in close proximity to a watercourse should include the addition of naturalised features to buffer zones to connect the river to the riparian zone, create natural flood management (NFM) schemes, and promote biodiversity. ■ The NLP should seek to protect groundwater quality as a water resource. <p>Flood risk</p> <ul style="list-style-type: none"> ■ The NLP should undertake a new Strategic Flood Risk Assessment (SFRA) and Flood Risk Management Strategy to address new challenges and mitigate against risk of flooding in the borough. These can also provide an evidence base to support the NLP.

Key Risks/Opportunities	Implications for the NLP
<p>already stressed capacity of sewer systems; and</p> <ul style="list-style-type: none"> ■ Climate change is likely to increase the occurrence of flooding from all sources and hence raise the flood risk in LBTH, in addition to existing residual flood risk in the event of a breach or failure of the flood defences. 	<ul style="list-style-type: none"> ■ The NLP should ensure that development in close proximity to a watercourse should include provision of natural, undeveloped buffer zones. These can help contribute to natural flood management (NFM) whilst also allowing access for maintenance and emergency works. ■ The NLP should seek to incorporate sustainable urban drainage systems (SUDs) and GI requirements within new developments in order to adapt to climate change and counteract flood risk. GI can also reduce surface water runoff and have water quality co-benefits. ■ The NLP should critically assess the resilience of Thames flood defences to sea level rise under different climate scenarios. The Thames Estuary 2100 Plan has requirements to raise flood defences in line with sea level rises across the Thames.

Air Quality

Summary of Current Baseline

Air quality plays an important role in human health. Poor air quality can have large impacts on health through short term exposure, but particularly through long term exposure. According to the World Health Organisation (WHO), air quality is one of the greatest environmental risks to human health. Reducing air pollution can result in reductions in stroke, heart disease, lung cancer, and both chronic and acute respiratory diseases,

including asthma¹⁶⁰. In 2019, 99% of the world's population were living in places where the WHO air quality guidelines were not met, and that ambient air pollution caused 4.2 million premature deaths worldwide in that year. Major pollutants include nitrous oxide (NO_x), nitrogen dioxide (NO₂) and particulate matter (PM).

Poor air quality also contributes to the deterioration of ecological receptors. Ecosystems are negatively impacted by air pollution, particularly emissions such as sulphur and nitrogen, as it affects their ability to function and grow¹⁶¹.

LBTH has higher levels of air pollution compared to the UK overall¹⁶². The average annual mean for nitrogen dioxide in the majority of the borough is 21 – 30 µg m⁻³. In some parts of the borough the average annual mean is 41 – 50 µg m⁻³, exceeding the UK air quality objective (AQO)¹⁶³ of 40 µg m⁻³. The average annual mean for nitrogen oxides are between 31 – 40 µg m⁻³ and 41 – 60 µg m⁻³, exceeding the UK AQO of 30 µg m⁻³. The borough does not exceed the AQO for either PM₁₀ or PM_{2.5}.

Local authorities must declare areas that are not likely to achieve national air quality objectives as Air Quality Management Areas (AQMAs). The whole borough sits within the Tower Hamlets AQMA which was designated in 2000 for PM₁₀ (24-Hour Mean) and NO₂ (Annual Mean)¹⁶⁴. The source of pollution is transport and industry.

The borough is situated within the London Ultra Low Emission Zone (ULEZ) which operates 24 hours a day, every day of the year, except Christmas Day (25 December). The high levels of pollutants in the borough are of particular concern due to their impacts on human health, especially as in 2019 it was estimated that between 88 and 97 deaths were attributable to human made NO₂ and PM_{2.5} air pollution exposure¹⁶⁵. LBTH's Air Quality Action Plan (AQAP) 2022-2027¹⁶⁶ is being implemented to address ongoing poor air quality throughout the borough.

¹⁶⁶ Tower Hamlets Council. London Borough of Tower Hamlets: Air Quality Action Plan 2022 – 2027. Available at: https://www.towerhamlets.gov.uk/ignl/environment_and_waste/environmental_health/pollution/air_quality/Breathe_Clean/Air-Quality-Action-Plan.aspx

The Borough Air Quality Compendium report (2022)¹⁶⁷ summarises the Annual Status Reports (ASRs) submitted by the London boroughs in 2021 from monitoring data in 2020. LBTH showed a drop from twenty-one locations exceeding NO₂ concentrations in 2019 to just one location post distance correction in 2020. The borough is also demonstrating improvement with regards to emissions from developments and buildings, adopting Air Quality Neutral policies, checking compliance at planning application stage for every major development proposal, and 100% of schemes in 2020 having suitable energy efficiency measures installed to reduce the demand for onsite heat generation.

Future Trends and evolution of the baseline without the NLP

The UK Clean Air Strategy outlines plans to reduce emission of pollutants and improve air quality by the year 2030¹⁶⁸. This will include reductions in public exposure to particulate matter, ammonia, nitrogen oxides, sulphur dioxide, and non-methane volatile organic compounds. However, the 29% increase in road traffic from 1990 and 2018 and 6% increase in GHG emission from 1990 to 2017 is likely to continue.

Additionally, as LBTH is part of the London urban area, it is likely that increases in population and urbanisation will contribute to increased air pollution. More severe and frequent heat episodes (associated with the changing climate) can also worsen air quality and therefore asthma, respiratory diseases and allergic reactions, without further intervention.

A ban on new petrol and diesel vehicle sales in the UK by 2030 is expected to further reduce NO_x emissions. This will improve air quality, particularly across urban areas, and further the improvements to emissions reductions. Electric and hybrid vehicles are expected to become dominant (with the ban on hybrid vehicle sales in the UK by 2035).

The UK wide ban on the new petrol and diesel vehicle sales by 2030 is expected to lead to a reduction in emissions from vehicles¹⁶⁹. This will improve air quality in urban areas, which will have a positive impact on health problems associated with air pollution. Because the AQMA in the borough is associated with vehicle emissions, the transition to electric vehicles has the potential to bring air pollution to acceptable levels.

¹⁶⁹ HM Government (2020). Available online at: <https://www.gov.uk/government/news/government-takes-historic-step-towards-net-zero-with-end-of-sale-of-new-petrol-and-diesel-cars-by-2030>

Overall, increases in population and urbanisation have the possibility to degrade air quality, while higher standards for air pollutants and vehicle emissions have the potential to improve air quality. These opposing trends may balance each other out in future.

Without the NLP development could be located in areas that are not well served by community facilities, services and jobs thereby increasing traffic movements and further impacting upon the borough’s air quality.

Issues and Opportunities

Issues and opportunities for air quality and the implications for the NLP have been identified in **Table D-14**.

Table D-14 – Issues and Opportunities for Air Quality

Key Risks/Opportunities	Implications for the NLP
<ul style="list-style-type: none"> ■ The number of vehicles on the roads is likely to increase as the population rises, putting air quality at further risk of degradation; ■ More severe and frequent heat episodes as a result of climate change can contribute to the worsening of air quality; ■ Air pollution disproportionately affects the vulnerable in society, with the potential to exacerbate health inequalities further as the population increases; ■ The UK Government’s plan to end the sale of all new conventional petrol and diesel cars and vans by 2030 and support for work and home-based electric charging facilities, will promote use of hybrid and electric vehicles, with positive effects for air quality; and ■ Air quality issues across LBTH can be addressed via a modal shift towards less polluting methods of transport (low carbon transport initiatives) and inclusive of active transport (e.g., cycling, walking etc.) thereby leading to a higher standard of air quality. 	<ul style="list-style-type: none"> ■ The NLP must consider the implications of Government plans, facilitating the transition to electric vehicles. ■ Consideration should be given to methods of modal shift to sustainable transport modes (public transport and active transport) active, to aid in reducing emissions. ■ The NLP should aim to improve congested areas of LBTH, minimising excess emissions where possible and aiding in improving air quality. ■ The NLP could consider living wall systems in the borough for associated air quality, biodiversity, and visual amenity benefits in highly urbanised areas.

Climate Change and Greenhouse Gases

Summary of Current Baseline

In 2021, an estimated 26% of greenhouse gas emissions (GHGs) in the UK were from the transport sector, 20% energy supply, 18% business and 16% residential, with carbon dioxide (CO₂) being the most prominent gas from these sectors¹⁷⁰. In 2021, transport accounted for 109.5 MtCO₂e of GHG emissions, which represents a 10% increase from 2020, but an 11% decrease compared with 2019 figures. The impact of the pandemic in 2020 caused transport emissions to fall, attributable to lockdown measures introduced.

In 2020, a total of 1,020.4 ktCO₂e emissions¹⁷¹ were generated by LBTH, with the greatest number of emissions arising from commercial uses (33.9%), followed by transport (25.9%), and domestic uses (20.9%). The percentage change of emissions per km² from 2005 to 2019 is -43% for the borough, better than the national average reduction of -36% for the same period. **Table D-15** shows the breakdown of emissions generated by the highest emission sectors in LBTH compared to regional and national averages.

¹⁷⁰ Defra (2023) 2021 UK Greenhouse Gas Emissions, Final Figures. Available at: https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/1134664/greenhouse-gas-emissions-statistical-release-2021.pdf

¹⁷¹ Department for Business, Energy & Industrial Strategy (2022) UK local authority and regional greenhouse gas emissions national statistics, 2005 to 2020. Available at: <https://www.gov.uk/government/statistics/uk-local-authority-and-regional-greenhouse-gas-emissions-national-statistics-2005-to-2020>

Table D-15 – Carbon Emissions¹⁷¹

	Total Emissions (ktCO₂e)	Commercial Emissions (%)	Transport Emissions (%)	Domestic Emissions (%)
Tower Hamlets	1,081.2	33.9	25.9	20.9
London	28,369.3	36.2	28.5	36.2
England	291,134.6	7.0	30.7	26.3

In 2019, the average per capita emissions across LBTH are 3.6 tonnes of CO₂ emissions per person, which is slightly higher than the regional of 3.2 tonnes per person but significantly lower than the national average of 8.9 tonnes per person¹⁷¹.

During the most recent decade (2009-2018) the UK has been on average 0.3°C warmer than the 1981-2010 average and 0.9°C warmer than 1961-1990. All of the top ten warmest years have occurred since 2002. In the past few decades there has been an increase in annual average rainfall over the UK, for which the most recent decade (2009-2018) has been on average 5% wetter than 1961-1990 and 1% wetter than 1981-2010¹⁷².

LBTH has a relatively high climate risk according to The London Climate Risk Maps¹⁷³, which measures overall risk using 13 metrics, which are as follows:

- Ages Under 5;
- Ages Over 75;
- English Proficiency;
- Income Deprivation;
- Social Renters;
- BAME;
- Average Land Surface Temperature;

¹⁷² Met Office (2022) UK Climate Projections: Headline Findings. Available at: https://www.metoffice.gov.uk/binaries/content/assets/metofficegovuk/pdf/research/ukcp/ukcp18_headline_findings_v4_aug_22.pdf

¹⁷³ Bloomberg Associates (2022) Climate Risk Mapping. Available at: <https://data.london.gov.uk/dataset/climate-risk-mapping>

- Surface Water Flood Risk;
- PM_{2.5};
- NO₂;
- Green/Blue Land Cover; and
- Areas of Deficiency in Access to Public Open Space.

Areas including Wapping, Shadwell, Bethnal Green, Bow and Poplar have the highest climate risk, traversing west to east of the borough. Limehouse, Blackwall and Isle of Dogs have the lowest climate risk, and subsequently a lower heat risk. Urban heat island (UHI) is the phenomenon where temperatures are relatively higher in cities compared to surrounding rural areas. UHI up to 8°C have been felt in UK cities, whilst cities the size of London has experienced temperatures in the order of 10°C, and concern for excess urban heat are increasing¹⁷⁴.

Future Trends and evolution of the baseline without the NLP

The UK is committed to legally binding GHG emissions reduction targets of 80% by 2050, compared to 1990 levels, as set out in the Climate Change Act 2008¹⁷⁵. The UK ratified the 2015 Paris Agreement, which set out a GHG emission reduction target of at least 40% by 2030, compared to 1990 with a long-term strategy for net zero emissions by 2050¹⁷⁶. However, a more ambitious target was set by the UK in 2020 to reduce greenhouse gas emissions by at least 68% by 2030, compared to 1990 levels¹⁷⁷. Currently there is widespread criticism as to whether the UK is on track to meet these ambitions.

Working towards these targets means changes to technology as well as ways in which people travel. For example, prior to the 26th Conference of the Parties (COP26) Summit in 2021, the UK brought forward its ban on the selling of new petrol, diesel, or hybrid cars from 2040 to 2030. The last decade has seen a remarkable surge in demand for electric vehicles in the UK.

The number of licensed ultra-low emission vehicles (ULEVs) in the UK has increased by 3,427% between the end of March 2010 to the end of June 2020, a jump from just under 9,000 ULEVs to 317,000 ULEVs¹⁷⁸.

¹⁷⁷ Department for Business, Energy and Industrial Strategy, Press Release: UK Sets Ambitious New Climate Target Ahead of UN Summit, 2020, Available online at: <https://www.gov.uk/government/news/uk-sets-ambitious-newclimate-target-ahead-of-un-summit>

¹⁷⁸ House of Commons (2020) Briefing Paper: Electric Vehicles and Infrastructure. Available at: <https://researchbriefings.files.parliament.uk/documents/CBP-7480/CBP-7480.pdf>

Since the 27th Conference of the Parties (COP27) Summit in 2022, the UK has pledged to triple its contributions to adaptation finance by 2025¹⁷⁹, in recognition of the existential threat climate change is posing globally. The next UN climate summit, COP28, held in November/December 2023, is set to take stock of its progress on the Paris Agreement through the first Global Stocktake (GST)¹⁸⁰.

The Mayor of LBTH declared a climate emergency in 2019 and set an ambitious target for the council to become net zero by 2025, and the borough net zero by 2045. The London Borough of Tower Hamlets Net Zero Carbon Plan document sets out the strategic vision on how this is going to be achieved¹³¹. The plan details actions recommended for Power, Buildings, Transport, Waste, Forestry and land use, Industry, Aviation, and F-gases.

By the end of the 21st century, all areas of the UK are projected to be warmer, more so in summer than in winter. This projected temperature rise in the UK is consistent with future warming globally. Rainfall patterns across the UK are not uniform and vary on seasonal and regional scales and will continue to vary in the future, with significant increases in hourly precipitation extremes⁴. Both temperature and rainfall changes will be much larger if greenhouse gas emissions continue to increase.

Despite this, the current estimate for temperature increases and changes to rainfall patterns are unlikely to alter significantly in the near future, given the timescales associated with climate change. This being the case, there will be an increasing need to implement climate change mitigation and adaptation measures in light of changing environmental conditions.

A new NLP would allow for better designed developments and buildings which are more resilient to the effects of climate change, reduce GHGs construction and operation (including embodied carbon). It will likely support developments that would also likely be more accessible, particularly by sustainable transport, which in turn will aid the borough in reducing the amount of greenhouse gases it produces.

¹⁷⁹ House of Commons (2023) What was agreed at COP27? Available at: <https://commonslibrary.parliament.uk/what-was-agreed-at-cop27/>

¹⁸⁰ COP28 UAE | United Nations Climate Change Conference (UNFCCC)

Issues and Opportunities

Issues and opportunities for climate change and greenhouse gases and the implications for the NLP have been identified in **Table D-16**.

Table D-16 – Issues and Opportunities for Climate Change and Greenhouse Gases

Key Risks/Opportunities	Implications for the NLP
<ul style="list-style-type: none"> ■ Transport is the largest contributor to GHG emissions in the UK. In LBTH, the largest contributor is from commercial uses; ■ Higher than average fuel poverty rates may continue to be a significant issue in the borough; ■ Since the Covid-19 pandemic, private car use has increased which contributes to GHG emissions; ■ The impacts of the Urban Heat Island (UHI) generated in London will increase as development increases, exacerbating health issues and reduce quality of life in overcrowded households; ■ There is the need to reduce GHG emissions of new infrastructure and housing that is required to accommodate prosperity and population growth within LBTH; and ■ There is a need to ensure climate resilience of the infrastructure in LBTH. The extent of future climate change will be strongly affected by the amount of GHG that the population chooses to emit. 	<ul style="list-style-type: none"> ■ There is a need to plan for and implement/facilitate climate change adaptation, in respect of rising temperatures, water scarcity and extreme weather events, particularly heavy rainfall/flooding. The Thames Estuary 2100 Plan has requirements to raise flood defences in line with sea level rises across the Thames. ■ There is a need to support the continued increase in charging infrastructure to support the demand in electric cars, as well as the modal shift to more sustainable transport. ■ The NLP should promote the implementation of Nature-based solutions (NbS) to build resilience to facilitate climate change adaptation, whilst providing a feasible method to sequester and store carbon in line with net zero ambitions. ■ There is need for low carbon buildings and energy to support LBTH’s commitment to reach net-zero, to reduce ‘embodied’ and ‘operational’ carbon. ■ The NLP should address the demand for on-site renewable energy to reduce national grid dependency. ■ The NLP should promote actions to ensure appropriate habitat is created that will be of importance to habitat connectivity and creating resilient

Key Risks/Opportunities	Implications for the NLP
	<p>functioning ecosystems, to allow wildlife to adapt to climate change.</p> <ul style="list-style-type: none"> ■ The NLP should set a target for the percentage of wild cover within green spaces to help prevent further biodiversity decline.

Material Assets (including Soil Resources)

Summary of Current Baseline

Geology and Soils

Government policy promotes development on previously developed land (brownfield land) rather than on greenfield land, to make the most efficient use of a finite resource. The borough’s land is predominantly in urban use¹⁸¹.

Southern and eastern England is underlain by a Principal Aquifer, ‘the Chalk’, which usually provides a high level of water storage as a result of its well-developed network of fractures. It may support water supply and/or river base flow on a strategic scale, however these are prone to diffuse pollution¹⁸². Parts of the borough are underlain by Secondary Aquifers.

The bedrock geology within the borough is predominantly sedimentary bedrock of clay, silt and sand, overlain with superficial deposits sedimentary in origin, deposited in the Quaternary period¹⁸³. The Taplow and Kempton Park Gravels in the borough are classified as Secondary A aquifers and are therefore protected superficial deposits. Gilbert’s Pit (Charlton) SSSI in Greenwich is in closest proximity to LBTH, designated for its geological importance.

London is the world’s biggest centre for investment in the minerals industry, with most of the world’s biggest mining companies listed on the London Stock Exchange¹⁸⁴. London itself

¹⁸⁴ London Stock Exchange. Available at: <https://www.londonstockexchange.com/>

has extensive history of mining and quarrying, specifically, chalk mines with associated flint deposits. Recorded extraction sites in LBTH include¹⁸⁵:

- Bow Rail Depot
- St Thomas Mill Brick Field
- Orchard Wharf

Soil sealing refers to the covering of the ground by an impermeable material and is one of the main causes of soil degradation. Over a third of the borough's surface area is covered by sealed surfaces, such as buildings, roads and car parks⁴⁰. This can have an impact on surface water flooding which is already a prevalent issue in the borough.

Local authorities have a duty to identify contaminated land under Section 78B of the Environmental Protection Act 1990¹⁸⁶. The borough has a legacy of land contamination as a result of widespread past industrial activity, particularly around the former docks¹⁸⁷. This is important to consider for the development of brownfield sites, as proper remediation will be required to enable development to take place, and remediation should seek to protect and improve both groundwater and land quality.

Energy

The commitment of the LBTH to become net zero by 2025, and LBTH net zero by 2045 will require commitments to increasing the supply of renewable energy within the borough. The Mayor of London has set a target to supply 15% of London's overall energy from renewable, local sources by 2030¹⁸⁸. This is in line with the growth of renewables demand and increased production in the UK¹⁸⁹.

The borough produces approximately 5.9MW installed capacity from just photovoltaics, performing in the lower half of London boroughs¹⁹⁰. Throughout the borough, the following renewable energies are currently utilised (2021), with their approximate energy productions:

- Solar photovoltaic (PV) – 692 systems installed, generating 4,449MWh of renewable electricity

¹⁸⁵ British Geological Survey, GeoIndex. Available at: <https://www.bgs.ac.uk/map-viewers/geoindex-onshore/>

¹⁹⁰ Defra (2022) Regional Renewable Statistics. Available at: <https://www.gov.uk/government/statistics/regional-renewable-statistics>

- Onshore wind – 1 installation, no data on approximate energy production

LBTH is supporting the council commitment to become net zero by further investing into renewable energy generation by installing photovoltaics onto council offices and leisure centres, also aiding households through a separate fund¹⁹¹.

Waste

The UK generated 222 million tonnes of waste in 2018¹⁹². In LBTH, a total of 113,059 tonnes of waste was collected from the kerbside in 2017/18¹⁹³. Household waste recycling rates in the borough have decreased between 2017/18 (26%) and 2020/21 (19%) by -7%, compared to the rates for London and England which have mainly remained unchanged across this period¹⁹⁴. The rates in the borough are also significantly lower than the 2020/21 average rates for both London (33%) and England (42%). In 2019/20, LBTH was the fourth-worst local authority for recycling in the whole of the UK. Since 2011/2012, all residual waste produced in the borough has been diverted from going directly to landfill to energy recovery¹⁹⁵. The energy from waste (EfW) facility is located in Belvedere in the London Borough of Bexley and has an annual capacity of 585,000t with a 66MW output¹⁹⁶. This process is estimated to save 170,000t of carbon by not sending waste to landfill¹⁹⁷.

Future Trends and evolution of the baseline without the NLP

In order for the borough to reach net zero by their respective target dates of 2025 and 2045, the increase of renewable energy supply will be pivotal. Shifting dependency away from non-renewable sources is crucial to meet such ambitions. The projected population increase in the borough will increase energy needs and renewables will be required to meet this demand.

The limitations of space for constructing renewable energy will be challenging as all new buildings must have ultra-low levels of total energy use, however, the NLP present opportunities to incorporate renewable energy as part of the design of new developments.

https://www.corygroup.co.uk/application/files/7216/6066/0318/Cory_Sustainability_Report_2021.pdf

The growing population and associated need for development are also likely to increase the use of mineral resources and waste generation. As such, it will be necessary to apply resource efficiency and waste management measures, including the re-use and recycling of materials.

The absence of the NLP could make it difficult for LBTH to properly plan for the amount of waste it will be expected to manage in the future. It may also compromise the boroughs' ability to plan for the amount of building material it needs to import in order to achieve its growth goals.

Issues and Opportunities

Issues and opportunities for material assets and the implications for the NLP have been identified in **Table D-17**.

Table D-17 – Issues and Opportunities for Material Assets

Key Risks/Opportunities	Implications for the NLP
<ul style="list-style-type: none"> ■ The growing population and associated need for development is likely to increase the use of mineral resources and waste generation. This is highly important considering the Belvedere EfW facility processes waste from across London; ■ Materials are a finite resource and materials will be required for new housing developments to meet the demands of a growing population; and ■ There is a continued increase in renewable energy supplies across the borough, of which needs to be managed efficiently to ensure the capacity requirements of this transition are met. 	<ul style="list-style-type: none"> ■ The NLP should promote actions to protect natural resources, buildings and infrastructure from the impacts of climate change. ■ The NLP should protect and conserve the borough's best and most versatile land from development where possible and utilise areas with capacity for growth. ■ The NLP should explore innovative ways to manage waste and align principles to support a circular economy when possible. ■ The NLP should maximise onsite renewable energy efficiency by making use of vertical solar panels and maximise space by seeking wind solutions through roof-mounted turbines.

Review of Plans, Policies and Programmes

Table E-1 – Relevant Plans, Policies, strategies and Programmes - Population and Equalities

Document	Key Messages/ Issues
The Equality Act, 2010	<p>The Equality Act 2010 legally protects people from discrimination in the workplace and in wider society. It is against the law to discriminate against anyone because of:</p> <ul style="list-style-type: none"> ▪ Age; ▪ Being or becoming a transsexual person; ▪ Being married or in a civil partnership; ▪ Being pregnant or having a child; ▪ Disability; ▪ Race including colour, nationality, ethnic or national origin; ▪ Religion, belief or lack of religion/belief; ▪ Sex; and ▪ Sexual orientation.
National Planning Policy Framework (NPPF), 2023	<p>When delivering new schemes, applicants must avoid and mitigate environmental and social impacts in line with the principles set out in the NPPF and the UK Government’s planning guidance. Applicants should provide evidence that they have considered reasonable opportunities to deliver environmental and social benefits as part of schemes.</p>
Department for Transport, Transport for Everyone: an action plan to promote equality, 2012	<p>The Action Plan sets what the UK Government is doing to ensure people from all communities in society have the option to use public transport.</p> <p>The main aim of the report is to <i>‘deliver better access to jobs and key services through an accessible and socially inclusive transport system, by removing the barriers to travel and</i></p>

Document	Key Messages/ Issues
	<i>ensuring that social impacts are addressed in policy development and service delivery’.</i>
Strong and Prosperous Communities: The Local Government White Paper, 2006	Deliver better public services through involving and consulting users more fully, providing better information about local standards and managing services at neighbourhood level.
Foresight Mental Capital and Wellbeing Project (2008). Final Project report. The Government Office for Science	As the number of older adults increases substantially in the UK over the next six decades, the existing urban and rural infrastructure will need to be adapted so that the needs of these people are met. For example, issues of access, transport, amenity and security will substantially affect the wellbeing of older people.
Addressing Transport Barriers to work in Low Income Neighbourhoods, Sheffield Hallam University, 2017	<p>Transport is a key factor shaping experiences of poverty. The ability of households in poverty to find paid work often depends on access to affordable, regular and reliable transport.</p> <p>Residents of low-income neighbourhoods generally have a significant reliance on bus services. This can create issues regarding variable frequency, timing, reliability and range of places served.</p> <p>There is considerable evidence that transport issues affect different groups to varying extents and in particular ways, especially in terms of gender.</p> <p>A distinguishing feature of low-income neighbourhoods is the relatively low incidence of motor vehicle ownership. This means that residents have a much higher reliance on public transport than those living in middle and high-income areas.</p>

Document	Key Messages/ Issues
	Difficulties in meeting the costs of transport from current incomes have given rise to the concept of 'transport poverty'.
Build Back Fairer: The Covid-19 Marmot Review, 2020	<p>The Marmot Review identified that the levels of social, environmental and economic inequality in society are damaging health and well-being. This report identifies that as the UK emerges from the pandemic it would be a mistake to attempt to re-establish the status quo that existed before the pandemic.</p> <p>The reductions in car traffic during the pandemic resulted in cleaner air and reduction in emission of greenhouse gases. Walking and cycling as modes of transport became both necessary and desirable. As the pandemic is brought under control and public transport again becomes safe, a future for our cities based on reduction in vehicle traffic and made safe for walking and cycling in addition to public transport is a future we can both imagine and realise.</p> <p>Building Back Fairer requires a sizeable reduction in private car use and greater active travel and use of public transport. Efforts to support this are required urgently and would help to reduce Greenhouse Gas Emissions and lead to a more sustainable environment.</p>

Growth and Infrastructure Act (2013)	<p>The Act allows the modification or discharge of the affordable housing elements of section 106 agreements in order to make developments more viable.</p> <p>Contains measures to extend permitted development rights to allow single-storey extensions of up to eight metres.</p> <p>Reduces the volume of extra paperwork required with a planning application; removing over-lapping development consent regimes that require multiple extra permissions from different government agencies.</p>
NPPF, 2023	<p>To determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment. In addition to the local housing need figure, any needs that cannot be met within neighbouring areas should also be taken into account in establishing the amount of housing to be planned for. Within this context, the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies, including, but not limited to:</p>

Document	Key Messages/ Issues
	<ul style="list-style-type: none"> ■ Those who require affordable housing; ■ Families with children; ■ Older people; ■ Students; ■ People with disabilities; ■ Service families; ■ Travellers; ■ People who rent their homes; and ■ People wishing to commission or build their own homes. <p>Planning policies and decisions should help create the conditions in which businesses can invest, expand and adapt. Significant weight should be placed on the need to support economic growth and productivity, taking into account both local business needs and wider opportunities for development. The approach taken should allow each area to build on its strengths, counter any weaknesses and address the challenges of the future.</p>
The Enterprise Act (2016)	<p>The Enterprise Act includes measures to:</p> <ul style="list-style-type: none"> ■ Establish a Small Business Commissioner to help small firms resolve issues. ■ Extend the Primary Authority scheme to make it easier for businesses to access tailored and assured advice from local authorities, giving them greater confidence to invest and grow. ■ Protect and strengthen apprenticeships by introducing targets for apprenticeships in public sector bodies in England, and

Document	Key Messages/ Issues
	<ul style="list-style-type: none"> ▪ Establish an Institute for Apprenticeships – an independent, employer-led body that will make sure apprenticeships meet the needs of business.
<p>UK Industrial Growth Strategy, 2017</p>	<p>The Industrial Strategy sets out a long-term plan to boost the productivity and earning power of people throughout the UK. It sets out how the UK Government is working towards building a Britain fit for the future – how they will help businesses create better higher-paying jobs in every part of the UK with investment in the skills, industries and infrastructure of the future.</p> <p>The strategy includes five foundations:</p> <ul style="list-style-type: none"> ▪ Ideas: the world’s most innovative economy ▪ People: good jobs and greater earning power for all ▪ Infrastructure: a major upgrade to the UK’s infrastructure ▪ Business environment: the best place to start and grow a business ▪ Places: prosperous communities across the UK <p>The UK Government will use this strategy to work with industry, academia and civil society over the coming years to build on the UK’s strengths, make more of untapped potential and create a more productive economy that works for everyone across the UK.</p>
<p>The Clean Growth Strategy, 2017</p>	<p>This Strategy sets out a comprehensive set of policies and proposals that aim to accelerate the pace of “clean growth”, i.e. deliver increased economic growth and decreased emissions. The Strategy has two guiding objectives:</p>

Document	Key Messages/ Issues
	<p>1. To meet our domestic commitments at the lowest possible net cost to UK taxpayers, consumers and businesses; and, 2. To maximise the social and economic benefits for the UK from this transition.</p> <p>In order to meet these objectives, the UK will need to nurture low carbon technologies, processes and systems that are as cheap as possible.</p>
<i>Regional</i>	
<p>Mayor of London, The London Plan 2021. Chapter 6: Economy</p>	<p>The London Plan (2021) is London’s SDS. It sets out an integrated economic, environmental, transport and social framework for the development of London over the next 20-25 years. When preparing Development Plans, boroughs should ensure the social infrastructure needs of London’s diverse communities are met, informed by a needs assessment of social infrastructure. Assessments should consider the need for cross-borough collaboration where appropriate and involve relevant stakeholders, including the local community. Chapter 6: Economy includes:</p> <ul style="list-style-type: none"> ■ Policy E1 Offices ■ Policy E2 Providing suitable business space ■ Policy E3 Affordable workspace ■ Policy E4 Land for industry, logistics and services to support London’s economic function ■ Policy E5 Strategic Industrial Locations (SIL) ■ Policy E6 Locally Significant Industrial Sites ■ Policy E7 Industrial intensification, co-location and substitution

Table E-4 – Relevant Plans, Policies, strategies and Programmes – Housing

Document	Key Messages/ Issues
<i>National</i>	
NPPF,2023	<p>To support the Governments objective of significantly boosting the supply of homes, it is important that a sufficient amount and variety of land can come forward where it is needed, that the needs of groups with specific housing requirements are addressed and that land with permission is developed without unnecessary delay.</p> <p>Paragraph 65 states that where major development involving the provision of housing is proposed, planning policies and decisions should expect at least 10% of the total number of homes to be available for affordable home ownership, unless this would exceed the level of affordable housing required in the area, or significantly prejudice the ability to meet the identified affordable housing needs of specific groups.</p> <p>Identify the size, type, tenure and range of housing that is required in particular locations, reflecting local demand.</p>
Planning for the Future White Paper (2020)	<p>Proposes to reform the planning process bring a new focus to design and sustainability, improve the system of developer contributions to infrastructure, and ensure more land is available for development where it is needed. The vision is to 'build better, greener and faster'.</p>

Document	Key Messages/ Issues
Housing Act 2004	<p>The Act covers housing conditions, and licensing of houses in multiple occupation and residential accommodation.</p> <p>It requires local housing authorities to assess the accommodation needs of Gypsies and Travellers in their area and produce a strategy on how these needs can be met.</p>
National Planning Practice Guidance (NPPG) – Housing and economic land availability assessment	<p>This Guidance sets out the method for assessing housing and economic land availability. This is used to identify future supply of land which is suitable, available and achievable for housing and economic development uses over the plan period.</p>
NPPG – housing and economic needs assessment	<p>This Guidance helps councils to assess their housing needs.</p> <p>The standard method uses a formula to identify the minimum number of homes expected to be planned for, in a way which addresses projected household growth and historic under-supply.</p>
NPPG Housing needs of different groups	<p>This Guidance provides advice on planning for the housing needs of different groups.</p> <p>Authorities must also consider the implications of their duties under the Equality Act 2010, including the Public Sector Equality Duty.</p> <p>When producing policies to address the need of specific groups, plan-making authorities will need to consider how the needs of individual groups can be addressed having regard to deliverability.</p>
NPPG – Housing for older and disabled people	<p>This Guidance provides advice in preparing planning policies on housing for older and disabled people.</p>

Document	Key Messages/ Issues
	<p>People are living longer lives and the proportion of older people in the population is increasing. The provision of appropriate housing for people with disabilities, including specialist and supported housing, is crucial in helping them to live safe and independent lives.</p> <p>Plan-making authorities should set clear policies to address the housing needs of groups with particular needs such as older and disabled people. These policies can set out how the plan-making authority will consider proposals for the different types of housing that these groups are likely to require.</p> <p>Where an identified need exists, plans are expected to make use of the optional technical housing standards to help bring forward an adequate supply of accessible housing.</p>
NPPG – Housing supply and delivery	<p>This Guidance provides advice on the 5-year housing land supply and Housing Delivery Test.</p> <p>Authorities should use the standard method as the starting point when preparing the housing requirement in their plan. The purpose of the 5-year housing land supply is to provide an indication of whether there are sufficient sites available to meet the housing requirement set out in adopted strategic policies for the next 5 years.</p>
Growth and Infrastructure Act 2013	<p>The Act allows the modification or discharge of the affordable housing elements of section 106 agreements in order to make developments more viable.</p>

Document	Key Messages/ Issues
	<p>Reduces the volume of extra paperwork required with a planning application, and removing over-lapping development consent regimes, to help to improve efficiency of the planning regulations.</p>
<i>Regional</i>	
<p>Mayor of London, The London Plan 2021. Chapter 4: Housing</p>	<p>The London Plan (2021) is London’s SDS. It sets out an integrated economic, environmental, transport and social framework for the development of London over the next 20-25 years. When preparing Development Plans, boroughs should ensure the social infrastructure needs of London’s diverse communities are met, informed by a needs assessment of social infrastructure.</p> <p>Assessments should consider the need for cross-borough collaboration where appropriate and involve relevant stakeholders, including the local community.</p> <p>Chapter 4: Housing includes:</p> <ul style="list-style-type: none"> ■ Policy H1 Increasing housing supply ■ Policy H2 Small sites ■ Policy H3 Meanwhile use as housing ■ Policy H4 Delivering affordable housing ■ Policy H5 Threshold approach to applications ■ Policy H6 Affordable housing tenure ■ Policy H7 Monitoring of affordable housing ■ Policy H8 Loss of existing housing and estate redevelopment ■ Policy H9 Ensuring the best use of stock ■ Policy H10 Housing size mix ■ Policy H11 Build to Rent

Document	Key Messages/ Issues
	<ul style="list-style-type: none"> ■ Policy H12 Supported and specialised accommodation ■ Policy H13 Specialist older persons housing ■ Policy H14 Gypsy and traveller accommodation ■ Policy H15 Purpose-built student accommodation ■ Policy H16 Large-scale purpose-built shared living
<p>Mayor of London, London Plan Guidance (LPG), Affordable Housing, 2023 (consultation draft)</p>	<p>The Affordable Housing LPG provides a further step to implement the London Plan, ensuring that developments assessed through the planning system maximise affordable housing delivery. It sets out how the threshold approach should work in practice and clarifies the requirements of different types of affordable housing and how they should be secured and monitored.</p> <p>Local planning authorities should apply the threshold approach to applications for sites that are capable of delivering 10 or more homes. When developing new policies on affordable housing, planning obligations and Community Infrastructure Levy (CIL) rates, local plans are required to be in general conformity with the London Plan. LPAs should apply the approach to affordable housing in the London Plan and in this LPG as a part of their plan and decision-making processes.</p>
<p>Mayor of London, London Plan Guidance (LPG), Development Vitality, 2023 (consultation draft)</p>	<p>The draft Development Viability LPG builds upon policy of the London Plan and provides a further step towards ensuring that developments assessed through the planning system maximises affordable housing delivery, setting out how viability assessment should be carried out where a planning application follows the Viability Tested Route. It is relevant to all planning applications where an applicant or planning authority needs to rely on viability</p>

Document	Key Messages/ Issues
	information and should be taken account of by planning authorities where area-wide viability testing is being carried out.
<i>Local</i>	
Tower Hamlets Council Strategic Plan 2022-2026	<p>The strategic plan is the council’s main plan and sets out the most important priorities for the council between 2022 and 2026. The housing crisis is the greatest challenge facing London today. In recent years, Tower Hamlets has delivered more homes than any other authority in England. However, there is an acute shortage of social homes. Too many residents live in overcrowded accommodation. The council will work alongside residents, housing providers and landlords to achieve real change.</p> <p>‘Priority 2: Homes for the future’. Ambition is that everyone in Tower Hamlets lives in a good quality home that they can afford.</p>
Tower Hamlets Council, High Density Living SPD, 2020	The High Density Living Supplementary Planning Document (SPD) provides guidance to shape high density development, so it supports good quality of life for Tower Hamlets’ residents.
Tower Hamlets Council, Central Area Good Growth SPD, 2021	The Central Area Good Growth SPD provides guidance to help the council deliver this housing growth, focusing specifically on design guidance to ensure that new developments respect and enhance the well-established character of this part of the borough. The Central Area Good Growth SPD is a material consideration to help determine planning applications for small-scale residential-led developments in the central part of the London Borough of Tower Hamlets.

Table E-5 – Relevant Plans, Policies, strategies and Programmes – Crime and Safety

Document	Key Messages/ Issues
<i>National</i>	
NPPF, 2023	<p>Paragraph 92 (b) of the policy states that policies should help to develop places that <i>‘are safe and accessible, so that crime and disorder, and the fear of crime, do not undermine the quality of life or community cohesion – for example through the use of attractive, well-designed, clear and legible pedestrian and cycle routes, and high quality public space, which encourage the active and continual use of public areas’</i>.</p> <p>Places and developments should also create safe spaces where crime and disorder, and the fear of crime, do not undermine the quality of life or community cohesion and resilience.</p>
National Networks National Policy Statement (NN NPS) (2014)	<p>Paragraphs 3.10 – 3.12 of the NN NPS advise that “<i>scheme promoters are expected to take opportunities to improve road safety, including introducing the most modern and effective safety measures where proportionate</i>”, and that it is the UK Government’s policy to ensure that risks of rail passenger and workforce accidents are reduced so far as reasonably practicable.</p>
Crime and Disorder Act, 1998	<p>The Crime and Disorder Act 1998 gave statutory responsibility to local authorities, the police, and key partners to reduce crime and disorder in their communities. Responsible authorities, commonly referred to now as Community Safety Partnerships (CSPs), were required to carry out audits every three years and to implement crime reduction strategies.</p>

Document	Key Messages/ Issues
Highways England Delivery Plan 2015-2020, 2015	<p>Whilst the number of people KSI on UK roads has generally been declining since 2005, over the last few years the number of fatalities has remained fairly consistent with a small increase in KSIs in 2013.</p> <p>Highways England recognise that they must continue to improve safety by investing in the road network, both to prevent incidents from occurring and to reduce the severity of those that do.</p> <p>By end of 2020, they aim to have reached a target of no more than 1,393 KSIs across the network in a year. This will be achieved by a year-on-year reduction in those harmed across the network.</p>
Department for Transport, Road Investment Strategy: for the 2015/16 – 2019/20 Road Period, 2015	<p>Safety is an important consideration for road users owing to the significant impact of serious and fatal accidents. A considerable economic cost is also associated with collisions on all roads, estimated at £15 billion annually to the UK economy.</p> <p>While driverless technology still has to mature, it clearly has the potential to transform the UK’s transport networks – improving safety, reducing congestion, and lowering emissions.</p> <p>Safety and the environment suffering as congested traffic is more polluting and there is an increased risk of accidents.</p> <p>The Strategic Road Network and local networks should work together to provide flexibility and door-to door connectivity for all users. Schemes such as the A453 upgrade highlighted below do just this, and we have also set aside funding in the ring-fenced Cycling, Safety, and Integration Fund to further support connectivity with local networks.</p>
<i>Regional</i>	

Document	Key Messages/ Issues
<p>Mayor of London, London's Police and Crime Plan 2022-25</p>	<p>The Mayor's Police and Crime Plan sets out his vision for a city in which Londoners are safer – and feel safer. It sets out the key priorities and objectives for policing and community safety in London over the next three years.</p> <p>The four key themes of the Plan are:</p> <ul style="list-style-type: none"> ■ Reducing and preventing violence – preventing and reducing violence affecting young people; making London a city in which women and girls are safer and feel safer; tackling the harm caused by drugs; reducing reoffending by the most violent and high-risk groups; preventing hate crime; and working together to prevent terrorism and violent extremism. ■ Increasing trust and confidence – increasing public trust in the Metropolitan Police Service (MPS) and reducing gaps in confidence between different groups; ensuring that the MPS engages with Londoners and treats them fairly; and ensuring that the MPS, borough councils and all community safety partners respond to neighbourhood crimes such as burglary and anti-social behaviour. ■ Better supporting victims – improving the service and support that victims receive from the MPS and the criminal justice service; working to ensure victims receive a better criminal justice response and outcome; and reducing the number of repeat victims of domestic abuse and sexual violence. ■ Protecting people from being exploited or harmed – reducing the number of young people and adults who are criminally exploited or harmed; keeping young people in the justice system supported and safe; and keeping people safe online.

Tower Hamlets Council, Council Strategic Plan 2022-2026	<p>The strategic plan is the council’s main plan and sets out the most important priorities for the council between 2022 and 2026. The council will assist the police in their fight against crime with more council-funded uniformed police officers, conduct regular surgeries and walkabouts to listen to the community, and lend support to police ward-based forums and increased community policing. Working as part of the Tower Hamlets Community Safety Partnership, the council will support safe spaces, and tackle substance misuse, hate crime, violence against women and girls, and safeguard people who are vulnerable from exploitation and radicalisation.</p> <p>‘Priority 6: Empower Communities and Fight Crime’. Ambition is for residents, workers and visitors of all backgrounds feel safe and welcome in Tower Hamlets.</p>
Tower Hamlets Council, Community Safety Partnership Plan (2021-2024)	<p>The CSP Plan 2021-24 sets out how the council will make Tower Hamlets a safer and more cohesive place to live. The plan has been developed in response to crime, anti-social behaviour, substance misuse and re-offending statistics, and the concerns of local people. In 2021- 2024 our community safety work will focus on:</p> <ul style="list-style-type: none"> ▪ Priority 1: Tackling neighbourhood crime and antisocial behaviour (ASB) ▪ Priority 2: Tackling hate crime, community tensions and extremism ▪ Priority 3: Reducing reoffending and tackling the drivers of crime ▪ Priority 4: Safeguarding those at risk of violence and exploitation

Table E-6 – Relevant Plans, Policies, strategies and Programmes – Transport and Accessibility

Document	Key Messages/ Issues
<i>National</i>	
NPPF, 2023	<p>Paragraph 104 - Transport issues should be considered from the earliest stages of plan-making and development proposals so that potential impacts and opportunities are addressed.</p> <p>Paragraph 105 - Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes.</p> <p>Paragraph 106 – Planning policies should:</p> <ul style="list-style-type: none"> ▪ support an appropriate mix of uses across an area to minimise the number and length of journeys needed for employment, shopping, leisure, education and other activities; ▪ be prepared with the active involvement of local highways authorities; ▪ identify and protect, where there is robust evidence, sites and routes which could be critical in developing infrastructure to widen transport choice and realise opportunities for large scale development; ▪ provide for attractive and well-designed walking and cycling networks; and ▪ recognise the importance of maintaining a national network of general aviation airfields, and their need to adapt and change over time <p>Paragraph 112 - address the needs of people with disabilities and reduced mobility in relation to all modes of transport.</p>

Document	Key Messages/ Issues
	Paragraph 112 – Developments should be designed to enable charging of plug-in and other ultra-low emission vehicles in safe, accessible and convenient locations.
Department for Transport, Transport Investment Strategy, 2017	<p>This Strategy sets out how the government will build on recent transport progress and how they intend to respond realistically and pragmatically to today’s challenges.</p> <p>They aim to create a more reliable, less congested, and better-connected transport network that works for the users who rely on it. Through investment they aim to achieve:</p> <ul style="list-style-type: none"> ▪ A network that is reliable, well-managed, and safe; ▪ Journeys that are smooth, fast, and comfortable; and ▪ The right connections in the right places
<i>Regional</i>	
Mayor of London, The London Plan 2021. Chapter 10: Transport	<p>The London Plan (2021) is London’s SDS. It sets out an integrated economic, environmental, transport and social framework for the development of London over the next 20-25 years. When preparing Development Plans, boroughs should ensure the social infrastructure needs of London’s diverse communities are met, informed by a needs assessment of social infrastructure. Assessments should consider the need for cross-borough collaboration where appropriate and involve relevant stakeholders, including the local community.</p> <p>Chapter 10: Transport includes:</p> <ul style="list-style-type: none"> ▪ Policy T1 Strategic approach to transport ▪ Policy T2 Healthy Streets

Document	Key Messages/ Issues
	<ul style="list-style-type: none"> ■ Policy T3 Transport capacity, connectivity and safeguarding ■ Policy T4 Assessing and mitigating transport impacts ■ Policy T5 Cycling ■ Policy T6 Car parking ■ Policy T6.1 Residential parking ■ Policy T6.2 Office Parking ■ Policy T6.3 Retail parking ■ Policy T6.4 Hotel and leisure uses parking ■ Policy T6.5 Non-residential disabled persons parking ■ Policy T7 Deliveries, servicing and construction ■ Policy T8 Aviation ■ Policy T9 Funding transport infrastructure through planning
<p>Mayor of London, Mayor’s Transport Strategy, 2018</p>	<p>The Mayor’s Transport Strategy sets out the Mayor’s policies and proposals to reshape transport in London over the next two decades. The central aim of the Mayor’s Transport Strategy is for 80% of all trips in London to be made on foot, by cycle or using public transport by 2041, and for all Londoners to do at least 20 minutes of active travel each day by 2041.</p> <p>Key themes of the strategy:</p> <ul style="list-style-type: none"> ■ Healthy streets and healthy people – Creating streets and street networks that encourage walking, cycling and public transport use will reduce car dependency and the health problems it creates ■ A good public transport experience – Public transport is the most efficient way for people to travel over distances that are too long to walk or cycle, and a shift from private car to public transport

Document	Key Messages/ Issues
	<p>could dramatically reduce the number of vehicles on London’s streets</p> <ul style="list-style-type: none"> ▪ New homes and jobs – More people than ever want to live and work in London. Planning the city around walking, cycling and public transport use will unlock growth in new areas and ensure that London grows in a way that benefits everyone <p>The Healthy Streets Approach is the framework of the strategy. Boroughs can deliver the Healthy Streets Approach in ways that suits the needs and aspirations of their residents and the unique character of their streets through public realm improvements and local policies that promote sustainable travel and deduce the dominance of motorised traffic. Adopting the Healthy Streets Approach is also a requirement of Local Implementation Plan funding and will help boroughs to fulfil their public health duties.</p> <p>Practical steps to achieving healthy streets for London:</p> <ul style="list-style-type: none"> ▪ Improving local environments by providing more space for walking and cycling, and better public spaces where people can interact ▪ Prioritising better and more affordable public transport and safer and more appealing routes for walking and cycling ▪ Planning new developments so people can walk or cycle to local shops, schools and workplaces, and have good public transport links for longer journeys
TfL, Healthy Streets for London, 2017	Although the initial strategy is based in London, the approach is becoming more widely adopted nationally. The Healthy Streets Approach puts people and their health at the centre of decisions

Document	Key Messages/ Issues
	<p>about how we design, manage and use public spaces. It aims to make our streets healthy, safe and welcoming for everyone.</p> <p>The Approach is based on 10 Indicators of a Healthy Street which focus on the experience of people using streets. These are as follows:</p> <ul style="list-style-type: none"> ▪ Pedestrians from all walks of life; ▪ Easy to cross; ▪ People chose to walk, cycle and use public transport; ▪ Clean air; ▪ People feel safe; ▪ Not too noisy; ▪ Places to stop and rest; ▪ Shade and shelter; ▪ People feel relaxed; and ▪ Things to see and do.
<i>Local</i>	
Tower Hamlets Council, Transport strategy 2019-41	<p>Vision: Tower Hamlets has a healthy, safe and environmentally friendly transport system that is accessible and affordable for all who live, work, study and do business in the borough. Desired outcomes:</p> <ul style="list-style-type: none"> ▪ Outcome 1: Tower Hamlets is one of the best places to walk and cycle in London ▪ Outcome 2: Car use is reduced in favour of active, efficient and sustainable transport ▪ Outcome 3: Transport services meet the needs of residents, visitors, businesses and supports growth and the economy

Document	Key Messages/ Issues
	<ul style="list-style-type: none"> ▪ Outcome 4: People feel safe and confident when travelling in the borough ▪ Outcome 5: Air quality is improved and our surroundings are quieter and more appealing ▪ Outcome 6: Travel in Tower Hamlets is accessible and affordable for all

<i>International</i>	
Bern Convention on the Conservation of European Wildlife and Natural Habitats (1979)	<p>The convention has three main aims which are stated in Article 1:</p> <ul style="list-style-type: none"> ▪ To conserve wild flora and fauna and their natural habitats; ▪ To promote cooperation between states; and ▪ To give particular attention to endangered and vulnerable species including endangered and vulnerable migratory species.
Conservation of Natural Habitats and Wild Fauna & Flora (the ‘Habitats Directive’) (1992)	<p>The identification of a European network of Sites of Community Importance to be designated as SACs. A SA would need to report on any potential effects on SACs and all development plans should aim to avoid adverse effects on them.</p>

Document	Key Messages/ Issues
<p>EU (2011) EU Biodiversity Strategy to 2020 – towards implementation</p>	<p>Aimed at halting the loss of biodiversity and ecosystem services in the EU by 2020, the strategy provides a framework for action over the next decade and covers the following key areas:</p> <ul style="list-style-type: none"> ■ Conserving and restoring nature; ■ Maintaining and enhancing ecosystems and their services; ■ Ensuring the sustainability of agriculture, forestry and fisheries; ■ Combating invasive alien species; and ■ Addressing the global biodiversity crisis.
<p>EU (2013) 7th Environment Action Programme (EAP) to 2020</p>	<p>The 7th EAP guided EU environmental policy up to 2020 and set ambitions for 2050. The Programme set the following as a priority objective: “to protect, conserve and enhance the Union’s natural capital.”</p> <p>The 7th EAP reflects the EU’s commitment to the preservation of biodiversity and the ecosystem services it provides for both its intrinsic value and its contribution to economic well-being.</p> <p>The Programme highlights that integrating the value of ecosystem services into accounting and reporting across the Union and its member states by 2020 will result in the better management of natural capital.</p>
<p>The Convention on Biological Diversity’s (CBD’s) Strategic Plan for Biodiversity 2011-2020</p>	<p>This plan provides an overarching framework on biodiversity, for all biodiversity-related conventions, the entire United Nations system and all other partners engaged in biodiversity management and policy development.</p> <p>The plan consists of five strategic goals of which 20 further Aichi goals which include:</p>

Document	Key Messages/ Issues
	<p>Strategic Goal A: Address the underlying causes of biodiversity loss by mainstreaming biodiversity across Government and society.</p> <ul style="list-style-type: none"> ▪ Strategic Goal B: Reduce the direct pressures on biodiversity and promote sustainable use. ▪ Strategic Goal C: To improve the status of biodiversity by safeguarding ecosystems, species and genetic diversity. ▪ Strategic Goal D: Enhance the benefits to all from biodiversity and ecosystem services. ▪ Strategic Goal E: Enhance implementation through participatory planning, knowledge management and capacity building.
<p>Ramsar Convention on the Conservation on Wetlands of International Importance (1971)</p>	<p>The Ramsar Convention covers all aspects of wetland conservation. It has three main pillars of activities:</p> <ul style="list-style-type: none"> ▪ The designation of wetlands of international importance as Ramsar sites; ▪ The promotion of the wise use of all wetlands in the territory of each country; and ▪ International co-operation with other countries to further the wise use of wetlands and their resources. <p>While the initial emphasis was on selecting sites of importance to waterbirds, now non-bird features are increasingly taken into account, both in the selection of new sites and when reviewing existing sites.</p>
<p>Kunming-Montreal Global Biodiversity Framework (GBF)</p>	<p>The 15th Conference of Parties to the UN Convention on Biological Diversity adopted the “Kunming-Montreal Global Biodiversity Framework” which includes four goals and 23 targets for achievement by 2030.</p>

Document	Key Messages/ Issues
	<p>The implementation of the Kunming-Montreal Global Biodiversity Framework will be guided and supported through a comprehensive package of decisions also adopted at COP 15. This package includes a monitoring framework for the GBF, an enhanced mechanism for planning, monitoring, reporting and reviewing implementation, the necessary financial resources for implementation, strategic frameworks for capacity development and technical and scientific cooperation, as well as an agreement on digital sequence information on genetic resources.</p> <p>In adopting the Kunming-Montreal Global Biodiversity Framework, all Parties committed to setting national targets to implement it, while all other actors have been invited to develop and communicate their own commitments. At the next meeting of the Conference of the Parties in 2024 in Türkiye, the world will take stock of the targets and commitments that have been set.</p>
<p>UNEP and ELD, State of Finance for Nature, 2022</p>	<p>Time to act: Doubling investment by 2025 and eliminating nature-negative finance flows. The State of Finance for Nature (SFN) 2022 report quantifies public and private finance flows to nature-based solutions (NbS) to tackle global challenges related to biodiversity loss, land degradation and climate change. The SFN 2022 report reveals that if the world wants to halt biodiversity loss, limit climate change to below 1.5C and achieve land degradation neutrality by 2030, current finance flows to NbS must urgently double by 2025 and triple by 2030.</p>
<p><i>National</i></p>	
<p>The Environment Act (2021)</p>	<p>The Environment Act, which became law in 2021, acts as the UK’s new framework of environmental protection. The Environment Act allows the</p>

Document	Key Messages/ Issues
	<p>UK to enshrine better environmental protection into law. It provides the Government with powers to set new binding targets, including for air quality, water, biodiversity, and waste reduction.</p> <p>The Biodiversity Gain objective requires the biodiversity value attributable to a development to exceed pre-development biodiversity value by at least 10%.</p>
<p>HM Government, 25 Year Environment Plan, 2018</p>	<p>The 25 Year Environment Plan outlines the UK Government’s ambition to leave our environment in a better state than we found it and the steps proposed to take to achieve that ambition.</p> <p>The Plan includes ten key targets of which two focus on biodiversity.</p> <p><u>Thriving plants and wildlife:</u></p> <ul style="list-style-type: none"> ■ Restoring 75% of our one million hectares of terrestrial and freshwater protected sites to favourable condition, securing their wildlife value for the long term; ■ Creating or restoring 500,000 hectares of wildlife-rich habitat outside the protected site network, focusing on priority habitats as part of a wider set of land management changes providing extensive benefits; ■ Taking action to recover threatened, iconic or economically important species of animals, plants and fungi and where possible to prevent human-induced extinction or loss of known threatened species in England and the Overseas Territories; ■ Increasing woodland in England in line with our aspiration of 12% cover by 2060: this would involve planting 180,000 hectares by end of 2042. <p><u>Enhancing biosecurity:</u></p>

Document	Key Messages/ Issues
	<ul style="list-style-type: none"> ■ Managing and reducing the impact of existing plant and animal diseases; lowering the risk of new ones and tackling invasive non-native species; ■ Reaching the detailed goals to be set out in the Tree Health Resilience Plan of 2018; ■ Ensuring strong biosecurity protection at our borders, drawing on the opportunities leaving the EU provides; and ■ Working with industry to reduce the impact of endemic disease.
<p>HM Government, Environmental Improvement Plan 2023</p>	<p>The 25 Year Environment Plan set out the ambition to refresh the plan every five years, a commitment set into law in the Environment Act 2021. This document continues to use the ten goals set out in the 25 Year Environment Plan; however, ‘Thriving Plants and Wildlife’ has since become the apex goal. It outlines the progress made so far and how Defra intends to deliver the framework and vision of the 25 Year Environment Plan.</p>
<p>Wildlife and Countryside Act (as amended 1981)</p>	<p>The Wildlife and Countryside Act 1981 consolidates and amends existing national legislation to implement the Convention on the Conservation of European Wildlife and Natural Habitats (Bern Convention) and Council Directive 79/409/EEC on the conservation of wild birds (Birds Directive) in Great Britain (NB Council Directive 79/409/EEC has now been replaced by Directive 2009/147/EC of the European Parliament and of the Council of 30 November 2009 on the conservation of wild birds (codified version).</p> <p>The Act provides for the notification and confirmation of SSSIs and the protection of wildlife.</p>

Document	Key Messages/ Issues
<p>Working with the grain of nature: A Biodiversity Strategy for England 2002</p>	<p>The Biodiversity Strategy for England sets a fundamental shift by ensuring that biodiversity considerations become embedded in all the main sectors of economic activity, public and private. The Strategy capitalises on the opportunities presented by the report of the Policy Commission on Food and Farming and the current review of the Common Agricultural Policy.</p> <p>The Strategy sets out a programme for five years for the other main policy sectors, to make the changes necessary to conserve, enhance and work with the grain of nature and ecosystems rather than against them. It takes account of climate change as one of the most important factors affecting biodiversity and influencing policies.</p>
<p>The Natural Environment White Paper (2011)</p>	<p>The aim of the White Paper is to set out a clear framework for protecting and enhancing the things that nature gives us for free.</p> <p>Four core themes:</p> <ol style="list-style-type: none"> 1. Protecting and improving our natural environment 2. Growing a green economy 3. Reconnecting people and nature 4. International and EU leadership
<p>Making Space for Nature: A review of England’s Wildlife Sites and Ecological Network: Chaired by Professor Sir John Lawton CBE FRS (2010)</p>	<p>Species and habitats should be restored and enhanced in comparison with 2000 levels.</p> <p>Improve the long-term sustainability of ecological and physical processes that underpin the functioning of ecosystems, thereby enhancing the capacity of ecosystem services.</p>

Document	Key Messages/ Issues
	Provide accessible natural environments rich in wildlife for people to enjoy and experience.
The Natural Choice: Securing the value of nature; HM Government (2011)	Protect and enhance biodiversity through Nature Improvement Areas (NIAs), biodiversity offsetting, Local Nature Partnerships and phasing out peat use. Place natural capital at the centre of economic decision making to avoid the unintended environmental consequences that arise from undervaluing natural assets.
NN NPS, (2014)	<p>NN NPS states that development should avoid significant harm to biodiversity and geological conservation interests, including through mitigation and consideration of reasonable alternatives. The applicant may also wish to make use of biodiversity offsetting in devising compensation to counteract impacts on biodiversity which cannot be avoided or mitigated. Where significant harm cannot be avoided or mitigated, as a last resort, appropriate compensation measures should be sought.</p> <p>Paragraphs 3.2 to 3.5 of the NN NPS state that not only should national road and rail networks be designed to minimise social and environmental impacts, but that they should also seek to improve quality of life. In part this may be achieved by <i>“reconnecting habitats and ecosystems [...] improving water quality and reducing flood risk, [...] and addressing areas of poor air quality.”</i></p> <p>Paragraph 5.162 recognises the potential for developments to provide positive environmental and economic benefits through the provision of green infrastructure. Paragraph 5.175 of the NN NPS highlights that</p>

Document	Key Messages/ Issues
	green infrastructure identified in development plans should be protected and, where possible, enhanced.
NPPF, 2023	<p>Paragraphs 174 and 179 to 182 of the NPPF require development to protect and safeguard biodiversity, and advise that development should aim to conserve, restore and enhance biodiversity adequately through mitigation or, as a last resort, using compensation. Proposals which aim to conserve or enhance biodiversity should be supported.</p> <p>Recognise the wider benefits of ecosystem services; minimise impacts on biodiversity and provide net gains in biodiversity where possible, contributing to the UK Government’s commitment to halt the overall decline in biodiversity, including by establishing coherent ecological networks that are more resilient to current and future pressures.</p> <p>Paragraph 174 of the NPPF requires that planning decisions should be taken to enhance the natural environment by recognising the wider benefits from natural capital and ecosystem services. Further, Paragraph 175 requires plans to take a strategic approach to maintaining and enhancing green infrastructure networks and improving natural capital at a catchment or landscape scale.</p>
The State of Natural Capital: Restoring our Natural Assets; Natural Capital Committee (2014)	<p>The report identifies that:</p> <ul style="list-style-type: none"> ■ Some assets are currently not being used sustainably and the benefits that we derive from them are at risk; ■ There are major economic benefits to be gained from natural capital and that their value should be incorporated into decision making; and ■ A long-term restoration plan is necessary to maintain and improve natural capital for future generations.

Document	Key Messages/ Issues
<p>The State of Natural Capital; Natural Capital Committee (2020)</p>	<p>In the report, the Natural Capital Committee sets out:</p> <ul style="list-style-type: none"> ■ Despite some improvements, only limited progress has been made towards the 25 Year Environment Plan’s goals. ■ Its advice to Government that biodiversity net gain should be expanded to environmental net gain. ■ Its advice that an England wide baseline of natural capital assets should be established to measure progress towards environmental goals. <p>Natural capital should be seen as infrastructure in its own right, in recognition of its contribution to economic wellbeing.</p>
<p>Natural Environment and Rural Communities (NERC) Act 2006</p>	<p>Makes provision about bodies concerned with the natural environment and rural communities, wildlife, sites of special scientific interest, National Parks and the Broads, rights of way, and other functions relating to the environment and rural affairs. Section 40 of the Natural Environment and Rural Communities (NERC) Act 2006 (or the ‘Biodiversity Duty’) states that: “Every public authority must, in exercising its functions, have regard, so far as is consistent with the proper exercise of those functions, to the purpose of conserving biodiversity”.</p> <p>You should be able to show your duty to have regard for conserving biodiversity if you have identified ways to integrate biodiversity when you:</p> <ul style="list-style-type: none"> ■ develop policies and strategies and put them into practice ■ manage the planning system ■ manage: <ul style="list-style-type: none"> – your land and buildings

Document	Key Messages/ Issues
	<ul style="list-style-type: none"> – woodlands and nature reserves – gardens, parks and public open space – community amenities e.g., sports grounds and cemeteries – waste and pollution – energy and water – wood and plant products <ul style="list-style-type: none"> ■ develop infrastructure, such as roads, buildings or flood defences ■ make decisions about procurement ■ implement economic, environmental and social programmes
<p>The Water Environment (Water Framework Directive) (England and Wales) Regulations 2017</p>	<p>10.—(1) The appropriate agency must, for each river basin district, maintain, review and keep up to date a register of the protected areas lying (whether wholly or partly) within the district. (2) The register must include the following protected areas—</p> <p>(iv) areas designated for the protection of habitats or species where the maintenance or improvement of the status of water is an important factor in the protection of the habitats or species.</p>

<p>European Landscape Convention 2000 (Became binding March 2007)</p>	<p>The Council of Europe Landscape Convention promotes the protection, management and planning of the landscapes and organises international co-operation on landscape issues. Specific measures include:</p> <ul style="list-style-type: none"> ▪ raising awareness of the value of landscapes among all sectors of society and of society's role in shaping them; ▪ promoting landscape training and education among landscape specialists, other related professions and in school and university courses; ▪ the identification and assessment of landscapes, ▪ analysis of landscape change, with the active participation of stakeholders; ▪ setting objectives for landscape quality, with the involvement of the public; and ▪ the implementation of landscape policies through the establishment of plans and practical programmes.
<i>National</i>	
<p>Accessible Natural Green Space Standards in Towns and Cities: A review and Toolkit for their Implementation (2003) and Nature Nearby: Accessible Green Space Guidance (2010)</p>	<p>English Nature (now Natural England) recommends that provision should be made of at least 2ha of accessible natural greenspace per 1000 population according to a system of tiers into which sites of different sizes fit:</p>

Document	Key Messages/ Issues
	<ul style="list-style-type: none"> ■ No person should live more than 300m from their nearest area of natural greenspace; ■ There should be at least one accessible 20ha site within 2km from home; ■ There should be one accessible 100ha site within 5km; and ■ There should be one accessible 500ha site within 10km.
Guidance for Outdoor Sport and Play (2015)	Fields in Trust guidance, first published in the 1930s, is based on a broad recommendation that 6 acres (2.4 hectares) of accessible green space per 1,000 head of population enables residents of all ages to participate in sport and play; 75% of local authorities adopt this or an equivalent standard (2014 Fields in Trust / David Lock Associates Survey).
Local Green Infrastructure: helping communities make the most of their landscape: Landscape Institute for Green Infrastructure Partnership (2011).	Communities should identify green infrastructure requirements in their local area through addition to or creative enhancement of the existing network. Look to enhance local landscape character, heritage and biodiversity and ensure long term management is included in an overall strategy.
Green Infrastructure: An integrated approach to landscape use. Landscape Institute Position Statement (2013)	The Landscape Institute’s most recent position statement, ‘Green Infrastructure LI Position Statement 2013’ sets out why GI is crucial to our sustainable future. The publication showcases a range of successful GI projects and shows how collaboration is key to delivering multifunctional landscapes. It also illustrates why landscape professionals should take the lead on the integration of GI.

Document	Key Messages/ Issues
National Policy Statement for National Networks (2014)	Paragraph 5.149 states that when judging the impact of a project on landscape, the decision is dependent on the nature of the existing landscape likely to be affected and the nature of the effect likely to occur. The project should aim to avoid or minimise harm to the landscape, providing reasonable mitigation where possible and appropriate.
25 Year Environment Plan (2018)	Goal 6: Enhancing beauty, heritage and engagement with the natural environment, is to “safeguard and enhance the beauty of our natural scenery and improving its environmental value while being sensitive to considerations of its heritage.”

NPPF, 2023	<p>Paragraph 190 states that “Plans should set out a positive strategy for the conservation and enjoyment of the historic environment, including heritage assets most at risk through neglect, decay or other threats. This strategy should take into account:</p> <ul style="list-style-type: none"> a) the desirability of sustaining and enhancing the significance of heritage assets, and putting them to viable uses consistent with their conservation; b) the wider social, cultural, economic and environmental benefits that conservation of the historic environment can bring; c) the desirability of new development making a positive contribution to local character and distinctiveness; and d) opportunities to draw on the contribution made by the historic environment to the character of a place”.

Document	Key Messages/ Issues
NN NPS (2014)	Paragraph 5.149 states that when judging the impact of a project on landscape, the decision is dependent on the nature of the existing landscape likely to be affected and the nature of the effect likely to occur. The project should aim to avoid or minimise harm to the landscape, providing reasonable mitigation where possible and appropriate.
25 Year Environment Plan (2018)	Goal 6: Enhancing beauty, heritage and engagement with the natural environment, is to “safeguard and enhance the beauty of our natural scenery and improving its environmental value while being sensitive to considerations of its heritage.”
Planning (Listed buildings and Conservation Areas) Act 1990	This is an Act relating to special controls in respect of buildings and areas of special architectural or historic interest.
1979 Ancient Monuments and Archaeological Areas Act	Where Ancient Monuments occur on agricultural land the following Act influences the extent of public control to ensure the protection of scheduled ancient monuments.
Historic England, The Historic Environment and Site Allocations in Local Plans	This advice note supports Local Plan development and outlines how to correctly implement historic environment legislation within Local Plans. The note also outlines how to minimise harm to the significance and setting of the historic environment through site allocations, including advice on evidence gathering and site selection methodology.

Document	Key Messages/ Issues
Historic England, Sustainability Appraisal and Strategic Environmental Assessment	Advice to support the assessment of plans on the historic environment and advice on heritage considerations for SA and (SEA processes. The advice note also offers guidance on implementing historic environment legislation appropriately within plans and assessments.
Historic England, The Setting of Heritage Assets	Guidance on managing the change within the settings of heritage assets through development. Outlines the role that setting plays in the significance of heritage assets and outlines how to incorporate heritage assets and their settings in decision making of developments.
Historic England Advice Note 4 Tall Buildings 2022	This Advice Note (HEAN 4) provides advice on planning for tall buildings within the historic environment. Its purpose is to support LPAs, developers, communities and other stakeholders in dealing with tall buildings proposals within the legislative and planning framework relevant to the historic environment.
Historic England, Managing Local Authority Heritage Assets	Guidance for local authorities regarding best practice guidance on how to safeguard and enhance heritage assets, as well as bringing them into productive use.

	<ul style="list-style-type: none"> ▪ Policy SI 1 Improving air quality
<p>Mayor of London, London Environment Strategy, 2018</p>	<p>The London Environment Strategy is the first truly integrated environment strategy for London that will combine policy and action to deliver multiple benefits for Londoners. It sets out an ambitious vision for improving London’s environment. The strategy provides a holistic plan for tackling the city’s environmental challenges, to make London greener, cleaner and ready for the future.</p> <p>The strategies that comprise the London Environment Strategy are:</p> <ul style="list-style-type: none"> ▪ London Plan ▪ Transport ▪ Housing ▪ Economic Development ▪ Culture ▪ Health Inequalities <p>The London Environment Strategy outlines aims for 2050:</p> <ul style="list-style-type: none"> ▪ Air quality. London will have the best air quality of any major world city by 2050, going beyond the legal requirements to protect human health and minimise inequalities
<p><i>Local</i></p>	
<p>Tower Hamlets Council, London Borough of Tower Hamlets Air Quality Action Plan 2022 – 2027</p>	<p>This Air Quality Action Plan (AQAP) has been produced as part of our responsibility under London Local Air Quality Management. The AQAP outlines the action to improve air quality in the London Borough of Tower Hamlets (LBTH) between 2022 – 2027.</p>

Document	Key Messages/ Issues
	<p>Priorities:</p> <ul style="list-style-type: none"> ■ Continue monitoring air pollutants and carrying out other core statutory duties to improve air quality within the Borough ■ Reducing emissions from developments and buildings ■ Increasing public health and awareness raising to reduce exposure to air pollution ■ Working with businesses in delivery servicing and freight to decrease air emissions ■ Reducing emission from Council fleet ■ Localised solutions such as expanding and improving green infrastructure, Low Emission Neighbourhoods (LENs) (subject to securing funding), replacing boilers and implementing insulation schemes in schools and Council properties, etc. ■ Improving cleaner transport within the Borough through transport and air quality policies, idling enforcement, car free days, pedestrianisation schemes projects, installation of electric vehicle charging points, and supporting walking and cycling.

Table E-12 – Relevant Plans, Policies, strategies and Programmes – Climate Change and Greenhouse Gases

Document	Key Messages/ Issues
<i>International</i>	
Kyoto Protocol to the UN Framework Convention on Climate Change (1992) Doha Amendment to the Kyoto Protocol (2012)	Developed countries commit themselves to reducing their collective emissions of six key greenhouse gases by at least 5%. Each country’s emissions target must be achieved by the period 2008-2012. Doha Amendment saw parties commit to reduce GHG emissions by at least 18 percent below 1990 levels in the eight-year period from 2013 to 2020.
The Paris Agreement, 2015	Aims to limit the global warming change to below 2°C above pre-industrial levels. However, countries aim to limit the increase to 1.5°C to reduce the impacts of global warming. The EU has committed to a binding target of a reduction of at least 40% in greenhouse gas emissions by 2030 compared to 1990
IEMA (2023) Practical steps for decarbonising local plans	<p>Toolkit to help close the gaps between climate action plans and the planning process, and to improve the plan’s evidence base. IEMA’s climate change and energy policy steering group has worked with IEMA members in the planning and infrastructure emissions fields to create a simple set of stages for local authorities to follow.</p> <ul style="list-style-type: none"> ▪ Stage one provides a clear understanding of baseline emissions and future carbon budgets. ▪ Stage two shows simple steps for calculating emissions linked to alternative policy options. ▪ Step three describes how the monitoring process feeds back into the review.

Document	Key Messages/ Issues
	Critically, the toolkit shows how each of the stages interacts with the authority’s climate action plan.
<i>National</i>	
NPPF, 2023	<p>Paragraph 154 of the NPPF states that “New development should be planned for in ways that:</p> <p>a) avoid increased vulnerability to the range of impacts arising from climate change. When new development is brought forward in areas which are vulnerable, care should be taken to ensure that risks can be managed through suitable adaptation measures, including through the planning of green infrastructure; and</p> <p>b) can help to reduce greenhouse gas emissions, such as through its location, orientation and design. Any local requirements for the sustainability of buildings should reflect the UK Government’s policy for national technical standards.”</p>
The Climate Change Act, 2008	<p>Improve carbon management and help the transition towards a low carbon economy in the UK.</p> <p>Demonstrate strong UK leadership internationally, showing the commitment to taking shared responsibility for reducing global emissions in the context of developing negotiations on a post-2012 global agreement at Copenhagen in 2009.</p> <p>Greenhouse gas emission reductions through action in the UK and abroad of at least 80% by 2050, and reductions in CO₂ emissions of at least 26% by 2020, against a 1990 baseline.</p>

Document	Key Messages/ Issues
<p>NN NPS, 2014</p>	<p>Paragraph 4.38 of the NN NPS states that “<i>New development should be planned to avoid increased vulnerability to the range of impacts arising from climate change. When new development is brought forward in areas which are vulnerable, care should be taken to ensure that risks can be managed through suitable adaptation measures, including through the provision of green infrastructure.</i>”</p> <p>The NN NPS also requires carbon impacts to be considered as part of the appraisal of scheme options, and an assessment of any likely significant climate factors in accordance with the requirements in the EIA Directive. <i>It goes on to state that “it is very unlikely that the impact of a road project will, in isolation, affect the ability of UK Government to meet its carbon reduction plan targets.”</i></p>
<p>A Green Future: Our 25 Year Plan to Improve the Environment, 2018</p>	<p>The 25 Year Environment Plan outlines the UK Government’s ambition to leave our environment in a better state than we found it and the steps proposed to take to achieve that ambition.</p> <p>Mitigating and adapting to climate change:</p> <p>Continuing to cut greenhouse gas emissions including from land use, land use change, the agriculture and waste sectors and the use of fluorinated gases. The UK Climate Change Act 2008 commits us to reducing total greenhouse gas emissions by at least 80 per cent by 2050 when compared to 1990 levels;</p> <p>Making sure that all policies, programmes and investment decisions take into account the possible extent of climate change this century; and</p>

Document	Key Messages/ Issues
	Implementing a sustainable and effective second National Adaptation Programme.
UK Committee on Climate Change, Interim UK Carbon Budgets	<p>The UK has committed to an 80% reduction in its greenhouse gas emissions by 2050. In order to help meet this target, the UK Committee on Climate Change (CCC) has devised a series of interim UK “carbon budgets” as follows:</p> <ul style="list-style-type: none"> ■ 1st carbon budget (2008 to 2012): 23% reduction; ■ 2nd carbon budget (2013 to 2017): 29% reduction; ■ 3rd carbon budget (2018 to 2022): 35% reduction by 2020; ■ 4th carbon budget (2023 to 2027): 50% reduction by 2025; ■ 5th carbon budget (2028 to 2032): 57% reduction by 2030.
25 Year Environment Plan, HM Government (2018)	Goal 7 of the 25 Year Environment Plan, ‘Mitigating and adapting to climate change’, is to “take all possible action to mitigate climate change, while adapting to reduce its impact” by “continuing to cut greenhouse gas emissions including from land use, land use change...” and “making sure that all policies, programmes and investment decisions consider the possible extent of climate change this century”.
<i>Regional</i>

Document	Key Messages/ Issues
	<p>The London Environment Strategy outlines aims for 2050:</p> <ul style="list-style-type: none"> ■ Waste. London will be a zero waste city. By 2026 no biodegradable or recyclable waste will be sent to landfill and by 2030 65 per cent of London’s municipal waste will be recycled <p>Chapter 7 sets out policies and proposals for reducing the amount of municipal waste produced, increasing the amount of waste reused, recycled or composted, and generating low carbon energy from waste remaining.</p>
<i>Local</i>	
<p>Tower Hamlets Council, ‘Don’t let our future go to waste’ Waste management strategy 2018-30</p>	<p>The six key priorities framing the waste management strategy are intended to guide a series of policies and targets to help the council achieve better services for residents, leading to a cleaner, greener Tower Hamlets. These priorities are set to remain relevant until 2030 and will be reviewed every four years alongside the reduction and recycling plan. This will allow any key legislative or policy changes to be incorporated into the strategy if necessary. The waste management strategy sets out six priorities to guide the way the council develops and improves work over the next 12 years:</p> <ul style="list-style-type: none"> ■ Collaboration at the heart of change – The more we work together, the more waste we can reduce, reuse and recycle. ■ Supporting people to love their neighbourhood – We will design services with our users in mind to encourage everyone to love their neighbourhood and take responsibility for their own waste ■ Supporting people to reduce, reuse, and recycle – We will encourage and enable everyone to follow the three R’s in their daily lives to lower our environmental impact.

Document	Key Messages/ Issues
	<ul style="list-style-type: none"> ■ Making waste a resource – We will provide opportunities for our service users to keep materials in use rather than throwing them away. ■ Reducing carbon and improving air quality – We will help improve local air quality by cutting emissions from our waste management activities. ■ Building our green economy – We will capitalise on ‘green opportunities’ for our residents and businesses where possible.
<p>Tower Hamlets Council, Reuse, Recycling & Waste SPD, 2021</p>	<p>The Tower Hamlets Reuse, Recycling and Waste SPD which sets out guidance for developers on how waste management should be addressed in proposals for new residential and mixed-use development. The SPD covers the entire borough and aims to re-examine and improve the way in which waste is produced and managed. The Reuse, Recycle and Waste SPD was prepared under Regulations 11 to 16 of the Town and Country Planning (Local Planning) (England) Regulations 2012.</p>

1 Introduction

1.1.1. This Appendix sets out the detailed findings of the assessment of the draft policies.

1.1.2. A matrix approach has been used for the assessment which has used the significance criteria identified in **Table 1-1** below. The performance of the draft policies against each IIA objective and **Tables 2-1 to 2-10** show the summary of significant effects based on each IIA objective.

Table 1-1 – Significance of Effect

Effect Significance	Key
Potential for significant positive effects	++
Potential for minor positive effects	+
Potential for minor negative effects	-
Potential for significant negative effects	--
Uncertain effects – Uncertain or insufficient information on which to determine the appraisal at this stage	?
Potential for both positive and negative effects	+/-
Negligible / No effect	0
Magnitude (High / Medium / Low)	H / M / L
Nature of effect (direct / indirect).	D / I
Spatial Extent (local / regional / national)	L / R / N
Reversibility of effect (reversible / irreversible)	R / I
Permanence (Permanent / Temporary)	P / T
Duration (short / medium / long term).	ST / MT / LT

2 Assessment of Draft Policies

2.1 Delivering the Local Plan

The assessment of the Delivering the Local Plan Policies are presented in **Table 2-1** below.

Table 2-1 – Delivering the Local Plan

Policy Grouping	Delivering the Local Plan							
Policy Codes	DV1, DV2, DV3, DV4, DV5, DV6, DV7, DV8							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	++	L	D	L	I	P	LT	<p>Policy DV1 (areas of growth and opportunity within Tower Hamlets) requires development to provide community infrastructure, and upgrade utilities infrastructure. This will provide improved infrastructure for both the current and future populations.</p> <p>Similarly, Policy DV7 (utilities and digital connectivity) ensures sufficient infrastructure, including electricity water, sewage, and digital infrastructure, for current and future populations within development proposals.</p> <p>Policy DV6 (Social Value) aims to maximise the delivery of social value to positively contribute community benefits. This will help to ensure that there will be a tangible commitment to expenditure across public, private, and voluntary, community and social enterprise sectors, generating the maximum social value across the borough. This can play a pivotal role in advancing equality.</p> <p>Similarly, Policy DV5 (Developer contributions) may also help to contribute to community project and facilities through Community Infrastructure Levy (CIL) payments.</p> <p>Policy DV8 (Site allocations) requires developers to discuss changes to social infrastructure and any alternative requirements as they arise on particular sites.</p>
IIA2: Human Health	++	M	D	R	I	P	LT	<p>Policy DV1 provides new community infrastructure, including health centres and leisure facilities. This improves healthcare provision and encourages physical activity amongst the population.</p> <p>Policy DV2 (delivering sustainable growth in Tower Hamlets) includes the support for developments where they contribute towards a clean and green future. This includes contributing to the development of healthy environments, encouraging physical activity and promoting good mental and physical wellbeing.</p> <p>Policy DV3 (healthy communities) requires developments to provide healthy environments for physical and mental wellbeing. This also includes the requirement for major developments to undertake a rapid health impact assessment. This is likely to result in positive developments for health and physical activity, resulting in improvements to physical and mental wellbeing amongst residents of the borough.</p> <p>Policy DV7 (utilities and digital connectivity) provides improvements to broadband infrastructure. This is likely to improve mental well-being for isolated communities.</p>

Policy Grouping	Delivering the Local Plan							
Policy Codes	DV1, DV2, DV3, DV4, DV5, DV6, DV7, DV8							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
								Policy DV8 (Site allocations) ensures that required infrastructure is delivered on earlier phases of development as far as possible. This is likely to result in positive developments for health as access to services will be prioritised. The policy also improves health through the publicly accessible open space requirements of new developments. Access to open space improves health and mental wellbeing, with increased access to this benefitting the local community.
IIA3: Economy & Town Centres	++	M	D	R	I	P	LT	<p>Policy DV1 directs development proposals towards the borough's opportunity areas within the City Fringe, Poplar Riverside, Isle of Dogs and South Poplar. This is likely to boost economic investment and growth within these areas. The policy also promotes a thriving economy through supporting development within the borough's strategic industrial locations, local industrial locations, and non-designated industrial sites. There is also focus upon ensuring town centres provide a range of uses and are accessible.</p> <p>Policy DV6 aims to maximise the delivery of social value to positively contribute to community benefits. This will help to ensure that there will be a tangible commitment to expenditure across public, private, and voluntary, community and social enterprise sectors, generating the maximum social value across the borough. This could include opportunities to support local businesses and enterprises.</p>
IIA4: Employment & Skills	++	M	D	R	I	P	LT	<p>Policy DV1 protects and enhances employment locations within the borough, as well as supporting a mix of employment opportunities across the borough. This also includes promoting affordable work space, to encourage a diverse range of employment opportunities.</p> <p>Policy DV6 aims to maximise the delivery of social value to positively contribute to community benefits. This will help to ensure that there will be a tangible commitment to expenditure across public, private, and voluntary, community and social enterprise sectors, generating the maximum social value across the borough. This could include opportunities to support local enterprises, businesses and training opportunities.</p>
IIA5: Housing	+	M	D	R	I	P	LT	Policy DV5 states that development proposals will be required to enter into Section 106 agreements to provide affordable housing. It also states that as vacant building credit has the potential to adversely impact the borough's ability to meet the affordable housing target, it will not apply and act as an exemption from its application in the borough.
IIA6: Crime & Safety	+	M	D	L	R	T	MT	Policy DV2 aims to empower the local community and deliver healthier, more inclusive, safer and cleaner spaces throughout the borough. Policy DV6 aims to maximise the delivery of social value to positively contribute to community benefits. An example provided by the policy includes demonstrating spatial and environmental improvement works that improve health and well-being, adopt gender inclusive design and create safer spaces.
IIA7: Sustainable Transport	+	M	D	R	I	P	LT	<p>Policy DV1 directs developments towards locations with good public and active travel links. This is likely to encourage a modal shift away from private vehicles and encourage utilisation of public and active travel. This is also encouraged through the development of green grid projects.</p> <p>Policy DV2 includes the support for developments where they contribute towards a clean and green future. This includes delivering social and transport infrastructure improvements.</p>

Policy Grouping	Delivering the Local Plan							
Policy Codes	DV1, DV2, DV3, DV4, DV5, DV6, DV7, DV8							
I/A Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
I/A8: Accessibility	++	M	D	R	I	P	LT	<p>Policy DV1 directs developments towards locations with good public and active travel links. It also aims to improve the transport network and wider strategic and local connections. This is likely to encourage a modal shift away from private vehicles and encourage utilisation of public and active travel and support greater accessibility to the borough's services.</p> <p>Policy DV1 provides new community infrastructure, including health centres and leisure facilities. This will provide greater access to facilities and services within the borough.</p>
I/A9: Biodiversity & Natural Capital	+	M	D	R	I	P	LT	<p>Policy DV1 supports Green Grid projects which will deliver appealing walking routes (such as the Lea River Park and Whitechapel Green Spine) and associated green infrastructure across the borough. This will help to provide new green infrastructure and a variety of new habitats.</p> <p>Policy DV4 (Planning and construction of new development) requires all major development proposals to sign up to the Tower Hamlets Code of Construction Practice and where appropriate a constructors' forum. All construction sites in the borough should meet or exceed the good practice set out in the Tower Hamlets Code of Construction Practice as regards, which includes consideration for urban ecology.</p> <p>Policy DV8 (Site allocations) require development proposals on site allocations to provide new publicly accessible open space of at least 0.4ha, and where strategic publicly accessible open spaces are required, provision of at least one hectare of contiguous open space. This can contribute to habitat creation and will be of importance to habitat connectivity, assisting statutory requirements to retain and enhance biodiversity.</p>
I/A10: Landscape & Townscape	+	L	D	L	R/I	P	LT	<p>Policy DV2 (delivering sustainable growth in Tower Hamlets) includes the support for developments where they contribute towards a clean and green future. This includes preserving and enhancing the character and setting of the area.</p>
I/A11: Historic Environment	+	L	D	L	R	P	LT	<p>Policy DV2 (delivering sustainable growth in Tower Hamlets) includes the support for developments where they contribute towards a clean and green future. This includes not resulting in unacceptable impacts on the historic environment.</p> <p>Policy DV4 requires all major development proposals to sign up to the Tower Hamlets Code of Construction Practice and where appropriate a constructors' forum. All construction sites in the borough should meet or exceed the good practice set out in the Tower Hamlets Code of Construction Practice as regards, which includes consideration for archaeology and built heritage.</p>
I/A12: Flooding	++	L	D	L	I	P	LT	<p>Policy DV2 (delivering sustainable growth in Tower Hamlets) includes the support for developments where they contribute towards a clean and green future. This includes mitigating flood risk.</p> <p>Policy DV4 requires all major development proposals to sign up to the Tower Hamlets Code of Construction Practice and where appropriate a constructors' forum. All construction sites in the borough should meet or exceed the good practice set out in the Tower Hamlets Code of Construction Practice as regards, which include flooding.</p>

Policy Grouping	Delivering the Local Plan							
Policy Codes	DV1, DV2, DV3, DV4, DV5, DV6, DV7, DV8							
I/A Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
								Policy DV8 includes the requirement for development in close proximity to water courses to incorporate buffer zones to support flood risk management, mitigating flood risk.
I/A13: Water Quality	+	L	D	L	R	T	MT	Policy DV4 requires all major development proposals should sign up to the Tower Hamlets Code of Construction Practice and where appropriate a constructors' forum. All construction sites in the borough should meet or exceed the good practice set out in the Tower Hamlets Code of Construction Practice as regards, which include water pollution.
I/A14: Air Quality	+	L	D	L	R	P/T	ST/LT	Policy DV2 (delivering sustainable growth in Tower Hamlets) includes the support for developments where they contribute towards a clean and green future. This includes reducing the impacts of poor air quality. Additionally, zero carbon construction is likely to contribute to reduced emissions and minimisation of poor air quality associated with construction.
I/A15: Climate Change & Resilience	+	L	D	L	R	P/T	ST/LT	Policy DV2 (delivering sustainable growth in Tower Hamlets) includes the support for developments where they contribute towards a clean and green future. This includes zero carbon construction, low carbon energy and heat production, this contributes to reducing the embodied carbon within developments. Policy DV7 (utilities and digital connectivity) supports decarbonised heat networks and net zero carbon emissions for energy systems. This reduces the waste heat from developments.
I/A16: GHG Emissions	+	L	D	L	R	P/T	ST/LT	Policy DV2 (delivering sustainable growth in Tower Hamlets) includes the support for developments where they contribute towards a clean and green future. This includes utilising local goods and services, supporting low carbon energy and heat production, zero carbon construction, reducing GHG emissions. Policy DV8 (Site allocations) require development proposals on site allocations to provide new publicly accessible open space of at least 0.4ha, and where strategic publicly accessible open spaces are required, provision of at least one hectare of contiguous open space. The addition of open space can improve climate resilience and help to reduce the Urban Heat Island (UHI) effect.
I/A17: Waste	+	L	D	L	R	P	LT	Policy DV2 (delivering sustainable growth in Tower Hamlets) includes the support for developments where they contribute towards a clean and green future. This includes utilising circular economy principles and reusing and recycling of buildings and resources.
I/A18: Efficient use of Land	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
Potential Cumulative/ Synergistic Effects	<p>Intra-plan:</p> <ul style="list-style-type: none"> These Policies are likely to have positive in-combination effects with the majority of policies within the NLP, most notably Community Infrastructure, Town Centres and Inclusive Economy and Good Growth Policies. <p>Inter-project:</p> <ul style="list-style-type: none"> The polices are expected to have concordant outcomes with the associated London Plan Policies and will resultantly lead to positive cumulative effect for LBTH. 							

Policy Grouping	Delivering the Local Plan							
Policy Codes	DV1, DV2, DV3, DV4, DV5, DV6, DV7, DV8							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
	<ul style="list-style-type: none"> The London Plan policy D1 seeks to understand the existing context of the borough in order to inform the areas capacity and needs for growth. In doing so, the policy ensures that development will be inclusive. This aligns with policy DV2 from the NLP which seeks to contribute towards inclusive environments throughout the borough. 							
Mitigation and Enhancement Measures	No mitigation measures have been outlined for these policies. Mitigations are likely to be based on site specific information once development sites have come forward.							
HIA and EqIA Findings/considerations	<p>EqIA</p> <ul style="list-style-type: none"> Mitigations are likely to be based on site specific information once development sites have come forward. New and improved facilities will likely be accessible and therefore beneficial to all borough residents. Consideration of social value added will ensure community, culture and diversity are upheld through development. <p>HIA</p> <ul style="list-style-type: none"> The Delivering the local plan policies outlined set out a holistic approach to the development of the NLP, and as such, are anticipated to bring about a high degree of positive effect across numerous social groups. By ensuring developers maximise contributions to the delivery of affordable housing, a greater proportion of the borough's population will be positioned to access housing. Social value contributions also include the adoption of gender inclusive design and creation of safer spaces, which will be of particular benefit to women and girls. 							
IIA Issues Addressed by Policies	<ul style="list-style-type: none"> There will be a need for adequate support and greater access to services and facilities for the young population, families with young children, and single parent families on one income. There are opportunities to improve access to facilities and services, as well as housing, for young adults and people with disabilities. The population of Tower Hamlets is expected to increase both in number and diversity and decrease in age profile. LBTH reducing age profile will present a greater need for access to leisure facilities and outdoor space, as well as a greater pressure on healthcare and support to tackle loneliness There is a need to provide more greenspaces and high-quality public realm which can provide social spaces 							
Recommendations	Policy DV6 could incorporate community engagement within the policy. It is implied within the supporting text but the important role it plays in adding social value to new developments isn't overly clear.							

2.2 Homes for our Community

The assessment of the Biodiversity and Open Space Policies are presented in **Table 2-2** below.

Table 2-2 – Homes for Our Community Policies Assessment

Policy Grouping	Homes for our Community							
Policy Codes	HF1, HF2, HF3, HF4, HF5, HF6, HF7, HF8, HF9							
I/A Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
I/A1: Population & Equalities	++	H	D	R	I	P	LT	<p>The policies aim to provide an appropriate mix of different sized homes, specialist and supported living, shared living and the protection of gypsy and traveller sites will help to reduce inequalities with access to housing, particularly for those in the community that are most vulnerable.</p> <p>Policy HF1 (Meeting housing needs) aims to prioritise specific groups including families with children, older people, disabled and vulnerable, key workers and service families, students and gypsies and travellers. In addition, the policy supports estate regeneration schemes that deliver homes across all tenures and provide improved social facilities, areas of high quality and multifunctional public realm and enhanced environmental amenity.</p> <p>Policy HF2 (Affordable housing and housing mix) requires development proposals to optimise the delivery of affordable housing, with the expectation of meeting the target of 50% affordable housing. The policy supports the reduction of poverty and inequalities in the borough and facilitates improvements in access to housing for low income groups.</p> <p>Policy HF9 (Housing Standards and Quality) also states that affordable housing should not be externally distinguishable in quality from private housing, which will ensure that low income groups will not be discriminated against. The policy also includes measures for wider accessibility within developments, ensuring inclusive access for all residents.</p>
I/A2: Human Health	++	H	D	R	I	P	LT	<p>The policies aim to provide an appropriate mix of different sized homes, specialist and supported living, shared living and the protection of gypsy and traveller sites. As housing is a social determinant of health, significant positive effects will also result.</p> <p>Policy HF4 (Supported and specialist housing and housing for older people) aims to seek opportunities to integrate the development into the wider area should also be explored to encourage a sense of belonging (especially among people from different generations) as well as to protect against the health impacts of loneliness and isolation.</p>
I/A3: Economy & Town Centres	++	M	I	R	I	P	LT	<p>The provision of new housing will benefit the local economy as the connectivity between employment centres and housing markets will be improved, and spending within the local communities will increase.</p>

Policy Grouping		Homes for our Community						
Policy Codes		HF1, HF2, HF3, HF4, HF5, HF6, HF7, HF8, HF9						
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA4: Employment & Skills	+	H	D	R	R	T	MT	All policies support the provision of a variety of new housing, which will indirectly provide employment opportunities. The construction and maintenance of these housing developments will likely provide high numbers of jobs.
IIA5: Housing	++	H	D	R	I	P	LT	<p>All policies will help to deliver at least 52,095 (+ London Legacy Development Corporation (LLDC)) new homes across the borough between 2023-2038, which exceeds the target of 34,730 new homes between 2019/20 and 2028/29. These will ensure a variety of housing will be delivered to meet the needs of all residents inclusively.</p> <p>In addition to the delivery of new housing, Policy HF3 (Protection of existing housing) aims to protect existing housing, particularly ensuring that the supply of self-contained homes and in particular family-sized homes is maintained.</p> <p>Policy HF7 and HF8 require development proposals for large-scale purpose-built shared living spaces and houses in multiple occupation (HMOs) to provide a cash-in-lieu contribution to the provision of affordable housing elsewhere in the borough. A monetary solution will be unlikely to address the issue of spatial availability in the borough and so the provision of affordable housing may be compromised in some locations by this suggestion.</p>
IIA6: Crime & Safety	+	L	I	L	R	T	MT	Policy HF5 (Gypsy and traveller accommodation) the proposed site is suitable for housing and in an accessible, safe location. This will help to ensure the safety of this often marginalised group. Policy HF9 (Housing Standards and Quality) states that any community amenity space associated with major developments must be overlooked by habitable rooms to ensure safety and surveillance. This may help to deter crime and improve overall feeling of safety.
IIA7: Sustainable Transport	+	L	I	L	I	P	LT	Policies HF1, HF4, HF6, HF7 and HF8 ensure that new development should be sited in locations that are well-connected and in close proximity to public transport. This will help to encourage the use sustainable transport modes and reduce private car use.
IIA8: Accessibility	+	L	I	L	I	P	LT	Policy HF1 (Meeting housing needs) will help to ensure that where possible development will be in highly accessible locations along transport corridors. Similarly, Policy HF5 (Gypsy and traveller accommodation) states that development proposals must demonstrate that they are accessible in terms of location and individual mobility needs. This will help to ensure older people can remain independent. Policy HF8 (Housing with shared facilities (houses in multiple occupation)) states that developments should be located are located in an area of high transport accessibility.
IIA9: Biodiversity & Natural Capital	+/-	H	D/I	R	R/I	P/T	ST/L T	Depending upon the location of sites, there may also be temporary disturbances to habitats and species during construction. However, Policy HF1 (Meeting housing needs) states that it will ensure a higher quality of built environment will be provided both off-site and on-site, through the delivery of public realm and green spaces. This could result in increases in biodiversity and natural capital through the provision of habitats and green infrastructure.

Policy Grouping		Homes for our Community						
Policy Codes		HF1, HF2, HF3, HF4, HF5, HF6, HF7, HF8, HF9						
I/A Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
I/A10: Landscape & Townscape	+/-	H	D/I	R	R/I	P/T	ST/L T	There is potential for housing developments to detract from the landscape and townscape, through land take and poor design. Depending upon the location of sites, there may also be temporary loss to the setting and tranquillity of some areas of the borough which have high landscape and townscape values, from dust, construction traffic, noise and vibration. However, Policy HF1 (Meeting housing needs) states that it will ensure a higher quality of built environment will be provided both off-site and on-site, through the delivery of public realm and green spaces. If sensitively designed this could help to improve the setting of the local landscape and townscape adding to its value.
I/A11: Historic Environment	?	N/A	N/A	N/A	N/A	N/A	N/A	<p>There is potential for housing developments to result in the loss of heritage assets (designated, non designated and buried archaeology), through land take as well as possible degradation from poor design. Depending upon the location of sites, there may also be temporary disturbances to the setting of heritage assets during construction from dust, construction traffic and noise and vibration. However, Policy HF1 (Meeting housing needs) states that it will ensure a higher quality of built environment will be provided both off-site and on-site, through the delivery of public realm and green spaces. If sensitively designed this could help to improve the setting of the local historic environment adding to its value.</p> <p>Policy HF5 (Gypsy and traveller accommodation) is the only policy that ensures that developments employ high quality design and are sympathetic to local character and heritage. It is not clear whether other sites will also have the same level of consideration to the historic environment. However, exact details of these impacts will depend on the scheme level designs which come forward and mitigation measures implemented, though it is expected that they will be single storey in nature and should not impact greatly on the setting of neighbouring heritage assets.</p>
I/A12: Flooding	?	N/A	N/A	N/A	N/A	N/A	N/A	Policy HF5 (Gypsy and traveller accommodation) is the only policy that ensures that developments are located away from areas of high flood risk (flood zone 3). It is not clear whether other sites which may come forward as a result of these policies will have the same considerations. Urban intensification and additional housing in the borough could increased flood risk due to more hard standing surfaces. However, exact details of these impacts will depend on the scheme level designs which come forward and mitigation measures implemented.
I/A13: Water Quality	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
I/A14: Air Quality	+/-	M	D/I	R	R/I	P/T	ST/ LT	Policies HF1, HF4, HF6, HF7 and HF8 ensure that new development should be sited in locations that are well-connected to public transport. This will help to encourage the use sustainable transport modes and reduce private car use. Allowing residents to live more locally may also reduce emissions and improve overall air quality. The inclusion of parks and green spaces as per Policy HF1 will also help to improve air quality. However, construction of housing is likely to result in temporary worsening of air quality during construction.

Policy Grouping		Homes for our Community						
Policy Codes		HF1, HF2, HF3, HF4, HF5, HF6, HF7, HF8, HF9						
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA15: Climate Change & Resilience	+	L	I	L	I	P	LT	<p>Policy HF1 (Meeting housing needs) aims to create sustainable places and quality living environments, however, it is not clear whether this will ensure climate resilient design.</p> <p>Policies HF1, HF4, HF6, HF7 and HF8 ensure that new development should be sited in locations that are well-connected to public transport. This will help to encourage the use sustainable transport modes and reduce private car use. Allowing residents to live more locally may also reduce emissions and improve. The inclusion of parks and green spaces as per Policy HF1 (Meeting housing needs) will also help to reduce levels of overheating within the borough.</p>
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	The development of housing is likely to result in significant levels of embodied carbon. Policy HF1 (Meeting housing needs) aims to create sustainable places and quality living environments, however, it is not clear whether this will include measure that will reduce GHG emissions and include renewable energy generation. As many of these measures will be determined by scheme level design, uncertain effects have been identified.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Housing development proposals which will come forward as a result of these policies are likely to be resource intensive and could generate a significant amount of construction waste. As the location and design of some proposals that may come forward as a result of these policies are not yet known, uncertain effects have been identified.
IIA18: Efficient use of Land	+/-	H	D	R	I	P	LT	As stated in Policy HF1 (Meeting housing needs), although housing growth will be primarily focused in the locations which may result in the repurposing of some land, the borough's limited area requires optimising delivery capacity where opportunities arise, which will be achieved by the regeneration of previously developed land, the intensification of the built form in opportunity areas.
Potential Cumulative/ Synergistic Effects	<p>Intra-plan:</p> <ul style="list-style-type: none"> There is potential for negative cumulative and synergistic effects on biodiversity, landscape and townscape, historic environment, air quality, GHGs, flooding and efficient use land if multiple developments were to come forward. These may conflict with policies PS6, PS7, PS8, BO1, BO2, CG1 and CG9. Cumulative increases in hardstanding which surfaces may also increase flood risk within the borough. Multiple housing developments are also likely to be resource intensive and significantly increase levels of embodied carbon as well as emissions associated with construction. The delivery of housing is likely to have positive effects in combination with policy DV1 and DV2. <p>Inter-plan:</p> <ul style="list-style-type: none"> Positive cumulative effects are expected to arise from the London plans policy on housing quality (D6) and the NLPs housing standards and quality policy (HF9). Housing that is fit for purpose is at the forefront of both polices, with HF9 setting out the requirements for space and accessibility standards as provided by the London Plan itself. Included in this is requirements for private internal space, access to external open space, and adequate daylight and privacy. housing in the NLP aligns with policy D7 in the London Plan. Both seek to provide housing that is genuinely suitable for London's diverse population, including at least 10% if dwellings to meet Building Regulation requirement M4(3) 'wheelchair user dwellings'. The positive cumulative effects of these policies will aid the borough population in need of specialist housing including the elderly and disabled groups. A strong focus on play and recreational space across both the London Plan and NLP will drive positive cumulative effects. The shared aim for residential developments to incorporate good-quality, accessible play provision within policy HF1 and S4 will generate positive effects for the greenspace accessibility of residents throughout the borough. 							

Policy Grouping	Homes for our Community							
Policy Codes	HF1, HF2, HF3, HF4, HF5, HF6, HF7, HF8, HF9							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
	<ul style="list-style-type: none"> There is the potential for negative cumulative effects to arise on housing in combination with London Plan 2021 policies. London Plan Policy SD5 does not promote the provision of off-site affordable housing or cash-in-lieu contributions, unless under exceptional circumstances; conflicting with NLP Policies (HF7 and HF8). 							
Mitigation and Enhancement Measures	<ul style="list-style-type: none"> Mitigation for IIA17 is likely to be offered by proposed Policy RW1 which aims to reduce the amount of waste and ensures that resources will be reused and recycled minimising waste wherever possible. Mitigation for IIA11 is likely to be offered by proposed Policy PS6 which aims to reduce the potential impacts on the historic environment. Mitigation for IIA12 is likely to be offered by proposed Policy CG6 which aims to manage flood risk from all sources. 							
HIA and EqIA considerations	<p>EqIA</p> <ul style="list-style-type: none"> The emphasis on affordable family sized housing with a view to combat overcrowding in the borough is also beneficial to families with children. Estate regeneration should not increase property prices in order that first time buyers remain able to buy into the property market and not be priced out. The provision of specialist housing to offer supported living to those with additional needs will support a range of protected characteristics in the borough. <p>HIA</p> <ul style="list-style-type: none"> The policies are anticipated to bring about a high degree of positive effect across numerous social groups. Social cohesion is highly supported by this theme. Regeneration as well as new provision is required to provide residents with a high-quality built environment, including access to community facilities. The requirement of development proposals to maximise the delivery of affordable homes under this theme will be especially beneficial to the health and wellbeing of low-income groups who are reliant on affordable housing. 							
IIA Issues Addressed by Policies	<ul style="list-style-type: none"> There is significant need for affordable properties to buy and rent, however, rising costs of living and above average house prices are affecting the number of residents able to afford to buy. There are significant levels of overcrowding in the borough The Covid-19 pandemic and rising cost of living is increasing levels of homelessness. The lack of affordable housing means that young people and/or lower income groups are missing out. 							
Recommendations	<ul style="list-style-type: none"> It should be noted that the Decent Home Standard is currently applicable to the social rented sector whilst the Decent Homes Standard in the private rented sector is undergoing consultation. More information could be provided on what the policies mean by 'sustainable' residential development i.e., does this include renewable energy regeneration, use of sustainable materials, well located to sustainable transport etc. Policy HF5 (Gypsy and traveller accommodation) is the only policy that makes ensures that developments employ high quality design and is sympathetic to local character and heritage - this should also be included in Policy HF1. 							

2.3 Clean, Green Future

The assessment of the Clean, Green Future Policies are presented in **Table 2-3** below.

Table 2-3 – Clean, Green Future Policies Assessment

Policy Grouping	Clean and Green Future							
Policy Codes	CG1, CG2, CG3, CG4, CG5, CG6, CG7, CG8, CG9, CG10, CG11							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	+	L	I	R	R	P	LT	The Clean and Green Future policies will help to provide adaptation and mitigation measures which will support the borough's population both now and in the future. Provision energy efficient buildings (CG2 Low energy buildings, CG3: Low carbon energy and heating) and retrofitting (CG4 Embodied carbon, circular economy and retrofit) will help to support better quality housing stock and present energy/ cost savings for residents.
IIA2: Human Health	++	L	D/I	L	R	P	LT	Provision energy efficient buildings (CG2 Low energy buildings, CG3 Low carbon energy and heating) and retrofitting (CG4 Embodied carbon, circular economy and retrofit) will help to improve residents' health by reducing exposure to cold and air pollutants, as well as overheating within developments. Potential cost savings may also provide more disposable income and reduce levels of stress and anxiety associated with the rising cost of living. Policy CG10 (noise and vibration) contributes to indirect positive effects on wellbeing through a reduction in noise within Tower Hamlets. Reductions in noise reduce the nuisance to residents, improving mental wellbeing. Policy CG11 (contaminated land and storage of hazardous substances) also acknowledges the risks that contaminated land poses to human health. This policy includes remediation measures for contaminated land and restrictions to hazardous substance use, preserving human health.
IIA3: Economy & Town Centres	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA4: Employment & Skills	+	L	I	L	R	T	MT	Design requirements as part of the Clean and Green policies could indirectly result in job opportunities particularly within the construction and renewable energy sectors.
IIA5: Housing	+	L	I	L	I	P	LT	Generally, policies within Clean and Green Future will indirectly contribute to improved housing quality within the borough, through higher quality building standards during construction, including through additional noise reduction measures, heating measures and climate resilience measures.
IIA6: Crime & Safety	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA7: Sustainable Transport	+	L	D	R	R	P	MT	Policy CG9 (air quality) outlines the promotion on low and zero emissions transport. The supporting policy text also includes the encouragement of sustainable movement patterns, this is likely to include the use of public and active transport modes. Additionally, the policy promotes the use of electric vehicles.
IIA8: Accessibility	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A

Policy Grouping		Clean and Green Future						
Policy Codes		CG1, CG2, CG3, CG4, CG5, CG6, CG7, CG8, CG9, CG10, CG11						
I/A Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
I/A9: Biodiversity & Natural Capital	++	L	I	L	R	P	MT	<p>Policy CG9 (air quality) contributes to indirect positive effects upon biodiversity through improvements to air quality, improving the environment for species and habitats. The policy also includes utilising nature-based solutions to reduce air pollution. This will also contribute to increasing the biodiversity within the borough as well as protecting existing habitats from the adverse effects of air pollution.</p> <p>Additionally, Policy CG10 (noise and vibration) includes measures to minimise disturbance from new construction, this is likely to have minor positive indirect effects on local biodiversity.</p>
I/A10: Landscape & Townscape	+	L	I	L	R	P	MT	<p>Policy CG6 aims to include nature-based drainage systems and planted landscapes, which in addition to natural flood they can provide positive landscape features within the borough.</p> <p>Policies CG9 and CG10 encourages developments which will mitigate and improve poor air quality and reduce exposure to noise and vibration. Both noise and air pollution can contribute to reductions in tranquillity and the setting of townscapes and landscapes.</p>
I/A11: Historic Environment	+	L	I	L	R	P	MT	<p>The improvements to air quality outlined in Policy CG9 (air quality) contribute to indirect positive effects upon the historic environment as poor air quality contributes to the degradation of heritage assets. Therefore, improving air quality is likely to reduce degradation of assets within Tower Hamlets.</p>
I/A12: Flooding	++	M	D	R	I	P	LT	<p>Policy CG6 (flood risk) within Clean and Green Future addresses flood risk within the borough and sets out the requirements for developments that may occur within flood zones, including flood risk assessments and the restriction of highly vulnerable uses within flood zone 3a and 3b.</p> <p>The policy also sets out requirements for developments to include flood risk mitigation measures, improving resilience in flood events.</p> <p>Policy CG7 (sustainable drainage) also contributes to reducing flood risk through the implementation of SuDS and greenfield run-off rates, as well as reducing surface water run-off.</p>
I/A13: Water Quality	++	L	I	R	R	P	MT	<p>Policy CG8 requires development proposals to seek to reduce the pressure on the fresh and wastewater systems through reducing demand and increasing water efficiency. Conserving water can help to reduce the risk of environmental pollution, improve water quality and also save energy.</p> <p>Inclusion of SuDs as per CG7 can also help to improve water quality, as they mimic natural drainage regimes and reducing the transport of pollution to the water environment. This policy also supports proposals for zero discharge developments.</p>
I/A14: Air Quality	++	M	D	R	R/I	P	MT/LT	<p>Policy CG9 (air quality) addresses the poor air quality within the borough and the need for developments to mitigate and improve air quality, including promoting low or zero emission transport and reducing vehicle reliance. This is likely to contribute to improvements to air quality within the borough.</p>

Policy Grouping	Clean and Green Future							
Policy Codes	CG1, CG2, CG3, CG4, CG5, CG6, CG7, CG8, CG9, CG10, CG11							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA15: Climate Change & Resilience	++	M	D	R	I	P	LT	All policies within Clean and Green Future contribute to improving the climate resilience within the borough, particularly CG1 (Mitigating and adapting to a changing climate), CG5 (overheating), CG6 (which acknowledges the impact of climate change on flood risk). Climate change is likely to result in increased heating and rainfall events, therefore these policies increase the resilience to this through prevention of overheating and the consideration of flood risk within developments, including the implementation of SuDS.
IIA16: GHG Emissions	++	M	D/I	L	I	P	LT	The majority of policies within Clean and Green Future contribute to reducing GHG emissions through the reduction in energy usage, and vehicle reliance. Policy CG3 (low carbon energy and heating) also contributes to positive effects due to reductions in fossil fuel usage. Policy CG4 also contributes to reductions in embodied carbon.
IIA17: Waste	++	L	D	L	R	P	MT	Policy CG4 will require all major development proposals to demonstrate how waste will be minimised in the design and construction of the building, through reuse of materials on-site or ensuring new materials are sustainably sourced and low impact. The policy also encourages circular economy approaches within design and construction. Policy CG1 aims to support development proposals which minimise the use of natural resources, by promoting more efficient use of materials in the construction process in line with the principles of the circular economy, minimising waste and consumption throughout the lifecycle of a building.
IIA18: Efficient use of Land and Resources	++	L	D	R	I	P	LT	Policy CG11 (contaminated land and storage of hazardous substances) outlines the requirements to remediate contaminated land. This is likely to improve the quality of land within Tower Hamlets and contribute to the utilisation of brownfield land. Policy CG1 aims to support development proposals which minimise the use of natural resources, by promoting more efficient use of materials in the construction process in line with the principles of the circular economy, minimising waste and consumption throughout the lifecycle of a building.
Potential Cumulative/ Synergistic Effects	<p>Intra-plan:</p> <ul style="list-style-type: none"> There are potential positive cumulative effects upon air quality, human health, housing, and climate change in conjunction with other policies. This is likely to result in improved air quality, and improvements to housing standards within the borough. There are also potential positive cumulative improvements to biodiversity, in conjunction with Biodiversity and Open Space policies. <p>Inter-plan:</p> <ul style="list-style-type: none"> Positive cumulative effects are expected from the overlapping requirements of the Clean, Green Future policies and the London Plan Policy SD1 on Opportunity Areas. Opportunity Areas are identified by the London Plan as significant locations with development capacity to accommodate housing, infrastructure and commercial development. The identification of such areas and the significant effect they have the potential to enact allows for the promotion of clean green principles in their development in order to support sustainability in the borough. This includes the development of brownfield sites in order to make the best use of land available. 							
Mitigation and Enhancement Measures	No mitigation or enhancement measures have been identified for these policies.							

Policy Grouping	Clean and Green Future							
Policy Codes	CG1, CG2, CG3, CG4, CG5, CG6, CG7, CG8, CG9, CG10, CG11							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
HIA and EqIA considerations	<p>EqIA</p> <ul style="list-style-type: none"> • Appropriate subsidies should be considered to ensure low-income groups can access sustainable retrofitting with no additional financial barriers. <p>HIA</p> <ul style="list-style-type: none"> • In general, Clean Green Future results in positive impacts upon health determinants. There are a number of resulting beneficial health effects, particularly upon older people, infants, children and young people including care leavers, people with long term health conditions and low-income groups. 							
IIA Issues addressed	<ul style="list-style-type: none"> • Increases in light, air, and noise pollution from increasing development in the borough • Frequent heat episodes as a result of climate change can contribute to the worsening of air quality • Climate change is likely to increase the occurrence of flooding from all sources • The impacts of the UHI generated in will increase as development increases, exacerbating health issues and reduce quality of life in overcrowded households • There is the need to reduce GHG emissions of new infrastructure and housing • There is a need to ensure climate resilience of the infrastructure in LBTH • Increasing population projections in the borough will increase demand for drinking water supply and place pressure on the already stressed capacity of sewer systems 							
Recommendations	<ul style="list-style-type: none"> • Policy CG4 Part 6 could be clearer on retrofitting proposals as it is not clear what developments these actually apply to - are these only applied to those undergoing redevelopment or applied to all existing housing stock? • Policy CG6 Part 8 could be reworded to '<i>Nature based solutions such as natural drainage systems and planted landscapes...</i>' • Policy CG9 could benefit from including the promotion of public or active travel modes within the policy, rather than just stating electric vehicles or sustainable movement patterns. 							

2.4 People, Places and Spaces

The assessment of the People, Places and Spaces Policies are presented in **Table 2-4** below.

Table 2-4 – People, Places and Space Policies Assessment

Policy Grouping	People Places and Spaces							
Policy Codes	PS1, PS2, PS3, PS4, PS5, PS6, PS7, PS8, PS9, PS10, PS11							
I/A Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	++	M	D	R	I	P	LT	<p>Policies within People Places and Spaces contribute to significant positive effects upon IIA1. PS1 (Design and Infrastructure Led Approach to Development) results in positive effects on communities as the policy supports the borough's growing population. Additionally, the policy outlines community engagement measures to ensure development suits community needs, and gender inclusive design.</p> <p>Policy PS5 (creating inclusive places) results in positive effects through improvements to equalities, ensuring all genders are able to access community spaces equally.</p> <p>Additionally, Policy PS4 (Attractive Streets, Spaces, and Public Realm) provides a range of public spaces for community use within developments. This improves the local facilities available for growing communities in the borough.</p>
IIA2: Human Health	++	M	D/I	R	I	P	LT	<p>Policy PS2 (tall buildings) indirectly improves health through the communal open space requirements of new developments. Access to open space improves health and mental wellbeing, with increased access to this benefitting the local community.</p> <p>Policy PS3 (Securing Design Quality) aims to ensure that developments do not result in unacceptably harmful impacts arising from overheating, wind, air pollution, light pollution noise pollution, or odours. All of these aspects can have harmful effects on human health, therefore reducing harmful impacts will have positive effects on the health of neighbouring populations. Additionally, the policy ensures developments consider the health and wellbeing of all users, including vulnerable people, throughout the design process. This further aids in reducing harmful impacts of development.</p> <p>Policy PS5 (creating inclusive places) includes measures for well-designed open spaces, which are accessible to all genders. This is likely to benefit health through reducing isolation of genders, for example mothers, and provide space for socialisation and activity outside, improving physical and mental health.</p>
IIA3: Economy & Town Centres	+	L	D	L	R	P	MT	<p>Policy PS9 (shopfronts) outlines the need for active shopfronts which will help to improve the economic diversity within the borough and encourage multi-use shopfronts, building the local economy. This is also reinforced by a number of other policies within the grouping.</p>
IIA4: Employment & Skills	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA5: Housing	+	L	D	R	I	P	LT	<p>Policy PS3 is likely to result in improved housing, particularly through improvements to privacy for residents, creating more habitable rooms and provision of a mix and range of communal and publicly</p>

Policy Grouping	People Places and Spaces							
Policy Codes	PS1, PS2, PS3, PS4, PS5, PS6, PS7, PS8, PS9, PS10, PS11							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
								accessible open spaces and water spaces. Policy PS2 supports the development of tall buildings, which could present opportunities to deliver greater housing densities.
IIA6: Crime & Safety	++	M	D/I	R	R	P	MT	<p>A number of policies within this group provide improvements to safety both directly and indirectly. Generally, they support public realm and high quality design which can engender a sense of pride in a place, which in turn can help to discourage crime.</p> <p>Policy PS2 (tall buildings) considers public safety within the design of tall buildings, including through evacuation routes.</p> <p>Policy PS4 incorporates secured by design principles which will help to improve safety and perception of safety for pedestrians. Additionally, the policy encourages a healthy streets approach. As part of this the 'people feel safe' indicator will help to ensure that whole community should feel comfortable and safe at all times and people should not feel worried about road danger or experience threats to their personal safety.</p> <p>Policy PS5 also includes lighting and signage measures, as well as design to make areas safe for all genders, particularly reducing the fear of crime.</p>
IIA7: Sustainable Transport	+	L	I	L	R	P	MT	Policy PS4 encourages better connectivity and permeability around sites, encouraging people to easily and safely get around the borough. It encourages connectivity to public transport hubs, town centres, open spaces, employment and community facilities. This could help to reduce the demand for use of private vehicles and facilitate a modal shift to more sustainable modes.
IIA8: Accessibility	++	L	D	R	R	P	MT	Policy PS4 outlines the requirements for development to maintain accessible street networks and enhance connectivity through developments. This includes connectivity to public transport hubs and improving accessibility around the borough. The application of the 'healthy streets' approach will ensure that public places are accessible for all.
IIA9: Biodiversity & Natural Capital	+	L	D	L	R	P	LT	<p>Policy PS2 requires new development to provides communal open space which may enhance local natural capital. The policy also requires development to have no adverse effect on biodiversity in the local area, preserving species and habitats.</p> <p>PS4 encourages tree planting and the maximisation of planting and soft landscaping to provide visual and environmental relief from hard landscaping. This is likely to provide small scale habitat creation and ecological networks.</p>
IIA10: Landscape & Townscape	+	H	D	R	R/I	P	LT	There are a number of policies within this group that contribute to significant positive effects on IIA10. Policy PS1 requires the appropriate scale of new developments, this will protect the borough's landscape and views. Similarly, policy PS2 requires tall buildings to provide high quality development that considers landmarks, key views and historic skylines, protecting the borough's views. However, there is no specification within the policy regarding building heights. Therefore, in the short term there is the potential for development to negatively impact the borough's landscape and views depending on the location of tall

Policy Grouping	People Places and Spaces							
Policy Codes	PS1, PS2, PS3, PS4, PS5, PS6, PS7, PS8, PS9, PS10, PS11							
I/A Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
								buildings and the sensitivity of design. In the long term, there is potential for the borough to develop its own unique skyline. Policies PS3 and PS4 support high quality design, the creation of attractive streets, spaces and public realms, as well as active frontages. This contributes to improved landscape and townscape within the borough and an improved streetscape value. Policy PS8 requires the management of key views within the borough. The policy also ensures the value of landmarks are protected. This means that new development is unlikely to negatively impact the local landscape and views. Policy PS9 also requires active shopfronts, which positively contributes to the local townscape.
I/A11: Historic Environment	++	M	D	R	R	P	LT	Policy PS6 specifically outlines the preservation and enhancement of designated and non-designated heritage assets, including archaeological areas and heritage at risk. However, the policy will under some circumstances allow the loss of heritage assets if they meet a stringent criterion. Policy PS7 (world heritage sites) also requires the safeguarding of the two world heritage sites within the borough, resulting in positive effects.
I/A12: Flooding	+	L	I	L	R	P	MT	Supporting text for Policy PS1 states that a design led approach will question whether proposals be built to meet high sustainability standards, and to maximise green spaces and effectively manage flood risk. General improvements to the public realm. Policy PS4 aims to ensure that all new streets contain trees and maximise planting and soft landscaping to provide visual and environmental relief. This could help to intercept rainfall and decrease surface run-off.
I/A13: Water Quality	+	L	I	R	R	P	MT	Policy PS3 supports efficient design, which could include water efficiency, however, this isn't necessarily clear. Supporting water efficient design can help to reduce the risk of environmental pollution, improve water quality and also saves energy. Policy PS2 requires new developments of tall buildings to have no adverse effect on water bodies, which is likely to maintain current water quality. PS4 encourages tree planting and the maximisation of planting and soft landscaping to provide visual and environmental relief from hard landscaping. This is likely to help indirectly improve water quality as trees, shrubs, ground cover and other plants can help filter out pollutants and reduce the amount of pollution that is washed into surface water bodies.
I/A14: Air Quality	+	L	I	R	R	P/T	MT	Policy PS3 (part f) states that use design and construction techniques to ensure that the development does not result in unacceptably harmful impacts arising from air pollution. Policy PS2 requires new development to provide communal open space which may enhance local natural capital. Urban greening will help to support air purification and dust suppression which could help to reduce levels of air pollution within the borough.

Policy Grouping	People Places and Spaces							
Policy Codes	PS1, PS2, PS3, PS4, PS5, PS6, PS7, PS8, PS9, PS10, PS11							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA15: Climate Change & Resilience	+	L	D	R	I	P	LT	Policy PS3 requires the high-quality design of new developments, including the resilience to overheating. This is likely to contribute to improving the resilience of new developments to heating as a result of climate change. Supporting text for Policy PS1 states that a design led approach will question whether proposal be built to meet high sustainability standards, and to maximise green spaces and effectively manage flood risk. General improvements to the public realm. Policy PS4 aims to ensure that all new streets contain trees and maximise planting and soft landscaping to provide visual and environmental relief. Tree planting and green infrastructure can help to reduce the urban heat island effect.
IIA16: GHG Emissions	+	L	D	L	I	P	LT	Policy PS3 supports the optimisation energy and waste efficiency, which could help to reduce GHG emissions. Part 11 of Policy PS6 aims to retrofit heritage assets to achieve greater levels of energy efficiency and reductions in carbon emissions.
IIA17: Waste	+	L	D	L	I	P	LT	Policy PS4 requires integrated refuse and recycling within new developments. This would contribute to encouraging recycling within new developments, and waste management within the borough.
IIA18: Efficient use of Land and Resources	+	M	D	R	I	P	LT	Policy PS2 supports the development of tall buildings, which can make efficient use of land by delivering greater housing densities and could reduce pressure on the borough's green spaces. Policy PS3 (part d) supports the use of high-quality design, materials and finishes to ensure buildings are robust, efficient and fit for the life of the development.
Potential Cumulative/ Synergistic Effects	<p>Intra-plan:</p> <ul style="list-style-type: none"> There are potential for cumulative effects upon IIA15, IIA10 and IIA11 when applied in combination with other policy groups such as Biodiversity and Open Space. There is potential for improved resilience to overheating, positively affecting IIA15. There are also likely to be cumulative improvements to the townscape within the borough, improving streetscape value, as a result of positive development design improving the public realm. This is likely to have positive effects in combination with the Town Centre, Biodiversity and Open Space and Community Infrastructure Policies. There are also positive cumulative effects upon IIA1 (population and equalities) through improved design and accessibility of developments, providing for the current and future population. <p>Inter-plan:</p> <ul style="list-style-type: none"> Positive cumulative effects are anticipated through the London Plan policy D9 on tall buildings and the equivalent NLP policy PS2, tall buildings. Both policies are geared towards selecting appropriate locations for the development of tall buildings, doing so in a way that avoids adverse visual impacts and fits into the spatial hierarchy of the borough. This Will work to ensure housing provision does not compromise the environment, and instead continues to protect and improve the townscape of the borough. Safety is also a key consideration in both the London Plan and the NLP. Design Out Crime initiatives working across both policies will result in positive cumulative effects for borough residents. 							
Mitigation and Enhancement Measures	No mitigation or enhancement measures have been identified.							

Policy Grouping	People Places and Spaces							
Policy Codes	PS1, PS2, PS3, PS4, PS5, PS6, PS7, PS8, PS9, PS10, PS11							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
HIA and EqIA considerations	<p>EqIA</p> <ul style="list-style-type: none"> • Accessibility must be considered at all stages of tall building design, construction and operation so as to not exclude groups such as wheelchair users. • Securing design quality should not increase property prices in order that first time buyers remain able to buy into the property market and not be priced out. • Appropriate positioning of advertisement and signage to ensure accessibility for disabled groups in public spaces should be considered. <p>HIA</p> <ul style="list-style-type: none"> • The policies proposed within the People, Places and Spaces theme have the potential to result in positive health effects upon multiple social groups, primarily through improving housing provision within LBTH. • Improved quantity and quality of housing as well as associated access to open space will contribute positively to the physical health and wellbeing of the LBTH population. 							
IIA Issues Addressed by Policies	<ul style="list-style-type: none"> • Frequent heat episodes as a result of climate change can contribute to the worsening of air quality • The impacts of the UHI generated in will increase as development increases, exacerbating health issues and reduce quality of life in overcrowded households • There is the need to reduce GHG emissions of new infrastructure and housing that is required to accommodate prosperity and population growth within LBTH. • There is a need to ensure climate resilience of the infrastructure in LBTH. The extent of future climate change will be strongly affected by the amount of GHG that the population chooses to emit. • There are significant health inequalities in LBTH. This is reflected in the variation of life expectancies between the most and least deprived residents. • There is a need to provide more greenspaces and high-quality public realm which can provide social spaces 							
Recommendations	<ul style="list-style-type: none"> • Policy PS5 (part G) it may be more inclusive to include all local groups and genders rather than specifically women. Policy supporting text could also include further statistics on LGBTQIA+ communities as it is currently quite focused on male and female genders. Additional reference could be made to the Tackling Violence Against Women and Girls Strategy (2021) and Inclusive Spaces and Places for Girls and Young People, An Introduction for Local Government (2023). • Policy PS1, PS3 and PS4 could incorporate elements of climate resilient design. This could include specific aspects such as rainwater and flood attenuation, SuDs, permeable paving, green roofs etc. Reference could also be made to urban creep. • PS3 touches on efficiency as part of design - this could be strengthened by inclusion (either within the policy or supporting text) on what type of efficiency measure these could include i.e. water efficient measures, energy efficient measures etc. 							

2.5 Inclusive Economy and Good Growth

The assessment of the Inclusive Economy and Good Growth Policies are presented in **Table 2-5** below.

Table 2-5 – Employment and Economic Growth Assessment

Policy Grouping	Inclusive Economy and Good Growth							
Policy Codes	EG1, EG2, EG3, EG4, EG5, EG6							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	+	M	D	R	I	P	LT	<p>Policy EG1 (creating investment and jobs) includes closing the skills gap amongst the working population, improving equalities. The policy also includes affordable workspace, which provides opportunities for smaller, local businesses.</p> <p>Policy EG3 (affordable workspace) also supports those who may have smaller, local businesses, through affordable workspace. This is also likely to provide opportunities for different cultures, improving equalities. Supporting policy text also aims to support disadvantaged groups starting up in any sector</p> <p>Policy EG5 (railway arches) also improves equalities by preserving the railway arches for their current cultural uses, enabling different communities to have economic and employment space within the borough.</p>
IIA2: Human Health	+	L	I	R	I	P	LT	<p>All policies indirectly support human health. There is clear evidence that good employment improves health and wellbeing across people’s lives, not only from an economic standpoint but also in terms of quality of life.</p> <p>Policy EG1 (creating investment and jobs) results in indirect positive effects on human health. The policy closes the skills gap through improving local education levels. Improving education is likely to result in increased opportunities and positive effects on mental wellbeing.</p>
IIA3: Economy & Town Centres	++	H	D	R	I	P	LT	<p>All policies within Employment and Economic Growth contribute to increasing the economic growth within the borough.</p> <p>Policy EG1 (creating investment and jobs) provides a range of workspaces and employment locations. This also improves transport connectivity to employment opportunities. Developing new employment locations promotes growth within the borough.</p> <p>Policy EG2 (new employment space) also contributes to encouraging investment within the borough from businesses utilising the new employment space.</p> <p>Policy EG3 (affordable workspace) also encourages the investment of smaller businesses within the borough. Small business investment in Tower Hamlets encourages diversity of the economy and additional opportunities for economic growth.</p> <p>Policy EG5 (railway arches) also encourages a diverse economy within Tower Hamlets, preserving the industrial economy located in these areas, as well as food and drink, arts and culture that are located in these areas.</p> <p>Policy EG6 (data centres) provides increased provision for employment uses within Tower Hamlets.</p>

Policy Grouping		Inclusive Economy and Good Growth						
Policy Codes		EG1, EG2, EG3, EG4, EG5, EG6						
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA4: Employment & Skills	++	H	D	R	I	P	LT	<p>All policies within Employment and Economic Growth contribute to increasing the number of employment opportunities within the borough. Policy EG1 (creating investment and jobs) provides improved job opportunities for all groups of the working population, including those with current low levels of education. The policy also provides jobs across the borough, providing jobs for a range of communities.</p> <p>Policy EG2 (new employment space) also creates new spaces for employment opportunities, increasing the number of jobs available within Tower Hamlets.</p> <p>Policy EG5 (railway arches) preserves railway arches within the borough. The railway arches provide employment opportunities for a range of sectors, namely industrial, food and drink, and arts and cultural employment opportunities.</p>
IIA5: Housing	-	M	I	L	I	P	LT	<p>The designation of Strategic Industrial Locations will protect the supply of space in Tower Hamlets for industrial usage. In doing so, other land uses such as housing will face competition for development within the borough. The protection and growth of Strategic Industrial Locations could, therefore, threaten the boroughs housing pipeline.</p>
IIA6: Crime & Safety	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA7: Sustainable Transport	++	M	D	R	R/I	P	LT	<p>Policy EG1 indirectly promotes sustainable transport by ensuring that the benefits of the Elizabeth line are a catalyst for growth within the borough. This is likely to encourage workers to utilise this line, and tube transportation, in order to access employment opportunities and economic opportunities within Tower Hamlets, resulting in positive effects.</p> <p>Policy EG2 aims to support development proposals for new employment space in town centres with good public transport accessibility or along major transport routes.</p> <p>Policy EG5 also ensures that active travel modes of walking and cycling are investigated within new developments involving railway arches. This encourages the use of sustainable transport access to areas, through improved walking and cycling facilities in these areas.</p> <p>All policies will help to reduce reliance upon the private vehicles and contribute to a modal shift.</p>

Policy Grouping		Inclusive Economy and Good Growth						
Policy Codes		EG1, EG2, EG3, EG4, EG5, EG6						
I/A Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
I/A8: Accessibility	+	M	D	R	I	P	MT	<p>Policy EG1 improves accessibility to jobs through the location of the borough's employment locations. The locations of these employment sites are located with considerations given to access to all, including through public transport.</p> <p>Policy EG2 aims to support development proposals for new employment space in town centres with good public transport accessibility or along major transport routes.</p> <p>Policy EG5 includes measures to ensure the accessibility to the railway arches by walking and cycling must be included within developments. This contributes to positive effects on accessibility due to walking permeability through the area, allowing those who rely on active and public transport modes, such as those on low incomes, to reach the area.</p>
I/A9: Biodiversity & Natural Capital	?	N/A	N/A	N/A	N/A	N/A	N/A	There is potential for some habitats to be lost as a result of the implementation of these policies. However, at this stage it is not clear where new development may come forward, therefore uncertain effects have been identified.
I/A10: Landscape & Townscape	+/-	L	D	L	I	P	LT	<p>Mixed positive and negative effects have been identified as there is potential for new employment developments to impact the local townscape and landscape setting.</p> <p>However, Policy EG2 requires that new employment space should contribute towards integrated place making, resulting in positive effects on the local townscape. Policy EG5 also ensures the preservation of railway arches and seeks for railway arches to make a positive contribution to the function of the area, improving the local townscape character and public realm.</p>
I/A11: Historic Environment	+/-	L	I	L	R/I	P	MT	<p>Mixed positive and negative effects have been identified as there is potential for new employment developments to impact the setting of local heritage assets if not sensitively designed.</p> <p>However, the positive placemaking proposed in policy EG2 may result in positive effects on the setting of local heritage assets. This is likely to be determined by individual schemes that may come forward. Policy EG5 also ensures the preservation of railway arches, which are a key heritage asset within the borough. This policy seeks for railway arches to make a positive contribution to the function of the area, improving the local character and public realm.</p>
I/A12: Flooding	?	N/A	N/A	N/A	N/A	N/A	N/A	Urban intensification and additional employment developments could increase flood risk due to more hard standing surfaces. However, exact details of these impacts will depend on the scheme level designs which come forward and mitigation measures implemented.
I/A13: Water Quality	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
I/A14: Air Quality	+/-	M	D	R	R/I	P/T	LT	The construction of new employment developments may temporarily negatively affect air quality due to plant emissions and dust.

Policy Grouping	Inclusive Economy and Good Growth							
Policy Codes	EG1, EG2, EG3, EG4, EG5, EG6							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
								<p>However, policy EG2 aims to support development proposals for new employment space in town centres with good public transport accessibility or along major transport routes.</p> <p>Policy EG5 also ensures that active travel modes of walking and cycling are investigated within new developments involving railway arches. This encourages the use of sustainable transport access to areas, through improved walking and cycling facilities in these areas.</p>
IIA15: Climate Change & Resilience	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	Some proposals which may come forward as a result of these policies may be resource intensive and could generate a significant amount of embodied carbon. As the number of developments and the detailed design is not currently available, uncertain effects have been identified.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Some proposals which may come forward as a result of these policies may be resource intensive and could generate a significant amount of construction waste. As the location of some proposals that may come forward as a result of these policies are not yet known, uncertain effects have been identified.
IIA18: Efficient use of Land and Resources	+	M	D	L	D	P	MT	Policies aim to protect existing employment floorspace and states that potential additional capacity exists within designated employment locations through the intensification of existing provision. This could help to make best use of existing land. Policy EG5 will also make good use of existing railway arches.
Potential Cumulative/ Synergistic Effects	<p>Intra-plan:</p> <ul style="list-style-type: none"> There are opportunities for positive cumulative effects on the economy and employment from the increase in employment and economic growth across the borough. There are also potential cumulative effects upon sustainable transport due to the encouragement of a modal shift towards public and active travel modes. Potential positive cumulative effects are also anticipated for population and equalities due to improved opportunities and resources for current and future populations, including employment opportunities and improved education, meeting community needs. Positive cumulative effects are likely in combination with the Town Centre policies. <p>Inter-plan:</p> <ul style="list-style-type: none"> A high level of positive cumulative effects is expected resulting from the synergy of London Plan and NLP policies relating to Inclusive Economy and Good Growth. Both policies strive to provide suitable business spaces, including flexible and hybrid working spaces. These spaces are likely to be well suited to SME's and small independent businesses in both growing sectors and creative businesses looking to set up in the borough. Importantly, the affordability of workspaces is stressed by both the NLP and London Plan, including those targeted towards start-up and early stage businesses. Positive cumulative effect will be resultant of efforts towards ensuring a wide range of economic opportunities all to make the borough fairer, and more inclusive. Finally, both policies put forward plans to improve digital connectivity. Positive cumulative effects of enhanced broadband throughout the borough and assurance that connectivity will meet growing demands of development will be felt by all borough residents. 							
Mitigation and Enhancement Measures	<ul style="list-style-type: none"> Mitigation to loss in housing is likely to be solved by the application of housing policies. Mitigation measures for IIA9, IIA10, IIA11 and IIA12 are likely to be based on site specific information once development sites have come forward, but positive placemaking and inclusion of green spaces/ small habitats could help to alleviate negative effects. 							

Policy Grouping	Inclusive Economy and Good Growth							
Policy Codes	EG1, EG2, EG3, EG4, EG5, EG6							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
	<ul style="list-style-type: none"> Sensitive design should be considered for any new developments within town centres to ensure positive effects on local heritage assets and landscapes. Application of Policy PS6 should mitigate adverse effects on IIA11 (historic environment). Mitigation for IIA12 is likely to be offered by proposed Policy CG6 which aims to manage flood risk from all sources. 							
HIA and EqIA considerations	<p>EqIA</p> <ul style="list-style-type: none"> Jobs creation must be evenly distributed across space within the borough to ensure all groups are able to easily access employment. New employment spaces should be a diverse and equal mix of office space and spaces for small businesses to thrive. The accessibility of disabled groups must also be considered when ensuring the walkability of the area. Footpaths must not be obstructed to allow space for wheelchair users to travel through. <p>HIA</p> <ul style="list-style-type: none"> The positive effects likely to result from these policies largely relate to the preservation and enhancement of the borough's employment spaces. The policies also supports the provision of education and upskilling opportunities throughout the borough. In doing so the current skills gap amongst the working population will likely diminish and a wider range of jobs will be accessible to a greater proportion of the population. The protection and growth of Strategic Industrial Locations could, threaten the boroughs housing stock. 							
IIA Issues Addressed by Policies	<ul style="list-style-type: none"> LBTH is a major location for employment in London, attracting a large daytime population of employees. Compared to London and Great Britain, LBTH has a larger proportion of residents of working age, of which a similar amount is employed. It is important to continue to support the role of LBTH as a major attractor of employment and economic functioning, whilst encouraging the resident population to seek opportunities in the borough. 							
Recommendations	<ul style="list-style-type: none"> Inclusive Economy and Good Growth policies would benefit from including additional notes to the development of town centre economies and the preservation of these areas. 							

2.6 Town Centres

The assessment of the Town Centre Policies are presented in **Table 2-6** below.

Table 2-6 – Town Centre Policies Assessment

Policy Grouping	Town Centres							
Policy Codes	TC1, TC2, TC3, TC4, TC5, TC6, TC7, TC8							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	++	M	D	R	R	P	LT	<p>Policy TC1 (Supporting the network and hierarchy of centres) includes community uses within town centres. This provides facilities for the community and is likely to suit community needs. It sets out plans for Whitechapel to become a civic hub for the borough through the new Town Hall and provide a concentration of health-related community services</p> <p>Policy TC2 (Protecting the diversity, vitality and viability of our town centres) also preserves retail uses within town centres, providing services and amenities for local communities.</p> <p>Policy TC7 (Evening and night time economy) also includes the development of 24 hour shops in close proximity to the borough's centres with night workers (Whitechapel and Brick Lane). This not only provides amenities for the local community but it also ensures that services are more widely available to those workers in the night-time economy who cannot access them during normal business hours.</p>
IIA2: Human Health	+	L	I	R	R	P	MT	<p>All policies help to support social cohesion across the borough, encouraging opportunities for social interaction between community members.</p> <p>Policy TC1 indirectly improves health through providing areas for socialisation, entertainment and culture. This contributes to improving mental wellbeing. There is potential for negative effects on the mental wellbeing of local residents as a result of the night time economy, and noise during night time hours. However, Policy TC7 includes mitigation requirements for night time economy venues, including mitigating noise, reducing the negative health impact upon local residents.</p> <p>Policy TC5 (Food and drink) includes the development of cafes and restaurants. These areas are likely to provide places for socialisation and meeting places, also improving mental wellbeing.</p>

Policy Grouping	Town Centres							
Policy Codes	TC1, TC2, TC3, TC4, TC5, TC6, TC7, TC8							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA3: Economy & Town Centres	++	H	D	R	I	P	LT	<p>All policies within Town Centres contribute to improving the diversity of the economy within Tower Hamlets, and encouraging economic growth through a range of sectors across the borough. Policy TC1 improves the vitality and resilience of the town centres within Tower Hamlets, through promoting different uses and frontages to ensure diverse uses and promote economic growth.</p> <p>Policy TC2 supports the retail function in specialist centres. This contributes to bringing visitors back to the high street and improving the economy of town centres. Encouraging retail also preserves their uses and improves the diversity of town centres.</p> <p>Policy TC7 also improves night time economy within town centres. As the borough has a number of town centres playing a significant role in the night time economy, improvements to the night time economy are likely to have significant positive effects on the borough's overall economy.</p> <p>Policy TC8 (Short-stay accommodation) promotes visitors to Tower Hamlets and is likely to improve the visitor economy.</p> <p>Policy TC4 (Markets) preserves the markets within Tower Hamlets, also preserving cultural diversity within the borough and promoting a diverse economy.</p>
IIA4: Employment & Skills	++	M	D	R	I	P	LT	<p>Additional town centre developments could contribute to the availability of additional employment opportunities within the borough.</p> <p>Policy TC1 directly provides opportunity for employment in retail and hospitality across Tower Hamlets. It also increases employment for night-time workers as a result of the night time economy. A large proportion of town centres in Tower Hamlets provide night time economy areas, improving employment opportunities. Policy TC7 also is likely to result in an increase in employment opportunities as part of the night time economy.</p>
IIA5: Housing	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA6: Crime & Safety	+/-	M	D	R	R	P	MT	<p>Policy TC1 promotes inclusive design, too ensure vulnerable users feel safe during the day and night. The policy also improves accessibility and wayfinding within town centres, improving safety and the feeling of safety.</p> <p>Policy TC7 requires night time economy developments to mitigate against any negative impacts, including noise, odours and anti-social behaviour. This is likely to minimise crime in these areas, particularly from anti social behaviour. New developments are also encouraged to improve the safety of these activities through the 'Ask for Angela' and National Pubwatch schemes. This is also likely to improve the feeling of safety.</p>

Policy Grouping	Town Centres							
Policy Codes	TC1, TC2, TC3, TC4, TC5, TC6, TC7, TC8							
I/A Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
								Indirect positive impacts on crime and safety are also likely as a result of improving the active frontages within the borough, preventing vacant areas and reducing the likelihood of crime.
I/A7: Sustainable Transport	+	M	D	R	I	P	LT	<p>All policies outlining development within town centres are likely to indirectly encourage public transportation use as these areas are well connected to existing public transportation.</p> <p>Policy TC6 (Entertainment uses) promotes the development of entertainment uses out of the town centre where there is good public transport accessibility.</p> <p>Policy TC7 also outlines that any out of town centre night time economy developments should have good public transport accessibility (within 400m of a night bus or tube stop).</p> <p>Policy TC8 requires public transport linkages to short stay accommodation to encourage visitors to use public transport.</p>
I/A8: Accessibility	+	L	D	L	R	P	MT	Whilst the Town Centres policies do not include a specific policy addressing accessibility, policy TC5 requires a delivery management plan to prevent waiting delivery drivers from acting as obstacles to users, including disabled users.
I/A9: Biodiversity & Natural Capital	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
I/A10: Landscape & Townscape	+	M	D	R	I	P	LT	<p>All policies place restrictions on developments out of town centres, which will help to preserve the existing townscapes and landscapes within the borough, provided design is sensitive to the existing townscape.</p> <p>Policy TC1 promotes active primary and secondary frontages. This contributes to improving the townscape value and public realm.</p> <p>Policy TC2 preserves town centre usage and is likely to attract visitors and increase footfall, as well as improving frontages and the public realm.</p> <p>Similarly, Policy TC5 prevents the over proliferation of hot food takeaways, also improving the diversity of the townscape.</p> <p>Policy TC9 preserves markets, ensuring a diversity within landscapes and improving the public realm.</p>
I/A11: Historic Environment	?	N/A	N/A	N/A	N/A	N/A	N/A	It is currently uncertain if the development of town centres, and associated spaces, will contribute to improvements to the setting of the local historic environment. There is potential that sensitively designed developments could improve the setting of heritage assets, equally they may also erode the historic character. However, this is likely to be determined by individual developments that may arise as a result of the local plan.
I/A12: Flooding	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A

Policy Grouping	Town Centres							
Policy Codes	TC1, TC2, TC3, TC4, TC5, TC6, TC7, TC8							
I/A Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
I/A13: Water Quality	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
I/A14: Air Quality	+	M	I	R	R	T	MT	Policy TC2 seeks to ensure that development proposals do not have a negative impact on the amenity of neighbourhood residential dwelling, including as a result of air pollution.
I/A15: Climate Change & Resilience	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
I/A16: GHG Emissions	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
I/A17: Waste	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
I/A18: Efficient use of Land	+	L	D	R	I	P	LT	<p>Policy TC2 outlines that where a vacant site is not utilised, the site is to be supported for other uses to make use of the space. This promotes the use of brownfield/ previously developed land within the borough.</p> <p>Similarly, Policy TC9 outlines that the development of new markets outside of town centres will be supported where they bring vacant sites back into use, further supporting the use of brownfield land/ previously developed land.</p>
Potential Cumulative/ Synergistic Effects	<p>Intra-plan:</p> <ul style="list-style-type: none"> • Potential for positive cumulative effects on economy and employment through revitalising and boosting town centres and night time economy. • Positive potential effects on landscape in conjunction with other policies through improvements to the public realm. • There are also potential positive effects upon crime and safety as a result of improvements to town centre areas, in conjunction with other policies such as People, Places and Spaces. • Positive cumulative effects are likely in combination with the Inclusive Economy and Good Growth policies. <p>Inter-plan:</p> <ul style="list-style-type: none"> • There are potential positive cumulative effects on population and equalities with London Plan 2021 policies (SD4, SD6, SD7, SD8), driving improvements to social infrastructure, including employment opportunities and improved education, meeting community needs. • Town centre policies in combination with London Plan 2021 policies (E9, E10) have the potential for positive cumulative effects on the economy, creating a successful, competitive and diverse retail sector, which promotes sustainable access to goods and services. Improvements to the night time economy are likely to have significant positive effects on the borough's overall economy in combination with London Plan 2021 policies (HC5, HC6). • Sustainable transport measures are likely to be specific to each development, but there may be cumulative benefits if implemented across plans (as set out in London Plan policies) (SD4, SD6). • The preservation of the historic environment is encouraged by London Plan 2021 policies (HC5) whereby the temporary use of vacant buildings (including heritage assets) for creative workspace and activities is encouraged, resulting in positive cumulative effects. This policy supports the restoration of listed buildings; retaining their character for community uses. 							

Policy Grouping	Town Centres							
Policy Codes	TC1, TC2, TC3, TC4, TC5, TC6, TC7, TC8							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
Mitigation and Enhancement Measures	<ul style="list-style-type: none"> Sensitive design should be considered for any new developments within town centres to ensure positive effects on local heritage assets and landscapes. Application of Policy PS6 should mitigate adverse effects on IIA11 (historic environment). Developments should seek to improve the public realm, including improving wayfinding and providing permeability through town centres to provide access to those with disabilities, or pushchairs. The TfL Healthy Street Principles should be applied and the Healthy Streets Tool should be utilised where appropriate as set out in Policy MC2 							
HIA and EqIA considerations	<p>EqIA</p> <ul style="list-style-type: none"> Demand for retail is high in locations outside of Metropolitan, District and Neighbourhood Centres and is necessary to meet the immediate convenience needs of local people and/or support the function of designated employment locations. This policy requires a delivery management plan to prevent waiting delivery drivers from acting as obstacles to users, including disabled users. The planning process and enforcement of conditions should consider sensitive receptors in the area on a case-by-case basis. Operation of the evening economy should be considered in tandem with safety measures to protect groups who could be more likely to be a victim of hate crimes. This includes women, LGBTIQ+ people, and people of different ethnicities. Night time venues can do this through the use of the 'Ask for Angela' and National 'Pubwatch' schemes, for just one example. This is also likely to improve the feeling of safety. Ensure accessibility standards are adhered to in short-stay accommodation. <p>HIA</p> <ul style="list-style-type: none"> The policies outlined within the Town Centres theme are likely to have mixed impacts upon the selected health determinants. These impacts are likely to be predominantly positive, with positive effects expected for young people including care leavers, older people, new and expectant mothers, women and girls, people with disabilities, low-income and unemployed groups and socially isolated groups. Policies support social cohesion across the borough, with existing routes being prioritised and new venues being developed to encourage opportunities for social interaction between community members. Services are also being made more widely available to those workers in the night-time economy who cannot access them during normal business hours through the requirements for late-opening and 24-hour services. 							
IIA Issues Addressed by Policies	<ul style="list-style-type: none"> Crime rates are significantly high within the borough, particularly with regards to violent crime and antisocial behaviour. There are opportunities to improve neighbourhoods and reduce the prevalence of antisocial behaviours. There are opportunities to increase the safety of active transport modes such as cycling and walking. Vulnerable road users such as cyclists and pedestrians are more likely to be casualties. Maintaining the vitality and attractiveness of town centres and high streets will be an ongoing challenge as shopping patterns and service delivery models change, especially with the growth of online shopping. 							
Recommendations	<ul style="list-style-type: none"> More emphasis should be placed on ensuring that night time uses are safe for all, not just women and girls but also minority ethnic groups and members of the LGBTIQ+ community. An additional point could therefore be added to Policy TC7 which outlines more specific safety measures such as citizen type patrols, CCTV and lighting. 							

2.7 Community Infrastructure

The assessment of the Community Infrastructure Policies are presented in **Table 2-7** below.

Table 2-7 – Community Infrastructure Policies Assessment

Policy Grouping	Community Infrastructure							
Policy Codes	CI1, CI2, CI3, CI4, CI5							
I/A Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
I/A1: Population & Equalities	++	M	D	R	I	P	LT	<p>All policies within Community Infrastructure contributes to providing community facilities for current and future populations.</p> <p>Policy CI1 (supporting community infrastructure) protects, maintains and enhances existing community facilities and increases the capacity of existing community facilities where other development will increase demand. This improves the provision for the local community and considers both the current and future community needs as well as delivering social value to the community through a range of services and opening hours.</p> <p>Policy CI3 (new and enhanced community facilities) also outlines the development of new community facilities, that will fit local needs and serve the changing needs of the local community.</p>
I/A2: Human Health	++	M	D/I	R	R/I	P	MT/ LT	<p>There are both direct and indirect positive effects on human health as a result of Community Infrastructure policies, through improving physical health and mental wellbeing.</p> <p>Policy CI1 outlines improvements to community facilities, including healthcare and sports and leisure facilities. This improves physical health through encouraging physical activity, as well as improving mental wellbeing through improving spaces for socialisation and encouraging activity.</p> <p>Policy CI3 will help to improve physical health through providing new community facilities and leisure facilities. This also improves mental wellbeing through new social facilities. Additionally, new early education and care facilities will also be located in areas of acceptable air quality, indirectly improving health. This is particularly of note as young people and older people are most at risk of respiratory illnesses such as asthma as a result of poor air quality.</p>

Policy Grouping	Community Infrastructure							
Policy Codes	CI1, CI2, CI3, CI4, CI5							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA3: Economy & Town Centres	++	M	D	R	I	P	LT	<p>Policy CI1 states that new community facilities will be directed towards centres. This promotes the diversity of town centre services and improves visitor numbers to centres, including social facilities like libraries, cultural facilities. This also includes facilities such as public houses, boosting the economy of town centres.</p> <p>Policy CI3 also focuses the development of new and enhanced community facilities in town centres, further boosting and diversifying the economy in Tower Hamlets centres.</p> <p>Policy CI4 (public houses) preserves public houses. This boosts the local economy and provides a diverse range of uses within town centres. Preserving public houses also improves the nighttime economy within Tower Hamlets.</p> <p>Policy CI5 (arts and culture facilities) also outlines that new arts and cultural facilities will be focussed in town centre locations, providing diversity to town centre economies and boosting the nighttime economy.</p>
IIA4: Employment & Skills	++	M	D	R	I	P	LT	<p>The policies within Community Infrastructure contribute to improving education amongst the population of Tower Hamlets.</p> <p>Policy CI1 includes preservation of the existing provision of education facilities, and the development of new facilities in line with community needs. The policy also outlines improving the accessibility of education facilities. This is likely to result in increased educational levels across the borough.</p> <p>Policy CI3 also includes the provision for new early education facilities where required, providing early years educational spaces for young children. Additional adult and higher education facilities are also proposed, improving educational levels across both children and adults within the borough.</p>
IIA5: Housing	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA6: Crime & Safety	+	L	D	R	I	P	LT	<p>Policy CI3 aims to ensure that new community facilities are designed to facilitate and encourage wider community use and do not look and feel exclusive to the occupants of the development. It aims to ensure safety by giving consideration of the use of street facing active frontages and presenting openness to the wider community whilst enhancing a feeling of safety on the streetscape through passive surveillance.</p>
IIA7: Sustainable Transport	+	M	D	R	I	P	LT	<p>All policies aim to improve accessibility to community facilities, which will allow residents to live their lives more locally. This in turn will reduce the reliance upon motorised vehicles and support a modal shift.</p> <p>Policy CI3 aims to ensure that new facilities will be directed towards locations which are accessible to their catchment areas through strong public transport links and by prioritising active travel. This will help to reduce the demand for use of private vehicles and help to support a modal shift.</p>

Policy Grouping	Community Infrastructure							
Policy Codes	CI1, CI2, CI3, CI4, CI5							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA8: Accessibility	++	M	D	R	R	P	LT	<p>Policy CI2 includes the development of accessible, inclusive new facilities. This includes allowing public access. This is likely to improve access to facilities to all groups of the public, including disabled and low income users.</p> <p>Policy CI3 states that new facilities should be located in accessible areas to local residents and working communities, contributing to positive effects on accessibility.</p>
IIA9: Biodiversity & Natural Capital	?	N/A	N/A	N/A	N/A	N/A	N/A	There is potential for community infrastructure developments to result in the loss of biodiversity and natural capital. As the overall design of proposals is not yet known uncertain effects have been identified. There may be opportunities to provide green infrastructure as part of design.
IIA10: Landscape & Townscape	?	N/A	N/A	N/A	N/A	N/A	N/A	It is currently uncertain if the development of community infrastructure, will contribute to improvements to the setting of the local townscape and landscape character. There is potential that sensitively designed developments could improve townscape, equally they could erode the townscape and landscape character. However, this is likely to be determined by individual developments that may arise as a result of the local plan.
IIA11: Historic Environment	?	N/A	N/A	N/A	N/A	N/A	N/A	<p>It is currently uncertain if the development of community infrastructure, will contribute to improvements to the setting of the local historic environment. There is potential that sensitively designed developments could improve the setting of heritage assets, equally they could erode the historic character. However, this is likely to be determined by individual developments that may arise as a result of the local plan.</p> <p>Policy CI4 (public houses) promotes the preservation of the character of public houses, where development is permitted. Preserving the nature of these assets also has the potential to preserve designated and undesignated heritage assets. However, this is to be determined by individual developments that may arise.</p>
IIA12: Flooding	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA13: Water Quality	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA14: Air Quality	+	M	I	R	R	T	MT	Policy CI3 seeks to ensure that development proposals for new community facilities take into account air quality levels as part of the relevant guidance from the Department for Education and Sport England. Additionally, the location of early education and care facilities must meet the needs of young children and promote their development, involving their locating away from areas of poor air quality.
IIA15: Climate Change & Resilience	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	Some proposals which may come forward as a result of these policies may be resource intensive and could generate a significant amount of embodied carbon. As the number of developments and the detailed design is not currently available, uncertain effects have been identified.

Policy Grouping	Community Infrastructure							
Policy Codes	CI1, CI2, CI3, CI4, CI5							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Some proposals which may come forward as a result of these policies may be resource intensive and could generate a significant amount of construction waste. As the location of some proposals that may come forward as a result of these policies are not yet known, uncertain effects have been identified.
IIA18: Efficient use of Land	+	L	I	L	R	P/T	MT/ LT	Policy CI3 permits the utilisation of vacant land sites for community uses, which promotes the use of existing sites within the borough.
Potential Cumulative/ Synergistic Effects	<p>Intra-plan:</p> <ul style="list-style-type: none"> There are potential positive cumulative effects on the economy as a result of developments within town centres, diversifying the economy. There are also positive cumulative effects upon health (both physical and mental wellbeing) through the increased provision of community spaces, in conjunction with improved physical activity and places for mental wellbeing. The development of additional community facilities, fitting future community needs, also has positive cumulative effects in conjunction with People Places and Spaces and Homes for the Community policies. There is potential for negative cumulative and synergistic effects on biodiversity, landscape and townscape, historic environment, air quality, GHGs, flooding and efficient use land if multiple developments were to come forward. These may conflict with policies PS6, PS7, PS8, BO1, BO2, CG1 and CG9. There is potential for negative cumulative effects upon water quality, air quality and GHG emissions due to increased works and potential land take within the borough, however this is dependent on individual development sites that may come forward. Multiple developments are also likely to be resource intensive and significantly increase levels of embodied carbon as well as emissions associated with construction. <p>Inter-plan:</p> <ul style="list-style-type: none"> There are potential positive cumulative effects resulting from the provision of social infrastructure including new community facilities and services if implemented across plans (as set out in London Plan policies) (S1, S2, S3, S4, S5). There are potential for minor negative cumulative effects of high concentrations of licensed premises on crime and safety, anti-social behaviour, noise pollution, health and wellbeing and other issues for residents and nearby uses in combination with London Plan 2021 policies (HC5, HC6). However, Design Out Crime initiatives working across both policies will result in positive cumulative effects for borough residents. The Agent of Change principle is also a key consideration in both the London Plan and the NLP. Sustainable transport measures are likely to be specific to each development, but there may be cumulative benefits if implemented across plans. London Plan policies (HC6) promote boroughs to ensure night-time economy venues are well-served with safe and convenient night-time transport, in line with 24-hour goals. This could have associated benefits for businesses: expanding into night-time economic opportunities. The preservation of the historic environment is encouraged by London Plan 2021 policies (HC5) whereby the temporary use of vacant buildings (including heritage assets) for creative workspace and activities is encouraged, resulting in positive cumulative effects. This policy supports the restoration of listed buildings; retaining their character for community uses. There is potential for positive cumulative effects upon efficient use of land in combination with London Plan 2021 policies (S17), with developments encouraged to make effective use of the site to maximise the opportunities for multi-purpose and shared use facilities. 							
Mitigation and Enhancement Measures	<ul style="list-style-type: none"> Mitigation for IIA17 is likely to be offered by proposed Policy RW1 which aims to reduce the amount of waste and ensures that resources will be reused and recycled minimising waste wherever possible. Sensitive design should be considered for any new developments within town centres to ensure positive effects on local heritage assets and landscapes. Application of Policy PS6 should mitigate adverse effects on IIA11 (historic environment). Application of Policy BO1 will likely help to reduce effects on biodiversity and open spaces. 							

Policy Grouping	Community Infrastructure							
Policy Codes	CI1, CI2, CI3, CI4, CI5							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
	<ul style="list-style-type: none"> Further assessment as part of scheme level design, should incorporate an evaluation of the provision of healthcare and education, to ensure that the current supply and future planned supply is sufficient in supporting the new community. 							
HIA and EqIA considerations	<p>EqIA</p> <ul style="list-style-type: none"> The policy should ensure that improvements to existing community facilities are made evenly across space in the borough so that all residents have access to improved facilities. New facilities should be located in accessible areas to local residents and working communities, contributing to positive effects on accessibility. <p>HIA</p> <ul style="list-style-type: none"> These policies will have predominantly positive effects upon the community of LBTH. These policies are anticipated to benefit children and young people, older people, people with disabilities, people with long term health conditions, and socially excluded groups. The improvement of social infrastructure such as parks and sports centres will also increase social cohesion and safety within the borough. 							
IIA Issues Addressed by Policies	<ul style="list-style-type: none"> There will be a need for adequate support and greater access to services and facilities for the young population, families with young children, and single parent families on one income. There are opportunities to improve access to facilities and services, as well as housing, for young adults and people with disabilities. The population of Tower Hamlets is expected to increase both in number and diversity and decrease in age profile. LBTH reducing age profile will present a greater need for access to leisure facilities and outdoor space, as well as a greater pressure on healthcare and support to tackle loneliness There is a need to provide more greenspaces and high-quality public realm which can provide social spaces 							
Recommendations	<ul style="list-style-type: none"> Within Policy CI2, the explanation of Part 2 could benefit from including further explanation as to how inclusive design can improve access to disabled users and those with mobility issues. Policy CI2, Part 2 could also benefit from including the promotion of schemes to provide access to low-income groups. 							

2.8 Biodiversity and Open Space

The assessment of the Biodiversity and Open Space Policies are presented in **Table 2-8** below.

Table 2-8 – Biodiversity and Open Space Policies Assessment

Policy Grouping	Biodiversity and Open Space							
Policy Codes	BO1, BO2, BO3, BO4, BO5, BO6, BO7							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	++	M	D	R	R	P	LT	<p>Policy BO1 (green and blue infrastructure) outlines improvements to the quality of open spaces within the borough, with areas of deficiency to open space being prioritised, therefore improving community facilities. The policy also includes the promotion of using water spaces for cultural and recreational use, providing spaces for the community.</p> <p>Policy BO2 (open spaces and the Green Grid network) provides community facilities within developments to open space, including playgrounds and outdoor gyms. These spaces will be accessible and will ensure high quality inclusive design.</p> <p>Policy BO3 (water spaces) also contributes to improving the local amenity space of riverbanks and dock edges, providing increases in publicly available spaces.</p> <p>Policy BO6 (play and recreation spaces) provides opportunities for sports, recreation and play areas that meet the needs of the population, including providing spaces for children and young people, disabled users, adults and carers. The policy also includes improving provision of play space in areas which have high deficiency to play space, ensuring improved access for all groups.</p> <p>Policy BO7 (food growing) provides spaces for community gardens, and includes the development of community facilities in major housing developments. This provides community spaces for food growing as well as social interaction.</p>
IIA2: Human Health	++	M	D	R	R	P	MT/LT	<p>Policy BO1 maintains and enhances green infrastructure and accessible open spaces. This contributes to improving both mental wellbeing and physical health through providing spaces for social interaction and physical activity. Additionally, this promotes recreation and leisure on blue spaces, improving health.</p> <p>Policy BO2 provides opportunities for physical activity and improvements in wellbeing through providing opportunities for outdoor sport, fitness and recreation. Point 2 (i) also includes the integration of food growing opportunities where feasible. This provides opportunities for healthy foods and promotes healthy lifestyles.</p> <p>Policy BO6 is likely to result in increased physical activity amongst children and young people, and adults, through improving the provision of sports and recreation facilities. This also includes designing spaces to reduce the harm caused by poor air quality. This is likely to reduce the exacerbation of respiratory illnesses amongst children.</p>

Policy Grouping	Biodiversity and Open Space							
Policy Codes	BO1, BO2, BO3, BO4, BO5, BO6, BO7							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
								Policy BO7 also improves physical and mental health through the increase in the provision of food growing spaces, and preservation of allotments and community gardens. These provide spaces for social interaction, as well as opportunities for healthy food.
IIA3: Economy & Town Centres	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA4: Employment & Skills	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA5: Housing	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA6: Crime & Safety	+	L	D	L	I	P	LT	<p>Policy BO1 includes the requirement for new green spaces designed to be safe to users. However, it is uncertain what measures will be included to improve safety within open spaces as this is likely to be determined by scheme design.</p> <p>Policy BO3 (specifically point 2 f) improves the safety of the borough's water spaces, including the provision of lifesaving equipment, improved lighting and wayfinding, and managing competing spaces between users. This is likely to improve user safety, and reduce the number of incidents along the borough's water environments.</p> <p>Policy BO6 includes safe design to ensure the safety of users, including children.</p>
IIA7: Sustainable Transport	+	L	D	R	I	P	LT	<p>PO2 outlines developments to the green grid, this contributes to improving the appeal of walking networks, and encouraging active travel.</p> <p>PO3 point 3 also includes the requirement for developments to integrate with the waterside environment, including walkways, cycle paths and towpaths. The integration of these areas is likely to result in improved connectivity of the active travel network, encouraging active travel and promoting sustainable transport modes.</p>
IIA8: Accessibility	+	M	D	R	I	P	LT	<p>Policy BO1 maintains and enhances 'accessible open spaces' throughout the borough, including at Lea River Park as well as improving way-finding to water spaces. This provides spaces for the general public, including all social groups.</p> <p>Policy BO2 also contributes to the delivery of new or enhanced publicly available open space. These spaces are to be designed to be enjoyed by people of all ages and physical abilities.</p> <p>PO6 includes designing spaces for all abilities and ages, addressing barriers to play through inclusion and equality. However, the specific measures proposed will be determined by individual scheme design.</p>

Policy Grouping	Biodiversity and Open Space							
Policy Codes	BO1, BO2, BO3, BO4, BO5, BO6, BO7							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA9: Biodiversity & Natural Capital	++	H	D	R	R	T	LT	<p>All policies within Biodiversity and Open space contribute to improving biodiversity and natural capital across the borough, including improving and enhancing blue and green spaces, green infrastructure, and contributing towards biodiversity net gain (BNG).</p> <p>Policy BO1 requires developments to improve green infrastructure and open space in line with local biodiversity action plans, and improves the green grid network, providing ecological corridors. The policy also enhances blue spaces and improves the ecological and biodiversity values of the borough's water spaces, including rehabilitating and rewilding. Additionally, it outlines requirements for all development proposals to achieve minimum urban greening factor and BNG targets.</p> <p>Policy BO2 enhances biodiversity through improvements to open spaces and the green grid network, this also includes preserving the ecological value of open spaces.</p> <p>Policy BO3 requires developments to enhance the biodiversity of the water space within the borough, as well as rewilding and re-naturalisation, further resulting in improvements to local biodiversity and ecology in the water areas of Tower Hamlets.</p> <p>Policy BO4 protects and retains existing habitats and biodiversity. It also outlines the replacement where preservation is not possible. Additionally, the policy requires developments to deliver a BNG of 30%. There is also a requirement for development proposals to preserve designated European sites, and undertake a Habitat Regulations Assessment where adverse effects are likely. The policy as a whole therefore directly results in preservation and enhancement of biodiversity and natural capital within the borough. Additionally, it contributes to eradicating invasive species where possible.</p> <p>Policy BO5 contributes to developing areas for habitats and biodiversity within the borough, including increasing the provision of trees. Trees provide habitats for a range of species, and increase canopy connectivity, reducing habitat segregation.</p>
IIA10: Landscape & Townscape	++	M	D	R	I	P	LT	<p>Policy BO1 maintains the character of MOL, contributing to preservation of the landscape character. Additionally, preserving green and blue spaces enhances the landscape of Tower Hamlets, proving a range of high quality open spaces. Improving the water environment (point 3) is also likely to improve the appearance of these landscapes, further contributing to positive landscape character.</p> <p>Policy BO2 also provides new or enhanced open space, that is of high quality design and complements local character. These developments are likely to improve the public realm through improvements to open spaces and landscaping.</p> <p>Policy BO3 also contributes to conserving and improving the landscape of Tower Hamlets through enhancements to the setting of water spaces, as well as improving the river banks.</p>

Policy Grouping	Biodiversity and Open Space							
Policy Codes	BO1, BO2, BO3, BO4, BO5, BO6, BO7							
I/A Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
I/A11: Historic Environment	+	L	D	L	R	P	MT	<p>Policy BO2 requires developments to not have adverse impacts on the heritage value of the borough's open spaces. This policy is also likely to preserve the setting of the borough's open spaces and local heritage assets in these areas.</p> <p>Policy BO3 also contributes to the preservation of the heritage value of water spaces, preserving the historic environment of Tower Hamlets.</p>
I/A12: Flooding	++	L	I	L	I	P	MT/LT	<p>Policy BO2 (specifically 2e) includes the incorporation of soft landscaping and sustainable urban drainage systems (SuDS). This contributes to improving flood resilience within new open space.</p> <p>Policy BO3 has considered flood risk within developments, requiring developments to provide suitable setbacks from water space edges. This contributes to mitigating flood risk and prevents the severance of walkways, cycle paths and canal towpaths during flood events.</p>
I/A13: Water Quality	++	M	D	R	R	P	LT	<p>Policy BO1 seeks to protect the integrity, improve the ecological and biodiversity, and water quality of water spaces within Tower Hamlets. This results in direct positive effects upon water quality.</p> <p>Policy BO3 protects the water environment and ensures that development must not adversely effect the water quality within the borough. Additionally, enhancing the quality of the water space through ecological, biodiversity and aesthetic methods is likely to result in improvements to water quality.</p>
I/A14: Air Quality	+	M	I	R	R	T	MT	<p>Policy BO4 states that development proposals must enhance biodiversity and contribute to nature recovery within the borough. Urban greening and the provision of living building elements is considered especially beneficial in areas of sub-standard air quality throughout the borough.</p>
I/A15: Climate Change & Resilience	++	M	I	R	R	T	LT	<p>Policy BO5 provides opportunities for climate resilience, from measures such as green roofs and walls, SuDS, and trees. These measures can increase drainage and reduce surface runoff, as well as providing shade reducing the risk of overheating.</p>
I/A16: GHG Emissions	+	M	I	R	R	T	LT	<p>Policies BO1, BO4 and BO5 all aim to protect and enhance biodiversity and blue green infrastructure within the borough. The application of green infrastructure presents an opportunity to reduce GHG emissions using a multi-faceted ecosystems-based approach</p>
I/A17: Waste	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
I/A18: Efficient use of Land	+/-	M	D	R	R/I	P/T	MT/LT	<p>Policy BO1 restricts 'inappropriate' development proposals on MOL. This preserves MOL and encourages efficient use of existing brownfield land in the borough. However, Policy BO2 does support development on MOL in specific circumstances. This has the potential to result in the loss of MOL, depending on the nature of schemes that come forward.</p> <p>Policy BO7 provides opportunities for the use of vacant sites as new allotments for food growing spaces. This contributes to making efficient use of land through the utilisation of existing vacant sites.</p>

Policy Grouping	Biodiversity and Open Space							
Policy Codes	BO1, BO2, BO3, BO4, BO5, BO6, BO7							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
Potential Cumulative/ Synergistic Effects	<p><i>Intra-project:</i> There are potential positive cumulative effects anticipated for population and equalities, health and wellbeing, biodiversity, landscape, water quality, and efficient use of land as a result of the proposed policies. There is likely to be an increase in biodiversity across the borough, and improved community open spaces, as well as improvements to physical and mental health.</p> <p><i>Inter-project:</i></p> <ul style="list-style-type: none"> Positive cumulative effects on Population and Equalities are identified as a result of NLP policies (BO7) and London Plan policies (G8). These policies provide provision for community gardens and food production, improving social integration and community cohesion. This may also lead to positive cumulative effects on Human Health, promoting more active lifestyles and better diets. Urban greening is encouraged by London Plan policies (G5) and complements NLP policies (BO1) that require all development proposals to achieve minimum urban greening factor (UGF) resulting in an increase in green cover throughout the borough. NLP policies (BO1, BO4) require developments to provide a minimum 2.5 biodiversity unit (BU) per hectare increase or deliver biodiversity net gain (BNG) of 30%, exceeding minimum BNG requirements of 10% and managing impacts on biodiversity as outlined in London Plan policies (G6) generating positive cumulative effects. Positive cumulative effects are anticipated through the London Plan policies (G3) and NLP Biodiversity and Open Space policies (BO1), protecting Metropolitan Open Land (MOL) from inappropriate development. The London Plan also supports the extension of MOL where appropriate. NLP policies (BO2) also work harmoniously with London Plan policies (G4) to create areas of publicly accessible open space that complements local character. These developments are likely to improve the public realm. Enhancements to Water Quality are encouraged through NLP policies (BO3) and London Plan policies (SI17), with positive cumulative effects identified. London Plan policies require developments that facilitate river restoration to be supported, concurrently providing habitats and protecting biodiversity. 							
Mitigation and Enhancement Measures	No mitigation measures have been outlined for these policies. Mitigations are likely to be based on site specific information once development sites have come forward.							
HIA and EqIA considerations	<p><u>EqIA</u></p> <ul style="list-style-type: none"> New parks and open spaces should be accessible to all members of the public. Design should consider safety by including appropriate lighting, accessible pathways and access and egress points. Accessibility and safety could be improved in existing spaces by providing lighting, accessible signage, and auxiliary aids to people with reduced mobility. Accessible surfacing should be considered for mobility aid users and people with mobility restrictions. Opportunities for sensory stimulation should be maximised to ensure inclusive enjoyment of spaces. Recreational spaces should be accessible by pushchair so parents with younger children are still able to access facilities. Accessible surfacing should be considered for mobility aid users and people with mobility restrictions. Food growing sites should be located in areas of best air quality in order that food grown is of a high standard and achieves good dietary nutrition and health. <p><u>HIA</u></p> <ul style="list-style-type: none"> These policies are anticipated to impacts on most health determinants, including positive effects for children and young people, older people, people with disabilities and mobility impairments, and socially isolated groups including new and expectant mothers. Improved access to these spaces under this theme will enhance the benefit experienced through socialisation and physical activity opportunities. Opportunities for education arise from the inclusion of the food growing policy, with young children particularly benefitting from this. 							

Policy Grouping	Biodiversity and Open Space							
Policy Codes	BO1, BO2, BO3, BO4, BO5, BO6, BO7							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA Issues Addressed by Policies	<ul style="list-style-type: none"> • There is a need to manage heat risk in new developments as well as increases the amount of green space and vegetation. • Light, air, and noise pollution from increasing urban development in the borough may put strains on nearby protected areas • New legislation regarding biodiversity net gain will require developments to implement demonstratable increases in biodiversity. • The inclusion of BGI can help with mitigating embodied carbon, improve air quality, reduce the Urban Heat Island effects and help to make developments more climate resilient, especially when it comes to flood mitigation. • Future growth could risk compromising landscape and townscape character and features. • The physical and chemical quality of water resources is an important aspect of the natural environment and can be adversely affected by pollution associated with surface water runoff from new or existing transport infrastructure, as well as by changes to waterbodies which can affect their quality as a habitat. 							
Recommendations	<ul style="list-style-type: none"> • Policy BO1 (b) could be changed to "maintain and enhance" the open character of Metropolitan Open Land (MOL) • Policy BO1 (d) (ii) could be amended to include safety measures, such as lighting and clear lines of sight. • Policy BO6 (2) (b) could include ways to tackle barriers to inclusion and equality. • Policy BO4 should make reference to the requirements of BNG under the Environment Act 2021 and Defra's Biodiversity Metric. Part 2 of the policy is quite complicated and some of the text could be moved to the supporting text. 							

2.9 Movement and Connectivity

The assessment of the Biodiversity and Open Space Policies are presented in **Table 2-9** below.

Table 2-9 – Movement and Connectivity Policies Assessment

Policy Grouping	Movement and Connectivity							
Policy Codes	MC1, MC2, MC3, MC4, MC5							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	++	M	D/I	R	R	P	LT	Developing active and sustainable travel networks, as outlined within Policies MC1 (sustainable travel) and MC2 (active travel and healthy streets) contribute to providing services to fit the needs of the current and future population of Tower Hamlets. Additionally, both MC1 and MC2 provide improved accessibility to all social groups, including disabled, elderly, women and girls and other marginalised groups.
IIA2: Human Health	++	M	D	R	I	P	LT	<p>Policy MC1 encourages active travel. This directly results in improvements to human health through improved physical activity rates. Additionally, the policy outlines that active travel developments should utilise the Healthy Streets approach, improving health and wellbeing through the design of developments.</p> <p>Policy MC2 (active travel and healthy streets) also contributes to improving the quality and connectivity of the active travel network. This is likely to improve physical health, as well as implementing the Healthy Streets approach. Additionally, encouraging a modal shift away from private vehicles, as is promoted by all policies within Movement and Connectivity, improves air quality. Air quality improvements also contribute to improving physical health, particularly amongst children and young people, the elderly, and those with respiratory illnesses.</p> <p>Policy MC3 also improves health through the promotion of active travel, improving physical activity. The policy also ensures a reduction in environmental impacts such as improving air quality, improving health and reducing exacerbation of health conditions as a result of poor air quality.</p>
IIA3: Economy & Town Centres	+	M	I	L	I	P	LT	<p>Policy MC1 aims to prioritise the needs of all pedestrians and cyclists, enabling people to choose active travel modes as the primary mode of travel for short trips within the borough, in line with 15-minute city principles. Whilst Policy MC2 states that development proposals must be designed to maximise the contribution of the public realm to encourage and enable active travel modes. It also encourages the use of the Healthy Streets principles to ensure that the development is inclusive and accessible to all groups.</p> <p>Improvements to the public realm and ensuring greater accessibility to all groups, will help to encourage more walking and cycling and increase footfall and potential improve the vitality within the town and district centres.</p>
IIA4: Employment & Skills	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA5: Housing	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA6: Crime & Safety	++	M	D	R	I	P	LT	Policy MC2 outlines the requirements for new developments to provide 2m wide footways and segregated routes for pedestrians and cyclists where possible. This is likely to result in improvements to user safety due to enabling safe overtaking and reducing user conflicts. Point 3 (e) also includes considering the design and safety of women, girls and gender diverse people. This is likely to improve feelings of safety amongst the

Policy Grouping		Movement and Connectivity						
Policy Codes		MC1, MC2, MC3, MC4, MC5						
I/A Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
								population. There are also measures to ensure good sight lines and surveillance, further reducing the likelihood of crime. Policy MC4 (parking and permit-free) outlines requirements for secure cycle parking. This is likely to reduce bicycle theft in the borough.
IIA7: Sustainable Transport	?	M	D	R	I	P	LT	Policy MC1 promotes the development of the sustainable travel network, including active travel. This encourages a modal shift away from private transport and towards sustainable transport modes. Additionally, Policy MC2 (active travel and healthy streets) promotes the expansion of walking and cycle network, improving active travel and further encouraging the modal shift from private vehicles. Policy MC4 outlines plans for parking management throughout the borough in order to address issues of congestion as well as respond to the needs of the community. A car free approach will be considered in areas of Tower Hamlets where the PTAL is high (4 or above). However, in those areas where PTAL scores are low, parking will be delivered in line with the London Plan maximum parking targets. This could result in an increased reliance upon private vehicles in those areas in the north and south of the borough, where scores range between 1-3. This will work against the achievement of this IIA objective.
IIA8: Accessibility	++	M	D	R	I	P	LT	Policy MC1 contributes to improving public transport, including enabling walking, wheeling and cycling. This is likely to improve access to all users, including those with mobility issues. Improving public and active transport also allows those on low incomes to access areas of the borough. The policy aims to reduce severance and increase permeability across the borough. Policy MC2 outlines the requirement for new active travel routes will be required to have footways 2m wide or using the Transport for London Pedestrian comfort level tool, whichever is greater. This is likely to improve access to disabled users and users with pushchairs, improving accessibility. Point 3 (e) also includes inclusive design for elderly, disabled and all genders. This also improves connectivity throughout the borough through the development of cycle lanes, including for adapted bicycles, contributing to improved accessibility for all groups. Policy MC4 aims to meet the needs of those community members who rely on private vehicle usage in areas of poor public transport accessibility are also accounted for through the provision of maximum parking in these areas.
IIA9: Biodiversity & Natural Capital	?	N/A	N/A	N/A	N/A	N/A	N/A	There is potential for those proposals set out within Policy MC1 as well as any additional proposals that may come forward as part of this policy and other 'Movement and Connectivity' policies to result in the loss of biodiversity and natural capital. It is anticipated that as the majority of the proposals will be delivered within the existing highway boundary, that loss will be small scale. However, delivery of public realm improvements (as per Policy MC2) may include additional planting and green infrastructure which could provide small scale habitats. As the overall design of proposals is not yet known uncertain effects have been identified.

Policy Grouping		Movement and Connectivity						
Policy Codes		MC1, MC2, MC3, MC4, MC5						
I/A Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
I/A10: Landscape & Townscape	+/-	M	D	R	I	P	LT	<p>All policies support a modal shift and reduction of vehicles on the borough's roads. A reduction in vehicles is likely to result in a reduction of vehicular disturbance, such as noise and air pollution, and subsequently improve the landscape and townscape through reduced numbers of vehicles on roads.</p> <p>Policy MC2 includes development engagement with the Healthy Streets Approach. Utilising this approach, in addition to improving active travel networks is likely to result in positive effects on the local landscape, including improving the public realm, particularly through positive design and the requirements of healthy streets such as 'everyone feels welcome' and 'things to see and do'.</p> <p>Policy MC4 includes the development of electric charging on streets. The integration of electric charging on streets is likely to result in positive effects on the landscape through positive design.</p> <p>There is potential for those proposals set out within Policy MC1 as well as any additional proposals that may come forward as part of this policy and other 'Movement and Connectivity' policies to result in negative effects on the landscape and townscape setting. It is however anticipated that that as the majority of the proposals will be delivered within the existing highway boundary.</p>
I/A11: Historic Environment	+/-	M	D	R	I	P	LT	<p>All policies support a modal shift and reduction of vehicles on the borough's roads. A reduction in vehicles is likely to result in reductions in pollution and disturbance, reducing the degradation of heritage assets and improving their overall setting.</p> <p>Policy MC2 includes the application of a Healthy Streets Approach, which is likely to result in positive effects on the public realm. This may help to improve the setting of heritage assets, however, public realm improvements will need to be sensitive to the historic environment.</p> <p>There is potential for those proposals set out within Policy MC1 as well as any additional proposals that may come forward as part of this policy and other 'Movement and Connectivity' policies to result in negative effects on the historic environment setting. It is however anticipated that that as the majority of the proposals will be delivered within the existing highway boundary.</p>
I/A12: Flooding	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
I/A13: Water Quality	?	N/A	N/A	N/A	N/A	N/A	N/A	Policy MC5 (sustainable delivery, servicing, and construction) has resulted in uncertain effects on water quality as a result of water freight. Increasing freight on water has the potential to reduce water quality. However, this is likely to be determined by the quantity of freight activity and the nature of freight being transported.
I/A14: Air Quality	?	N/A	N/A	N/A	N/A	N/A	N/A	All policies encouraging active travel and contribute to a modal shift away from private car use and reduction in emissions are likely to contribute to improving air quality across the borough. Additionally, restricting car parking and encouraging car free developments as a starting point for all development proposals, will help to reduce reliance upon motorised vehicles. However, in those areas where PTAL scores are low, parking will be delivered in line with the London Plan maximum parking targets. This could result in an increased reliance upon private vehicles in those areas, and have subsequent effects on air quality.

Policy Grouping		Movement and Connectivity						
Policy Codes		MC1, MC2, MC3, MC4, MC5						
I/A Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
								<p>There is also potential for the construction of new and upgraded active travel routes to result in increased to temporarily reduce air quality (from dust and plant emissions) during construction.</p> <p>Policy MC3 (impacts on the transport network) also acknowledges the improvements to air quality through new developments. Additionally, utilising the Healthy Streets Approach considers improving air quality through 'clean air', further contributing to indirect improvements on air quality.</p>
I/A15: Climate Change & Resilience	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
I/A16: GHG Emissions	+/-	M	D	R	R	P	MT	<p>All policies within Movement and Connectivity contribute to encouraging modal shift away from private car use, therefore reducing GHG emissions from vehicles. However, there is potential for the construction of new and upgraded active travel routes to result in increased GHG emissions during construction and they are likely to have high levels of embodied carbon.</p> <p>Policy MC4 includes the provision of electric vehicle charging in new developments. This encourages sustainable vehicles and is likely to reduce GHGs from private vehicles.</p> <p>Policy MC5 also contributes to reducing GHGs. However, the development of new freight areas has the potential to increase emissions. Additionally, despite the policy stating that zero and low emissions freight vehicles should be used where possible, there is potential for the use of traditional freight vehicles and increases in freight activity within Tower Hamlets. This has potential to result in increased GHG emissions depending on the nature of freight vehicles used and increases in activity.</p>
I/A17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Some proposals which may come forward as a result of these policies may be resource intensive and could generate a significant amount of construction waste. If a preference for road network reallocation is sought there is potential for positive effects. As the location and design of some proposals that may come forward as a result of these policies are not yet known, uncertain effects have been identified.
I/A18: Efficient use of Land	?	N/A	N/A	N/A	N/A	N/A	N/A	The location of some proposals that may come forward as a result of these policies is not yet known. Whilst it is likely that the majority may result in the reallocation of the existing highway network, there could be potential for some land take. If a preference for road network reallocation is sought there is potential for positive effects.
Potential Cumulative/ Synergistic Effects	<p>Intra-plan:</p> <ul style="list-style-type: none"> • There are potential positive cumulative effects on sustainable transport and accessibility across the borough, as well as air quality improvements. This is likely to result in a modal shift away from private transport and towards public transport and active travel. • There are also potential positive effects on health through increased activity rates amongst residents. • There is a potential for a cumulative increase in car usage if parking provision is maximised. Making use of private vehicles more convenient could have adverse effects on air quality and GHGs in these locations. This works against Policy MC4. 							

Policy Grouping	Movement and Connectivity							
Policy Codes	MC1, MC2, MC3, MC4, MC5							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
	<p>Inter-plan:</p> <ul style="list-style-type: none"> There are likely to be positive cumulative effects on both Population and Equalities and Human Health with NLP policies (MC1, MC2) working in combination with London Plan policies (GG3, T2). Policies improve accessibility to cycling to all social groups, with development proposals encouraged to demonstrate how cycle parking areas will provide facilities for disabled cyclists. The Healthy Streets Approach prioritises health in all planning decisions at t The inclusion of the 'last-mile' principle aligns with policies stated in the London Plan. This is likely to generate positive cumulative effects as the beneficial environmental effects of this process will be more widespread. NLP policies (MC4) require the consideration of potential for residential car parking in areas with low PTALs (1-3) in accordance with the maximum parking standards set out within London Plan policies (T6). These policies will provide cumulative improvements to the provision of residential parking in less accessible areas, reducing barriers of isolation. Conversely, this is likely to result in cumulative negative effects on air quality, human health and GHGs. This also contradicts the borough's Transport Strategy, where Outcome 2 aims to reduce demand for on street car parking and the amount of car trips in the borough NLP policy MC1's intention to improve accessibility of water transport is also concordant with themes of water transport in the London Plan, although no detail is given as to how improved accessibility will be achieved in relation to this mode. As such, no cumulative effects are anticipated to occur. 							
Mitigation and Enhancement Measures	<ul style="list-style-type: none"> Where possible, the reallocation of the existing road network should be preferred for the development of new schemes, to avoid loss of greenspaces and habitats and support the efficient use of land. Mitigation for IIA17 is likely to be offered by proposed Policy RW1 which aims to reduce the amount of waste and ensures that resources will be reused and recycled minimising waste wherever possible. Sensitive design should be considered for any new developments within town centres to ensure positive effects on local heritage assets and landscapes. Application of Policy PS6 should mitigate adverse effects on IIA11 (historic environment). 							
HIA and EqIA considerations	<p>EqIA</p> <ul style="list-style-type: none"> Active travel infrastructure should be accessible and inclusive. Cycleways should provide enough space for adapted cycles such as tricycles, tandems and wheelchair cycles. Consideration should be made for removing other barriers towards active travel for disabled people, such as affordability. The council should work with charities and other representative groups to help lower the cost of adapted cycles. It is likely that other forms of sustainable travel will be prevalent in the future, such as electric scooters. Parking and facilities for these schemes should be accessible and not present physical barriers to users. It is recommended that the Purple Badge Scheme is maintained to ensure there will be no negative impacts on protected groups, such as disabled people. Management should protect priority bays to maintain accessibility for protected groups. <p>HIA</p> <ul style="list-style-type: none"> These policies are anticipated to impacts on most health determinants, including positive effects for low-income groups and socially isolated groups including new and expectant mothers in particular. The theme is particularly supportive of improvements to settings for social cohesion throughout the borough. While climate change resilience is not directly built into the policies proposed under this theme, the reduced reliance on private vehicles brought about by improvements to public transport and active travel options will likely contribute to reduced GHG emissions throughout the borough. 							
IIA Issues Addressed by Policies	<ul style="list-style-type: none"> There is a need to improve sustainable transport modes (public and active) in line with LBTH's commitment to reach net-zero GHG emissions by 2045. Electric vehicle (EV) charging infrastructure will need to improve to support the growing demand of residents switching from petrol and diesel to hybrid and EVs. Transport issues affect different groups to varying extents, and there is potential that the barriers to accessing and using transport can be exacerbated by age, ethnicity and gender. 							

Policy Grouping	Movement and Connectivity							
Policy Codes	MC1, MC2, MC3, MC4, MC5							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
	<ul style="list-style-type: none"> The number of vehicles on the roads is likely to increase as the population rises, putting air quality at further risk of degradation. Air pollution disproportionately affects the vulnerable in society, with the potential to exacerbate health inequalities further as the population increases. Air quality issues across LBTH can be addressed via a modal shift towards less polluting methods of transport (low carbon transport initiatives) and inclusive of active transport (e.g., cycling, walking etc.) thereby leading to a higher standard of air quality. 							
Recommendations	<ul style="list-style-type: none"> Policy MC2 could benefit from including mention of how sustainable transport can improve access to those on low-incomes. Policy MC5 could be made more stringent by replacing 'should' with 'will'. 							

2.10 Reuse, Recycling and Waste

The assessment of the Reuse, Recycling and Waste Policies are presented in **Table 2-10** below.

Table 2-10 – Reuse, Recycling and Waste Policies Assessment

Policy Grouping	Reuse, Recycling and Waste							
Policy Codes	RW1, RW2, RW3							
I/A Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
I/A1: Population & Equalities	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
I/A2: Human Health	+	N/A	N/A	N/A	N/A	N/A	N/A	Policy RW2 (new and enhanced waste facilities) states that waste management facilities should incorporate opportunities to be attached to the district heating network and/or incorporate opportunities for energy recovery and combined heat and power. This may help increase the quality of new and existing housing stock and provide a more cost-effective heating solutions. Cost savings may help to reduce health inequalities and reduce the pressure of the rising cost of living.
I/A3: Economy & Town Centres	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
I/A4: Employment & Skills	+	L	I	L	I	P	LT	The increase in waste facilities may result in employment opportunities for residents within the borough.
I/A5: Housing	+	L	I	L	I	P	LT	Policy RW2 (new and enhanced waste facilities) states that waste management facilities should incorporate opportunities to be attached to the district heating network and/or incorporate opportunities for energy recovery and combined heat and power. Whilst this policy does not support the development of new housing, it may help increase the quality of new and existing housing stock and provide a more cost-effective heating solutions.
I/A6: Crime & Safety	+	L	D	L	R	P	LT	Policy RW2 requires new waste facilities to provide on-site measures to ensure safety and security. This is likely to result in a reduction in accidents, and improvement of safety on waste sites.
I/A7: Sustainable Transport	+	L	D	R	R	P	MT	Policy RW2 requires new waste developments, or the development of existing waste sites, to prioritise rail and water transport, as well as utilising zero/ultra-low emission vehicles. This is likely to result in minor positive effects upon sustainable transport through reducing the reliance on HGVs.
I/A8: Accessibility	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
I/A9: Biodiversity & Natural Capital	?	N/A	N/A	N/A	N/A	N/A	N/A	There is potential for developments to result in the loss of biodiversity and natural capital. As the overall design of proposals is not yet known uncertain effects have been identified. There may be opportunities to provide green infrastructure as part of design.
I/A10: Landscape & Townscape	?	N/A	N/A	N/A	N/A	N/A	N/A	Policies could result in the development of new waste facilities and infrastructure which could negatively affect the landscape and townscape. Policy RW2 does, however, require high quality design for new waste facilities. This is to ensure the integration into local landscape settings. At this stage it is not clear on the design or location of new waste facilities and therefore uncertain effects have been identified.
I/A11: Historic Environment	?	N/A	N/A	N/A	N/A	N/A	N/A	Policies could result in the development of new waste facilities and infrastructure which could negatively affect the historic environment. Policy RW2 does, however, require high quality design for new waste facilities which could ensure the integration into local historic environment. At this stage it is not clear on the design or location of new waste facilities and therefore uncertain effects have been identified.

Policy Grouping	Reuse, Recycling and Waste							
Policy Codes	RW1, RW2, RW3							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA12: Flooding	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA13: Water Quality	?	N/A	N/A	N/A	N/A	N/A	N/A	RW2 states that waste transport will prioritise rail and water transport over the road network. There is potential that increase waterborne transport could result in an increase in water pollution and decrease in overall water quality. At this stage the potential increase in water transport is not known, so uncertain effects have been identified.
IIA14: Air Quality	+/-	L	D	R	R	P	LT	Policy RW2 requires new waste sites to minimise air pollutants, noise, vibration, dust and odours and aims to it incorporate measures to minimise carbon emissions and maximise the use of lower-carbon energy sources. Additionally, the utilisation of zero/ultra-low emission vehicles reduces the negative impacts of new sites upon air quality. However, there is potential for negative effects from waste sites operations as their operation may increase levels of air pollutants.
IIA15: Climate Change & Resilience	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA16: GHG Emissions	+/-	L	D	R	R	P	LT	Policy RW2 results in positive effects on GHGs due to utilisation of zero/ultra-low emission vehicles and the shift towards prioritising rail and water transport over the road network. New waste sites should also minimise carbon emissions and maximise low carbon energy sources. However, there is potential for negative effects from waste sites operations as their operation may increase levels of GHGs and their construction may include significant levels of embodied carbon.
IIA17: Waste	++	M	D	R	I	P	LT	All policies within the Reuse, Recycling and Waste group result in improvements to waste management within the borough. Policy RW1 (managing our waste) preserves waste facilities within the area and maximises the capacity and efficiency of waste facilities. New development will also be expected to reuse and recycle resources, minimising waste. This policy contributes to meeting future waste management needs within the borough. Policy RW3 (waste collection facilities in new development) improves the facilities for recycling, organics, residual and bulky waste. The policy also improves the collection systems on site to encourage recycling through engagement and facilities. This is likely to reduce the amount of waste within the borough.
IIA18: Efficient use of Land	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
Potential Cumulative/ Synergistic Effects	<p>Intra-plan:</p> <ul style="list-style-type: none"> There is potential for negative cumulative effects upon water quality, air quality and GHG emissions due to increased works and potential land take within the borough, however this is dependent on individual development sites that may come forward. <p>Inter-plan:</p> <ul style="list-style-type: none"> Policy D6 in the London Plan states requirements for housing to be designed with adequate and easily accessible storage space that supports the separate collection of dry recyclables (for at least card, paper, mixed plastics, metals, glass) and food waste as well as residual waste. Equivalent policies stated under the Reuse, Recycling and Waste policy theme of the NLP will ensure positive cumulative effects will result. 							

Policy Grouping	Reuse, Recycling and Waste							
Policy Codes	RW1, RW2, RW3							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
	<ul style="list-style-type: none"> There is the potential for positive cumulative effects on Climate Change & Resilience through the implementation of NLP policies (RW2) and London Plan policies (SI7, SI8, SI9). Development proposals that demonstrate effective implementation of the waste hierarchy and its contribution to the circular economy will be supported: improving resource efficiency, preventing waste, and reducing carbon emissions. 							
Mitigation and Enhancement Measures	<ul style="list-style-type: none"> Sensitive design, as outlined in the Tower Hamlets Reuse, Recycling and Waste Supplementary Planning Document¹ should be considered for any new developments to ensure positive effects on local heritage assets and landscapes. Application of Policy PS6 should mitigate adverse effects on IIA11 (historic environment). Application of Policy BO1 will likely help to reduce effects on biodiversity and open spaces. 							
HIA and EqIA considerations	<p>EqIA</p> <ul style="list-style-type: none"> Internal waste management spaces will further improve the streetscape around flats and higher density residential areas. Bringing waste facilities inside is also beneficial to disabled groups who suffer as a consequence of footpath obstruction resulting from outdoor waste management. New waste facilities to be constructed and utilise existing brownfield sites to reduce negative biodiversity and landscape impacts associated with new development. <p>HIA</p> <ul style="list-style-type: none"> Reuse, Recycling and Waste policies will have some positive effects on the health determinants identified across a selection of social groups within the borough. Primarily, the improvement of air quality associated with this policy theme can have particularly beneficial effects for older people, infants, and those with long term health conditions. 							
IIA Issues Addressed by Policies	<ul style="list-style-type: none"> The growing population and associated need for development is likely to increase the use of mineral resources and waste generation. Materials are a finite resource and materials will be required for new housing developments to meet the demands of a growing population. 							
Recommendations	<ul style="list-style-type: none"> Policies could benefit from emphasising the requirement to reduce waste within the borough and improve recycling rates borough wide. Policy RW2 could also benefit from acknowledging and implementing circular economy principles within the development of new waste sites.

Introduction

This Appendix sets out the findings of both the red, amber, green (RAG) analysis and site assessments for both the Proposed Site and Alternative Site allocations.

RAG Analysis

An initial red, amber, green (RAG) assessment for both the site allocations and alternative sites was undertaken using spatial indicators for each of the IIA Appraisal Framework objectives.

Relevant data on spatial environmental, social and economic indicators, as well as those specifically relevant to health and equalities, have been loaded onto an online WebGIS platform, which has facilitated the site assessments.

It should be noted that the RAG assessment simply highlights the potential sensitivity of different indicators, it doesn't necessarily mean that the indicators are good or bad. For instance, an area of overall deprivation could be more highly sensitive to change so scored R, however, development of the site could in turn reduce levels of deprivation.

Due to this professional expertise has been used to review and validate this initial RAG rating to provide the final assessment of each site.

Site Assessments

The assessment of policies, spatial approaches and alternatives has considered the following:

- Overall effect significance (negative, positive, uncertain, potential for both negative and positive effect or negligible)
- Nature of effect (direct, indirect)
- Spatial Extent (local, regional, national)
- Reversibility of effect:
 - Reversible: The receptor can return to baseline condition without significant intervention
 - Irreversible: The receptor would require significant intervention to return to baseline condition
- Duration (short, medium or long term) – Short term: 0-5 years, Medium term: 5-10 years (up to the end of the plan period) Long term: 10+ years (beyond the plan period).

Table G-1 – Key to Assessment

Effect Significance	Key
Potential for significant positive effects	++
Potential for minor positive effects	+
Potential for minor negative effects	-
Potential for significant negative effects	--
Uncertain effects – Uncertain or insufficient information on which to determine the appraisal at this stage	?
Potential for both positive and negative effects	+/-
Negligible / No effect	0
Magnitude (High / Medium / Low)	H / M / L
Nature of effect (direct / indirect).	D / I
Spatial Extent (local – borough wide / regional – Greater London / national - England)	L / R / N
Reversibility of effect (reversible / irreversible)	R / I
Permanence (Permanent / Temporary)	P / T
Duration (short / medium / long term).	ST / MT / LT

It should be noted that where uncertain and negligible effects have been identified, it has not been possible to determine the nature of effect, the spatial extent, the reversibility or the duration of effect. In this instance, these cells have been left blank.

Proposed Site Allocations RAG Analysis

Due to the quantity of sites, RAG analysis results have been split into Table G-2 and Table G-3.

Table G-2 - Proposed Sites RAG Analysis results

Proposed Site Allocations Assessment Summaries

Bishopsgate Goods Yard

Table G-4 - Bishopsgate Goods Yard

Site Name	Bishopsgate Goods Yard							
Site Capacity	500							
Site Source	Existing allocation							
Site Status	Outline Consent Granted							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	++	H	D	R	I	P	LT	The site will provide 500 new homes, of which at least 35% will be affordable and the development will include wheelchair adaptable homes (number of which is tbc). In addition, there will be new retail and employment opportunities, healthcare facilities, new parks and open spaces and improvements to the public realm. The site has good existing access to community services and will likely reduce levels of inequalities and provide new facilities which will help to bring communities together and support a changing demographic. The existing 5-a-side football pitches currently located on the site will be lost as part of development - it is not clear at this stage whether these will be re-provisioned elsewhere in the borough.
IIA2: Human Health	++	H	D	R	I	P	LT	As well as housing, the site includes new retail and employment opportunities, leisure facility, healthcare facilities, new parks and open spaces and improvements to the public realm. The site will reduce levels of health inequalities and provide new facilities which will improve physical and mental health and wellbeing and reduce levels of loneliness. It will ensure that the needs of all groups will be met both now and in the future.
IIA3: Economy & Town Centres	++	H	D	R	I	P	LT	The proposed site will include a maximum of 11,500sqm of non-residential uses such as retail, workspace, community and cultural. This will include the provision of a leisure facility and an Idea Store, as well as public realm improvements at the ground and platform level. The site will improve and enhance connectivity between business clusters and the housing market and improve town centre viability.
IIA4: Employment & Skills	++	H	D	R	I	P	LT	The site will include employment space/ workshops as well as retail. It is well located to existing employment areas including the City Fringe Activity Area and the Central Activity Zone. This will likely increase employment opportunities. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
IIA5: Housing	++	H	D	R	I	P	LT	The provision of 500 new homes will help towards meeting LBTH's housing target. At least 35% of all units will be affordable and will include 10% wheelchair adaptable homes. The size, type and tenure of housing takes into account different groups in the community including, but not limited to, those who require affordable housing, families with children, older people and people with disabilities.

Site Name	Bishopsgate Goods Yard							
Site Capacity	500							
Site Source	Existing allocation							
Site Status	Outline Consent Granted							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA6: Crime & Safety	+	L	I	L	R	P	MT	The site is currently located within an area of high crime deprivation (top 10-20% of neighbourhoods nationally). There is limited detail on whether designing out crime principles will be applied as part of the development, however, developing the land from its existing use and providing housing and public realm improvements is likely to help to reduce crime and create a safer community.
IIA7: Sustainable Transport	+	M	D	L	I	P	LT	Access is readily available to the site via public transport through bus, overground, underground and rail. This is reflected by the site having Public Transport Accessibility Levels (PTAL) scores ranging between 5 and 6b. Other than public realm improvements and increased wayfinding, there are no plans for additional transport provision.
IIA8: Accessibility	++	H	D	R	I	P	LT	The existing site has good access to facilities and services and the proposal includes further provision for community facilities and services. Improvements to walking and cycling routes to and from the site will establish better connections with Shoreditch High Street Overground station, Brick Lane District Centre, Shoreditch Triangle and the new open space, and will help to improve access to all groups inclusively. The site will allow residents to live their lives more locally and reduce the need to travel.
IIA9: Biodiversity & Natural Capital	++	M	D	R	I	P	LT	The site is located away from any greenspace or designated sites, however, there is potential for some adverse effects on some small-scale habitats and species during construction. However, the site will provide a significant increase in greenspace and GI, through the provision of open space (with a minimum size of one hectare) integrated with the green grid along Quaker Street and Brick Lane in the form of a multi-functional local park located above the Braithwaite Viaduct.
IIA10: Landscape & Townscape	?	N/A	N/A	N/A	N/A	N/A	N/A	The site aims to achieve high quality sustainable design for buildings, spaces and the public realm and improve the quality and condition of the townscape and landscape. The site is located within two London View Management Framework (LVMF) areas - Westminster Pier to St Paul's Cathedral and King Henry VIII's Mound to St Pauls Cathedral. Development will need to be sensitive to these views and avoid obstruction and enhance the setting. There are likely to be temporary negative effects to the local landscape and townscape setting during construction. There is also potential for negative effects to arise depending on the height of developments at the site. Whilst development should be stepped down to the eastern end of the site, there is potential for the height of developments to negatively affect the local landscape and views.

Site Name	Bishopsgate Goods Yard							
Site Capacity	500							
Site Source	Existing allocation							
Site Status	Outline Consent Granted							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA11: Historic Environment	+/-	H	D/I	R	R/I	P/T	ST/LT	The site has a number of heritage assets within its vicinity and is located within an archaeological priority area, and partially located in the South Shoreditch, Redchurch Street and Brick Lane and Fournier Street Conservation Areas. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets. The proposed site aims to restore and repair the existing Grade II listed Braithwaite Viaduct and adjoining structures. Enhancement to the public realm will also help to improve the setting of the historic environment.
IIA12: Flooding	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA13: Water Quality	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA14: Air Quality	+/-	L	D/I	L	R	P/T	ST/LT	The site has good access to local public transport and will provide new facilities allowing resident to live their lives more locally and reduce the need for private car usage. Public realm improvements may also include GI which could reduce exposure to the effects of urban air pollution. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction. There are a number of existing residential receptors surrounding the site which would be negatively impacted during construction, and consideration would need to be given as to how to minimise disruption to the local residents.
IIA15: Climate Change & Resilience	+	M	D	L	I	P	LT	The site is located in an area which has a low overall climate risk and heat risk rating and is likely to have some resilience to climate change. The addition of more green infrastructure (GI) and open space will help to reduce the Urban Heat Island (UHI) effect. The inclusion of sustainable drainage systems (SuDS) is expected, however specific details are not known at this stage. The design of the scheme will include measures to prevent overheating.
IIA16: GHG Emissions	+/-	M	D	L	I	P	LT	There are likely to be significant greenhouse gases (GHG) emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. The scheme is expected to make use of Air Source Heat Pumps and be delivered via an electricity-led strategy. Buildings are expected to be energy efficient to reduce reliance on heating.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.

Site Name	Bishopsgate Goods Yard							
Site Capacity	500							
Site Source	Existing allocation							
Site Status	Outline Consent Granted							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA18: Efficient use of Land	+	H	D	R	I	P	LT	The development is located on previously developed land and will support the protection of the borough's green spaces. The site will support high density housing which will help to make the best use of the site. However, it will result in the loss of the 5-a-side pitches. It is not clear whether the site will encourage sustainable use of materials.
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring site Brick Lane and Pedley Street.</p> <p>IIA1/2: If construction of this site and the Brick Lane and Pedley Street site were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Brick Lane and Pedley Street site will significantly increase the number of business and jobs.</p> <p>IIA5: In combination, this site and the Brick Lane and Pedley Street site will significantly increase housing stock.</p> <p>IIA10: There is potential for cumulative negative effects on LVMF areas in combination with neighbouring site Brick Lane and Pedley Street.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Brick Lane and Pedley Street site.</p> <p>IIA14: If construction of this site and the Brick Lane and Pedley Street site were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA15: The increase in GI provided by both this site and the Brick Lane and Pedley Street site is likely to increase resilience to the UHI effect.</p> <p>IIA16: The construction of both this site and the Brick Lane and Pedley Street site is likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Brick Lane and Pedley Street is likely to result in a cumulative increase in waste.</p>							
Mitigation and Enhancement Measures	<p>IIA1/17: The 5-a-side football pitches should be re-provisioned elsewhere in the borough, to avoid a loss in community facilities.</p> <p>IIA1/2: Further assessment as part of scheme level design, should incorporate an evaluation of the provision of healthcare and education, to ensure that the current supply is sufficient in supporting new communities. The application of Policy CI1 may also help to mitigate impacts on existing community facilities.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA9: A lighting strategy should be prepared to minimise light spill onto retained or newly created habitat features.</p> <p>IIA9: In line with policy BO1, the site must achieve a minimum urban greening factor (UGF) and biodiversity net gain (BNG) targets set out within the Plan.</p> <p>IIA10: The application of Policy PS8 will help manage adverse effects on the skyline and preserves or enhance visual connections between the public realm and open spaces.</p> <p>IIA11: Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals should be referred to minimise the impacts on the historic environment. The council should also work in partnership with Historic England.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the Construction Environmental Management Plan (CEMP). The application of policy CG9 will help to ensure that measures to improve air quality should be implemented on-site during both construction and operation.</p> <p>IIA14/15/16: Development should look to incorporate renewable energy generation methods (in line with Policy CG1), such as solar panels and use of low carbon heat networks, to reduce operational GHG emissions. The site should consider undertaking BREEAM Infrastructure to ensure that sustainability is integral to development.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and Operational Environmental Management Plan (OEMP).</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with policy DV4.</p>							

Table G-5 - London Dock

Site Name	London Dock							
Site Capacity	1800							
Site Source	Existing allocation							
Site Status	Consented, under construction.							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	++	H	D	R	I	P	LT	The development as a whole could deliver up to 1,800 new homes of which a minimum of 35% will be affordable homes. It will be a mixed-use, predominantly residential development. This will include offices, restaurants, shops and a school within twelve multi storey buildings and a one to two storey basement across the footprint of the site. At least 10% of homes will be wheelchair accessible and adaptable. The site has good existing access to community services which may help to reduce levels of inequalities by bringing communities closer to these facilities. This includes Shadwell DLR station and Shadwell train station both, of which, are wheelchair accessible and within 1km of the site as well as nearby bus stops.
IIA2: Human Health	++	H	D/I	R	I	P	LT	As well as housing, the site includes up to 21,500sqm of non-residential floorspace which will provide new retail and employment opportunities, healthcare facilities new secondary school, new parks and open spaces and improvements to the public realm. It is also located within close proximity to existing healthcare and leisure facilities, as well as open spaces which includes Swedenborg Gardens and St George's Gardens that are under 0.5km away which would encourage walking and cycling. The site will reduce levels of health inequalities and provide new facilities which will improve physical and mental health and wellbeing and reduce levels of loneliness. Homes that are made accessible and adaptable for disabled and wheelchair users would, therefore, increase human health. It will ensure that the needs of all groups will be met both now and in the future.
IIA3: Economy & Town Centres	++	H	D	R	I	P	LT	At present the site is located near to central activities zones which includes St Mellons Business centre and primary shopping areas as well as town centres. The development's provision of non-residential floor space such as those which support offices, restaurants and shopfronts. Considering this site is located in the 30-50% most employment deprived and 10-20% income deprived areas, the development will result in a significant increase in the number and diversity of jobs and will improve and enhance connectivity between business clusters and the housing market.
IIA4: Employment & Skills	++	H	D	R	I	P	LT	Considering this site is located in the 30-50% most employment deprived and 10-20% income deprived areas, the development will result in a significant increase in the number and diversity of jobs and will improve and enhance connectivity between business clusters and the housing market. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
IIA5: Housing	++	H	D	R	I	P	LT	The provision of 1800 new homes will help towards meeting LBTH's housing target. At least 35% of all units will be affordable and at least 10% will include wheelchair accessible and adaptable homes. The size, type and tenure of housing takes into account different

Site Name	London Dock							
Site Capacity	1800							
Site Source	Existing allocation							
Site Status	Consented, under construction.							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
								groups in the community including, but not limited to, those who require affordable housing, families with children, older people and people with disabilities.
IIA6: Crime & Safety	+	M	D	L	R/I	P/T	ST/LT	The site is currently located within an area of moderate crime deprivation (30-50% of neighbourhoods nationally). There is limited detail on whether designing out crime principles will be applied as part of the development, however, developing the land from its existing use and providing housing and public realm improvements is likely to help to reduce crime and create a safer community.
IIA7: Sustainable Transport	+	M	D	R	I	P	LT	The site is well located to local facilities and services such as bus, rail and underground services within 0.8km and has a PTAL score between 2 and 4. Moreover, other than public realm improvements of pedestrian, cycle paths and increased wayfinding, there are no plans for additional transport provision.
IIA8: Accessibility	++	H	D	R	I	P	LT	The site already includes a range of facilities, and the proposal includes further provision for community facilities and services. Improvements to pedestrian, cycling and wayfinding will provide better access to the Thomas More Neighbourhood Centre, St Katharine Docks, Tobacco Dock and the Wapping Canal, and to improve walking and cycling connections across the Highway for all groups inclusively. The site will allow residents to live their lives more locally and reduce the need to travel. The site will also provide safe access routes to the new secondary school.
IIA9: Biodiversity & Natural Capital	++	H	D	L	R/I	P	LT	The proposed landscaping will provide a good diversity of nectar-rich flowers, including some night-scented species, which will provide forage for bees and other pollinators and contribute to Local Biodiversity Action Plan (LBAP) objectives. Priority habitats are located to the East (Wapping Woods), North-East (St George's Gardens) and south of the site (Wapping Gardens). On-site landscaping and green roofs proposed under this development are expected to provide a significant net gain in biodiversity, outweighing any potential adverse effects via overshadowing.
IIA10: Landscape & Townscape	+	H	D	L	R/I	P	LT	While there are likely to be temporary negative effects to the local landscape and townscape setting during construction, improvements to public realm, particularly along the Highway and Vaughan Way, will enhance the quality and condition of the townscape and landscape. Overlooking from residential plots into the school playground would be controlled with high screens and dense vegetation. These would provide a barrier between the school and its surroundings at all levels. The screens are planted with species which would assist in improving the air quality and biodiversity of the area.
IIA11: Historic Environment	+/-	M	D	L	R/I	P/T	ST/LT	The Grade II listed Pennington Street Warehouse is located directly south east of the site. The site also falls to the west of the Tower of London, which is designated as a World Heritage Site. The site is located in close proximity to numerous conservation areas and within an archaeological priority area. A Scheduled monument (Roman Bath House, Shadwell) is also located to the east of the site. The proposed site aims to repair and modify the existing Grade II listed warehouse and adjoining structures. Enhancement to the public realm will also help to improve the setting of the historic environment. There is

Site Name	London Dock							
Site Capacity	1800							
Site Source	Existing allocation							
Site Status	Consented, under construction.							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
								potential of disturbance to archaeology from excavation works during construction and for construction works to adversely affect local heritage assets.
IIA12: Flooding	--	H	D	L	I	P	LT	The site is situated in a flood risk area classing the development as more vulnerable as it sits in flood zone 3. Development should accord with any flood mitigation and adaptation measures stated within the borough's Strategic Flood Risk Assessment and the sequential test.
IIA13: Water Quality	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA14: Air Quality	+/-	M	D	L	R/I	P/T	ST/LT	Air quality at this site has moderate levels of NO ₂ and PM ₁₀ and sits within an Air Quality Management Area (AQMA). The site has good access to local public transport and will provide new facilities allowing resident to live their lives more locally and reduce the need for private car usage. Public realm improvements may also include GI which could reduce exposure to the effects of urban air pollution. It is assumed that additional mitigation strategies will be incorporated considering the development of a secondary school on the site. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction.
IIA15: Climate Change & Resilience	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is located in an area which has a medium to high overall climate risk and heat risk rating. Whilst the addition of more GI, open space and green roofs will help to reduce the UHI effect, not all climate resilience measures are known at this stage. The site is also situated in a flood risk area classing the development as more vulnerable as it sits in flood zone 3
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. The development is expected to make use of decentralised energy and solar PV, as well as incorporate energy efficient measures to reduce energy needs. Further design details are still required.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	+	H	D	R	I	P	LT	The development is located on previously developed land and will support the protection of the borough's green spaces. The site will support high density housing which will help to make the best use of the site. It is not clear whether the site will encourage sustainable use of materials.

Site Name	London Dock							
Site Capacity	1800							
Site Source	Existing allocation							
Site Status	Consented, under construction.							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring site Brick Lane and Pedley Street.</p> <p>IIA1/2: If construction of this site were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site will significantly increase the number of businesses and jobs.</p> <p>IIA5: In combination, this site will significantly increase housing stock.</p> <p>IIA10: There is potential for cumulative negative effects on LVMF areas in combination with neighbouring site Brick Lane and Pedley Street.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the neighbouring Tobacco Dock site</p> <p>IIA14: If construction of this site and the Tobacco Dock were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA15: The increase in GI provided by both this site is likely to increase resilience to the UHI effect.</p> <p>IIA16: The construction of this site is likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site is likely to result in a cumulative increase in waste.</p>							
Mitigation and Enhancement Measures	<p>IIA1: Housing should deliver at least 10% accessible homes. A range of housing options to suit all housing needs within the community is necessary in line with policies HF1 and HF2. Development specific EqlAs should be undertaken to ensure inclusive housing is delivered.</p> <p>IIA1/2: Further assessment of part of scheme level design should incorporate an evaluation of the provision of healthcare to ensure that the current supply is sufficient in supporting new communities. The application of policy CI1 may also help to mitigate impacts on existing community facilities.</p> <p>IIA3: Where the site is located adjacent to a designated town centre, policies TC1-TC8 will ensure that development outside of the town centre will not detrimentally impact on the existing town centre, allowing centres to remain vibrant and sustainable and demonstrating vitality.</p> <p>IIA3/4: The loss of businesses should be avoided, however, in line with policy EG4 it is assumed that there will be no net loss in employment space. Where businesses will be lost, discussions with owners should be undertaken to ensure suitable alternative locations are identified. Alternative units should where possible be equivalent in size, layout, rent and connectivity to the existing site and considered suitable by the occupier.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA9: In line with policy BO1, the site must achieve a minimum UGF and BNG targets set out within the Plan.</p> <p>IIA8/9/11: A lighting strategy should be prepared to minimise light spill onto retained or newly created habitat features and heritage assets.</p> <p>IA10: The application of Policy PS8 will help manage adverse effects on the skyline and preserves or enhance visual connections between the public realm and open spaces.</p> <p>IIA11: Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals should be referred to minimise the impacts on the historic environment. The council should also work in partnership with Historic England.</p> <p>IIA12: Development should be delivered in line with policy CG6, the NPPF and guidance from the Environment Agency.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of policy CG9 will help to ensure that measures to improve air quality should be implemented on-site during both construction and operation.</p> <p>IIA14/15/16: Development should look to incorporate renewable energy generation methods (in line with Policy CG1), such as solar panels and use of low carbon heat networks, to reduce operational GHG emissions. The site should consider undertaking BREEAM Infrastructure to ensure that sustainability is integral to development. The application of policies CG1, CG2, CG3, CG4 and CG5 will help to reduce the impacts of GHGs and increase climate resilience.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with policy DV4.</p>							

Marian Place Gasworks and the Oval

Table G-6 - Marian Place Gasworks and the Oval

Site Name	Marian Place Gasworks and the Oval							
Site Capacity	700							
Site Source	Existing allocation							
Site Status	Consented							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	++	H	D	R	I	P	LT	This site will provide up to 700 new homes of which 35% will be affordable housing. The development will also include 55 wheelchair accessible homes. In addition, the site has good existing access to community services and will likely reduce levels of inequalities and provide new facilities which will help to bring communities together and support a changing demographic. This will also include 1.0 hectares of publicly accessible open space. The site will include new retail and employment opportunities and has current access to healthcare and community facilities; however, no new healthcare facilities are proposed for this site.
IIA2: Human Health	++	H	D	R	I	P	LT	The site is located in close proximity to a range of facilities and infrastructure which supports human health. As well as housing, the site includes a minimum of 4,000sqm of new non-residential floorspace, which will provide new retail and employment opportunities, and supports urban greening through the provision of new parks and open spaces to encourage and improvements to the public realm. It is noted that no new healthcare facilities are included within the development. The site will reduce levels of health inequalities and provide new facilities which will improve physical and mental health and wellbeing and reduce levels of loneliness. It will ensure that the needs of all groups will be met both now and in the future.
IIA3: Economy & Town Centres	++	H	D	R	I	P	LT	The proposed site will include active uses through the formation of new shopfront openings and public realm improvements at the ground floor level. The site will prioritise mixed use development, with residential properties above the ground floor level to improve and enhance connectivity between business clusters. The site is not located within a main town centre; therefore, any main town centre uses must ensure they do not impact on the vitality of existing high streets. The site will provide a range of office, industrial and studio workspaces meeting the needs for businesses serving a more local need, start-ups, small to medium enterprises and creative industries.
IIA4: Employment & Skills	++	H	D	R	I	P	LT	The site will provide a minimum of 4,000sqm of new non-residential floorspace which will include employment space, in particular for start-ups, small and midsize enterprises (SMEs) and creative industry businesses, as well as retail, supporting further job opportunities in the area. The site will provide a range of office, industrial and studio workspaces meeting the needs for businesses serving a more local need, start-ups, small to medium enterprises and creative industries, therefore diversifying the labour market. The site is outside the Activity Area, and so will improve employment opportunities within the locality. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.

Site Name	Marian Place Gasworks and the Oval							
Site Capacity	700							
Site Source	Existing allocation							
Site Status	Consented							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA5: Housing	++	H	D	R	I	P	LT	The provision of up to 700 new homes will help towards meeting LBTH's housing target. At least 35% of all units will be affordable and will include wheelchair adaptable homes. The size, type and tenure of housing takes into account different groups in the community including, but not limited to, those who require affordable housing, families with children, older people and people with disabilities. In addition, the site could potentially be suitable for extra-care accommodation or accommodation for people with learning disabilities.
IIA6: Crime & Safety	+	M	I	L	R/I	P/T	MT	The site is currently located within an area of high crime deprivation (top 10-20% of neighbourhoods nationally). There is limited detail on whether designing out crime principles will be applied. The site will include a range of uses and improving public realm including active uses at ground floor level, which will improve overall natural surveillance. Overall, it is considered that the development of the site will inherently improve the perception of safety within the area. The increase of passive surveillance and public foot and cycle traffic, through and around the site, will significantly improve the security of the area.
IIA7: Sustainable Transport	++	M	D	L	I	P	LT	The site has very good access to sustainable transport as it is located in close proximity to Cambridge Heath station, Bethnal Green underground station, a number of bus stops and a cycle hire scheme, as reflected in a PTAL score between 4-6a. The site includes a new cycle and pedestrian network around the perimeter to improve connectivity with the Cambridge Heath Neighbourhood Centre and along the waterfront at the Regents Canal. Long-stay cycle parking spaces will also serve the site.
IIA8: Accessibility	++	H	D	L	I	P	LT	The existing site has good access to facilities and services and the proposal includes further provision for community facilities and services. It is expected that improvements to wayfinding across the site including Legible London Signage which will help to improve access to all groups inclusively. The site will allow residents to live their lives more locally and reduce the need to travel due to improvements in connectivity with the Cambridge Heath Neighbourhood Centre and along the waterfront at the Regents Canal.
IIA9: Biodiversity & Natural Capital	+/-	M	D	R	R	P	LT	There are no statutory nor non-statutory designated sites of nature conservation interest within or adjacent to the development site. The Northern boundary of the development site adjoins Regent's Canal, which forms part of the London's Canals Site of Importance for Nature Conservation (SINC). The site is also located in close proximity to a number of other SINC's. The development site mainly comprises of areas of extension existing hardstanding and bare ground, with large areas devoid of any vegetation cover and a limited range of species. It is assumed that the potential impacts from pollution are avoided through good construction practice. The green roofs, landscaping and other biodiversity features will enhance the biodiversity of the site. In addition, all proposals for development within the site allocation will look to contribute to an overall provision of 1ha of new public open space

Site Name	Marian Place Gasworks and the Oval							
Site Capacity	700							
Site Source	Existing allocation							
Site Status	Consented							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
								across the allocation as a whole, delivered through a number of smaller open spaces and pocket parks. This could help to increase biodiversity on site.
IIA10: Landscape & Townscape	?	N/A	N/A	N/A	N/A	N/A	N/A	The site aims to achieve high quality sustainable design for buildings, spaces and 1ha of publicly accessible public realm, which will improve the quality and condition of the townscape and landscape. The site is located within the alignment of the background Wider Setting Consultation Areas of the LVMF SPG views from West Minster Pier to St Paul's and the Queen's Walk to Tower of London. The development will re-use The Oval (which is designated as Local Open Space and Identified as a London Square) as a new public open space. There are likely to be temporary negative effects to the local landscape and townscape setting during construction. There is also potential for negative effects to arise depending on the height of developments at the site. Whilst development should be stepped down around the former gasworks, there is potential for the height of developments to negatively affect the local landscape and views.
IIA11: Historic Environment	+/-	H	D/I	L	R/I	P/T	ST/LT	The site has a number of heritage assets within its vicinity and is partially located in the Regent's Canal Conservation Area, and Adjacent to the Hackney Road Conservation Area. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. The proposed site will be built upon the existing gas holders, the guide frames no.2 and no.5 of which are located within and contribute positively to the Conservation Area; however, they are subject to a Certificate of Immunity from Listing and considered as non-designated heritage assets. Guide frames will be refurbished to ensure their long-term future, the proposed buildings will pay homage to the gasholder shapes and forms to reflect the industrial legacy of the site. Enhancement to the public realm will also help to improve the setting of the historic environment.
IIA12: Flooding	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA13: Water Quality	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA14: Air Quality	+/-	L	D/I	L	R	P/T	ST/LT	The site has good access to local public transport and will provide new facilities allowing resident to live their lives more locally and reduce the need for private car usage. Public realm improvements may also include GI which could reduce exposure to the effects of urban air pollution. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction. There are a number of existing residential receptors surrounding the site which would be negatively impacted during construction.
IIA15: Climate Change & Resilience	+	M	D/I	L	R/I	P/T	ST/LT	The site is located in an area which has a high overall climate risk and heat risk rating. During construction and operation, the site will have a minor adverse residual effect on GHGs. The addition of more GI and open space will help to reduce the UHI effect. SuDS are expected to be delivered within the works at the site.

Site Name	Marian Place Gasworks and the Oval							
Site Capacity	700							
Site Source	Existing allocation							
Site Status	Consented							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA16: GHG Emissions	+	M	D/I	L	R/I	P/T	ST/LT	During construction and operation, the site will have a minor adverse residual effect on GHGs. The building fabric of the Proposed Development will incorporate energy efficient design and support opportunities for renewable energy production
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage, it is not clear the extent of re-use and re-cycling of materials.
IIA18: Efficient use of Land	+	H	D	L	I	P	LT	The site includes brownfield land. The site will support high density housing, making the most efficient use of the land. It is assumed that the site will encourage the use of sustainable materials, however full realisation of the details is not yet available.
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring site Devons Road.</p> <p>IIA1/2: If construction of this site and the Devons Road site were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Devons Road site will significantly increase the number of business and jobs.</p> <p>IIA5: In combination, this site and the Devons Road site will significantly increase housing stock.</p> <p>IIA10: There is potential for cumulative negative effects on LVMF areas in combination with neighbouring site Devons Road.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Devons Road.</p> <p>IIA14: If construction of this site and the Devons Road site were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA15: The increase in GI provided by both this site and the Devons Road site is likely to increase resilience to the UHI effect.</p> <p>IIA16: The construction of both this site and the Devons Road site is likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Devons Road is likely to result in a cumulative increase in waste.</p>							
Mitigation and Enhancement Measures	<p>IIA1/2: Further Assessment as part of the scheme level design, should incorporate an evaluation of the provision of healthcare and education, to ensure that current supply is sufficient in supporting new communities.</p> <p>IIA6: The development should be designed in accordance with the Secured by Design Principles and Policies PS3 and PS4.</p> <p>IIA9: Other policies in the Local Plan should help to avoid potential negative effects, e.g. Policies BO1, BO2, BO3, BO and BO5. The site must achieve a minimum UGF and BNG targets set out within the Plan.</p> <p>IIA10: The application of Policy PS8 will help manage adverse effects on the skyline and preserves or enhance visual connections between public realm and open spaces.</p> <p>IIA11: Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals should be referred to minimise the impacts on the historic environment. The council should also work in partnership with Historic England.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of policy CG9 will help to ensure that measures to improve air quality should be implemented on-site during both construction and operation.</p> <p>IIA14/15/16: Development should look to incorporate renewable energy generation methods (in line with Policy CG1), such as solar panels and use of low carbon heat networks, to reduce operational GHG emissions. The site should consider undertaking BREEAM Infrastructure to ensure that sustainability is integral to development.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with policy DV4.</p>							

Whitechapel South

Table G-7 - Whitechapel South

Site Name	Whitechapel South							
Site Capacity	837 (+ 425 student rooms)							
Site Source	Existing allocation							
Site Status	Consented, under construction							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	+	M	D	L	I	P	LT	<p>The site will provide 837 new homes and has potential to provide at least 425 new rooms for students, which will work positively towards achieving the borough's housing target. The provision of student accommodation is harmonious with the position of the Queen Mary University of London campus. At this stage, it is not known how many of these units will be accessible and wheelchair adaptable. The ward sits in the third most deprived decile; therefore, affordability needs to be a key consideration. The site has good existing access to community services which may help to reduce levels of inequalities by bringing communities closer to these facilities. It is not clear on whether the site will provide any additional facilities, and if so whether these will be open to the public. Overcrowding is significant at this location, with 19965p/h compared to the borough average of 15,695p/h. The provision of communal amenity space under this development would be beneficial to residents. These units have the potential to benefit both students and the wider community, by delivering other priorities such as affordable housing. The introduction of student housing could potentially complement the existing mix of uses and the provision of local services, including public transport.</p>
IIA2: Human Health	++	H	D	R	I	P	LT	<p>The site safeguards an existing health facility (Royal London Hospital) within the allocation and is also located within close proximity to other existing healthcare and leisure facilities. The site will also provide an NHS primary health care facility (including the re-provision of the existing sexual health and other services).</p> <p>As well as housing and healthcare, the site includes 93,000sqm non-residential floorspace, which will provide new retail and employment opportunities, and supports urban greening through the provision of open spaces to encourage and improvements to the public realm. The site will reduce levels of health inequalities and provide new facilities which will improve physical and mental health and wellbeing and reduce levels of loneliness. It will ensure that the needs of all groups will be met both now and in the future.</p> <p>The site does have good access to healthcare and community facilities; however, it is not clear whether the current provision will meet the needs of the new student population. There is limited information of the type of housing and the additional provisions the site may make e.g. public realm, employment, health facilities.</p>

Site Name	Whitechapel South							
Site Capacity	837 (+ 425 student rooms)							
Site Source	Existing allocation							
Site Status	Consented, under construction							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA3: Economy & Town Centres	++	H	D	R	I	P	LT	The site is currently located near to the City Fringe Activity Area and Central Activity Zone, as well as within part of Whitechapel's bustling town centre and thriving night-time economy. The new town hall in Whitechapel and permanent Residents' Hub supports town centre revival. The site lies within Whitechapel district centre, with both Whitechapel High Street and Whitechapel Market designated as Conservation Areas. The High Street is characterised by small-scale retail and industrial enterprises, and the Market is one of the borough's main local shopping areas. The site will improve town centre viability, with main town centre uses and employment led development proposed within the site including the formation of new shopfront openings and public realm improvements. These measures can support the strategic role of Whitechapel as an emerging hub for life sciences, bio-tech and digital industries.
IIA4: Employment & Skills	++	H	D	R	I	P	LT	The site is within the Whitechapel Local Employment Location with an emerging creative, digital, and ICT hub. It is well located to existing employment areas including the City Fringe Activity Area and the Central Activities Zone. The proposal of an economic led development will provide 93,000sqm of non-residential floorspace which will increase employment opportunities, in particular within the life sciences sector. The site will also provide improved access to existing employment opportunities in the surrounding area. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
IIA5: Housing	++	H	D	L	I	P	LT	The site provides a net gain of over 500+ dwellings, and therefore is sufficient enough to contribute to meeting LBTH's housing supply targets. The site will meet the minimum 35% target of affordable homes. This is beneficial considering its location within a high house price ward. However, the size, type and tenure of housing is not currently known.
IIA6: Crime & Safety	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is currently located within an area of high crime deprivation (top 10-20% of neighbourhoods nationally). The provision of student accommodation has potential for adverse effects on the amenity of neighbouring residents and businesses, particularly in relation to noise and antisocial behaviour. There is limited detail on whether designing out crime principles will be applied as part of the development, however, developing the land from its existing use and providing housing and public realm improvements is likely to help to reduce crime and create a safer community.
IIA7: Sustainable Transport	+	M	D	L	I	P	LT	Access is readily available to the site via public transport, enhanced by the nearby Elizabeth Line station, acting as a catalyst for investment within the ward. This is reflected by the site having a PTAL score ranging between 6a and 6b. The site will enhance connections to the Whitechapel North site allocation, Whitechapel High Street, as well as improved accessibility to the north and south and east and west of the site.

Site Name	Whitechapel South							
Site Capacity	837 (+ 425 student rooms)							
Site Source	Existing allocation							
Site Status	Consented, under construction							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA8: Accessibility	+	M	D	L	I	P	LT	The site has good access to facilities and services and will allow residents to live their lives more locally and may reduce the need to travel. This is particularly important for students who don't have access to their own private car. The site will enhance connections to the Whitechapel North site allocation, Whitechapel High Street, as well as improved accessibility to the north and south and east and west of the site. There is potential for essential services to be stretched by a large increase in population. This may conversely increase the need to travel.
IIA9: Biodiversity & Natural Capital	++	M	D	R	R	P	LT	The site will provide improvements to the green grid should be provided along Whitechapel High Street, Stepney Way, New Road, and Cavell Street, along with good quality connections to surrounding green grid routes. The development should contribute to the delivery of a new and improved green open space (the Green Spine) stretching from Philpot Street to the new civic centre. Where opportunities exist, development will be expected to consolidate and integrate the consented open space with the new Green Spine to maximise its multi-functional use. This will help to significantly increase biodiversity on site.
IIA10: Landscape & Townscape	+/-	H	D/I	L	R/I	P/T	ST/LT	While there are likely to be temporary negative effects to the local landscape and townscape setting during construction, improvements to public realm at this site will enhance the quality and condition of the townscape and landscape. The site will contribute to the delivery of the Green Spine (new green open space) stretching from Philpot Street to the new civic centre, which will help to improve visual amenity.
IIA11: Historic Environment	+/-	H	D/I	L	R/I	P/T	ST/LT	The site has a number of heritage assets within its vicinity and is located within the Mile End Archaeological Priority Area (APA), and partially within the London Hospital Conservation Area that is listed on the Heritage at Risk Register. There are also a number of listed buildings within the site allocation, with the potential for a locally listed building to be brought back into use. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration; however, this is dependent on scale, massing, layout and materials. Excavation works required may result in the loss of buried archaeological assets. The site will aim to protect or enhance heritage assets and mitigate any negative impacts on the setting of the London Hospital Conservation Area.
IIA12: Flooding	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA13: Water Quality	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA14: Air Quality	+/-	H	D/I	R	R/I	P/T	ST/LT	The site has good access to local public transport and community facilities and could (assuming provision meets population demands) allow residents to live their lives more locally and reduce the need for private car usage. Although, given it will be utilised by students, car usage is assumed to be low, regardless of location. However, there will be temporary negative effects on air quality due to dust generation and emissions from

Site Name	Whitechapel South							
Site Capacity	837 (+ 425 student rooms)							
Site Source	Existing allocation							
Site Status	Consented, under construction							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
								construction. There are a number of existing residential receptors surrounding the site which would be negatively impacted during construction, and consideration would need to be given as to how to minimise disruption to the local residents.
IIA15: Climate Change & Resilience	-	H	D	L	I	P	LT	The site is located in an area which has a high overall climate risk and heat risk rating. The addition of more GI and open space will help to reduce the UHI effect. However, not all climate resilience measures are known at this stage.
IIA16: GHG Emissions	+/-	M	D	L	I	P	LT	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. The development is expected to be provided with a heat network and enhanced building fabric is expected to reduce energy consumption.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction to align with circular economy principles.
IIA18: Efficient use of Land	+	H	D	L	I	P	LT	The site includes brownfield land. The site will support high density housing, making the most efficient use of the land. It is assumed that the site will encourage the use of sustainable materials, however full realisation of the details is not yet available.

Site Name	Whitechapel South							
Site Capacity	837 (+ 425 student rooms)							
Site Source	Existing allocation							
Site Status	Consented, under construction							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
Potential Cumulative/Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring site Whitechapel North and Watney Market. The increased demand for services to support the additional population may negatively impact existing local residents if no new facilities are brought forward.</p> <p>IIA1/2: If construction of this site and the Whitechapel North and Watney Market site were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents. It is unknown if the existing population will respond positively to an increased student population in the area.</p> <p>IIA3/4: In combination, this site and the Whitechapel North and Watney Market site will significantly increase the number of businesses and jobs, providing more opportunities for existing and new residents, whilst stimulating the economy and town centre of Whitechapel.</p> <p>IIA5: In combination, this site and the Whitechapel North and Watney Market site will significantly increase housing stock, contributing to the borough's housing target, whilst tackling issues of overcrowding and affordability.</p> <p>IIA10: If construction of this site and the Whitechapel North and Watney Market site were to happen concurrently, there is potential for a temporary negative cumulative effect on the local landscape and townscape setting, as well as the visual amenity. Improvements to the public realm during operation may result in positive cumulative effects in the long term, enhancing the landscape and townscape character.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Whitechapel North and Watney Market site, resulting in a negative residual effect.</p> <p>IIA14: If construction of this site and the Whitechapel North and Watney Market site were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic, a temporary effect. However, if construction timetables occurred in succession, these negative effects could be long term, though less severe.</p> <p>IIA15: The increase in open space GI potentially provided by both this site and the Whitechapel North and Watney Market site is likely to increase resilience to the UHI effect. However, the exact climate resilience measures are not yet known.</p> <p>IIA16: The construction of both this site and the Whitechapel North and Watney Market site is likely to result in a significant cumulative increase in embodied carbon. Embodied carbon could be reduced if circular economy principles are applied and existing materials are repurposed.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Whitechapel North and Watney Market is likely to result in a cumulative increase in waste. Alignment with circular economy principles is not yet confirmed, however this could reduce the negative effect associated with waste generation.</p>							

Site Name	Whitechapel South							
Site Capacity	837 (+ 425 student rooms)							
Site Source	Existing allocation							
Site Status	Consented, under construction							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
Mitigation and Enhancement Measures	<p>IIA1: Housing should deliver at least 35% affordable homes and include provision of housing to meet the needs of all population groups as set out in the Homes for the Community policies.</p> <p>IIA1/2: Further assessment as part of scheme level design, should incorporate an evaluation of the provision of healthcare and education, to ensure that the current supply is sufficient in supporting new communities, and specifically the new student population. The application of Policy CI1 may also help to mitigate impacts on existing community facilities.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4, especially in relation to concerns of noise and ASB potentially generated by the new student population.</p> <p>IIA8/9/11: A lighting strategy should be prepared to minimise light spill onto retained or newly created habitat features, and to avoid interference with the visual amenity of the historic environment.</p> <p>IIA9: In line with Policy BO1 and BO4, the site must achieve a minimum UGF and BNG targets set out within the Plan. Developments must demonstrate BNG and ensure it is measurable against metrics.</p> <p>IIA10: The application of Policy PS8 will help manage adverse effects on the skyline and preserves or enhance visual connections between the public realm and open spaces.</p> <p>IIA11: Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals should be referred to minimise the impacts on the historic environment. The council should also work in partnership with Historic England.</p> <p>IIA12: The application of SuDS techniques (in line with Policy CG7) should be demonstrated by developments to reduce the risk of run-off and surface water flooding.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented on-site during both construction and operation.</p> <p>IIA14/15/16: Development should look to incorporate renewable energy generation methods (in line with Policy CG1), such as solar panels and use of low carbon heat networks, to reduce operational GHG emissions. The site should consider undertaking BREEAM Infrastructure to ensure that sustainability is integral to development.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA16: The application of Policy CG4 will require major developments to assess whole lifecycle carbon emissions and meet best practice embodied carbon emissions targets for building elements. This policy sets out limits for embodied carbon which should be monitored.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4. Development proposals which seek to maximise the efficiency and/or capacity of waste facilities in the borough will be supported in line with Policy RW1.</p>							

Table G-8 - London Metropolitan University

Site Name	London Metropolitan University							
Site Capacity	520 student rooms							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	?	N/A	N/A	N/A	N/A	N/A	N/A	<p>The site has potential to provide at least 520 new rooms for students, which will work positively towards achieving the borough's housing target. However, at this stage, it is not known how many of these units will be accessible and wheelchair adaptable. Overall deprivation is very high, so affordability needs to be a key consideration.</p> <p>The site has good existing access to community services which may help to reduce levels of inequalities by bringing communities closer to these facilities. The site will provide an additional 33,500 sqm of educational floorspace. However, it is unknown whether this will be open to the public.</p> <p>These units will, however, only benefit students and the delivery may compromise the ability to deliver other priorities, in particular affordable housing and facilities which will benefit the wider community. The introduction of student housing could potentially complement the existing mix of uses and the provision of local services, including public transport.</p>
IIA2: Human Health	?	N/A	N/A	N/A	N/A	N/A	N/A	<p>As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and community facilities; however, health deprivation is high and life expectancy is worse than the national average for males. It is not clear whether the current provision will meet the needs of the new student population as well as the wider community. There is limited information of the type of housing and the additional provisions the site may make e.g. public realm, employment, health facilities.</p>
IIA3: Economy & Town Centres	?	N/A	N/A	N/A	N/A	N/A	N/A	<p>The finer details of the development are not yet known. It is assumed that there could be potential to provide a mixed-use development which may include employment space and retail offering, which may help to improve the viability of the town centre. However, there are some businesses located across the site and it is not clear whether these will be re-provisioned elsewhere and whether existing business owners will be compensated and/or given opportunities to buy or rent new units. Affordability of new units may be a key concern.</p>
IIA4: Employment & Skills	?	N/A	N/A	N/A	N/A	N/A	N/A	<p>The site is well located to existing employment areas including the City Fringe Activity Area and the Central Activity Zone. This will likely improve access for residents to employment opportunities. There are some businesses located across the site and it could result in a net loss of jobs. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.</p>
IIA5: Housing	?	N/A	N/A	N/A	N/A	N/A	N/A	<p>The site has potential to provide at least 520 new rooms for students, which whilst this work positively towards achieving the borough's housing target, it will only benefit students and may compromise the ability to deliver affordable housing.</p>

Site Name	London Metropolitan University							
Site Capacity	520 student rooms							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA6: Crime & Safety	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is currently located within an area of high crime deprivation (top 10-20% of neighbourhoods nationally). The provision of student accommodation has potential for adverse effects on the amenity of neighbouring residents and businesses, particularly in relation to noise and anti-social behaviour. There is limited detail on whether designing out crime principles will be applied as part of the development or whether there will be improvements to the public realm, to support crime reductions.
IIA7: Sustainable Transport	+	M	D	L	I	P	LT	Access is readily available to the site via public transport through bus, overground, underground and rail. This is reflected by the site having a PTAL score of 6b. The site will help to improve walking and cycling routes to the underground stations at Aldgate and Aldgate East, Whitechapel High Street and to the north of the site at Wentworth Street.
IIA8: Accessibility	+	M	D	L	I	P	LT	The existing site has good access to facilities and services and will allow residents to live their lives more locally and may reduce the need to travel. The site will help to improve walking and cycling routes to the underground stations at Aldgate and Aldgate East, Whitechapel High Street and to the north of the site at Wentworth Street. There is potential for essential services to be stretch by a large increase in population. This may conversely increase the need to travel.
IIA9: Biodiversity & Natural Capital	+	M	D	R	R	P	LT	Due to the small size of this site, it cannot fulfil the requirement of policy DV8(1)(e) to provide 0.4ha of publicly accessible open space. Development on the site will aim instead to provide smaller 'pocket parks' of publicly accessible open space and an improved public realm. Although it may not achieve a minimum 2.5 biodiversity unit (BU) per hectare or 30% gain (whichever is higher) compared with the pre-development baseline on site, there is potential for the addition of some small habitats.
IIA10: Landscape & Townscape	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is located within two LVMF areas - Westminster Pier to St Paul's Cathedral and King Henry VIII's Mound to St Paul's Cathedral. Development will need to be sensitive to these views and avoid obstruction and enhance the setting. There are likely to be temporary, negative effects to the local landscape and townscape setting during construction. There is also potential for negative effects to arise depending on the height of developments at the site. Whilst development should be stepped down towards residential buildings, there is potential for the height of developments in the southwestern corner and north of the site to negatively affect the local landscape and views. Improved public realm and active frontages should be provided at principal entrances to key buildings, including along the Whitechapel High Street frontage, Goulston Street, and Old Castle Street. Due to the small size, the site aims to provide small 'pocket parks' of publicly accessible open space. This will help to enhance the quality and condition of the townscape and landscape within the area.

Site Name	London Metropolitan University							
Site Capacity	520 student rooms							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA11: Historic Environment	+/-	H	D/I	L	R/I	P/T	ST/LT	The site has a number of heritage assets within its vicinity and is located within the Aldgate and Portsoken APA, and partially located opposite the Wentworth Street and Whitechapel High Street Conservation Areas. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets. The site will aim to protect or enhance heritage assets and mitigate any negative impacts. This includes ensuring no negative impact on the backdrop of the view of the Tower of London, and the adaptive re-use of existing locally listed buildings to be explored.
IIA12: Flooding	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA13: Water Quality	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA14: Air Quality	+/-	L	D/I	L	R	P/T	ST/LT	The site has good access to local public transport and community facilities and could (assuming provision meets population demands), allow residents to live their lives more locally and reduce the need for private car usage. Although, given it will be utilised by students, car usage is assumed to be low, regardless of location. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction. There are a number of existing residential receptors surrounding the site which would be negatively impacted during construction, and consideration would need to be given as to how to minimise disruption to the local residents.
IIA15: Climate Change & Resilience	-	M	D	L	I	P	LT	Overall climate risk is medium, and the overall heat risk is high. Development specific climate resilience measures are not known at this stage. Measures to reduce the risk of overheating will need to be considered. However, it is assumed that the site will adhere to the London Plan, Policy G5 – Urban Greening. This will provide opportunities for increased climate resilience at the site.
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. At this stage, it is not clear whether the development will utilise renewable energy sources or low carbon heat networks once operational. Further design details are required.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	+	H	D	R	I	P	LT	The development is located on previously developed land and will support the protection of the borough's green spaces. The site will support high density student housing which will help to make the best use of the site. It is not clear whether the site will encourage sustainable use of materials.

Site Name	London Metropolitan University							
Site Capacity	520 student rooms							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
Potential Cumulative/Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring site Brick Lane and Pedley Street.</p> <p>IIA1/2: If construction of this site and the Brick Lane and Pedley Street site were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA1/6: The site is located in close proximity to existing student accommodation on Whitechapel High St and Leman St which in combination with this site may cumulatively have adverse effects on the amenity of neighbouring residents and businesses, particularly in relation to noise and anti-social behaviour.</p> <p>IIA3/4: In combination, this site and the Brick Lane and Pedley Street site will significantly increase the number of business and jobs.</p> <p>IIA10: There is potential for cumulative negative effects on LVMF areas in combination with neighbouring site Brick Lane and Pedley Street.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Brick Lane and Pedley Street site.</p> <p>IIA14: If construction of this site and the Brick Lane and Pedley Street site were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA15: The increase in GI provided by both this site and the Brick Lane and Pedley Street site is likely to increase resilience to the UHI effect.</p> <p>IIA16: The construction of both this site and the Brick Lane and Pedley Street site is likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Brick Lane and Pedley Street is likely to result in a cumulative increase in waste.</p>							
Mitigation and Enhancement Measures	<p>IIA1: Housing should deliver at least deliver a minimum of 50% of units as affordable student accommodation in line with policy HF6.</p> <p>IIA1: The site should provide 10% of student rooms which are wheelchair accessible and adaptable, including access to a wheelchair-accessible shower room for independent use in line with policy HF6.</p> <p>IIA1/2: Further assessment as part of scheme level design, should incorporate an evaluation of the provision of healthcare, to ensure that the current supply is sufficient in supporting new communities. The application of Policy CI1 may also help to mitigate impacts on existing community facilities.</p> <p>IIA3/4: The loss of businesses should be avoided, however, in line with policy EG4 it is assumed that there will be no net loss in employment space. Where businesses will be lost, discussions with owners should be undertaken to ensure suitable alternative locations are identified. Alternative units should where possible be equivalent in size, layout, rent and connectivity to the existing site and considered suitable by the occupier.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA9: In line with policy BO1, the site must achieve a minimum urban greening factor UGF and BNG targets (2.5 biodiversity units per hectare or a 30% gain in habitat value for wildlife) set out within the Plan.</p> <p>IIA10: Compliance with the requirements of the London View Management Framework is essential.</p> <p>IIA11: Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals should be referred to minimise the impacts on the historic environment. The council should also work in partnership with Historic England.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of policy CG9 will help to ensure that measures to improve air quality should be implemented on-site during both construction and operation.</p> <p>IIA14/15/16: Development should look to incorporate renewable energy generation methods (in line with Policy CG1), such as solar panels and use of low carbon heat networks, to reduce operational GHG emissions. The site should consider undertaking BREEAM Infrastructure to ensure that sustainability is integral to development.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with policy DV4.</p>							

Whitechapel North

Table G-9 - Whitechapel North

Site Name	Whitechapel North							
Site Capacity	1225							
Site Source	New allocation							
Site Status	New allocation							
I/A Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
I/A1: Population & Equalities	++	M	D	L	I	P	LT	The site will provide 1,225 new homes, which will work positively towards achieving the borough's housing target. At this stage, it is not known how many of these units will be accessible and wheelchair adaptable. The ward sits in the third most deprived decile; therefore, affordability needs to be a key consideration. The site has good existing access to community services which may help to reduce levels of inequalities by bringing communities closer to these facilities. Swanlea Secondary School sits on the border of the site, facilitating access to education. The site will enhance the NHS primary healthcare facility, re-provide and enhance the leisure centre, and provide a new community facility. At this location, issues of overcrowding are lower than the borough average. The site has good existing access to community services and will likely reduce levels of inequalities and provide new facilities which will help to bring communities together and support a changing demographic.
I/A2: Human Health	++	M	D	L	I	P	LT	As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and community facilities, including Whitechapel Sports Centre and a pharmacy. The site will enhance the NHS primary healthcare facility, re-provide the leisure centre, and provide a new community facility.
I/A3: Economy & Town Centres	++	H	D	R	I	P	LT	The site is currently located near to the City Fringe Activity Area and Central Activity Zone, as well as within part of Whitechapel's bustling town centre and thriving night-time economy. The new town hall in Whitechapel and permanent Residents' Hub supports town centre revival. The site lies within Whitechapel district centre, with both Whitechapel High Street and Whitechapel Market designated as Conservation Areas. The High Street is characterised by small-scale retail and industrial enterprises, and the Market is one of the borough's main local shopping areas. The site will provide a minimum of 4,500sm of retail space which will help to improve the viability of the town centre. The addition of market facilities as part of the proposed site, including the provision of parking, will help to provide further employment opportunities within the area as well as improving social cohesion of the town centre.
I/A4: Employment & Skills	++	H	D	R	I	P	LT	The site is well located to existing employment areas including the City Fringe Activity Area and the Central Activity Zone. This will likely improve access for residents to employment opportunities. The proposed site will provide at least 4,500sqm of retail space which will increase employment opportunities. There are some businesses located across the site and it could result in a net loss of jobs. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.

Site Name	Whitechapel North							
Site Capacity	1225							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA5: Housing	++	H	D	L	I	P	LT	The provision of 1,225 new homes will help towards meeting LBTH's housing target. It is assumed that the site will meet the minimum 35% target of affordable homes, however, the size, type and tenure of housing is not currently known.
IIA6: Crime & Safety	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is currently located within an area of high crime deprivation (top 10-20% of neighbourhoods nationally). There is limited detail on whether designing out crime principles will be applied as part of the development or whether there will be improvements to the public realm, to support crime reductions.
IIA7: Sustainable Transport	+	M	D	L	I	P	LT	Access is readily available to the site via public transport through bus, overground, underground and rail, with the Elizabeth Line station situated beneath the site. This is reflected by the site having PTAL scores ranging between 6a and 6b. Active transport is also encouraged via the London Cycle Network, central within the site. The site will enhance connections to the Whitechapel South site allocation Whitechapel High Street, Vallance Road, and Brady Street, along with good quality onward connections to surrounding green grid routes such as that along Old Montague Street. Parking for the re-provided supermarket will be provided in a way which minimises the negative impact on the public realm and on primary routes for pedestrians and cyclists.
IIA8: Accessibility	+	M	D	L	I	P	LT	The existing site has good access to facilities and services and will allow residents to live their lives more locally and may reduce the need to travel. The site will enhance connections to the Whitechapel South site allocation Whitechapel High Street, Vallance Road, and Brady Street, along with good quality onward connections to surrounding green grid routes such as that along Old Montague Street. There is potential for essential services to be stretch by a large increase in population. This may conversely increase the need to travel.
IIA9: Biodiversity & Natural Capital	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is located away from any designated sites, however, there is potential for some adverse effects on some neighbouring small-scale habitats such as deciduous woodland during construction. At this stage BNG is assumed but whether the site meets the BNG benchmark of 2.5 biodiversity unit (BU) per hectare or 30% gain (whichever is higher) is unknown
IIA10: Landscape & Townscape	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be temporary negative effects to the local landscape and townscape setting during construction. At this stage the design details are unknown, however, it is assumed that the development likely improves townscape and landscape setting. There is also potential for negative effects to arise depending on the height of developments at the site. Whilst development should be stepped down surrounding the tallest points, there is potential for the height of developments to negatively affect the local landscape and views. However, building height is likely to be determined by individual design and is currently unknown.
IIA11: Historic Environment	?	N/A	N/A	N/A	N/A	N/A	N/A	The site has a number of heritage assets within its vicinity is predominantly located within the London to Colchester Roman Road TH APA, and partially within the Whitechapel Market Conservation Area. There are two Grade II listed buildings within the site allocation. During

Site Name	Whitechapel North							
Site Capacity	1225							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
								construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets. The site will aim to protect or enhance heritage assets and mitigate any negative impacts. This includes the repairing and incorporating the locally listed building to the north of the Vallence Road within the development.
IIA12: Flooding	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA13: Water Quality	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA14: Air Quality	+/-	H	D/I	R	R/I	P/T	ST/LT	The site has good access to local public transport and community facilities and could (assuming provision meets population demands) allow residents to live their lives more locally and reduce the need for private car usage. However, there will also be a temporary negative effect on air quality due to dust generation and emissions from construction of the re-provisioned community facilities. There are a number of existing residential receptors surrounding the site which would be negatively impacted during construction, and consideration would need to be given as to how to minimise disruption to the local residents.
IIA15: Climate Change & Resilience	--	H	D	L	I	P	LT	The site is located in an area which has a high overall climate risk and heat risk rating. Development specific climate resilience measures are not known at this stage. Measures to reduce the risk of overheating will need to be considered. However, it is assumed that the site will adhere to the London Plan, Policy G5 – Urban Greening. This will provide opportunities for increased climate resilience at the site.
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. At this stage, it is not clear whether the development will utilise renewable energy sources or low carbon heat networks once operational. Further design details are required.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	+	H	D	R	I	P	LT	The development is predominantly on previously developed land will support the protection of the borough's green spaces. The site will support 1,225 new homes which will help to make the best use of the site. It is not clear whether the site will encourage sustainable use of materials.

Site Name	Whitechapel North							
Site Capacity	1225							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring site Whitechapel South and Watney Market.</p> <p>IIA1/2: If construction of this site and the Whitechapel South and Watney Market site were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Whitechapel South and Watney Market site will significantly increase the number of businesses and jobs.</p> <p>IIA5: In combination, this site and the Whitechapel South and Watney Market site will significantly increase housing stock.</p> <p>IIA10: If construction of this site and the Whitechapel South and Watney Market site were to happen concurrently, there is potential for a negative cumulative effect on the local landscape and townscape setting, as well as the visual amenity.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Whitechapel South and Watney Market site.</p> <p>IIA14: If construction of this site and the Whitechapel South and Watney Market site were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA15: The increase in GI provided by both this site and the Whitechapel South and Watney Market site is likely to increase resilience to the UHI effect.</p> <p>IIA16: The construction of both this site and the Whitechapel South and Watney Market site is likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Whitechapel South and Watney Market is likely to result in a cumulative increase in waste.</p>							

Site Name	Whitechapel North							
Site Capacity	1225							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
Mitigation and Enhancement Measures	<p>IIA1: Housing should deliver at least 35% affordable home and include provision of housing to meet the needs of all population groups as set out in the Homes for the Community policies.</p> <p>IIA1/2: Further assessment as part of scheme level design, should incorporate an evaluation of the provision of healthcare and education, to ensure that the current supply is sufficient in supporting new communities. The application of Policy CI1 may also help to mitigate impacts on existing community facilities.</p> <p>IIA3/4: The loss of businesses should be avoided, however, in line with policy EG4 it is assumed that there will be no net loss in employment space. Where businesses will be lost, discussions with owners should be undertaken to ensure suitable alternative locations are identified. Alternative units should where possible be equivalent in size, layout, rent and connectivity to the existing site and considered suitable by the occupier.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA8/9/11: A lighting strategy should be prepared to minimise light spill onto retained or newly created habitat features, and to avoid interference with the visual amenity of the historic environment.</p> <p>IIA9: In line with Policy BO1 and BO4, the site must achieve a minimum UGF and BNG targets set out within the Plan (2.5 biodiversity units per hectare or a 30% gain in habitat value for wildlife). Developments must demonstrate BNG and ensure it is measurable against metrics.</p> <p>IIA10: The application of Policy PS8 will help manage adverse effects on the skyline and preserves or enhance visual connections between the public realm and open spaces. Compliance with the requirements of the London View Management Framework and World Heritage Site Management Plans is essential.</p> <p>IIA11: Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals should be referred to minimise the impacts on the historic environment. The council should also work in partnership with Historic England.</p> <p>IIA12: The application of SuDS techniques (in line with Policy CG7) should be demonstrated by developments to reduce the risk of run-off and surface water flooding.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of policy CG9 will help to ensure that measures to improve air quality should be implemented on-site during both construction and operation.</p> <p>IIA14/15/16: Development should look to incorporate renewable energy generation methods (in line with Policy CG1), such as solar panels and use of low carbon heat networks, to reduce operational GHG emissions. The site should consider undertaking BREEAM Infrastructure to ensure that sustainability is integral to development.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA16: The application of Policy CG4 will require major developments to assess whole lifecycle carbon emissions and meet best practice embodied carbon emissions targets for building elements. This policy sets out limits for embodied carbon which should be monitored.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4. Development proposals which seek to maximise the efficiency and/or capacity of waste facilities in the borough will be supported in line with Policy RW1.</p>							

Brick Lane and Pedley Street

Table G-10 - Brick Lane and Pedley Street

Site Name	Brick Lane and Pedley Street							
Site Capacity	800							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	+	M	D	L	I	P	LT	<p>The proposed site will provide the 800 homes as well as up to 33,000sqm of non-residential floorspace to include a five-storey office building with ground floor and first floor commercial units and two storey basements for provision of plant, servicing, storage and a gym. This will work positively towards achieving the borough's housing target It is currently unknown how many of these units will be affordable and whether there will be provision made for wheelchair adaptable homes. Overall deprivation is very high, so affordability needs to be a key consideration.</p> <p>The site has good existing access to community services which may help to reduce levels of inequalities by bringing communities closer to these facilities. The proposed site will also provide new small public open spaces, such as pocket parks, and improvements to the public realm.</p>
IIA2: Human Health	+	M	D	L	I	P	LT	<p>As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and community facilities; however, health deprivation is high and life expectancy is worse than the national average for males. It's unlikely that the current provision will meet the needs of the new population. There is limited information of the type of housing and additional provisions, however the site will provide new community facilities, enhancements to the public realm and improved connectivity to Allen Gardens, the Truman Brewery Estate and Shoreditch High Street station.</p>
IIA3: Economy & Town Centres	++	H	D	L	I	P	LT	<p>The site is currently located near to the City Fringe Activity Area and Central Activity Zone, as well as being close to Spitalfields bustling town centre, market and thriving night-time economy. The site will provide a minimum of 33,000sqm of non-residential floorspace to include a five-storey office building with ground floor and first floor commercial units and two storey basements for provision of plant, servicing, storage and a gym. The site will improve and enhance connectivity between business clusters and the housing market and improve town centre viability.</p>
IIA4: Employment & Skills	++	H	D	L	I	P	LT	<p>The site is well located to existing employment areas including the City Fringe Activity Area and the Central Activity Zone. The site will provide a minimum of 33,000sqm of non-residential floorspace. This will likely improve access for residents to employment opportunities. There are a number of small businesses located across the site and it could result in a net loss of jobs. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.</p>

Site Name	Brick Lane and Pedley Street							
Site Capacity	800							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA5: Housing	+	M	D	L	I	P	LT	The provision of 800 new homes will help towards meeting LBTH's housing target. It is assumed that the site will meet the minimum 35% target of affordable homes, however, the size, type and tenure of housing is not currently known.
IIA6: Crime & Safety	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is currently located within an area of high crime deprivation (top 10-20% of neighbourhoods nationally). There is limited detail on whether designing out crime principles will be applied as part of the development or whether there will be improvements to the public realm, to support crime reductions.
IIA7: Sustainable Transport	+	M	D	L	I	P	LT	Access is readily available to the site via public transport through bus, overground, underground and rail. This is reflected by the site having a PTAL scores ranging between 5 and 6b. Improvements to walking and cycling connections will be provided to connect up Allen Gardens, the Truman Brewery estate, and Shoreditch High Street station. The site will also improve north-south and east-west connections through the existing large number of street bocks currently within the site, such as the Grey Eagle Street car park, the Truman Brewery estate, and the railway lines in the north of the site to improve connectivity.
IIA8: Accessibility	+	M	D	L	I	P	LT	The existing site has good access to facilities and services and will allow residents to live their lives more locally and may reduce the need to travel. Improvements to walking and cycling connections and wayfinding will be provided to connect up Allen Gardens, the Truman Brewery estate, and Shoreditch High Street station. The site will also improve north-south and east-west connections through the existing large number of street bocks currently within the site, such as the Grey Eagle Street car park, the Truman Brewery estate, and the railway lines in the north of the site to improve connectivity. There is potential for essential services to be stretch by a large increase in population. This may conversely increase the need to travel.
IIA9: Biodiversity & Natural Capital	-	M	D	L	R/I	P/T	ST/LT	Allen Gardens falls within the Site boundary. Whilst this is designated as an area of open space it is likely to contain some small-scale habitats. There is potential for construction at the site to result in disturbance to this site, local habitat and species, through the inclusion of public open spaces and pocket parks. At this stage BNG is assumed but whether the site BNG benchmark of 2.5 biodiversity unit (BU) per hectare or 30% gain (whichever is higher) is unknown
IIA10: Landscape & Townscape	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is located within two LVMF areas - Westminster Pier to St Paul's Cathedral and King Henry VIII's Mound to St Paul's Cathedral. Development will need to be sensitive to these views and avoid obstruction and enhance the setting. There are likely to be temporary negative effects to the local landscape and townscape setting during construction. There is also potential for negative effects to arise depending on the height of developments at the site. Whilst development should be stepped down on the Fleet Street Hill site, there is potential for the height of developments to negatively affect the local landscape and views. The site will provide improvements to the public realm through the provision of new small public open space. Improvements to the public realm in this area will also include additional street lighting, wayfinding, and street furniture, to create a sense of place.

Site Name	Brick Lane and Pedley Street							
Site Capacity	800							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA11: Historic Environment	+/-	H	D/I	L	R/I	P/T	ST/LT	The site has a number of heritage assets within its vicinity and is located within an archaeological priority area, and partially located in the Brick Lane and Fournier Street and Whitechapel High Street Conservation Areas. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets. The impact of development on nearby heritage assets and conservation areas will be considered. There is potential that tall buildings may negatively impact the setting of the conservation area, however this is to be considered within development. The site will aim to protect and enhance heritage assets, in particular the character of the Fournier Street Conservation Area should be preserved and, where possible, enhanced.
IIA12: Flooding	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA13: Water Quality	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA14: Air Quality	+/-	L	D/I	L	R	P/T	ST/LT	The site has good access to local public transport and community facilities and could (assuming provision meets population demands) allow residents to live their lives more locally and reduce the need for private car usage. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction. There are a number of existing residential receptors surrounding the site which would be negatively impacted during construction, and consideration would need to be given as to how to minimise disruption to the local residents.
IIA15: Climate Change & Resilience	-	H	D	L	I	P	LT	The site is located in an area which has a medium to high overall climate risk and heat risk rating. Development specific climate resilience measures are not known at this stage. Measures to reduce the risk of overheating will need to be considered. However, it is assumed that the site will adhere to the London Plan, Policy G5 – Urban Greening. This will provide opportunities for increased climate resilience at the site.
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. At this stage, it is not clear whether the development will utilise renewable energy sources or low carbon heat networks once operational. Further design details are required.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.

Site Name	Brick Lane and Pedley Street							
Site Capacity	800							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA18: Efficient use of Land	+	H	D	L	I	P	LT	The development is predominantly on previously developed land and will support high density housing, making the most efficient use of the land. It is assumed that the site will encourage the use of sustainable materials, however full realisation of the details is not yet available.
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring site Bishopsgate Goods Yard.</p> <p>IIA1/2: If construction of this site and the Bishopsgate Goods Yard site were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Bishopsgate Goods Yard site will significantly increase the number of business and jobs.</p> <p>IIA5: In combination, this site and the Bishopsgate Goods Yard site will significantly increase housing stock.</p> <p>IIA10: There is potential for cumulative negative effects on LVMF areas in combination with neighbouring site Bishopsgate Goods Yard.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Bishopsgate Goods Yard site.</p> <p>IIA14: If construction of this site and the Bishopsgate Goods Yard site were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA16: The construction of both this site and the Bishopsgate Goods Yard site is likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Bishopsgate Goods Yard is likely to result in a cumulative increase in waste.</p>							
Mitigation and Enhancement Measures	<p>IIA1: Housing should deliver at least 35% affordable homes and include provision of housing to meet the needs of all population groups as set out in the Homes for the Community policies.</p> <p>IIA1/2: Further assessment as part of scheme level design, should incorporate an evaluation of the provision of healthcare and education, to ensure that the current supply is sufficient in supporting new communities. The application of Policy C11 may also help to mitigate impacts on existing community facilities.</p> <p>IIA3/4: The loss of businesses should be avoided, however, in line with Policy EG4 it is assumed that there will be no net loss in employment space. Where businesses will be lost, discussions with owners should be undertaken to ensure suitable alternative locations are identified. Alternative units should where possible be equivalent in size, layout, rent and connectivity to the existing site and considered suitable by the occupier.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA9: Phase 1 habitat surveys should be undertaken to determine if there are any habitats/ species residing in Allen Gardens.</p> <p>IIA9: In line with policy BO1, the site must achieve a minimum UGF and BNG targets set out within the Plan (2.5 biodiversity units per hectare or a 30% gain in habitat value for wildlife).</p> <p>IIA10: The application of Policy PS8 will help manage adverse effects on the skyline and preserves or enhance visual connections between the public realm and open spaces Compliance with the requirements of the London View Management Framework is essential.</p> <p>IIA11: Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals should be referred to minimise the impacts on the historic environment. The council should also work in partnership with Historic England.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of policy CG9 will help to ensure that measures to improve air quality should be implemented on-site during both construction and operation.</p> <p>IIA14/15/16: Development should look to incorporate renewable energy generation methods (in line with Policy CG1), such as solar panels and use of low carbon heat networks, to reduce operational GHG emissions. The site should consider undertaking BREEAM Infrastructure to ensure that sustainability is integral to development.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with policy DV4.</p>							

Bow Common Lane

Table G-11 - Bow Common Lane

Site Name	Bow Common Lane							
Site Capacity	1000							
Site Source	New allocation							
Site Status	Consented							
I/A Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
I/A1: Population & Equalities	+/-	H	D	R	I	P	LT	The site will provide 1000 new homes, helping towards meeting LBTH's housing target. The ward sits in the second most deprived decile, meaning the high proportion of affordable housing at this site has potential to bring positive effects due to the ward's high levels of deprivation. The further construction of tall buildings, however, will exacerbate existing problems of overcrowding at this site. Overcrowding is significant at this location, with 20605p/h compared to the borough average of 15,695p/h. The provision of communal amenity space under this development will be beneficial to residents. There are also plans to develop a new sixth form centre, provide new retail and employment opportunities, and bring about improvement to the public realm through the enhancement of Bow Common.
I/A2: Human Health	+	H	D	R	I	P	LT	As well as housing, the site includes 2,500sqm of new retail and employment opportunities, new cultural and community facilities, and improvements to open space and public realm. The sites provision of new facilities and enhancement of existing spaces will improve physical and mental health and wellbeing and reduce levels of loneliness. Tall buildings shortcoming to provide a sufficient quantity of open space for all residents may limit the sites potential to provide accessible greenspace to all.
I/A3: Economy & Town Centres	++	H	D	R	I	P	LT	As of present, the site is not located in or near a Central Activity Zone or Primary Shopping Area. As such, the developments provision of non-residential floor space such as those which support small to medium enterprise; including creative industries and retail will be highly beneficial to the local economy.
I/A4: Employment & Skills	++	H	D	R	I	P	LT	The sites inclusion of 2,500sqm employment space (Class B1) as well as retail will take the form of flexible commercial space, enabling a wide range of small to medium enterprises to set up here. This will generate a mix of commercial activity across the area that will in turn create a range of employment opportunities. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
I/A5: Housing	++	H	D	R	I	P	LT	The provision of 1000 new homes will help towards meeting LBTH's housing target, including the provision of affordable housing At least 35% of all units will be affordable and 10% will include wheelchair accessible and adaptable homes. The size, type and tenure of housing takes into account different groups in the community including, but not limited to, those who require affordable housing, families with children, older people and people with disabilities.

Site Name	Bow Common Lane							
Site Capacity	1000							
Site Source	New allocation							
Site Status	Consented							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA6: Crime & Safety	+	M	D	R	I	P	LT	The site is currently located within an area of high crime deprivation (top 10-20% of neighbourhoods nationally). There is limited detail on whether designing out crime principles will be applied as part of the development, however, developing the land from its existing use and providing housing and public realm improvements is likely to help to reduce crime and create a safer community.
IIA7: Sustainable Transport	+	M	D	R	I	P	LT	Despite average PTAL scores (2-3) the site has relatively good access to public transport, with bus stops located in close proximity to the site on Bow Common Lane and Devons Road. Providing better wayfinding may also help to encourage more people to walk and cycle.
IIA8: Accessibility	++	H	D	R	I	P	LT	The site already includes a range of facilities, and the proposal includes further provision for community facilities and services. Improvements to wayfinding across the site will help to improve access to all groups inclusively. The site will allow residents to live their lives more locally and reduce the need to travel.
IIA9: Biodiversity & Natural Capital	+/-	H	D/I	R	I	P	LT	The site sits immediately south-adjacent to Tower Hamlets Cemetery Park Local Nature Reserve (LNR) and SINC, which contains priority habitat of 'created' chalk grassland, a habitat for particular invertebrates, including the Priority Species Small Blue butterfly. The addition of tall buildings at this Site will likely negatively affect the biodiversity present through overshading and increased visitors to the park. On-site landscaping and green roofs proposed under this development are expected to provide a significant net gain in biodiversity, outweighing any potential adverse effects via overshading.
IIA10: Landscape & Townscape	+	M	D	R	I	P	LT	While there are likely to be temporary negative effects to the local landscape and townscape setting during construction, improvements to public realm at this site will enhance the quality and condition of the townscape and landscape.
IIA11: Historic Environment	-	H	D/I	R	R/I	P/T	ST/LT	The site does not lie within a conservation area or contain any statutory listed buildings. Tower Hamlets Cemetery Park located north adjacent to the Site comprises a Conservation Area and an Archaeological Priority Area. The site seeks the demolition of the locally listed building present in this area. During construction there is also potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets.
IIA12: Flooding	+	L	I	L	R	T	MT	The use of rainwater harvesting could help to slow the flow of stormwater and help prevent floods, particularly overflows from sewers.
IIA13: Water Quality	+	L	I	L	R	T	MT	Rain and stormwater harvesting can also lessen the environmental impact of urbanisation on stormwater drainage systems and receiving water bodies, particularly as surface water run-off from heavy rainfall collects pollutants such as oil and trace metals.

Site Name	Bow Common Lane							
Site Capacity	1000							
Site Source	New allocation							
Site Status	Consented							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA14: Air Quality	+/-	L	D/I	L	R	P/T	ST/LT	The site outlines a car free development other than seven accessible parking spaces which will reduce private vehicle usage and encourage public transport usage amongst residents. Public realm improvements may also include GI which could reduce exposure to the effects of urban air pollution. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction. There are a number of existing residential receptors surrounding the site which would be negatively impacted during construction, and consideration would need to be given as to how to minimise disruption to the local residents.
IIA15: Climate Change & Resilience	+	M	D	L	I	P	LT	The site is located in an area which has a medium overall climate risk and heat risk rating and is likely to have diminishing resilience to climate change. The addition of more GI including green roofs and open space will help to reduce the UHI effect. It is expected that measures for SuDS and minimising overheating will be delivered through the design of buildings and public spaces. It is assumed that the site will adhere to the London Plan, Policy G5 – Urban Greening. This will provide opportunities for increased climate resilience at the site. In line with the Integrated Water Management Plan for the Isle of Dogs and South Poplar, opportunities for greywater re-use and rainwater harvesting are likely to be investigated which will help with water quantity issues during periods of drought.
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. The proposed development seeks to implement energy efficiency measures and renewable energy technologies to deliver CO ₂ emission reductions. Further design details are required to fully assess the GHG reduction potential of these measures.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	++	H	D	R	I	P	LT	The development proposes to replace a vacant brownfield, former utilities site and will support the protection of the borough's green spaces. The sites function as high density housing will help to make the best use of the space.

Site Name	Bow Common Lane							
Site Capacity	1000							
Site Source	New allocation							
Site Status	Consented							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with nearby site Devon Road.</p> <p>IIA1/2: If construction of this site and the Devon Road site were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Devon Road site will significantly increase the number of business and jobs.</p> <p>IIA10: In combination with construction at the Devon Road site, temporary adverse impacts on landscape and townscape during the construction phase will be more severe in extent.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Devon Road site.</p> <p>IIA14: If construction of this site and the Devon Road site were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA15: The increase in GI provided by both this site and the Devon Road site is likely to increase resilience to the UHI effect.</p> <p>IIA16: The construction of both this site and the Devon Road site is likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Devon Road is likely to result in a cumulative increase in waste.</p>							
Mitigation and Enhancement Measures	<p>IIA1/2: Further assessment as part of scheme level design, should incorporate an evaluation of the provision of healthcare and education, to ensure that the current supply is sufficient in supporting new communities. The application of Policy C11 may also help to mitigate impacts on existing community facilities.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA9: In line with Policy BO1, the site must achieve a minimum UGF and BNG targets set out within the Plan.</p> <p>IIA10: The application of Policy PS8 will help preserves or enhance visual connections between the public realm and open spaces.</p> <p>IIA11: Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals should be referred to minimise the impacts on the historic environment. The council should also work in partnership with Historic England.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented on-site during both construction and operation.</p> <p>IIA14/15/16: Development should look to incorporate renewable energy generation methods (in line with Policy CG1), such as solar panels and use of low carbon heat networks, to reduce operational GHG emissions. The site should consider undertaking BREEAM Infrastructure to ensure that sustainability is integral to development.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4.</p>							

Table G-12 - Chrisp Street

Site Name	Chrisp Street							
Site Capacity	650							
Site Source	Existing allocation							
Site Status	Consented, Amendments under consideration							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	++	H	D	R	I	P	LT	The site will provide 650 new homes, including the re-provision of 124 affordable residential units. The ward sits in the second most deprived decile, meaning the high proportion of affordable housing at this site has potential to bring positive effects due to the ward's high levels of deprivation. The provision of 20,000sqm of communal amenity space under this development will be beneficial to residents. There are also plans to increase commercial floorspace, bringing about new retail and employment opportunities, and provide new public realm, landscaping works and child play spaces.
IIA2: Human Health	++	H	D	R	I	P	LT	As well as housing, the site includes new retail and employment opportunities, extension of existing multi-use spaces for community usage, the provision of new child play spaces and improvements to open space and public realm. The sites provision of new facilities and enhancement of existing spaces will improve physical and mental health and wellbeing and reduce levels of loneliness.
IIA3: Economy & Town Centres	++	H	D	R	I	P	LT	The site will encourage a mix of town centre uses including evening and night-time use and a market which will boost the overall vibrancy of Chrisp Street. Enhancements to the existing district centre and market will generate significant new employment and additional annual spend within the area, boosting the local economy.
IIA4: Employment & Skills	++	H	D	R	I	P	LT	The sites inclusion of employment space (Class B1) as well as retail will take the form of flexible commercial space, enabling a wide range of small to medium enterprises to set up here. This will generate a mix of commercial activity across the area that will in turn create a range of employment opportunities. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
IIA5: Housing	+	H	D	R	I	P	LT	The provision of 650 new homes will help towards meeting LBTH's housing target. This will include the re-provision of 124 affordable units which will be beneficial to low-income groups in the area. The development recognises that homes must be designed specifically to meet the needs of disabled people but does not set a specific target of what percentage of new units will be wheelchair accessible and adaptable.
IIA6: Crime & Safety	+	M	D	R	I	P	LT	The site is currently located within an area of high crime deprivation (top 10-20% of neighbourhoods nationally). There is limited detail on whether designing out crime principles will be applied as part of the development, however, developing the land from its existing use and providing housing and public realm improvements is likely to help to reduce crime and create a safer community.

Site Name	Chrisp Street							
Site Capacity	650							
Site Source	Existing allocation							
Site Status	Consented, Amendments under consideration							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA7: Sustainable Transport	+	H	D	R	I	P	LT	The site has good accessibility to sustainable transport, with access to numerous bus tops on Chrisp Street and East India Dock Road, as well as All Saint DLR Station located 50m south east of the site and Langdon Park DLR Station located 160m north of the site. This will help to encourage the new population to seek sustainable transport alternatives. Improving accessibility to services will also help to reduce the need to travel.
IIA8: Accessibility	+	H	D	R	I	P	LT	The site already includes a range of facilities, and the proposal includes further provision for community facilities and services. The site will allow residents to live their lives more locally and reduce the need to travel.
IIA9: Biodiversity & Natural Capital	+	L	D	L	R	P	MT	The site is located away from any greenspace or designated sites, however, there is potential for some adverse effects on some small-scale habitats and species during construction. However, the site will provide a significant increase in greenspace and GI, which could help to provide new small-scale habitats.
IIA10: Landscape & Townscape	+	M	D	R	I	P	LT	While there are likely to be temporary negative effects to the local landscape and townscape setting during construction, improvements to public realm at this Site will enhance the quality and condition of the townscape and landscape.
IIA11: Historic Environment	+	H	D	R	I	P	LT	The site sits within an Archaeological Priority Area. The developments intention to retain and enhance the existing heritage assets present at the site including the Festival of Britain housing and retail provision at ground floor level, the Clock Tower and the original 1950's Gibberd masterplan for the market will ensure the site does not damage the local heritage setting of the area
IIA12: Flooding	?	N/A	N/A	N/A	N/A	N/A	N/A	The site sits between an area of flood zone 2 and flood zone 3. The site gives limited detail as to how it intends to manage the flood risk of the area. The inclusion of rainwater harvesting could help to slow the flow of stormwater and help prevent floods, particularly overflows from sewers. However, it is not known if this will be sufficient in tackle flood risk issues on site.
IIA13: Water Quality	+	L	I	L	R	T	MT	Rain and stormwater harvesting can also lessen the environmental impact of urbanisation on stormwater drainage systems and receiving water bodies, particularly as surface water run-off from heavy rainfall collects pollutants such as oil and trace metals.
IIA14: Air Quality	-	H	D	R	I	P	LT	There will be temporary negative effects on air quality due to dust generation and emissions from construction. A number of existing residential receptors surround the site which would be negatively impacted during construction, and consideration would need to be given as to how to minimise disruption to the local residents. The site gives no detail as to how increases in operational air pollution will be managed.
IIA15: Climate Change & Resilience	+	M	D	R	I	P	LT	The site is located in an area which has a high overall climate risk and flood and heat risk rating and is likely to have diminishing resilience to climate change. Green walls, brown and green roofs, and street trees will improve urban greening and are expected to reduce the impacts of the UHI effect.

Site Name	Chrisp Street							
Site Capacity	650							
Site Source	Existing allocation							
Site Status	Consented, Amendments under consideration							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
								In line with the Integrated Water Management Plan for the Isle of Dogs and South Poplar, opportunities for greywater re-use and rainwater harvesting are likely to be investigated which will help with water quantity issues during periods of drought.
IIA16: GHG Emissions	+/-	M	D	R	I	P	LT	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. Building efficiency measures are expected to reduce energy reliance. The scheme is also anticipated to make use of heating networks, including the use of combined heat and power and renewable energy, further details are yet to be confirmed.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	+	H	D	R	I	P	LT	The development is located on previously developed land and will support the protection of the borough's green spaces. The site will support high density housing which will help to make the best use of the site. It is not clear whether the site will encourage sustainable use of materials.
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with nearby sites Aspen Way and Teviot Estate.</p> <p>IIA1/2: If construction of this site and the Aspen Way and Teviot Estate sites were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Aspen Way and Teviot Estate sites will significantly increase the number of business and jobs.</p> <p>IIA10: In combination with construction at the Aspen Way and Teviot Estate sites, temporary adverse impacts on landscape and townscape during the construction phase will be more severe in extent.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Aspen Way and Teviot Estate sites.</p> <p>IIA14: If construction of this site and the Aspen Way and Teviot Estate sites were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA16: The construction of both this site and the Aspen Way and Teviot Estate sites is likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring sites Aspen Way and Teviot Estate is likely to result in a cumulative increase in waste.</p>							

Site Name	Chrisp Street							
Site Capacity	650							
Site Source	Existing allocation							
Site Status	Consented, Amendments under consideration							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
Mitigation and Enhancement Measures	<p>IIA1/2: Further assessment as part of scheme level design, should incorporate an evaluation of the provision of healthcare and education, to ensure that the current supply is sufficient in supporting new communities. The application of Policy CI1 may also help to mitigate impacts on existing community facilities.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA9: In line with Policy BO1, the site must achieve a minimum UGF and BNG targets set out within the Plan.</p> <p>IIA10: The application of Policy PS8 will help preserves or enhance visual connections between the public realm and open spaces.</p> <p>IIA11: Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals should be referred to minimise the impacts on the historic environment. The council should also work in partnership with Historic England.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented on-site during both construction and operation.</p> <p>IIA14/15/16: Development should look to incorporate renewable energy generation methods (in line with Policy CG1), such as solar panels and use of low carbon heat networks, to reduce operational GHG emissions. Table G-13 – Alisa Street

Site Name	Ailsa Street							
Site Capacity	1450							
Site Source	Existing allocation							
Site Status	Consented							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	++	H	D	R	I	P	LT	<p>The site will provide 1450 new residential units, which will work positively towards achieving the borough's housing target. The site is located within the 10% most deprived LSOAs in the borough, meaning that development of this site could increase economic opportunities and reduce poverty. Population density is higher than the borough average within this ward, therefore provision of additional residential units could reduce overcrowding. The site has good existing access to community services which may help to reduce levels of inequalities by bringing communities closer to these facilities.</p> <p>The site will also provide 6,500sqm commercial floorspace which will provide workspace, retail, and restaurant uses. The site has good existing access to community services and will likely reduce levels of inequalities and provide new facilities which will help to bring communities together and support a changing demographic. Additionally, this site could potentially be suitable for extra-care accommodation or accommodation for people with learning disabilities.</p>
IIA2: Human Health	++	H	D	R	I	P	LT	<p>As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and community facilities; however, health deprivation is high and life expectancy is worse than the national average for males and females.</p> <p>The site aims to deliver new retail facilities, workspaces and community facilities. Additionally, this site could potentially be suitable for extra-care accommodation or accommodation for people with learning disabilities. This will help to improve the health and wellbeing for new residents and those living locally.</p>
IIA3: Economy & Town Centres	?	N/A	N/A	N/A	N/A	N/A	N/A	<p>The site is near Empson Street Strategic Industrial Location, one of London's main reservoirs of industrial and related capacity and is adjacent to Gillender Street Local Industrial Location. The site is not within a town centre, nor is it proposed for any town centre uses. The proposed land uses include the re-provision of existing employment, therefore retaining the current uses rather than revitalising the economy. Affordability of new units may be a key concern for existing business owners.</p>
IIA4: Employment & Skills	+	M	D	L	I	P	LT	<p>As well as housing, the site includes the re-provision of existing employment capacity on-site, including complementary commercial uses which support SME, creative industries and new retail. This will likely improve access for residents to employment opportunities. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.</p>

Site Name	Ailsa Street							
Site Capacity	1450							
Site Source	Existing allocation							
Site Status	Consented							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA5: Housing	++	H	D	R	I	P	LT	The provision of 1450 new homes will help towards meeting LBTH's housing target. It is assumed that the site will meet the minimum 35% target of affordable homes. The development recognises that homes must be designed specifically to meet the needs of disabled people which is reflected in the 10% wheelchair accessible and adaptable homes to be provided.
IIA6: Crime & Safety	+	L	I	L	R	P	MT	The site is currently located within an area of high crime deprivation (top 10-20% of neighbourhoods nationally). There is limited detail on whether designing out crime principles will be applied as part of the development, however, developing the land from its existing use and providing housing and public realm improvements is likely to help to reduce crime and create a safer community.
IIA7: Sustainable Transport	+	M	D	L	I	P	LT	The site has relatively low PTAL scores ranging between 1b and 3, and is therefore isolated in terms of sustainable transport, largely due to its surrounding connectivity barriers in the form of the River Lea, the A12 and the A13. The site will aim to facilitate a new or extended bus route through the site to enhance access to public transport, as well as improving access to public transport and walking and cycling routes across the River Lea.
IIA8: Accessibility	+	M	D	L	I	P	LT	There are plans to improve walking and cycling connections to, from and within the site, and support the provision of new and improved A12 and River Lea crossings, to encourage active travel. Improvements to wayfinding across the site will help to improve access to all groups inclusively. The site will allow residents to live their lives more locally and reduce the need to travel. Improvement in walking and cycling connections will improve accessibility, especially for the most deprived.
IIA9: Biodiversity & Natural Capital	+/-	L	D	L	R	P	MT	The site is adjacent to The River Thames and Tidal Tributaries SINC and The Limehouse Cut Conservation Area which is also designated a SINC. There is potential for some adverse effects on some priority habitats including mudflat and species during construction. However, the site will contribute to biodiversity along the water edges and within open spaces, which could help to provide new small-scale habitats.
IIA10: Landscape & Townscape	+	M	D	L	I	P	LT	There are a number of open spaces in the vicinity of the site. While there are likely to be temporary negative effects to the local landscape and townscape setting during construction, improvements to public realm at this site will enhance the quality and condition of the townscape and landscape. The riverside frontage provides a key opportunity to provide high quality spaces that will become part of the public realm, and design principles highlight the need to improve riverside accessibility and the potential to improve access to the Lea River Park and Queen Elizabeth Olympic Park.

Site Name	Ailsa Street							
Site Capacity	1450							
Site Source	Existing allocation							
Site Status	Consented							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA11: Historic Environment	+/-	H	D/I	R	R/I	P/T	ST/LT	The site is located within the Lea Valley APA, and adjacent to the Limehouse Cut Conservation Area. The site is close to a number of listed buildings, with the Former Bromley Hall School (Grade II) listed on the Heritage at Risk Register. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets. Enhancement to the public realm will help to improve the setting of the historic environment.
IIA12: Flooding	-	H	D	L	I	P	LT	The site falls wholly within Flood Zone 3 and a flood warning area, and is directly adjacent to the River Lea. The site is low lying and therefore has a greater probability of flooding. The site does, however, include the raising of flood defences in line with the Thames Estuary 2100 Plan. Along the riverside, the development will be set back from the water by a minimum of 16m to allow adequate access to flood defences for future maintenance and upgrading.
IIA13: Water Quality	+/-	M	D	L	R/I	P/T	ST/LT	The site is located adjacent to the River Lea. There is potential for increased surface runoff during construction, further polluting this watercourse. No details are currently known relating to any measures to mitigate against water quality impacts during construction. Once operational, the incorporation of rain and stormwater harvesting could lessen the environmental impact of urbanisation on stormwater drainage systems and the River Lea, particularly as surface water run-off from heavy rainfall collects pollutants such as oil and trace metals
IIA14: Air Quality	+/-	H	D/I	R	R/I	P/T	ST/LT	The site has good access to local public transport and will provide new facilities allowing resident to live their lives more locally and reduce the need for private car usage. Public realm improvements may also include GI which could reduce exposure to the effects of urban air pollution. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction. There are a number of existing residential receptors surrounding the site which would be negatively impacted during construction, and consideration would need to be given as to how to minimise disruption to the local residents.
IIA15: Climate Change & Resilience	+	H	D	L	I	P	LT	Overall climate risk and overall heat risk is high. The landscape design will include a mixture of shrub and tree planting and biodiverse roofs which will contribute towards reducing the UHI, measures to limit overheating are also expected to be delivered which will increase the climate resilience of the development. In line with the Integrated Water Management Plan for the Isle of Dogs and South Poplar, opportunities for greywater re-use and rainwater harvesting are likely to be investigated which will help with water quantity issues during periods of drought.

Site Name	Ailsa Street							
Site Capacity	1450							
Site Source	Existing allocation							
Site Status	Consented							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA16: GHG Emissions	+-	H	D	L	I	P	LT	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. The design of the scheme will incorporate energy efficiency measures and will ensure that construction is undertaken efficiently. A centralised combined heat and power system is expected to be delivered. Solar PV has been identified as a suitable renewable energy source for the site.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	The site has an existing safeguarded waste site, which may be released for other uses due to being an area of regeneration. Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	+	H	D	L	I	P	LT	The site includes brownfield land and is also identified as containing vacant land. Existing on-site uses and buildings would be replaced by new development and could address any potential contamination from previous uses. However, it is not clear whether the site will encourage sustainable use of materials.
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring site Teviot Estate, Aberfeldy Estate and Leven Road. The increased demand for services to support the additional population may negatively impact existing local residents if no new facilities are brought forward at sites.</p> <p>IIA1/2: If construction of this site and the Teviot Estate, Aberfeldy Estate and Leven Road site were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Teviot Estate, Aberfeldy Estate and Leven Road site will significantly increase the number of businesses and jobs, providing more opportunities for existing and new residents.</p> <p>IIA5: In combination, this site and the Teviot Estate, Aberfeldy Estate and Leven Road site will significantly increase housing stock, contributing to the borough's housing target, whilst tackling issues of affordability.</p> <p>IIA10: If construction of this site and the Teviot Estate, Aberfeldy Estate and Leven Road site were to happen concurrently, there is potential for a temporary negative cumulative effect on the local landscape and townscape setting, as well as the visual amenity. Improvements to the public realm during operation may result in positive cumulative effects in the long term, enhancing the landscape and townscape character.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Teviot Estate, Aberfeldy Estate and Leven Road site, resulting in a negative residual effect.</p> <p>IIA14: If construction of this site and the Teviot Estate, Aberfeldy Estate and Leven Road site were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic, a temporary effect. However, if construction timetables occurred in succession, these negative effects could be long term, though less severe.</p> <p>IIA15: The increase in open space GI potentially provided by both this site and the Teviot Estate, Aberfeldy Estate and Leven Road site is likely to increase resilience to the UHI effect. However, the exact climate resilience measures are not yet known.</p> <p>IIA16: The construction of both this site and the Teviot Estate, Aberfeldy Estate and Leven Road site is likely to result in a significant cumulative increase in embodied carbon. Embodied carbon could be reduced if circular economy principles are applied and existing materials are repurposed.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Teviot Estate, Aberfeldy Estate and Leven Road is likely to result in a cumulative increase in waste. Alignment with circular economy principles is not yet confirmed, however this could reduce the negative effect associated with waste generation.</p>							

Site Name	Ailsa Street							
Site Capacity	1450							
Site Source	Existing allocation							
Site Status	Consented							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
Mitigation and Enhancement Measures	<p>IIA1: Housing should deliver at least 35% affordable home and include provision of housing to meet the needs of all population groups as set out in the Homes for the Community policies.</p> <p>IIA1/2: Further assessment as part of scheme level design, should incorporate an evaluation of the provision of healthcare and education, to ensure that the current supply is sufficient in supporting new communities. The application of Policy C11 may also help to mitigate impacts on existing community facilities.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA8/9/11: A lighting strategy should be prepared to minimise light spill onto retained or newly created habitat features, and to avoid interference with the visual amenity of the historic environment.</p> <p>IIA9: In line with Policy BO1 and BO4, the site must achieve a minimum UGF and BNG targets set out within the Plan. Developments must demonstrate BNG and ensure it is measurable against metrics.</p> <p>IIA10: The application of Policy PS8 will help manage adverse effects on the skyline and preserves or enhance visual connections between the public realm and open spaces. Compliance with the requirements of the London View Management Framework and World Heritage Site Management Plans is essential. Buildings within the London City Airport Aerodrome Safeguarded zone need adhere to stipulated height restrictions.</p> <p>IIA11: Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals should be referred to minimise the impacts on the historic environment. The council should also work in partnership with Historic England.</p> <p>IIA12: Development should accord with any flood mitigation and adaptation measures stated within the borough's SFRA in line with Policy CG6, including a sequential test. The application of SuDS techniques (in line with Policy CG7) should be demonstrated by developments to reduce the risk of run-off and surface water flooding. A revised flood risk assessment should be submitted to demonstrate compliance with London Plan Policy 5.12.</p> <p>IIA13: Development should be delivered in line with Policy BO3 and guidance from the Environment Agency.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented on-site during both construction and operation.</p> <p>IIA14/15/16: Development should look to incorporate renewable energy generation methods (in line with Policy CG1), such as solar panels and use of low carbon heat networks, to reduce operational GHG emissions. The site should consider undertaking BREEAM Infrastructure to ensure that sustainability is integral to development.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA16: The application of Policy CG4 will require major developments to assess whole lifecycle carbon emissions and meet best practice embodied carbon emissions targets for building elements. This policy sets out limits for embodied carbon which should be monitored.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4. Development proposals which seek to maximise the efficiency and/or capacity of waste facilities in the borough will be supported in line with Policy RW1.</p>							

Leven Road

Table G-14 – Leven Road

Site Name	Leven Road							
Site Capacity	2800							
Site Source	Existing allocation							
Site Status	Consented, under construction							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	++	H	D	R	I	P	LT	<p>The site will provide 2800 new residential units, which will work positively towards achieving the borough's housing target. At least 35% will be affordable homes (70% affordable rent and 30% shared ownership). In addition, there will be new retail and employment opportunities, new parks and open spaces and improvements to the public realm. The site is located within the 10% most deprived LSOAs in the borough, meaning that development of this site could increase economic opportunities and reduce poverty. Population density is higher than the borough average within this ward, therefore provision of additional residential units could reduce overcrowding. Additionally, this site could potentially be suitable for extra-care accommodation or accommodation for people with learning disabilities.</p> <p>The site has good existing access to community services and will likely reduce levels of inequalities and provide new facilities which will help to bring communities together and support a changing demographic.</p>
IIA2: Human Health	++	H	D	R	I	P	LT	<p>As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and community facilities; however, health deprivation is high and life expectancy is worse than the national average for males and females.</p> <p>The site will include additional community facilities including a secondary school, strategic consolidated open space which should include space for sport and recreation. Additionally, this site could potentially be suitable for extra-care accommodation or accommodation for people with learning disabilities. This will help to improve the health and wellbeing for new residents and those living locally.</p>
IIA3: Economy & Town Centres	+	M	D	L	I	P	LT	<p>The site allocation includes allowance for employment, through a variety of commercial units and 8,500sqm of commercial floorspace. The site is located near to Chrisp Street district centre and Poplar High Street neighbourhood centre, providing opportunities for residents to live locally and improve connectivity between the housing market and town centres. The proposed site will include the formation of new shopfront openings and public realm improvements at the ground and platform level. The site will improve and enhance connectivity between business clusters and the housing market and improve town centre viability.</p>
IIA4: Employment & Skills	+	M	D	L	I	P	LT	<p>As well as housing, the site includes the re-provision of existing employment capacity on-site. This will likely improve access for residents to employment opportunities. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.</p>

Site Name	Leven Road							
Site Capacity	2800							
Site Source	Existing allocation							
Site Status	Consented, under construction							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA5: Housing	++	H	D	R	I	P	LT	The provision of 2800 new homes will help towards meeting LBTH's housing target. The site is proposed to meet the minimum 35% target of affordable homes. The development recognises that homes must be designed specifically to meet the needs of disabled people to this end, 10% of new units will be wheelchair accessible and adaptable.
IIA6: Crime & Safety	+	L	I	L	R	P	MT	The site is currently located within an area of high crime deprivation (top 20% of neighbourhoods nationally). There is limited detail on whether designing out crime principles will be applied as part of the development, however, developing the land from its existing use and providing housing and public realm improvements is likely to help to reduce crime and create a safer community. The implementation of riparian lifesaving infrastructure along the riverside path within the site will also contribute to improving user safety, helping to prevent death by drowning in the river.
IIA7: Sustainable Transport	-	M	D	L	I	P	LT	The site has low PTAL scores ranging between 1a and 2, and is therefore isolated in terms of sustainable transport, largely due to its surrounding connectivity barriers in the form of the River Lea, the A12 and the A13.
IIA8: Accessibility	+	M	D	L	I	P	LT	There are plans to make cross river connection improvements, including the new 500m riverside walk, crucial to facilitate active travel. Improvements to wayfinding across the site will help to improve access to all groups inclusively. The site will allow residents to live their lives more locally and reduce the need to travel. Improvement in walking and cycling connections will improve accessibility, especially for the most deprived.
IIA9: Biodiversity & Natural Capital	+/-	L	D	L	R	P	MT	The site is adjacent to The River Thames and Tidal Tributaries SINC and near The Limehouse Cut Conservation Area. There is potential for some adverse effects on some priority habitats including mudflat and species during construction. However, the site will contribute to biodiversity along the water edges and within open spaces, which could help to provide new small-scale habitats. At this stage BNG is assumed but whether the site meets the BNG benchmark of 2.5 biodiversity unit (BU) per hectare or 30% gain (whichever is higher) is unknown
IIA10: Landscape & Townscape	++	H	D	R	I	P	LT	There are a number of open spaces in the vicinity of the site. While there are likely to be temporary negative effects to the local landscape and townscape setting during construction, improvements to public realm at this site will enhance the quality and condition of the townscape and landscape. The riverside frontage provides a key opportunity to provide high quality spaces that will become part of the public realm, and design principles highlight the need to improve riverside accessibility. The site includes strategic scale open space provision, supporting the borough's strategy to reduce open space deficiency.

Site Name	Leven Road							
Site Capacity	2800							
Site Source	Existing allocation							
Site Status	Consented, under construction							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA11: Historic Environment	+/-	H	D/I	R	R/I	P/T	ST/LT	The site is located within the Lea Valley APA, and near to the Limehouse Cut Conservation Area. The site is a former gas works, therefore retaining and integrating the characteristic gasholders in the provision of open space has associated benefits. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets. Enhancement to the public realm will help to improve the setting of the historic environment.
IIA12: Flooding	-	H	D	L	I	P	LT	The site falls wholly within Flood Zone 3 and a flood warning area, and is directly adjacent to the River Lea. The site is low lying and therefore has a greater probability of flooding. The site does, however, include the raising of flood defences in line with the Thames Estuary 2100 Plan. Along the riverside, the development will be set back from the water by a minimum of 16m to allow adequate access to flood defences for future maintenance and upgrading.
IIA13: Water Quality	+/-	H	D	L	R/I	P/T	ST/LT	The site is located adjacent to the River Lea. There is potential for increased surface runoff during construction, further polluting this watercourse. No details are currently known relating to any measures to mitigate against water quality impacts during construction. Once operational, the incorporation of rain and stormwater harvesting could lessen the environmental impact of urbanisation on stormwater drainage systems and the River Lea, particularly as surface water run-off from heavy rainfall collects pollutants such as oil and trace metals
IIA14: Air Quality	+/-	H	D/I	R	R/I	P/T	ST/LT	Public realm improvements include GI which could reduce exposure to the effects of urban air pollution. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction. There are a number of existing residential receptors surrounding the site which would be negatively impacted during construction, and consideration would need to be given as to how to minimise disruption to the local residents.
IIA15: Climate Change & Resilience	+	H	D	L	I	P	LT	Overall climate risk and overall heat risk is high. The delivery of the site is expected to be landscape-led and will provide a green infrastructure grid and large green spaces which will improve the UHI effect. Measures to reduce the risk of overheating have been incorporated into the design of residential homes. SUDs measures will include living roof and rainwater harvesting. In line with the Integrated Water Management Plan for the Isle of Dogs and South Poplar, opportunities for greywater re-use and rainwater harvesting are likely to be investigated which will help with water quantity issues during periods of drought.
IIA16: GHG Emissions	+/-	M	D	L	I	P	LT	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. A site wide heat network is expected to be delivered. Measures to improve energy efficiency will reduce energy demand.,

Site Name	Leven Road							
Site Capacity	2800							
Site Source	Existing allocation							
Site Status	Consented, under construction							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	+	H	D	L	I	P	LT	The site is derelict brownfield land. Existing on-site uses and buildings would be replaced by new development and could address any potential contamination from previous uses. However, it is not clear whether the site will encourage sustainable use of materials.
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring site Ailsa Street, Aberfeldy Estate and Blackwall Trading Estate and Leamouth Road Depot. The increased demand for services to support the additional population may negatively impact existing local residents if no new facilities are brought forward at sites.</p> <p>IIA1/2: If construction of this site and the Ailsa Street, Aberfeldy Estate and Blackwall Trading Estate and Leamouth Road Depot site were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Ailsa Street, Aberfeldy Estate and Blackwall Trading Estate and Leamouth Road Depot site will significantly increase the number of businesses and jobs, providing more opportunities for existing and new residents.</p> <p>IIA5: In combination, this site and the Ailsa Street, Aberfeldy Estate and Blackwall Trading Estate and Leamouth Road Depot site will significantly increase housing stock, contributing to the borough's housing target, whilst tackling issues of affordability.</p> <p>IIA10: If construction of this site and the Ailsa Street, Aberfeldy Estate and Blackwall Trading Estate and Leamouth Road Depot site were to happen concurrently, there is potential for a temporary negative cumulative effect on the local landscape and townscape setting, as well as the visual amenity. Improvements to the public realm during operation may result in positive cumulative effects in the long term, enhancing the landscape and townscape character.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Ailsa Street, Aberfeldy Estate and Blackwall Trading Estate and Leamouth Road Depot site, resulting in a negative residual effect.</p> <p>IIA14: If construction of this site and the Ailsa Street, Aberfeldy Estate and Blackwall Trading Estate and Leamouth Road Depot site were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic, a temporary effect. However, if construction timetables occurred in succession, these negative effects could be long term, though less severe.</p> <p>IIA15: The increase in open space GI potentially provided by both this site and the Ailsa Street, Aberfeldy Estate and Blackwall Trading Estate and Leamouth Road Depot site is likely to increase resilience to the UHI effect. However, the exact climate resilience measures are not yet known.</p> <p>IIA16: The construction of both this site and the Ailsa Street, Aberfeldy Estate and Blackwall Trading Estate and Leamouth Road Depot site is likely to result in a significant cumulative increase in embodied carbon. Embodied carbon could be reduced if circular economy principles are applied and existing materials are repurposed.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Ailsa Street, Aberfeldy Estate and Blackwall Trading Estate and Leamouth Road Depot is likely to result in a cumulative increase in waste. Alignment with circular economy principles is not yet confirmed, however this could reduce the negative effect associated with waste generation.</p>							
Mitigation and Enhancement Measures	<p>IIA1: Housing should include provision of housing to meet the needs of all population groups as set out in the Homes for the Community policies.</p> <p>IIA1/2: Further assessment as part of scheme level design, should incorporate an evaluation of the provision of healthcare and education, to ensure that the current supply is sufficient in supporting new communities. The application of Policy C11 may also help to mitigate impacts on existing community facilities.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA8/9/11: A lighting strategy should be prepared to minimise light spill onto retained or newly created habitat features, and to avoid interference with the visual amenity of the historic environment.</p>							

Site Name	Leven Road							
Site Capacity	2800							
Site Source	Existing allocation							
Site Status	Consented, under construction							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
	<p>IIA9: In line with Policy BO1 and BO4, the site must achieve a minimum UGF and BNG targets set out within the Plan. Developments must demonstrate BNG and ensure it is measurable against metrics.</p> <p>IIA10/IIA11: The application of Policy PS8 will help manage adverse effects on the skyline and preserves or enhance visual connections between the public realm and open spaces. Compliance with the requirements of the World Heritage Site Management Plans is essential. Buildings within the London City Airport Aerodrome Safeguarded zone need adhere to stipulated height restrictions.</p> <p>IIA11: Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals should be referred to minimise the impacts on the historic environment. The council should also work in partnership with Historic England.</p> <p>IIA12: Development should accord with any flood mitigation and adaptation measures stated within the borough's SFRA in line with Policy CG6, including a sequential test. The application of SuDS techniques (in line with Policy CG7) should be demonstrated by developments to reduce the risk of run-off and surface water flooding. A revised flood risk assessment should be submitted to demonstrate compliance with London Plan Policy 5.12.</p> <p>IIA13: Development should be delivered in line with policy BO3 and guidance from the Environment Agency.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented on-site during both construction and operation.</p> <p>IIA14/15/16: Development should look to incorporate renewable energy generation methods (in line with Policy CG1), such as solar panels and use of low carbon heat networks, to reduce operational GHG emissions. The site should consider undertaking BREEAM Infrastructure to ensure that sustainability is integral to development.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA16: The application of Policy CG4 will require major developments to assess whole lifecycle carbon emissions and meet best practice embodied carbon emissions targets for building elements. This policy sets out limits for embodied carbon which should be monitored.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4. Development proposals which seek to maximise the efficiency and/or capacity of waste facilities in the borough will be supported in line with Policy RW1.</p>							

Aberfeldy Estate

Table G-15 – Aberfeldy Estate

Site Name	Aberfeldy Estate							
Site Capacity	1550							
Site Source	New allocation							
Site Status	New allocation							
I/A Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
I/A1: Population & Equalities	++	H	D	R	I	P	LT	The has potential to provide at least 1550 new homes, of which at least 35% will be affordable. In addition, there will be new retail and employment opportunities, new parks and open spaces and improvements to the public realm. The site has good existing access to community services which may help to reduce levels of inequalities by bringing communities closer to these facilities. The needs of all groups are taken into account, with provision of a mosque nearby providing a vital cultural facility. The site has potential to provide additional community spaces, including a primary school, as well as the potential for extra-care accommodation or accommodation for people with learning disabilities. This will improve the provision of services for the community.
I/A2: Human Health	++	H	D	R	I	P	LT	As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and community facilities; however, life expectancy is worse than the national average for males and females. However, the development of new primary school provision, including playing fields and sports facilities is likely to improve the health and wellbeing of children around the site and Leaside area, providing play and educational facilities. Additionally, the site has potential to provide extra-care accommodation or accommodation for people with learning disabilities.
I/A3: Economy & Town Centres	++	H	D	L	I	P	LT	The site is well located, within Aberfeldy neighbourhood centre, near to Chrisp Street district centre and Poplar High Street neighbourhood centre, <1 km from Canary Wharf Major Centre, and the Isle of Dogs Activity Area. Aberfeldy neighbourhood centre provides a range of shops and services to meet the needs of its local catchment, with a higher proportion of convenience retail compared to comparison retail. The development aims to create a new local centre on Aberfeldy Street, with shops, workspaces, a community centre and mosque. New commercial space will include the provision of affordable workspace for local businesses.
I/A4: Employment & Skills	++	H	D	R	I	P	LT	The proposed site is partially located in a town centre (Aberfeldy neighbourhood centre) and is adjacent to a primary shopping area (Chrisp Street primary shopping area), providing opportunities for residents to live locally and improve connectivity between the housing market and town centres. The development aims to provide shops and new commercial space, including affordable workspace for local independent businesses. This will likely increase employment opportunities. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
I/A5: Housing	+	M	D	L	I	P	LT	The provision of 1550 new homes will help towards meeting LBTH's housing target. The site is proposed to meet the minimum 35% target of affordable homes. At this stage it is not known how many units will be accessible and wheelchair adaptable.

Site Name	Aberfeldy Estate							
Site Capacity	1550							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA6: Crime & Safety	+	L	I	L	R	P	MT	The site is currently located within an area of high crime deprivation (top 10-30% of neighbourhoods nationally). There is limited detail on whether designing out crime principles will be applied as part of the development, however, developing the land from its existing use and providing housing and public realm improvements is likely to help to reduce crime and create a safer community.
IIA7: Sustainable Transport	-	M	D	L	I	P	LT	The site has relatively low PTAL scores ranging between 1b and 3, and is therefore isolated in terms of sustainable transport, largely due to its surrounding connectivity barriers in the form of the River Lea, the A12 and the A13. The site will, however, provide improved walking and cycling connections to, from and within the site.
IIA8: Accessibility	+	M	D	L	I	P	LT	There are plans to improve walking and cycling connections to, from and within the site, and support repurposing the existing A12 underpass to create a new walking and cycling route to improve connectivity across Poplar. Creation of healthy streets will also encourage active travel. Improvements to wayfinding across the site will help to improve access to all groups inclusively. The site will allow residents to live their lives more locally and reduce the need to travel.
IIA9: Biodiversity & Natural Capital	++	L	D	L	R	P	MT	The site is adjacent to The River Thames and Tidal Tributaries SINC and near The Limehouse Cut Conservation Area. There is potential for some adverse effects on some priority habitats including mudflat and species during construction. However, the site will contribute to biodiversity through creation of new public realm and upgrades to existing open spaces, which could help to provide new small-scale habitats. The site is expected to deliver an integrated approach to open space, biodiversity and the natural environment through the provision of GI.
IIA10: Landscape & Townscape	++	H	D	R	I	P	LT	There are a number of open spaces in the vicinity of the site. While there are likely to be temporary negative effects to the local landscape and townscape setting during construction, improvements to public realm at this site will enhance the quality and condition of the townscape and landscape. The site includes strategic open space provision and has plans for new high-quality planting and landscaping, supporting the borough's strategy to reduce open space deficiency.
IIA11: Historic Environment	+/-	M	D	L	R/I	P/T	ST/LT	The site is located within the Lea Valley and Limmo APA, and near to a number of conservation areas. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets. Enhancement to the public realm will help to improve the setting of the historic environment. Open space within the site will be maintained, and a larger provision of open and amenity spaces will also be provided, integrating new green development into the existing surrounding context. The site will have an overall positive contribution to the townscape, with open space provision to deliver enhancements to the character and appearance of the surrounding area.

Site Name	Aberfeldy Estate							
Site Capacity	1550							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA12: Flooding	-	H	D	L	I	P	LT	The site falls wholly within Flood Zone 3 and a flood warning area, and is adjacent to the River Lea. The site is low lying and therefore has a greater probability of flooding. No details are currently understood relating to flood risk measures for the site.
IIA13: Water Quality	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is located adjacent to the River Lea. There is potential for increased surface runoff during construction, further polluting this watercourse. No details are currently known relating to any measures to mitigate against water quality impacts.
IIA14: Air Quality	+/-	H	D/I	R	R/I	P/T	ST/LT	Public realm improvements include GI which could reduce exposure to the effects of urban air pollution. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction. There are a number of existing residential receptors surrounding the site which would be negatively impacted during construction, and consideration would need to be given as to how to minimise disruption to the local residents.
IIA15: Climate Change & Resilience	-	H	D	L	I	P	LT	Overall climate risk is high and overall heat risk is medium. Development specific climate resilience measures are not known at this stage; however, the incorporation of GI will help to alleviate the UHI effect.
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. At this stage, it is not clear whether the development will utilise renewable energy sources or low carbon heat networks once operational. Further design details are required.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	+	H	D	L	I	P	LT	The development is located on previously developed land and will support the protection of the borough's green spaces. The site will support high density housing which will help to make the best use of the site. It is not clear whether the site will encourage sustainable use of materials.
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring site Teviot Estate, Ailsa Street and Leven Road. The increased demand for services to support the additional population may negatively impact existing local residents if no new facilities are brought forward at sites.</p> <p>IIA1/2: If construction of this site and the Teviot Estate, Ailsa Street and Leven Road site were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Teviot Estate, Ailsa Street and Leven Road site will significantly increase the number of businesses and jobs, providing more opportunities for existing and new residents.</p> <p>IIA5: In combination, this site and the Teviot Estate, Ailsa Street and Leven Road site will significantly increase housing stock, contributing to the borough's housing target, whilst tackling issues of affordability.</p> <p>IIA10: If construction of this site and the Teviot Estate, Ailsa Street and Leven Road site were to happen concurrently, there is potential for a temporary negative cumulative effect on the local landscape and townscape setting, as well as the visual amenity. Improvements to the public realm during operation may result in positive cumulative effects in the long term, enhancing the landscape and townscape character.</p>							

Site Name	Aberfeldy Estate							
Site Capacity	1550							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
	<p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Teviot Estate, Ailsa Street and Leven Road site, resulting in a negative residual effect.</p> <p>IIA14: If construction of this site and the Teviot Estate, Ailsa Street and Leven Road site were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic, a temporary effect. However, if construction timetables occurred in succession, these negative effects could be long term, though less severe.</p> <p>IIA15: The increase in open space GI potentially provided by both this site and the Teviot Estate, Ailsa Street and Leven Road site is likely to increase resilience to the UHI effect. However, the exact climate resilience measures are not yet known.</p> <p>IIA16: The construction of both this site and the Teviot Estate, Ailsa Street and Leven Road site is likely to result in a significant cumulative increase in embodied carbon. Embodied carbon could be reduced if circular economy principles are applied and existing materials are repurposed.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Teviot Estate, Ailsa Street and Leven Road is likely to result in a cumulative increase in waste. Alignment with circular economy principles is not yet confirmed, however this could reduce the negative effect associated with waste generation.</p>							
Mitigation and Enhancement Measures	<p>IIA1: Housing should include provision of housing to meet the needs of all population groups as set out in the Homes for the Community policies.</p> <p>IIA1/2: Further assessment as part of scheme level design, should incorporate an evaluation of the provision of healthcare and education, to ensure that the current supply is sufficient in supporting new communities. The application of Policy CI1 may also help to mitigate impacts on existing community facilities.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA8/9/11: A lighting strategy should be prepared to minimise light spill onto retained or newly created habitat features, and to avoid interference with the visual amenity of the historic environment.</p> <p>IIA9: In line with Policy BO1 and BO4, the site must achieve a minimum UGF and BNG targets set out within the Plan (2.5 biodiversity units per hectare or a 30% gain in habitat value for wildlife). Developments must demonstrate BNG and ensure it is measurable against metrics.</p> <p>IIA10: The application of Policy PS8 will help manage adverse effects on the skyline and preserves or enhance visual connections between the public realm and open spaces. Compliance with the requirements of the World Heritage Site Management Plans is essential. Buildings within the London City Airport Aerodrome Safeguarded zone need adhere to stipulated height restrictions.</p> <p>IIA12: Development should accord with any flood mitigation and adaptation measures stated within the borough's SFRA in line with Policy CG6, including a sequential test. The application of SuDS techniques (in line with Policy CG7) should be demonstrated by developments to reduce the risk of run-off and surface water flooding. A revised flood risk assessment should be submitted to demonstrate compliance with London Plan Policy 5.12.</p> <p>IIA13: Development should be delivered in line with policy BO3 and guidance from the Environment Agency.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented on-site during both construction and operation.</p> <p>IIA14/15/16: Development should look to incorporate renewable energy generation methods (in line with Policy CG1), such as solar panels and use of low carbon heat networks, to reduce operational GHG emissions. The site should consider undertaking BREEAM Infrastructure to ensure that sustainability is integral to development.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA16: The application of Policy CG4 will require major developments to assess whole lifecycle carbon emissions and meet best practice embodied carbon emissions targets for building elements. This policy sets out limits for embodied carbon which should be monitored.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4. Development proposals which seek to maximise the efficiency and/or capacity of waste facilities in the borough will be supported in line with Policy RW1.</p>							

Table G-16 – Bromley by Bow

Site Name	Bromley by Bow							
Site Capacity	1300							
Site Source	New allocation - LLDC Local Plan allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	++	H	D	R	I	P	LT	<p>The site has potential to provide approximately 1,300 homes, of which 35% will be affordable. This will work positively towards achieving the borough's housing target. However, at this stage, it is not known how many of these units will be accessible and wheelchair adaptable.</p> <p>The site has good existing access to some community services which may help to reduce levels of inequalities by bringing communities closer to these facilities. It is expected that the site will provide additional facilities and services including educational provision and community facilities.</p>
IIA2: Human Health	++	H	D	L	I	P	LT	<p>As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and community facilities; however, health deprivation is in the top 30-50% nationally. The site will deliver new community facilities and services and so it is expected that improvements to health and wellbeing will be delivered. The provision of open spaces including a 1.2ha park is expected to deliver further health benefits for the population.</p> <p>Additionally, the site development states that residents of the proposed site would not be exposed to excessive noise or other pollution from Bow Free Wharf. This would minimise stress caused by excess noise and improve human health.</p>
IIA3: Economy & Town Centres	+	M	D	L	I	P	LT	<p>There are no town centres within 1km of the site, but Stroudley Walk primary shopping area is located 300m from the site. The site is anticipated to contain employment-generating business space, likely to improve the economy of the area.</p>
IIA4: Employment & Skills	+	M	D	L	I	P	LT	<p>The site is in the 10-20% least deprived nationally in terms of employment. The sites anticipated to contain employment-generating business space, and community and educational facilities to provide employment and upskilling opportunities. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.</p>
IIA5: Housing	+	H	D	R	I	P	LT	<p>The provision of 1,300 new homes will help towards meeting LBTH's housing target. It is assumed that the site will provide 35% affordable housing, meeting the minimum target. Further details will be required regarding the number of wheelchair accessible homes. The size, type and tenure of housing will need to take into account different groups in the community, however this is currently unknown. It is important that affordability is taken into account, particularly considering the significant barriers to housing within the locality.</p>
IIA6: Crime & Safety	+	M	D/I	L	I	P	LT	<p>The site is located in the 30-50% most deprived nationally in terms of crime. There is limited detail on whether designing out crime principles will be applied as part of the development, however, providing housing, public realm and open space improvements are likely to</p>

Site Name	Bromley by Bow							
Site Capacity	1300							
Site Source	New allocation - LLDC Local Plan allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
								<p>improve footfall and therefore provide additional natural surveillance, in turn reducing crime and creating a safer community. Additionally, the site includes improvements to safety within the underpass beneath the A12, as well as improvements to at-grade pedestrian and cycle crossings. This will contribute to improving pedestrian safety at junctions, as well as the feeling of safety.</p> <p>The implementation of riparian lifesaving infrastructure along the riverside path within the site will also contribute to improving user safety, helping to prevent death by drowning in the river.</p>
IIA7: Sustainable Transport	++	M	D	L	I	P	LT	The site is well situated in proximity to bus stops, rail station, the underground and the cycle network. This is reflected in the site having a PTAL level of between 3 and 6a. The site is well located to local facilities and services which will allow residents to live their lives more locally.
IIA8: Accessibility	++	M	D	L	I	P	LT	The existing site has good access to facilities and services and the proposal includes further provision for community facilities and services. Improvements to wayfinding across the site will help to improve access to all groups inclusively. The site will allow residents to live their lives more locally and reduce the need to travel.
IIA9: Biodiversity & Natural Capital	+/-	M	D/I	L	R/I	P/T	ST/MT	There is an area of priority habitat for mudflats located 30m east of the site. There is a potential negative effect on this habitat as a result, particularly during construction. Green space is proposed as part of the development which will improve urban greening and provide GI; however, it is unknown whether the site will be in line with BNG benchmark of 2.5 biodiversity unit (BU) per hectare or 30% gain (whichever is higher) is unknown
IIA10: Landscape & Townscape	+/-	M	D/I	L	R/I	P/T	ST/MT	The site is located 40m from an area of Local Open Green Space (St Leonard's Churchyard). It is therefore expected that the development of the site will respond to the existing character of the surrounding built environment, taking into particular consideration the massing of the surrounding area. There are likely to be temporary negative effects to the local landscape and townscape setting during construction, however, the site will incorporate GI as part of the design including the increase in public realm and public open spaces.
IIA11: Historic Environment	-	L	D/I	L	R/I	P/T	ST/MT	The site has a number of heritage assets within its vicinity, is adjacent to Three Mills Conservation Area and is located within Lea Valley Archaeological Priority Area. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets.
IIA12: Flooding	--	H	D	L	I	P	LT	The site is located within flood zone 2 and 3, any flood risk measures are expected to be in line with the borough's Strategic Flood Risk Assessment.
IIA13: Water Quality	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is located adjacent to the River Lea. There is potential that construction at the site may result in contamination of this water body as a result of surface runoff. Currently, no water quality measures are known to be included within the development.

Site Name	Bromley by Bow							
Site Capacity	1300							
Site Source	New allocation - LLDC Local Plan allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA14: Air Quality	+/-	M	D/I	R	R/I	P/T	ST/LT	The site has good access to local public transport and community facilities and could (assuming provision meets population demands) allow residents to live their lives more locally and reduce the need for private car usage. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction. There are a number of existing residential receptors surrounding the site which would be negatively impacted during construction, and consideration would need to be given as to how to minimise disruption to the local residents.
IIA15: Climate Change & Resilience	-	H	D	L	I	P	LT	The site is located in an area which has a high overall climate risk and heat risk rating and is likely to have diminishing resilience to climate change. The incorporation of GI will help to alleviate the UHI effect.
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. At this stage, it is not clear whether the development will utilise renewable energy sources or low carbon heat networks once operational. Further design details are required.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	+	L	D	R	I	P	LT	The development is located on previously developed land and will support the protection of the borough's green spaces. The site will support high density housing which will help to make the best use of the site. However, it is not clear whether the site will encourage sustainable use of materials.
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring site Whitechapel North.</p> <p>IIA1/2: If construction of this site and the Whitechapel North site were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Whitechapel North site will significantly increase the number of business and jobs.</p> <p>IIA5: In combination, this site and the Whitechapel North site will significantly increase housing stock.</p> <p>IIA10: There is potential for cumulative negative effects on LVMF areas in combination with neighbouring site Whitechapel North.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Whitechapel North site.</p> <p>IIA14: If construction of this site and the Whitechapel North site were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA15: The increase in GI provided by both this site and the Whitechapel North site is likely to increase resilience to the UHI effect.</p> <p>IIA16: The construction of both this site and the Whitechapel North site is likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Whitechapel North is likely to result in a cumulative increase in waste.</p>							

Site Name	Bromley by Bow							
Site Capacity	1300							
Site Source	New allocation - LLDC Local Plan allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
Mitigation and Enhancement Measures	<p>IIA1/2: Further Assessment as part of the scheme level design, should incorporate an evaluation of the provision of healthcare and education, to ensure that current supply is sufficient in supporting new communities.</p> <p>IIA6: The development should be designed in accordance with the Secured by Design Principles and Policies PS3 and PS4.</p> <p>IIA9: Other policies in the Local Plan should help to avoid potential negative effects, e.g. Policies BO1, BO2, BO3, BO and BO5. The site must achieve a minimum UGF and BNG targets set out within the Plan (2.5 biodiversity units per hectare or a 30% gain in habitat value for wildlife).</p> <p>IIA10: The application of Policy PS8 will help manage adverse effects on the skyline and preserves or enhance visual connections between public realm and open spaces.</p> <p>IIA10: Buildings within the London City Airport Aerodrome Safeguarded zone need adhere to stipulated height restrictions.</p> <p>IIA12: Development should be delivered in line with Policy CG6, the NPPF and guidance from the Environment Agency.</p> <p>IIA13: Development should be delivered in line with policy BO3 and guidance from the Environment Agency.</p> <p>IIA14: The application of policy CG9 will help ensure that measures to improve air quality should be implemented on site during construction and operation</p> <p>IIA14/15/16: Development should look to incorporate renewable energy generation methods (in line with Policy CG1), such as solar panels and use of low carbon heat networks, to reduce operational GHG emissions. The site should consider undertaking BREEAM Infrastructure to ensure that sustainability is integral to development.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4.</p>							

Blackwall Trading Estate and Leamouth Road Depot

Table G-17 – Blackwall Trading Estate and Leamouth Road Depot

Site Name	Blackwall Trading Estate and Leamouth Road Depot							
Site Capacity	775							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	+	M	D	R	I	P	LT	The site has potential to provide approximately 775 homes, which will work positively towards achieving the borough's housing target. However, at this stage, it is not known how many of these units will be accessible and wheelchair adaptable. The site has good existing access to some community services which may help to reduce levels of inequalities by bringing communities closer to these facilities.
IIA2: Human Health	++	M	D	L	I	P	LT	As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and community facilities; however, health deprivation is in the top 30-50% nationally. Life expectancy for males and female are also lower than the national average. The site includes the development of a primary health care facility or community facility as required at the site. This will aid in ensuring that there is adequate healthcare and community infrastructure for the increasing population in and around the site.
IIA3: Economy & Town Centres	+	N/A	N/A	N/A	N/A	N/A	N/A	The site is within the top 10-20% most deprived nationally in terms of income. The site is located near London City Island town centre. At this stage it is not known if the site will include any additional retail or business spaces.
IIA4: Employment & Skills	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is within the top 10-20% most deprived nationally in terms of employment. The site is well located to existing employment areas including the City Fringe Activity Area and the Central Activity Zone. It is unclear if there will be any provision for additional employment within the site. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
IIA5: Housing	+	N/A	N/A	N/A	N/A	N/A	N/A	The provision of 775 new homes will help towards meeting LBTH's housing target. It is assumed that the site will provide 35% affordable housing, meeting the minimum target. Further details will be required regarding the number of wheelchair accessible homes. The size, type and tenure of housing will need to take into account different groups in the community, however this is currently unknown. It is important that affordability is taken into account, particularly considering the significant barriers to housing within the locality.
IIA6: Crime & Safety	+	L	I	L	R	P	MT	The site is located within an area of high crime deprivation (10%-20% most deprived neighbourhoods nationally). There is limited detail on whether designing out crime principles will be applied as part of the development, however, developing the land from its existing use and providing housing and public realm improvements is likely to help to reduce crime and create a safer community. The implementation of riparian lifesaving infrastructure along the riverside path within the site will also contribute to improving user safety, helping to prevent death by drowning in the river.

Site Name	Blackwall Trading Estate and Leamouth Road Depot							
Site Capacity	775							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA7: Sustainable Transport	+	L	D	L	I	P	LT	The site has average to good connectivity via public transport through bus and Overground rail, but the site is located 1.75km from the closest tube station. This is reflected in the PTAL score of between 2 and 5. It is uncertain if there are plans for additional transport provision.
IIA8: Accessibility	+	M	D	R	I	P	LT	The existing site has good access to facilities and services. The site will allow residents to live their lives more locally and reduce the need to travel.
IIA9: Biodiversity & Natural Capital	+/-	H	D/I	R	R/I	P/T	ST/LT	Construction has potential to have temporary adverse effects on the adjacent Bow Creek Ecology Park SINC (across the River Lea in the London Borough of Newham) as well as the mudflat priority habitat, which falls within the site boundary. Habitats are likely to be affected by increase in noise and vibration, temporary reductions in air quality as well as potential land take and/or habitat fragmentation. However, the development aims to incorporate a 'significant amount' of riverside public open space, with elements of biodiversity that complement the adjacent Bow Creek Ecology Park SINC.
IIA10: Landscape & Townscape	+/-	H	D/I	R	R/I	P/T	ST/LT	The site is located near designated local open space. There are likely to be temporary negative effects to the local landscape and townscape setting during construction. However, as the site currently has low townscape value, there is potential for the redevelopment of the site to result in positive effects on the public realm, improving the landscape setting, particularly through the incorporation of riverside public open space.
IIA11: Historic Environment	+/-	H	D/I	R	R/I	P/T	ST/LT	The site has a number of heritage assets within its vicinity. The site is located within Lea Valley archaeological priority area. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets. However, the site may enhance the public realm, improving the setting of the historic environment.
IIA12: Flooding	--	M	D	L	I	P	LT	The site is located within a flood risk area and an area of flood zone 3. Any flood risk measures for the site are currently unknown and are likely to be determined during the design phase.
IIA13: Water Quality	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is located adjacent to the River Lea. There is potential that construction at the site may result in contamination of this water body as a result of surface runoff. Currently, no water quality measures are known to be included within the development.
IIA14: Air Quality	+/-	L	D/I	L	R	P/T	ST/LT	The site has good access to local public transport, providing the opportunity to reduce the need for private car usage, improving air quality. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction.
IIA15: Climate Change & Resilience	-	H	D	L	I	P	LT	The site is located in an area which has a high overall climate risk and heat risk rating and is likely to have diminishing resilience to climate change. The incorporation of GI will help to alleviate the UHI effect.

Site Name	Blackwall Trading Estate and Leamouth Road Depot							
Site Capacity	775							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. At this stage, it is not clear whether the development will utilise renewable energy sources or low carbon heat networks once operational. Further design details are required.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	+	L	D	R	I	P	LT	The development is located on previously developed land and will support the protection of the borough's green spaces. The site will support high density housing which will help to make the best use of the site. However, it is not clear whether the site will encourage sustainable use of materials.
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with the Leven Road site.</p> <p>IIA1/2: If construction of this site and the Leven Road site were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Leven Road site will significantly increase the number of business and jobs.</p> <p>IIA5: In combination, this site and the Leven Road site will significantly increase housing stock.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Leven Road site.</p> <p>IIA14: If construction of this site and the Leven Road site were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA15: The increase in GI provided by both this site and the Leven Road site is likely to increase resilience to the UHI effect.</p> <p>IIA16: The construction of both this site and the Leven Road site is likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring Leven Road site is likely to result in a cumulative increase in waste.</p>							
Mitigation and Enhancement Measures	<p>IIA1/2: Further assessment as part of scheme level design, should incorporate an evaluation of the provision of healthcare and education, to ensure that the current supply is sufficient in supporting new communities. The application of Policy CI1 may also help to mitigate impacts on existing community facilities.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA8/9/11: A lighting strategy should be prepared to minimise light spill onto retained or newly created habitat features or local heritage assets.</p> <p>IIA8: In line with policy BO1, the site must achieve a minimum UGF and BNG targets set out within the Plan (2.5 biodiversity units per hectare or a 30% gain in habitat value for wildlife).</p> <p>IIA10: The application of Policy PS8 will help manage adverse effects on the skyline and preserves or enhance visual connections between the public realm and open spaces. Buildings within the London City Airport Aerodrome Safeguarded zone need adhere to stipulated height restrictions.</p> <p>IIA12: Development should be delivered in line with Policy CG6, the NPPF and guidance from the Environment Agency.</p> <p>IIA13: Development should be delivered in line with Policy BO3 and guidance from the Environment Agency.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented onsite during both construction and operation.</p> <p>IIA14/15/16: Development should look to incorporate renewable energy generation methods (in line with Policy CG1), such as solar panels and use of low carbon heat networks, to reduce operational GHG emissions. The site should consider undertaking BREEAM Infrastructure to ensure that sustainability is integral to</p>

Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
	<p>development.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with policy DV4.</p>							

Hackney Wick Station

Table G-18 - Hackney Wick Station

Site Name	Hackney Wick Station							
Site Capacity	800 on the whole allocation (300 within borough)							
Site Source	New allocation - LLDC Local Plan allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	++	H	D	R	I	P	LT	<p>The site will provide a minimum of 800 residential properties (300 within Tower Hamlets). The area is located within the 30-50% most deprived neighbourhoods, and it is expected that the site will deliver 35% affordable housing. This site may also be suitable for extra-care accommodation. A range of sizes of housing unit will meet housing requirements for all. It is expected that at least 10% of each tenure type will be designed to be wheelchair user dwellings and located where there is suitable access for parking.</p> <p>The site will be served by a nursery, library and associated community uses which will help to improve local access to services and bring communities together and supporting the changes demographics of the area.</p>
IIA2: Human Health	++	H	D	R	I	P	LT	<p>As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and some community facilities; however, health deprivation is high and life expectancy is worse than the national average for males. As well as housing, the site will include new employment opportunities, and will include new open spaces. The site will therefore reduce levels of health inequalities and provide new facilities which will improve physical and mental health and wellbeing and reduce levels of loneliness, ensuring that the needs of all groups will be met now and in the future.</p>
IIA3: Economy & Town Centres	++	H	D	R	I	P	LT	<p>The site will include the provision of active frontages and public realm improvements at ground floor level and prioritise mixed use development, with residential properties above the ground floor level to improve and enhance connectivity between business clusters. The site is located within the Hackney Wick neighbourhood centre and so the addition of new retail spaces will improve the vitality of the high street. The site will also replace the existing employment, cultural, creative, retail and residential uses (including a theatre) with the aim to ensure no net loss in employment opportunities. It is expected that a variety of workspace typologies will be provided to meet the local demand.</p>
IIA4: Employment & Skills	++	H	D	R	I	P	LT	<p>The site will include employment space (Class B1, B2 uses) as well as retail. This will likely increase employment opportunities and improve town centre viability. All employment floorspace at the existing site will be replaced to ensure there is no net loss in jobs. A variety of workspace typologies will be provided, as well as a mixture of cultural uses to support existing and emerging demands for business spaces. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.</p>

Site Name	Hackney Wick Station							
Site Capacity	800 on the whole allocation (300 within borough)							
Site Source	New allocation - LLDC Local Plan allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA5: Housing	++	H	D	R	I	P	LT	The provision of over 800 new homes (300 in Tower Hamlets) will help towards meeting LBTH's housing target. At least 35% of all units will be affordable and will include 10% wheelchair adaptable homes. The size, type and tenure of housing takes into account different groups in the community including, but not limited to, those who require affordable housing, families with children, older people and people with disabilities. This site may also be suitable for extra-care accommodation.
IIA6: Crime & Safety	+	M	D	L	I	P	LT	The site is currently located within an area of high crime deprivation (top 10-20% of neighbourhoods nationally). It is assumed that the proposal will be designed in accordance with the Secured by Design Principles. The site will include a range of uses and improving public realm including active uses at ground floor level, which will improve overall natural surveillance. Overall, it is considered that the development of the site will improve perception of safety. Improvements to internal connectivity will increase passive surveillance through and around the site, which will improve the security of the area.
IIA7: Sustainable Transport	++	L	D	L	I	P	LT	The site is in close proximity to underground and overground stations, as well as a number of bus stops. The site connected to the London Cycle Network and the National Cycle Network. This is reflected in a PTAL score between 2-4. Cycle parking is expected to be delivered as part of the site's development. The site is also proposed to deliver a pattern of land use which prioritises walking and cycling and facilitates short trips.
IIA8: Accessibility	++	H	D	R	I	P	LT	The existing site has fairly good access to facilities and services and will allow residents to live their lives more locally and may reduce the need to travel. The level of additional services provided on-site will deliver a pattern of land use which prioritises walking and cycling and reduces the need to travel.
IIA9: Biodiversity & Natural Capital	+/-	M	D	L	R/I	P/T	ST/LT	There are no statutory or non-statutory designated sites within the site, an area of prior habitat deciduous woodland is located to the south west of the site. The site is also located in close proximity to a number of SINCs. There is potential for some adverse effects on some small-scale habitats and species during construction. However, the site will provide an increase in GI (particularly from the redevelopment of Queen's Yard), which could help to provide new small-scale habitats. At this stage BNG is assumed but whether the site meets the BNG benchmark of 2.5 biodiversity unit (BU) per hectare or 30% gain (whichever is higher) is unknown
IIA10: Landscape & Townscape	+	M	D	L	R/I	P/T	ST/LT	The site is not situated within any designations relating to townscape nor landscape. There are likely to be temporary negative effects to the local landscape and townscape setting during construction. Improvements to public realm and consideration of the design within will improve townscape and landscape setting.

Site Name	Hackney Wick Station							
Site Capacity	800 on the whole allocation (300 within borough)							
Site Source	New allocation - LLDC Local Plan allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA11: Historic Environment	+	M	D	L	R/I	P/T	ST/LT	The site lies within the Hackney Wick and Fish Island Conservation Areas and is situated with the boundary of the Lea Valley Archaeological Priority Area. During construction, there is potential for adverse effects on the setting of heritage assets from construction traffic, emissions and noise and vibration. Excavation works may result in the loss of buried archaeological assets. It is expected that the site will reduce the number of vacant sites and buildings which currently have a negative impact on the designated heritage assets. The site will demonstrate buildings of industrial character, in-keeping with the existing site.
IIA12: Flooding	--	H	D	L	I	P	LT	The site lies within Flood Zones 2 and 3. It is expected that the site will achieve safety through the sequential allocation of development types and appropriate flood resilience measures. At this stage, flood risk and sustainable drainage measures have not been fully realised.
IIA13: Water Quality	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is adjacent to a main river, and so consideration to adequately mitigate against adverse impacts on water quality as a result of the development is key to the delivery of the site.
IIA14: Air Quality	+/-	M	D/I	L	R/I	P/T	ST/LT	Air quality at the site is good with low levels of NO ₂ and PM ₁₀ . The site has good access to local public transport and community facilities and could allow residents to live their lives more locally and reduce the need for private car usage. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction. Consideration would need to be given as to how to minimise disruption to the local residents.
IIA15: Climate Change & Resilience	-	H	D	L	I	P	LT	Overall climate risk and overall heat risk are high. Development specific climate resilience measures are not known at this stage. The addition of GI will help to alleviate the UHI effect, but more specific climate resilient design measures are not known at this time.
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. At this stage, it is not clear whether the development will utilise renewable energy sources or low carbon heat networks once operational. Further design details are required.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	++	M	D	L	I	P	LT	The development is located on previously developed land and will support high density housing and mixed-use development which will help to make the best use of the site.

Site Name	Hackney Wick Station

Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
Potential Cumulative/Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with nearby site Hepscoot Road, Neptune Wharf, Hamlet Industrial Estate and Sweetwater</p> <p>IIA1/2: If construction of this site and the other allocated sites at Hepscoot Road, Neptune Wharf, Hamlet Industrial Estate and Sweetwater were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Hepscoot Road, Neptune Wharf, Hamlet Industrial Estate and Sweetwater sites will significantly increase the number of business and jobs.</p> <p>IIA10: In combination with construction at the Hepscoot Road, Neptune Wharf, Hamlet Industrial Estate and Sweetwater sites, temporary adverse impacts on landscape and townscape during the construction phase will be more severe in extent.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Hepscoot Road, Neptune Wharf, Hamlet Industrial Estate and Sweetwater sites.</p> <p>IIA14: If construction of this site and the Hepscoot Road, Neptune Wharf, Hamlet Industrial Estate and Sweetwater sites were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA15: The increase in GI provided by both this site and other allocated sites in the vicinity is likely to increase resilience to the UHI effect.</p> <p>IIA16: The construction of both this site and the Hepscoot Road, Neptune Wharf, Hamlet Industrial Estate and Sweetwater sites is likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Hepscoot Road, Neptune Wharf, Hamlet Industrial Estate and Sweetwater sites is likely to result in a cumulative increase in waste.</p>							
Mitigation and Enhancement Measures	<p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA9: In line with policy BO1, the site must achieve a minimum UGF and BNG targets set out within the Plan (2.5 biodiversity units per hectare or a 30% gain in habitat value for wildlife).</p> <p>IIA10: The application of Policy PS8 will help preserves or enhance visual connections between the public realm and open spaces. Buildings within the London City Airport Aerodrome Safeguarded zone need adhere to stipulated height restrictions.</p> <p>IIA12/13: The application of policies CG6, CG7 and CG8 will help mitigate flood risk and water quality impacts.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented on-site during both construction and operation.</p> <p>IIA15/16: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices. The application of policies CG1, CG2, CG3, CG4 and CG5 will help to reduce the impacts of GHGs and increase climate resilience.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4.</p>							

Hepscott Road

Table G-19 – Hepscott Road

Site Name	Hepscott Road							
Site Capacity	525							
Site Source	New allocation – LLDC Local Plan allocation							
Site Status	New allocation							
I/A Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
I/A1: Population & Equalities	++	M	D	R	I	P	LT	The site is anticipated to provide up to 525 new homes, of which 35% will be affordable, this is key for the area as it falls within the 30-50% most deprived. The site has fair access to some community services which will help to bring communities together and support a changing demographic. The site will also include additional community and cultural facilities and may be potentially suitable for extra-care accommodation.
I/A2: Human Health	++	H	D	R	I	P	LT	The site is located in close proximity to a range of facilities and infrastructure which supports human health. Health deprivation is currently high, and the life expectancy for men is worse than the national average. The site will comprise of mixed-use development opportunities, supports urban greening through the provision of canal-side open space, and encourages improvements to the public realm. Community uses will also be included within the development site to meet the needs of the additional population. Overall, the site is expected to reduce levels of health inequalities and provide new facilities which will improve physical and mental health and wellbeing and reduce levels of loneliness. The site will promote active travel through the provision of new walking and cycling routes by and providing connection to the Hertford Union Canal towpath, Roach Point Bridge, and Hackney Wick Station. It will ensure that the needs of all groups will be met both now and in the future.
I/A3: Economy & Town Centres	++	H	D	R	I	P	LT	The proposed site will include active uses through the formation of active frontage and non-residential ground floor frontage, prioritising mixed use development with residential properties above ground floor level, improving connectivity between business clusters. New shopfront openings and public realm improvements at the ground floor level. The site will prioritise mixed use development, with residential properties above the ground floor level to improve and enhance connectivity between business clusters. The Site is located within close proximity to the Hackney Wick Neighbourhood Centre. The site will serve a range of business needs providing employment, creative and cultural uses.
I/A4: Employment & Skills	++	H	D	R	I	P	LT	The site will include employment space, supporting further job opportunities in the area. The site is expected to provide a range of employment, creative and cultural uses, meeting the needs for businesses and diversifying the labour market. The Site is outside the Activity Area, and so will improve employment opportunities within the locality. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
I/A5: Housing	++	H	D	L	I	P	LT	The provision of approximately 525 new homes will help towards meeting LBTH and LLDC's housing target. At least 35% of all units will be affordable. It is expected that the size, type and tenure of housing takes into account different groups in the community, including but not limited to, those who require affordable housing, families with children, older people and people with disabilities.

Site Name	Hepscott Road							
Site Capacity	525							
Site Source	New allocation – LLDC Local Plan allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA6: Crime & Safety	+	M	D	L	R/I	P/T	LT	The site is located within an area of high crime deprivation (top 10-20% of neighbourhoods nationally). The Site will include a range of uses and will improve public realm including active uses at ground floor level, which will improve overall natural surveillance, particularly considering the existing waste management use of the site. It is expected that the development of the site would improve the perception of safety within the area compared to the existing nature of the site as a waste management facility. Improvements to connections for public foot and cycle traffic through the site are also expected to improve the security of the area
IIA7: Sustainable Transport	+	M	D	L	I	P	LT	The site is in a fairly sustainable location, located in close proximity to Hackney Wick Railway Station, a number of bus stops. The site is not connected to the London Cycle Network and is not in close proximity to EV charging infrastructure. This is reflected in a PTAL score between 2-3. The site includes the development of new walking and cycle routes providing connections to the Hertford Union Canal towpath, Roach Point Bridge and Hackney Wick Station.
IIA8: Accessibility	+	M	D	L	I	P	LT	The existing site has fairly good access to facilities and services and will allow residents to live their lives more locally and may reduce the need to travel, the additional services to be provided on site is expected to sufficiently serve the new population of the area.
IIA9: Biodiversity & Natural Capital	++	M	D	L	I	P	LT	Areas of deciduous woodland are located <0.8km from the Site. The site is also located in close proximity to a number of SINC. There are no other statutory or non-statutory designated sites of nature conservation interest within or adjacent to the development site. A canal is located to the South of the Site. The development site mainly comprises of previously developed brownfield land, with most areas limited in vegetative cover. It is expected that there will be a minor adverse impact on ecology during construction. The site will include a linear park alongside the canal which will improve GI corridors and enhance the biodiversity of the site, which outweighs harm during the construction phase.
IIA10: Landscape & Townscape	+/-	M	D/I	L	I	P	LT	The site is located adjacent to MOL to the South and designated Open Space to the West. The site is expected to respond positively to the waterfront setting, enhancing the character of the canal and enhance strategic views west towards central London, and aims to achieve high quality public realm improvements.
IIA11: Historic Environment	+/-	M	D/I	L	R/I	P/T	ST/LT	The site is situated within the Fish Island Conservation Area and the Lea Valley Archaeological Priority Areas. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets. It is anticipated that the development will make use of to ensure the retention and reuse of buildings of heritage value, and how development should preserve and enhance the conservation area, and where outside, enhance its setting.

Site Name	Hepscott Road							
Site Capacity	525							
Site Source	New allocation – LLDC Local Plan allocation							
Site Status	New allocation							
I/A Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
I/A12: Flooding	-	H	D	L	I	P	LT	The site is located within Flood Zones 2 and 3 and therefore is within a Flood Risk Area. Development will therefore need to comply with any flood mitigation and adaptation measures.
I/A13: Water Quality	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is located adjacent to Hertford Union Canal. There is potential that construction at the site may result in contamination of this water body as a result of surface runoff.
I/A14: Air Quality	+/-	L	D/I	L	R/I	P/T	ST/LT	The site has generally good access to local public transport and will provide new facilities allowing residents to live their lives more locally and reduce the need for private car usage. Public realm improvements will also include GI which could reduce exposure to the effects of urban air pollution. There are likely to be temporary negative effects on air quality due to dust generation and emissions from construction, and consideration would need to be given as to how to minimise disruption to the local residents.
I/A15: Climate Change & Resilience	+	M	D/I	L	I	P	LT	Overall climate risk and overall heat risk are both high. Climate resilience measures are expected to reduce impacts of overheating risk and GI is a key element of the scheme to be delivered which should reduce the impacts of the UHI Effect. It is assumed that the site will adhere to the London Plan, Policy G5 – Urban Greening. This will provide opportunities for increased climate resilience at the site.
I/A16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. At this stage, it is not clear whether the development will utilise renewable energy sources or low carbon heat networks once operational.
I/A17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
I/A18: Efficient use of Land	+	H	D	R	I	P	LT	The development is located on previously developed land and will support the protection of the borough's green spaces. The site will support high density housing which will help to make the best use of the site. It is not clear whether the site will encourage sustainable use of materials.

Site Name	Hepscott Road							
Site Capacity	525							
Site Source	New allocation – LLDC Local Plan allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with nearby site Neptune Wharf, Hackney Wick Station, Hamlet Industrial Estate and Sweetwater</p> <p>IIA1/2: If construction of this site and the other allocated sites at Neptune Wharf, Hackney Wick Station, Hamlet Industrial Estate and Sweetwater were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Neptune Wharf, Hackney Wick Station, Hamlet Industrial Estate and Sweetwater sites will significantly increase the number of business and jobs.</p> <p>IIA10: In combination with construction at the Neptune Wharf, Hackney Wick Station, Hamlet Industrial Estate and Sweetwater sites, temporary adverse impacts on landscape and townscape during the construction phase will be more severe in extent.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Neptune Wharf, Hackney Wick Station, Hamlet Industrial Estate and Sweetwater sites.</p> <p>IIA14: If construction of this site and the Neptune Wharf Hackney Wick Station, Hamlet Industrial Estate and Sweetwater sites were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA15: The increase in GI provided by both this site and other allocated sites in the vicinity is likely to increase resilience to the UHI effect.</p> <p>IIA16: The construction of both this site and the Neptune Wharf, Hackney Wick Station, Hamlet Industrial Estate and Sweetwater sites is likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Neptune Wharf, Hackney Wick Station, Hamlet Industrial Estate and Sweetwater sites is likely to result in a cumulative increase in waste.</p>							
Mitigation and Enhancement Measures	<p>IIA1: Housing should deliver at least 10% accessible homes. A range of housing options to suit all housing needs within the community is necessary in line with policies HF1 and HF2.</p> <p>IIA1/2: Further assessment of part of scheme level design should incorporate an evaluation of the provision of healthcare to ensure that the current supply is sufficient in supporting new communities. The application of Policy C11 may also help to mitigate impacts on existing community facilities.</p> <p>IIA3: Where the site is located adjacent to a designated town centre, policies TC1-TC8 will ensure that development outside of the town centre will not detrimentally impact on the existing town centre, allowing centres to remain vibrant and sustainable and demonstrating vitality.</p> <p>IIA3/4: The loss of businesses should be avoided, however, in line with policy EG4 it is assumed that there will be no net loss in employment space. Where businesses will be lost, discussions with owners should be undertaken to ensure suitable alternative locations are identified. Alternative units should where possible be equivalent in size, layout, rent and connectivity to the existing site and considered suitable by the occupier.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA7: Sustainable Transport should be delivered as part of the development, in line with the requirements of policies MC1 and MC2.</p> <p>IIA9: In line with Policy BO1, the site must achieve a minimum UGF and BNG targets set out within the Plan (2.5 biodiversity units per hectare or a 30% gain in habitat value for wildlife).</p> <p>IIA11: Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals should be referred to minimise the impacts on the historic environment. The council should also work in partnership with Historic England.</p> <p>IIA10: The application of Policy PS8 will help manage adverse effects on the skyline and preserves or enhance visual connections between the public realm and open spaces. Buildings within the London City Airport Aerodrome Safeguarded zone need adhere to stipulated height restrictions.</p> <p>IIA12: Development should be delivered in line with Policy CG6, the NPPF and guidance from the Environment Agency.</p> <p>IIA13: Development should be delivered in line with Policy BO3 and guidance from the Environment Agency.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented onsite during both construction and operation.</p> <p>IIA14/15/16: Development should look to incorporate renewable energy generation methods (in line with Policy CG1), such as solar panels and use of low carbon</p>							

Site Name	Hepscott Road							
Site Capacity	525							
Site Source	New allocation – LLDC Local Plan allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
	<p>heat networks, to reduce operational GHG emissions. The site should consider undertaking BREEAM Infrastructure to ensure that sustainability is integral to development. The application of policies CG1, CG2, CG3, CG4 and CG5 will help to reduce the impacts of GHGs and increase climate resilience.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4.</p>							

Table G-20 – Sweetwater

Site Name	Sweetwater							
Site Capacity	775							
Site Source	New allocation – LLDC Local Plan allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	++	H	D	R	I	P	LT	The site will provide up to 775 residential properties. The area is located within the 30-50% most deprived neighbourhoods, and 30% of the housing proposed will be affordable. A range of sizes of unit are proposed to meet housing requirements for all. At least 10% of each tenure type are designed to be wheelchair user dwellings and located where there is suitable access for parking. Access to services and facilities is generally good, and the site will be served by a nursery, library and associated community uses which will help to bring communities together and supporting the changes demographics of the area. The site will also be supported by public realm.
IIA2: Human Health	++	H	D	R	I	P	LT	The site is located in close proximity to a range of facilities and infrastructure which supports human health, including significant areas of parks and open spaces. Health deprivation is currently high, and the life expectancy for men is worse than the national average. The site will comprise of mixed-use development opportunities and supports urban greening through the provision of a canal-side walk, which will improve public realm and provide safe spaces for walking and cycling, and the provision of play spaces. A new NHS healthcare facility will also be provided. Other community facilities include a library and community centre and a nursery and outdoor play spaces. Overall, the site will reduce levels of health inequalities and provide new facilities which will improve physical and mental health and wellbeing and reduce levels of loneliness. It will ensure that the needs of all groups will be met both now and in the future.
IIA3: Economy & Town Centres	++	H	D	R	I	P	LT	The site lies in an out-of-centre location, with Hackney Wick Neighbourhood Centre being the closest to the site. The site will deliver non-residential floorspace so that the needs of residents are responded to and provide a mixture of uses to establish its own neighbourhood centre which will complement the wider Hackney Wick Area and introduce its own neighbourhood parade into the locality. The site will include active uses through the formation of active frontage and non-residential ground floor frontage, prioritising mixed use development with residential properties above ground floor level, improving connectivity between business clusters.
IIA4: Employment & Skills	++	H	D	R	I	P	LT	The site is within the 10-20% most deprived in terms of income, and the 30-50% most deprived in terms of employment. The site will include employment and commercial floor space, supporting further job opportunities in the area. The Site is outside the Activity Area and other industrial locations and so will improve and generate local employment opportunities. Ground floor uses will create its own neighbourhood centre, in an area where there are currently no neighbourhood parades within close vicinity to the site. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.

Site Name	Sweetwater							
Site Capacity	775							
Site Source	New allocation – LLDC Local Plan allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA5: Housing	++	H	D	R	I	P	LT	The provision of 775 new homes will help towards meeting LBTH and LLDCs housing targets. The site is within the 10-20% most deprived in relation to barriers to housing. At least 30% of all units will be affordable. 10% of residential units will be accessible homes. The site will include housing units in a range of sizes to suit all members of the community.
IIA6: Crime & Safety	+	M	D/I	L	R/I	P/T	ST/LT	The site is located within an area of high crime deprivation (top 10-20% of neighbourhoods nationally). The site will include a range of uses and will improve public realm including active uses at ground floor level, which will improve overall natural surveillance. It is assumed the site has been designed in mind with measures to design out crime, and so the development will inherently improve the perception of safety within the area. Improvements to connections for public foot and cycle traffic through the site are also expected to improve the security of the area.
IIA7: Sustainable Transport	++	M	D	L	I	P	LT	The site is in a fairly sustainable location and is located in close proximity to Hackney Wick Railway Station, Pudding Mill Lane and Stratford International DLR stations, as well as a number of bus stops. The site connected to the London Cycle Network. There is little EV charging infrastructure at the site. This is reflected in a PTAL score between 2-3. The site will include 20% EV charging when operational. Also, walking and cycling routes are proposed, as well as secure cycle parking. The site is also proposed to deliver a pattern of land use which prioritises walking and cycling and facilitates short trips.
IIA8: Accessibility	++	M	D	L	I	P	LT	The existing site has fairly good access to facilities and services and will allow residents to live their lives more locally and may reduce the need to travel. The level of additional services provided on-site will deliver a pattern of land use which prioritises walking and cycling and reduces the need to travel. Accessible parking bays will be provided for wheelchair accessible dwellings for 3% of accessible dwellings for up to an additional 7%.
IIA9: Biodiversity & Natural Capital	+/-	H	D	R	I	P	LT	There are no statutory or non-statutory designated sites within the site, an area of prior habitat deciduous woodland is located to the south of the site. The site is also located in close proximity to a number of SINCS. The site is expected to deliver an integrated approach to open space, biodiversity and the natural environment through the provision of GI. It is expected that during construction there will be an adverse impact on ecology. It is assumed that BNG benchmark of 2.5 biodiversity unit (BU) per hectare or 30% gain (whichever is higher) will be delivered through the development of the Canal Park, the proposed liveable streets, and green roofs.
IIA10: Landscape & Townscape	++	M	D	L	R/I	P/T	ST/LT	Local Open Space within the site will be maintained, and a larger provision of open and amenity spaces will also be provided through the approved landscaping plan, integrating new green development into the existing surrounding context. The site will have an overall positive contribution to the townscape, with open space provision to deliver enhancements to the character and appearance of the surrounding area. Active frontage would be created along the canal, and green landscapes areas will be maintained to set development back from the river frontage to maintain the character of the canal side.

Site Name	Sweetwater							
Site Capacity	775							
Site Source	New allocation – LLDC Local Plan allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA11: Historic Environment	+	M	I	L	R/I	P/T	ST/LT	The site lies within close proximity to the Fish Island, Hackney Wick, and White Post Lane Conservation Areas and is situated within the Lea Valley Archaeological Priority Area. During construction, there is potential for adverse effects on the setting of heritage assets from construction traffic, emissions and noise and vibration. Excavation works may result in the loss of buried archaeological assets, which must be mitigated against. The site will lead to the enhancement of existing views and greening which will have a positive impact on heritage assets.
IIA12: Flooding	--	H	D	L	I	P	LT	The site is located within Flood Zones 2 and 3 and therefore is within a Flood Risk Area. Development will therefore need to comply with any flood mitigation and adaptation measures.
IIA13: Water Quality	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is located in close proximity to a main river, and so consideration to adequately mitigate against adverse impacts on water quality as a result of the development is key to the delivery of the site.
IIA14: Air Quality	+/-	M	D	L	I	T	ST	Air quality is generally good at the site. The site has generally good access to local public transport and will provide new facilities allowing residents to live their lives more locally and reduce the need for private car usage. Public realm improvements also include GI which could reduce exposure to the effects of urban air pollution. There are likely to be temporary negative effects on air quality due to dust generation and emissions. Residential properties will be set back and separated from main vehicle circulation routes by street trees to reduce impact on the local community.
IIA15: Climate Change & Resilience	+	H	D	L	I	P	LT	The site is identified as being at high heat and climate risk. The addition of more GI and open space will help to reduce the UHI effect. It is expected that homes and non-residential units will be constructed to energy efficient standards and will make use of renewable energy. It is assumed sustainable construction practices will be used. It is assumed that the site will adhere to the London Plan, Policy G5 – Urban Greening. This will provide opportunities for increased climate resilience at the site.
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. It is uncertain if the development will include renewable energy sources.
IIA17: Waste	+	M	D	L	I	P/T	ST	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site The site will encourage sustainable use of materials through the use of recycled aggregated and materials
IIA18: Efficient use of Land	++	M	D	L	I	P	LT	The development is located on previously developed land and will support the protection of the borough's green spaces. The site will support high density housing which will help to make the best use of the site. The site will encourage sustainable use of materials through the use of recycled aggregated and materials

Site Name	Sweetwater							
Site Capacity	775							
Site Source	New allocation – LLDC Local Plan allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
Potential Cumulative/Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with nearby sites at Hepscoth Road, Hackney Wick Station, Hamlet Industrial Estate and Neptune Wharf, as well as other East Wick and Sweetwater development phases outside of the borough.</p> <p>IIA1/2: If construction of this site and the other allocated sites at Hepscoth Road, Hackney Wick Station, Hamlet Industrial Estate and Neptune Wharf and other phases of the East Wick and Sweetwater development were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and other East Wick and Sweetwater phases, and the Hepscoth Road, Hackney Wick Station, Hamlet Industrial Estate and Neptune Wharf sites will significantly increase the number of business and jobs.</p> <p>IIA10: In combination with construction at the Hepscoth Road, Hackney Wick Station, Hamlet Industrial Estate and Neptune Wharf sites, as well as other East Wick and Sweetwater development phases outside of the borough, temporary adverse impacts on landscape and townscape during the construction phase will be more severe in extent.</p> <p>IIA11: There is potential for cumulative increases in the loss of heritage assets and buried archelogy from both this site and the Hepscoth Road, Hackney Wick Station, Hamlet Industrial Estate and Neptune Wharf sites as well as other East Wick and Sweetwater development phases outside of the borough.</p> <p>IIA14: If construction of this site and the Hepscoth Road, Hackney Wick Station, Hamlet Industrial Estate and Neptune Wharf and other East Wick and Sweetwater phases of development were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA15: The increase in GI provided by both this site and other allocated sites in the vicinity is likely to increase resilience to the UHI effect.</p> <p>IIA16: The construction of both this site and the Hepscoth Road, Hackney Wick Station, Hamlet Industrial Estate and Neptune Wharf sites as well as other East Wick and Sweetwater development phases outside of the borough is likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Hepscoth Road, Hackney Wick Station, Hamlet Industrial Estate, Neptune Wharf sites and other East Wick and Sweetwater phases are likely to result in a cumulative increase in waste.</p>							
Mitigation and Enhancement Measures	<p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA9: In line with policy BO1, the site must achieve a minimum UGF and BNG targets set out within the Plan (2.5 biodiversity units per hectare or a 30% gain in habitat value for wildlife).</p> <p>IIA10: The application of Policy PS8 will help preserves or enhance visual connections between the public realm and open spaces. Buildings within the London City Airport Aerodrome Safeguarded zone need adhere to stipulated height restrictions.</p> <p>IIA13: The application of policy CG6, CG7 and CG8 will help to preserve water quality and mitigate impacts.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented on-site during both construction and operation.</p> <p>IIA15/16: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices. The application of policies CG1, CG2, CG3, CG4 and CG5 will help to reduce the impacts of GHGs and increase climate resilience.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4.</p>							

Table G-21 – Teviot Estate

Site Name		Teviot Estate						
Site Capacity		1200						
Site Source		New allocation						
Site Status		New allocation						
I/A Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
I/A1: Population & Equalities	++	H	D	R	I	P	LT	The site will provide 1,200 new residential units, which will work positively towards achieving the borough's housing target. Population density is higher than the borough average within this ward, therefore provision of additional residential units could reduce overcrowding. The site has good existing access to community services which may help to reduce levels of inequalities by bringing communities closer to these facilities. The site aims to provide additional facilities, including community and faith facilities, as well as a new primary school. The site has good existing access to community services and will likely reduce levels of inequalities and provide new facilities which will help to bring communities together and support a changing demographic.
I/A2: Human Health	++	H	D	R	I	P	LT	As housing is a key determinant of health, the delivery of this is likely to provide health benefits. As well as housing, the site includes community and faith facilities, and supports urban greening through provision improvements to parks and open spaces at Langdon Park and Uamvar Street, as well as encouraging improvements to the public realm. The site could potentially be suitable for extra-care accommodation or accommodation for people with learning disabilities. The site will reduce levels of health inequalities and provide new facilities which will improve wellbeing and reduce levels of loneliness. The development of new primary school provision, including playing fields and sports facilities is likely to improve the health and wellbeing of children around the site and Leaside area, providing play and educational facilities.
I/A3: Economy & Town Centres	+	L	D	L	I	P	LT	The site is near Empson Street SIL, one of London's main reservoirs of industrial and related capacity, and is adjacent to Barratt Industrial Estate, a Locally Significant Industrial Site. The site will aim to cluster of local retail and community uses could be reprovided along Zetland Street from the current location on Teviot Street, which may provide some additional employment opportunities, however, these are unlikely to be significant.
I/A4: Employment & Skills	+	L	D	R	I	P	LT	The site is well located close to Empson Street SIL, <1 km from Canary Wharf Major Centre, and the Isle of Dogs Activity Area, providing opportunities for access to employment. However, it is unclear if there will be any provision for additional employment within the site. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
I/A5: Housing	+	H	D	R	I	P	LT	The provision of 1200 new homes will help towards meeting the borough's housing target. It is assumed that the site will meet the minimum 35% target of affordable homes. At this stage it is not known how many units will be accessible and wheelchair adaptable.
I/A6: Crime & Safety	+	L	I	L	R	P	MT	The site is currently located within an area of high crime deprivation (top 10-40% of neighbourhoods nationally). There is limited detail on whether designing out crime principles will be applied as part of the development, however, developing the land from its existing use and

Site Name	Teviot Estate							
Site Capacity	1200							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
								providing housing and public realm improvements is likely to help to reduce crime and create a safer community.
IIA7: Sustainable Transport	?	N/A	N/A	N/A	N/A	N/A	N/A	Some access is available to the site via public transport through bus, overground, underground and rail. This is reflected by the site having a PTAL scores ranging between 2 and 4. Public transport access, and improvements to walking and cycling should be the main consideration in the delivery of the site. It is not clear whether there will be plans for additional sustainable transport provision, however improved infrastructure is a proposed feature of the scheme.
IIA8: Accessibility	+	M	D	L	I	P	LT	The existing site has fairly good access to facilities and services and will allow residents to live their lives more locally and may reduce the need to travel. However, it is not clear whether additional services will be provided on site and the current capacity of these facilities. There is potential for essential services to be stretched by a population increases. This may conversely increase the need to travel. Details are currently not available regarding any potential improvements to public realm. Any improvements should seek to improve legibility.
IIA9: Biodiversity & Natural Capital	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is adjacent to the River Thames and Tidal Tributaries SINCS and adjacent to areas of priority habitat including mudflat. There is potential for some adverse effects on some small-scale habitats and species during construction, as a result of noise and dust spoiling. Some new green spaces and play parks will be provided, but this will be small scale and at this stage BNG is assumed but whether the site meets the BNG benchmark of 2.5 biodiversity unit (BU) per hectare or 30% gain (whichever is higher) is unknown
IIA10: Landscape & Townscape	+	M	D	L	I	P	LT	There are a number of open spaces in the vicinity of the site. While there are likely to be temporary negative effects to the local landscape and townscape setting during construction, improvements to public realm at this site will enhance the quality and condition of the townscape and landscape. There are proposals to create new green and play spaces which will deliver enhancements to the character and appearance of the surrounding area.
IIA11: Historic Environment	+/-	H	D/I	R	R/I	P/T	ST/LT	The site is located within the Lea Valley APA, partially within the Langdon Park Conservation Area, and adjacent to the Limehouse Cut Conservation Area. It is therefore anticipated that the built form will protect and enhance the setting of heritage assets. Enhancements to public realm are expected to improve the setting of the local historic environment. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets
IIA12: Flooding	--	H	D	L	I	P	LT	The site is partially located within Flood Zones 2 and 3 and therefore is within a Flood Risk Area. The site gives no detail as to how it intends to manage the flood risk of the area, however any measures are expected to be in line with the borough's Strategic Flood Risk Assessment.
IIA13: Water Quality	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is located adjacent to the Limehouse Cut. There is potential for increased surface runoff during construction, further polluting this watercourse. No details are currently known relating to any measures to mitigate against water quality impacts.

Site Name	Teviot Estate							
Site Capacity	1200							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA14: Air Quality	+/-	M	D/I	L	R	P/T	ST/LT	The site has good access to local public transport, providing the opportunity to reduce the need for private car usage, improving air quality. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction, and consideration would need to be given as to how to minimise disruption to the local residents.
IIA15: Climate Change & Resilience	-	H	D	L	I	P	LT	Overall climate risk and overall heat risk are high. Development specific climate resilience measures are not known at this stage. The addition of GI will help to alleviate the UHI effect, but more specific climate resilient design measures are not known at this time.
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. At this stage, it is not clear whether the development will utilise renewable energy sources or low carbon heat networks once operational. Further design details are required.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	+	H	D	L	I	P	LT	The development is located on previously developed land and will support the protection of the borough's green spaces. The site will support high density housing which will help to make the best use of the site. It is not clear whether the site will encourage sustainable use of materials.
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring site Ailsa Street, Aberfeldy Estate and Chrisp Street. The increased demand for services to support the additional population may negatively impact existing local residents if no new facilities are brought forward at sites.</p> <p>IIA1/2: If construction of this site and the Ailsa Street, Aberfeldy Estate and Chrisp Street site were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Ailsa Street, Aberfeldy Estate and Chrisp Street site will significantly increase the number of businesses and jobs, providing more opportunities for existing and new residents.</p> <p>IIA5: In combination, this site and the Ailsa Street, Aberfeldy Estate and Chrisp Street site will significantly increase housing stock, contributing to the borough's housing target, whilst tackling issues of affordability.</p> <p>IIA10: If construction of this site and the Ailsa Street, Aberfeldy Estate and Chrisp Street site were to happen concurrently, there is potential for a temporary negative cumulative effect on the local landscape and townscape setting, as well as the visual amenity. Improvements to the public realm during operation may result in positive cumulative effects in the long term, enhancing the landscape and townscape character.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archology from both this site and the Ailsa Street, Aberfeldy Estate and Chrisp Street site, resulting in a negative residual effect.</p> <p>IIA14: If construction of this site and the Ailsa Street, Aberfeldy Estate and Chrisp Street site were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic, a temporary effect. However, if construction timetables occurred in succession, these negative effects could be long term, though less severe.</p> <p>IIA15: The increase in open space GI potentially provided by both this site and the Ailsa Street, Aberfeldy Estate and Chrisp Street site is likely to increase resilience to the UHI effect. However, the exact climate resilience measures are not yet known.</p> <p>IIA16: The construction of both this site and the Ailsa Street, Aberfeldy Estate and Chrisp Street site is likely to result in a significant cumulative increase in embodied</p>							

Site Name	Teviot Estate							
Site Capacity	1200							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
	<p>carbon. Embodied carbon could be reduced if circular economy principles are applied and existing materials are repurposed.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Ailsa Street, Aberfeldy Estate and Chrisp Street is likely to result in a cumulative increase in waste. Alignment with circular economy principles is not yet confirmed, however this could reduce the negative effect associated with waste generation.</p>							
Mitigation and Enhancement Measures	<p>IIA1: Housing should include provision of housing to meet the needs of all population groups as set out in the Homes for the Community policies.</p> <p>IIA1/2: Further assessment as part of scheme level design, should incorporate an evaluation of the provision of healthcare and education, to ensure that the current supply is sufficient in supporting new communities. The application of Policy CI1 may also help to mitigate impacts on existing community facilities.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA8/9/11: A lighting strategy should be prepared to minimise light spill onto retained or newly created habitat features, and to avoid interference with the visual amenity of the historic environment.</p> <p>IIA9: In line with Policy BO1 and BO4, the site must achieve a minimum UGF and BNG targets set out within the Plan (2.5 biodiversity units per hectare or a 30% gain in habitat value for wildlife). Developments must demonstrate BNG and ensure it is measurable against metrics.</p> <p>IIA10: The application of Policy PS8 will help manage adverse effects on the skyline and preserves or enhance visual connections between the public realm and open spaces. Compliance with the requirements of the London View Management Framework and World Heritage Site Management Plans is essential. Buildings within the London City Airport Aerodrome Safeguarded zone need adhere to stipulated height restrictions.</p> <p>IIA12: Development should accord with any flood mitigation and adaptation measures stated within the borough's SFRA in line with Policy CG6, including a sequential test. The application of SuDS techniques (in line with Policy CG7) should be demonstrated by developments to reduce the risk of run-off and surface water flooding. A revised flood risk assessment should be submitted to demonstrate compliance with London Plan Policy 5.12.</p> <p>IIA13: Development should be delivered in line with policy BO3 and guidance from the Environment Agency.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented onsite during both construction and operation.</p> <p>IIA14/15/16: Development should look to incorporate renewable energy generation methods (in line with Policy CG1), such as solar panels and use of low carbon heat networks, to reduce operational GHG emissions. The site should consider undertaking BREEAM Infrastructure to ensure that sustainability is integral to development.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA16: The application of Policy CG4 will require major developments to assess whole lifecycle carbon emissions and meet best practice embodied carbon emissions targets for building elements. This policy sets out limits for embodied carbon which should be monitored.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4. Development proposals which seek to maximise the efficiency and/or capacity of waste facilities in the borough will be supported in line with Policy RW1.</p>							

Table G-22 – Aspen Way

Site Name	Aspen Way							
Site Capacity	780							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	++	M	D	R	I	P	LT	The site will provide 780 new residential units, which will work positively towards achieving the borough's housing target. However, it is not known whether there will be provision made for wheelchair adaptable homes. It is assumed that the site will meet the minimum 35% target of affordable homes. The site is within the 20-30% most deprived Lower Super Output Areas (LSOAs) in the borough so affordability should be a key consideration. The site has good existing access to community services which may help to reduce levels of inequalities by bringing communities closer to these facilities. The site will also include additional community facilities, including sports, cultural and a college. Proposals on this site should be in accordance with the principles of the South Poplar Masterplan SPD, which aims to address the social, economic and environmental disparities between Poplar and Canary Wharf.
IIA2: Human Health	+	M	D		I	P	LT	As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and community facilities, and is directly adjacent to Poplar Recreation Ground, however, health deprivation is high and life expectancy is worse than the national average for males and females. It is not clear whether the current healthcare provision will meet the needs of the new population. However, the additional provision of community facilities, college and football pitches will contribute to improving the public realm and community facilities around the site. Additionally, reprovisioning the football pitches will encourage physical activity and improve health, particularly amongst children and young people.
IIA3: Economy & Town Centres	+	L	D	L	I	P	LT	The finer details of the development are not yet known; however the site is allocated for mixed use development and compatible commercial uses, which will include SME and retention of the existing Docklands Light Railway (DLR) depot. The site will improve and enhance connectivity between business clusters and the housing market.
IIA4: Employment & Skills	++	H	D	L	I	P	LT	The site is well located to existing employment areas, within the Isle of Dogs Activity Area. This will likely improve access for residents to employment opportunities. The proposal of mixed-use development to include commercial uses will ensure an increase in the number of jobs and provide additional employment opportunities. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
IIA5: Housing	+	H	D	R	I	P	LT	The provision of 780 new homes will help towards meeting the borough's housing target. It is assumed that the site will meet the minimum 35% target of affordable homes, however, the size, type and tenure of housing is not currently known.

Site Name	Aspen Way							
Site Capacity	780							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA6: Crime & Safety	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is currently located within an area of high crime deprivation (top 10-40% of neighbourhoods nationally). There is limited detail on whether designing out crime principles will be applied as part of the development or whether there will be improvements to the public realm, to support crime reductions. The addition of sustainable transport provision could reduce the number of vehicles on the borough's roads, thus supporting road safety measures to reduce the numbers of victims killed and seriously injured (KSI) on roads.
IIA7: Sustainable Transport	++	M	D	L	I	P	LT	Access is readily available to the site via public transport through bus, overground, underground and rail, with Poplar DLR station within the site. It is uncertain if there are plans for additional transport provision. This is reflected by the site having a PTAL scores ranging between 3 and 5. However, the site includes improved walking and cycling connections to the surrounding area, including: Poplar DLR station, Poplar High Street, East India Dock Road and Canary Wharf Station. There are also proposed improvements to the pedestrian crossing over Aspen Way as part of the development.
IIA8: Accessibility	+	M	D	L	I	P	LT	The existing site has good access to facilities and services and will allow residents to live their lives more locally and may reduce the need to travel. Active travel is encouraged with direct access to the National Cycle Network. However, it is not clear whether additional services will be provided on-site and the current capacity of these facilities. There is potential for essential services to be stretched by a large increase in population. This may conversely increase the need to travel.
IIA9: Biodiversity & Natural Capital	+	L	D	L	R	P	MT	The site is located away from any greenspace or designated sites, however, there is potential for some adverse effects on some small-scale habitats and species during construction. The provision of strategic open space along with a public square green grid improvement, will help to increase biodiversity and natural capital on site.
IIA10: Landscape & Townscape	++	H	D	R	R/I	P/T	ST/LT	The current landscape/ townscape is of a low quality. The proposed site aims to create a positive sense of place with a public square and public green open space that integrates north-south links and Poplar DLR station and improve the quality of spaces around and between buildings and movement through the area.
IIA11: Historic Environment	+/-	H	D/I	R	R/I	P/T	ST/LT	The site has a number of heritage assets within its vicinity. The site is partially located within both Poplar and Isle of Dogs APA, and partially within St Matthias' Church Conservation Area. It is pertinent to protect and enhance the setting of heritage assets in and around the area, including the Grade II New City College within the site, as well as multiple adjacent listed buildings. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets. However, the site may enhance the public realm, improving the setting of the historic environment.
IIA12: Flooding	-	H	D	L	I	P	LT	The site falls wholly within Flood Zone 3 and a Flood Risk Area. The site is low lying and therefore has a greater probability of flooding. The site does sit within the South Poplar Masterplan area and therefore will include co-ordinated development to manage surface

Site Name	Aspen Way							
Site Capacity	780							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
								water and enable discharge into the docks to the south. However, no details are understood relating to the specific measures this will include, or any additional flood risk mitigation.
IIA13: Water Quality	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA14: Air Quality	+/-	L	D/I	L	R	P/T	ST/LT	The site has substandard air quality but provides good access to local public transport, providing the opportunity to reduce the need for private car usage, improving air quality. Public realm improvements may also include GI which could reduce exposure to the effects of urban air pollution. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction.
IIA15: Climate Change & Resilience	-	H	D	L	I	P	LT	Overall climate risk is medium and overall heat risk is high. Development specific climate resilience measures are not known at this stage, but the incorporation of green spaces and GI will help to reduce the UHI effect. It is assumed that the site will adhere to the London Plan, Policy G5 – Urban Greening. This will provide opportunities for increased climate resilience at the site.
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. At this stage, it is not clear whether the development will utilise renewable energy sources or low carbon heat networks once operational. Further design details are required.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	+	H	D	L	I	P	LT	The development is located on previously developed land and will support the protection of the borough's green spaces. Existing on-site uses and buildings would be replaced by new development and could address any potential contamination from previous uses. However, it is not clear whether the site will encourage sustainable use of materials.
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring site North Quay and Billingsgate Market. The increased demand for services to support the additional population may negatively impact existing local residents if no new facilities are brought forward at sites.</p> <p>IIA1/2: If construction of this site and the North Quay and Billingsgate Market site were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the North Quay and Billingsgate Market site will significantly increase the number of businesses and jobs, providing more opportunities for existing and new residents.</p> <p>IIA5: In combination, this site and the North Quay and Billingsgate Market site will significantly increase housing stock, contributing to the borough's housing target, whilst tackling issues of affordability.</p> <p>IIA10: If construction of this site and the North Quay and Billingsgate Market site were to happen concurrently, there is potential for a temporary negative cumulative effect on the local landscape and townscape setting, as well as the visual amenity. Improvements to the public realm during operation may result in positive cumulative effects in the long term, enhancing the landscape and townscape character.</p>							

Site Name	Aspen Way							
Site Capacity	780							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
	<p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the North Quay and Billingsgate Market site, resulting in a negative residual effect.</p> <p>IIA14: If construction of this site and the North Quay and Billingsgate Market site were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic, a temporary effect. However, if construction timetables occurred in succession, these negative effects could be long term, though less severe.</p> <p>IIA15: The increase in open space GI potentially provided by both this site and the North Quay and Billingsgate Market site is likely to increase resilience to the UHI effect. However, the exact climate resilience measures are not yet known.</p> <p>IIA16: The construction of both this site and the North Quay and Billingsgate Market site is likely to result in a significant cumulative increase in embodied carbon. Embodied carbon could be reduced if circular economy principles are applied and existing materials are repurposed.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site North Quay and Billingsgate Market is likely to result in a cumulative increase in waste. Alignment with circular economy principles is not yet confirmed, however this could reduce the negative effect associated with waste generation.</p>							
Mitigation and Enhancement Measures	<p>IIA1: Housing should include provision of housing to meet the needs of all population groups as set out in the Homes for the Community policies.</p> <p>IIA1/2: Further assessment as part of scheme level design, should incorporate an evaluation of the provision of healthcare and education, to ensure that the current supply is sufficient in supporting new communities. The application of Policy C11 may also help to mitigate impacts on existing community facilities.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA8/9/11: A lighting strategy should be prepared to minimise light spill onto retained or newly created habitat features, and to avoid interference with the visual amenity of the historic environment.</p> <p>IIA9: In line with Policy BO1 and BO4, the site must achieve a minimum UGF and BNG targets set out within the Plan (2.5 biodiversity units per hectare or a 30% gain in habitat value for wildlife). Developments must demonstrate BNG and ensure it is measurable against metrics.</p> <p>IIA10: The application of Policy PS8 will help manage adverse effects on the skyline and preserves or enhance visual connections between the public realm and open spaces. Compliance with the requirements of the World Heritage Site Management Plans is essential.</p> <p>IIA12: Development should accord with any flood mitigation and adaptation measures stated within the borough's Strategic Flood Risk Assessment (SFRA) in line with Policy CG6, including a sequential test. The application of SuDS techniques (in line with Policy CG7) should be demonstrated by developments to reduce the risk of run-off and surface water flooding. A revised flood risk assessment should be submitted to demonstrate compliance with London Plan Policy 5.12.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented on-site during both construction and operation.</p> <p>IIA14/15/16: Development should look to incorporate renewable energy generation methods (in line with Policy CG1), such as solar panels and use of low carbon heat networks, to reduce operational GHG emissions. The site should consider undertaking BREEAM Infrastructure to ensure that sustainability is integral to development.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This policy sets out limits for embodied carbon which should be monitored.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4. Development proposals which seek to maximise the efficiency and/or capacity of waste facilities in the borough will be supported in line with Policy RW1.</p>							

Billingsgate Market

Table G-23 – Billingsgate Market

Site Name	Billingsgate Market							
Site Capacity	3,000							
Site Source	Existing allocation							
Site Status	Existing allocation (undeveloped)							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	+	M	D	L	I	P	LT	<p>The site has potential to provide approximately 3000 homes, which will work positively towards achieving the borough's housing target. It is assumed that the site will meet the minimum 35% target of affordable homes, however, the size, type and tenure of housing is not currently known. It is also not known how many of these units will be accessible and wheelchair adaptable. The site has good existing access to some community services which may help to reduce levels of inequalities by bringing communities closer to these facilities.</p> <p>Proposals on this site should be in accordance with the principles of the South Poplar Masterplan SPD, which aims to address the social, economic and environmental disparities between Poplar and Canary Wharf.</p>
IIA2: Human Health	?	N/A	N/A	N/A	N/A	N/A	N/A	<p>As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and community facilities, including sports facilities. It is not clear whether the current provision will meet the needs of the new population. There is limited information on the level of additional community infrastructure that will be delivered to support health and wellbeing, and so further information will be required on whether the provision of services will be adequate for the increasing population. However, it is expected the scheme will deliver open space, a community centre and retail complexes which will help to promote active and healthy lifestyles.</p>
IIA3: Economy & Town Centres	+/-	M	D	L	I	P	LT	<p>The site will prioritise mixed use development, and there is an allowance for employment on-site, including strategic office space with supporting uses such as gyms, hotels, restaurants and retail, along with compatible commercial uses, including SME, as well as industrial floorspace. The site will include the formation of active frontages and public realm improvements which will support the vitality of units and increase footfall in the area. The site is adjacent to Canary Wharf Major Centre, and so it is imperative that development does not impact on the function of this retail centre. As part of the development, relocation of the wholesale market is required, the UK's largest inland fish market. Therefore, re-provision must be suitable to ensure it continues its legacy.</p>
IIA4: Employment & Skills	+	M	D	L	I	P	LT	<p>The site is well located to existing employment areas including the Isle of Dogs Activity Area. This will likely improve access for residents to employment opportunities. The proposal of mixed-use development to include employment floorspace in a range of sizes will ensure an increase in the number of jobs and provide additional employment opportunities. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.</p>

Site Name	Billingsgate Market							
Site Capacity	3,000							
Site Source	Existing allocation							
Site Status	Existing allocation (undeveloped)							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA5: Housing	+	H	D	R	I	P	LT	The provision of 3000 new homes will help towards meeting the borough's housing target. It is assumed that the site will meet the minimum 35% target of affordable homes. At this stage it is not known how many units will be accessible and wheelchair adaptable.
IIA6: Crime & Safety	+	L	I	L	R	P	MT	There is limited detail on whether designing out crime principles will be applied as part of the development, however, developing the land from its existing use and providing housing and public realm improvements is likely to help to reduce crime and create a safer community.
IIA7: Sustainable Transport	+	M	D	L	I	P	LT	The site is well connected via public transport through bus, overground, underground and rail, with multiple Docklands Light Railway (DLR) stations nearby. The site has a PTAL score of between 4 and 5. Active travel is also encouraged via the London Cycle Network. It is uncertain if there are plans for additional transport provision.
IIA8: Accessibility	++	M	D	L	I	P	LT	The existing site has good access to transport, facilities and services. The development has aspiration for pedestrian and cycling priority access along a new dockside promenade, further facilitating active travel. Improvements to wayfinding across the site will help to improve access to all groups inclusively. The site will allow residents to live their lives more locally and reduce the need to travel.
IIA9: Biodiversity & Natural Capital	-	M	D	L	R	T	ST	The site is located adjacent to areas of mudflat priority habitat, along with a few SINCs, including Millwall and West India Docks SINC, Blackwall Basin SINC, and Poplar Dock SINC. There is potential for some adverse effects on some small-scale habitats and species during construction, as a result of noise and dust spoiling. At this stage BNG is assumed but whether the site meets the BNG benchmark of 2.5 biodiversity unit (BU) per hectare or 30% gain (whichever is higher) is unknown
IIA10: Landscape & Townscape	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is located in close proximity to Local Open Space and is within the Tall Building Zone and the Canary Wharf Strategically Important Skyline. It is currently uncertain if development of the site will provide an appropriate transition in building heights to respect the existing character of the site and avoiding adverse effects on the skyline. Full details of the scale of buildings are currently unknown, this is likely to be determined by individual design. While there are likely to be temporary negative effects to the local landscape and townscape setting during construction, improvements to public realm at this site will enhance the quality and condition of the townscape and landscape.
IIA11: Historic Environment	+/-	H	D/I	L	R/I	P/T	ST/LT	The site is situated within the Isle of Dogs APA, furthermore it is pertinent to protect and enhance the setting of heritage assets in and around the area, including the Grade II accumulator tower on the west side of Poplar Dock, within the site. Design principles will need to protect or enhance the accumulator tower. Coldharbour Conservation Area and the safeguarded Northumberland Wharf are located near to the site. It is therefore anticipated that the built form will need to protect and enhance the setting of heritage assets which will depend on the scale, massing, layout and materials that are proposed. Enhancements to public realm are expected to improve the setting of the local historic environment. During construction there is potential for adverse effects on the setting of neighbouring heritage

Site Name	Billingsgate Market							
Site Capacity	3,000							
Site Source	Existing allocation							
Site Status	Existing allocation (undeveloped)							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
								assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets.
IIA12: Flooding	-	H	D	L	I	P	LT	The site is predominantly located within Flood Zone 3 and therefore is within a Flood Risk Area. Development will therefore need to comply with any flood mitigation and adaptation measures. The site does sit within the South Poplar Masterplan area and therefore will include co-ordinated development to manage surface water and enable discharge into the docks to the south.
IIA13: Water Quality	-	H	D	L	R/I	P/T	ST/LT	The site is located in close proximity to the River Thames. There is potential for increased surface runoff during construction, further polluting this watercourse. The management of surface water and the enablement of discharge into the docks to the south of the site, may also impact on water quality. In line with the South Poplar Masterplan area and the Isle of Dogs and South Poplar Integrated Water Management Plan, water management should be considered in the planning and design of development proposals.
IIA14: Air Quality	+/-	L	D/I	L	R	P/T	ST/LT	The site has good access to local public transport and community facilities and could (assuming provision meets population demands) allow residents to live their lives more locally and reduce the need for private car usage. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction. There are a number of existing residential receptors surrounding the site which would be negatively impacted during construction, and consideration would need to be given as to how to minimise disruption to the local residents.
IIA15: Climate Change & Resilience	-	M	D	L	I	P	LT	Overall climate and heat risk is medium-high. Climate resilience measures such as GI, SuDs etc are not known at this stage. Measures to reduce the risk of overheating will need to be considered. The incorporation of accessible open space and GI may help to reduce the UHI effect.
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. At this stage, it is not clear whether the development will utilise renewable energy sources or low carbon heat networks once operational. Further design details are required.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	+	H	D	R	I	P	LT	The development is located on previously developed land and will support the protection of the borough's green spaces. The site will support high density housing which will help to make the best use of the site. Existing on-site uses and buildings would be replaced by new development and could address any potential contamination from previous uses. It is not clear whether the site will encourage sustainable use of materials.

Site Name	Billingsgate Market							
Site Capacity	3,000							
Site Source	Existing allocation							
Site Status	Existing allocation (undeveloped)							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring site Aspen Way and North Quay. The increased demand for services to support the additional population may negatively impact existing local residents if no new facilities are brought forward at sites.</p> <p>IIA1/2: If construction of this site and the Aspen Way and North Quay site were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Aspen Way and North Quay site will significantly increase the number of businesses and jobs, providing more opportunities for existing and new residents.</p> <p>IIA5: In combination, this site and the Aspen Way and North Quay site will significantly increase housing stock, contributing to the borough's housing target, whilst tackling issues of affordability.</p> <p>IIA10: If construction of this site and the Aspen Way and North Quay site were to happen concurrently, there is potential for a temporary negative cumulative effect on the local landscape and townscape setting, as well as the visual amenity. Improvements to the public realm during operation may result in positive cumulative effects in the long term, enhancing the landscape and townscape character.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Aspen Way and North Quay site, resulting in a negative residual effect.</p> <p>IIA14: If construction of this site and the Aspen Way and North Quay site were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic, a temporary effect. However, if construction timetables occurred in succession, these negative effects could be long term, though less severe.</p> <p>IIA15: The increase in open space GI potentially provided by both this site and the Aspen Way and North Quay site is likely to increase resilience to the UHI effect. However, the exact climate resilience measures are not yet known.</p> <p>IIA16: The construction of both this site and the Aspen Way and North Quay site is likely to result in a significant cumulative increase in embodied carbon. Embodied carbon could be reduced if circular economy principles are applied and existing materials are repurposed.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Aspen Way and North Quay is likely to result in a cumulative increase in waste. Alignment with circular economy principles is not yet confirmed, however this could reduce the negative effect associated with waste generation.</p>							
Mitigation and Enhancement Measures	<p>IIA1: Housing should include provision of housing to meet the needs of all population groups as set out in the Homes for the Community policies.</p> <p>IIA1/2: Further assessment as part of scheme level design, should incorporate an evaluation of the provision of healthcare and education, to ensure that the current supply is sufficient in supporting new communities. The application of Policy CI1 may also help to mitigate impacts on existing community facilities.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA8/9/11: A lighting strategy should be prepared to minimise light spill onto retained or newly created habitat features, and to avoid interference with the visual amenity of the historic environment.</p> <p>IIA9: In line with Policy BO1 and BO4, the site must achieve a minimum UGF and BNG targets set out within the Plan. Developments must demonstrate BNG and ensure it is measurable against metrics.</p> <p>IIA10: The application of Policy PS8 will help manage adverse effects on the skyline and preserves or enhance visual connections between the public realm and open spaces. Compliance with the requirements of the London View Management Framework and World Heritage Site Management Plans is essential.</p> <p>IIA11: Tower Hamlets Conservation Strategy and relevant Conservation Area Character Appraisals should be referred to minimise the impacts on the historic environment. The council should also work in partnership with Historic England.</p> <p>IIA12: Development should accord with any flood mitigation and adaptation measures stated within the borough's SFRA in line with Policy CG6, including a sequential test. The application of SuDS techniques (in line with Policy CG7) should be demonstrated by developments to reduce the risk of run-off and surface water flooding. A revised flood risk assessment should be submitted to demonstrate compliance with London Plan Policy 5.12.</p>							

Site Name	Billingsgate Market							
Site Capacity	3,000							
Site Source	Existing allocation							
Site Status	Existing allocation (undeveloped)							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
	<p>IIA13: Development should be delivered in line with policy BO3 and guidance from the Environment Agency.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented on-site during both construction and operation.</p> <p>IIA14/15/16: Development should look to incorporate renewable energy generation methods (in line with Policy CG1), such as solar panels and use of low carbon heat networks, to reduce operational GHG emissions. The site should consider undertaking BREEAM Infrastructure to ensure that sustainability is integral to development.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA16: The application of Policy CG4 will require major developments to assess whole lifecycle carbon emissions and meet best practice embodied carbon emissions targets for building elements. This policy sets out limits for embodied carbon which should be monitored.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4. Development proposals which seek to maximise the efficiency and/or capacity of waste facilities in the borough will be supported in line with Policy RW1.</p>							

Table G-24 – Crossharbour

Site Name	Crossharbour							
Site Capacity	2,500							
Site Source	Existing allocation							
Site Status	Existing allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	++	H	D	R	I	P	LT	The site has potential to provide approximately 2500 homes. However, at this stage, it is not known how many of these units will be affordable and wheelchair adaptable. The site has good existing access to most community services which may help to reduce levels of inequalities by bringing communities closer to these facilities. It is expected that the site will provide additional facilities and services including educational provision, health and community facilities.
IIA2: Human Health	++	H	D	L	I	P	LT	As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and community facilities; however, health deprivation is high. The site will deliver new community facilities and NHS services and so it is expected that improvements to health and wellbeing will be delivered. Public realm improvements including integration into the green grid and the provision of open spaces are expected to deliver further health benefits for the population.
IIA3: Economy & Town Centres	++	H	D	R	I	P	LT	The Crossharbour site is defined as a primary shopping area. The development is expected to create a new town centre with provision for a variety of retail, leisure and community uses. The inclusion of ground floor active uses will support town centre viability and changing retail patterns, integration with residential development will improve and enhance connectivity between business clusters and the housing market.
IIA4: Employment & Skills	+	M	D/I	L	I	P	LT	The site will include retail space, as well as other leisure and community uses which is considered to provide employment opportunities. It is anticipated that other comparable uses may come forward which could include other employment spaces. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
IIA5: Housing	?	N/A	N/A	N/A	N/A	N/A	N/A	The provision of 2500 new homes will help towards meeting LBTH's housing target. Further details will be required regarding the affordability of units, and the number of wheelchair accessible homes. The size, type and tenure of housing will need to take into account different groups in the community, however this is currently unknown. It is important that affordability is taken into account, particularly considering the significant barriers to housing within the locality.
IIA6: Crime & Safety	+	L	D/I	L	I	P	LT	There is limited detail on whether designing out crime principles will be applied as part of the development, however, providing housing, public realm and open space improvements are likely to improve footfall and therefore provide additional natural surveillance, in turn reducing crime and creating a safer community.

Site Name	Crossharbour							
Site Capacity	2,500							
Site Source	Existing allocation							
Site Status	Existing allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA7: Sustainable Transport	+	M	D	L	I	P	LT	The site is well situated in proximity to bus stops, rail station and the cycle network. There is poor access to the underground at the site. This is reflected in the site having a PTAL level of between 2-4. The site is expected to improve walking and cycling connections, and the provision of a bus interchange which will support new sustainable transport options for future population growth. The site is well located to local facilities and services which will allow residents to live their lives more locally.
IIA8: Accessibility	++	M	D	L	I	P	LT	The existing site has good access to facilities and services and the proposal includes further provision for community facilities and services. Improvements to wayfinding across the site will help to improve access to all groups inclusively. The site will allow residents to live their lives more locally and reduce the need to travel.
IIA9: Biodiversity & Natural Capital	+/-	M	D/I	L	R/I	P/T	MT/LT	The site is adjacent to deciduous woodland and borders the Mudchute Park Farm Local Nature Reserve. The site is also located in close proximity to a number of SINCS, with Mudchute Farm and Park SINC located on the border of the site. There is a potential negative effect on ecology as a result, particularly during construction. Green space is proposed as part of the development which will improve urban greening and provide GI; however, it is unknown whether the site will be in line with BNG targets.
IIA10: Landscape & Townscape	+/-	M	D/I	L	R/I	P/T	ST/LT	The site is adjacent to an area of Local Open Green Space (Mudchute Farm and Millwall Park), the site is also situated in the Millwall Inner Dock Cluster Tall Buildings Zone. It is therefore expected that the development of the site will respond to the existing character of the surrounding built environment, taking into particular consideration the massing of the surrounding area. The site will incorporate GI as part of the design including the increase in public realm and public open spaces.
IIA11: Historic Environment	+/-	M	D/I	L	R/I	P/T	ST/LT	The site is situated in the Isle of Dogs APA. Consideration should be given to ensure there is no impact on the setting of the historic docks and Maritime Greenwich World Heritage Site to the South, and the adjacent listed building, the Carnegie Library. It is therefore anticipated that the built form will need protect and enhance the setting of heritage assets which will depend on the scale, massing, layout and materials that are proposed. Enhancements to public realm are expected to improve the setting of the local historic environment. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets.
IIA12: Flooding	--	H	D	L	I	P	LT	The site is located within flood zone 2 and 3, any flood risk measures are expected to be in line with the borough's Strategic Flood Risk Assessment.
IIA13: Water Quality	-	M	D	L	R/I	P/T	ST/LT	The site is located in close proximity to the River Thames and sits directly next to the South Docks, thus creating potential for increased surface runoff during construction, further polluting this watercourse.

Site Name	Crossharbour							
Site Capacity	2,500							
Site Source	Existing allocation							
Site Status	Existing allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA14: Air Quality	+/-	L	D/I	L	R/I	P/T	ST/LT	Air quality is generally good at the site has fairly good access to local public transport and will provide new facilities allowing resident to live their lives more locally and reduce the need for private car usage. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction.
IIA15: Climate Change & Resilience	-	H	D	L	I	P	LT	The site is located in an area which has a high overall climate risk and heat risk rating. The site is also located within an area of flood risk and flood zone 2 and 3. Therefore, it is likely to have diminishing resilience to climate change. At this stage, specific climate resilience design measures are unknown, but the inclusion of GI may help to alleviate the UHI effect
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. At this stage, it is not clear whether the development will utilise renewable energy sources or low carbon heat networks once operational however it is expected that the development could demonstrate potential to connect to the Barkantine Energy Centre. Further design details are required.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	+	H	D	R	I	P	LT	The development is located on previously developed land and will support high density housing which will help to make the best use of the site. However, it is not clear whether the site will encourage sustainable use of materials.
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring sites Samuda Estate and Limeharbour.</p> <p>IIA1/2: If construction of this site and the Samuda Estate and Limeharbour sites were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Samuda Estate and Limeharbour sites will significantly increase the number of business and jobs.</p> <p>IIA5: In combination, this site and the Samuda Estate and Limeharbour sites will significantly increase housing stock.</p> <p>IIA10: There is potential for cumulative negative effects on townscape in combination with neighbouring sites Samuda Estate and Limeharbour.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archaeology from both this site and the Samuda Estate and Limeharbour site.</p> <p>IIA14: If construction of this site and the Samuda Estate and Limeharbour sites were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA15: The increase in GI provided by both this site and the Samuda Estate and Limeharbour sites are likely to increase resilience to the UHI effect.</p> <p>IIA16: The construction of both this site and the Samuda Estate and Limeharbour sites are likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Samuda Estate and Limeharbour sites are likely to result in a cumulative increase in waste.</p>							

Site Name	Crossharbour							
Site Capacity	2,500							
Site Source	Existing allocation							
Site Status	Existing allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
Mitigation and Enhancement Measures	<p>IIA1/2: Further assessment as part of the scheme level design should incorporate an evaluation of the provision of healthcare and education facilities to ensure the current supply is sufficient in supporting new communities.</p> <p>IIA3/4: Development should make efficient use of space and deliver development in line with Policy EG1 to maximise employment opportunities. To ensure that the development does not have a negative impact on existing town centres, development should be in line with policies protecting town centres TC1-TC8.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA7: Development should prioritise the provision of sustainable transport infrastructure through compliance with policy MC1, and development should be designed in line with the principles as set out in policy MC2 to promote active transport.</p> <p>IIA9: In line with policy BO1, the site must achieve a minimum UGF and BNG targets set out within the Plan.</p> <p>IIA10: The application of Policy PS8 will help preserves or enhance visual connections between the public realm and open spaces.</p> <p>IIA11: Development should be in line with policies PS6 and PS7.</p> <p>IIA12/13: The application of policies CG6, CG7 and CG8 will help mitigate flood risk and water quality impacts.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented on-site during both construction and operation.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4.</p>							

Table G-25 – Limeharbour

Site Name	Limeharbour							
Site Capacity	1900							
Site Source	Existing allocation							
Site Status	Existing allocation (undeveloped-pending decision)							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	+	H	D	L	I	P	LT	The site has potential to provide approximately 1900 homes. The number of affordable homes for the entire site is not currently realised. It is expected that 35% affordable housing could be provided. 10% of units will be designed to be wheelchair accessible. The site has good existing access to some community services which may help to reduce levels of inequalities by bringing communities closer to these facilities. At this location, issues of overcrowding are higher than the borough average and so it is important to ensure that the provision of services will help to support the changing demographic.
IIA2: Human Health	+	M	D	L	I	P	LT	As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and community facilities, the site is within the 30-50% most deprived in terms of health. The site will deliver new community facilities and services and so it is expected that improvements to health and wellbeing will be delivered. The site is expected to provide a minimum of 1ha of open space, which will improve physical and mental health and wellbeing and reduce levels of loneliness. Public realm improvements including integration into the green grid and the provision of open spaces are expected to deliver further health benefits for the population.
IIA3: Economy & Town Centres	+/-	M	D	L	I	P	LT	The site is well located to existing employment areas including the Isle of Dogs Activity Area. This will likely improve access for residents to employment opportunities. There is an allowance for employment floorspace as part of the development of the site, and so it is likely that the site will improve connectivity between business clusters and the housing market. The site will include the formation of active frontages and public realm improvements which will support the vitality of units and increase footfall in the area. The site is adjacent to the South Quay neighbourhood centre, and so it is imperative that development does not impact on the function of this retail centre.
IIA4: Employment & Skills	++	M	D	L	I	P	LT	Limehouse is well located to existing employment areas including the Isle of Dogs Activity Zone. The proposal of mixed-use development to include employment floorspace in a range of sizes will ensure an increase in the number of jobs and provide additional employment opportunities. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
IIA5: Housing	?	N/A	N/A	N/A	N/A	N/A	N/A	The site has capacity to provide approximately 1900 homes, which will provide a net increase in the number of dwellings within the borough. The number of affordable homes for the entire site is not currently realised. It is expected that 35% affordable housing could be provided. 10% of units will be designed to be wheelchair accessible. The size, type and tenure of housing will need to take into account different groups in the community, and it is

Site Name	Limeharbour							
Site Capacity	1900							
Site Source	Existing allocation							
Site Status	Existing allocation (undeveloped-pending decision)							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
								expected that the site will maximise the provision of family homes. It is important that affordability is taken into account, particularly considering the significant barriers to housing within the locality.
IIA6: Crime & Safety	+	L	D/I	L	I	P	LT	Currently, the site scores within the 30-50% most deprived neighbourhoods in terms of crime. There is limited detail on whether designing out crime principles will be applied as part of the development, however, providing housing, public realm and open space improvements are likely to improve footfall and therefore provide additional natural surveillance, in turn reducing crime and creating a safer community.
IIA7: Sustainable Transport	+	M	D	L	I	P	LT	The site has average access to public transport, as reflected in a PTAL score between 3-4, the site is situated within reasonable proximity to bus stops and underground and overground stations. Improvements to cycling and walking connections to, from and within the site are assumed including to the wider area's employment and amenity spaces. The site is well located to local facilities and services which will allow residents to live their lives more locally. Improvements to public realm are expected to increase uptake of active modes of transport.
IIA8: Accessibility	+	L	D	L	I	P	LT	The existing site has good access to facilities and services and the proposal includes further provision for community facilities and services. Improvements to the legibility of the site will improve the accessibility of the site. The site will allow residents to live their lives more locally and reduce the need to travel.
IIA9: Biodiversity & Natural Capital	+/-	L	D/I	L	R/I	P/T	MT/LT	The Mudchute Park Farm Local Nature Reserve is located approximately 0.5km to the south of the site, and mud flat priority habitats are located to the east. There are also a number of SINCs located within close proximity of the site. There is a potential for a negative effect on ecology as a result, particularly during construction. Green space is proposed as part of the development which will improve urban greening and provide GI.
IIA10: Landscape & Townscape	+/-	M	D/I	L	R/I	P/T	ST/LT	The Canary Wharf Area Strategically Important Skyline is situated to the North of the site, and the site itself is within the boundaries of the Millwall Inner Dock Cluster Tall Buildings Zone. Development of the site is therefore expected to provide an appropriate transition in building heights to respect the existing character of the site and avoiding adverse effects on the skyline. Full details of the scale of buildings are currently unknown. While there are likely to be temporary negative effects to the local landscape and townscape setting during construction, improvements to public realm at this site will enhance the quality and condition of the townscape and landscape.

Site Name	Limeharbour							
Site Capacity	1900							
Site Source	Existing allocation							
Site Status	Existing allocation (undeveloped-pending decision)							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA11: Historic Environment	+/-	M	D/I	L	R/I	P/T	ST/LT	The site is situated within the Isle of Dogs APA, furthermore it is pertinent to protect and enhance the setting of heritage assets in and around the area, including the historic docks and the setting of the Maritime Greenwich World Heritage Site to the South. It is therefore anticipated that the built form will need protect and enhance the setting of heritage assets which will depend on the scale, massing, layout and materials that are proposed. Enhancements to public realm are expected to improve the setting of the local historic environment. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets.
IIA12: Flooding	--	H	D	L	I	P	LT	The site is located within flood zone 2 and 3, any flood risk measures are expected to be in line with the borough's Strategic Flood Risk Assessment.
IIA13: Water Quality	-	M	D	L	R/I	P/T	ST/LT	The site is located in close proximity to the River Thames and sits directly next to the South Docks, thus creating potential for increased surface runoff during construction, further polluting this watercourse.
IIA14: Air Quality	+/-	L	D/I	L	R/I	P/T	ST/LT	Air quality is generally good at the site, however, levels of NO ₂ are >28-43µ/m ³ . The site has fairly good access to local public transport and will provide new facilities allowing residents to live their lives more locally and reduce the need for private car usage. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction. There are a number of existing receptors surrounding the site which would be negatively impacted during construction.
IIA15: Climate Change & Resilience	+	H	D	L	I	P	LT	The site is located in an area which has a high overall climate risk and heat risk rating. The site is also located within an area of flood risk and flood zone 2 and 3. Therefore, it is likely to have diminishing resilience to climate change. Measures are expected to be implemented in the design of buildings to minimise the effects of heating and cooling including a range of planting to improve the GI provision.
IIA16: GHG Emissions	+	H	D	L	I	P	LT	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. It is expected that the development could connect to the Barkantine Energy Centre. Energy demand is also expected to be met by using air source heat pumps and a centralised distribution network. Passive design features are expected to improve energy efficiency.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	+	L	D	R	I	P	LT	The development is located on previously developed land and will support high density housing which will help to make the best use of the site. However, it is not clear whether the site will encourage sustainable use of materials.

Site Name	Limeharbour							
Site Capacity	1900							
Site Source	Existing allocation							
Site Status	Existing allocation (undeveloped-pending decision)							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring sites Samuda Estate and Crossharbour.</p> <p>IIA1/2: If construction of this site and the Samuda Estate and Crossharbour sites were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Samuda Estate and Crossharbour sites will significantly increase the number of business and jobs.</p> <p>IIA5: In combination, this site and the Samuda Estate and Crossharbour sites will significantly increase housing stock.</p> <p>IIA10: There is potential for cumulative negative effects on townscape in combination with neighbouring sites Samuda Estate and Crossharbour.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Samuda Estate and Crossharbour site.</p> <p>IIA14: If construction of this site and the Samuda Estate and Crossharbour sites were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA15: The increase in GI provided by both this site and the Samuda Estate and Crossharbour sites are likely to increase resilience to the UHI effect.</p> <p>IIA16: The construction of both this site and the Samuda Estate and Crossharbour sites are likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Samuda Estate and Crossharbour sites are likely to result in a cumulative increase in waste.</p>							
Mitigation and Enhancement Measures	<p>IIA1/2: Further assessment as part of the scheme level design should incorporate an evaluation of the provision of healthcare and education facilities to ensure the current supply is sufficient in supporting new communities.</p> <p>IIA3/4: Development should make efficient use of space and deliver development in line with Policy EG1 to maximise employment opportunities. To ensure that the development does not have a negative impact on existing town centres, development should be in line with policies protecting town centres TC1-TC8.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA7: Development should prioritise the provision of sustainable transport infrastructure through compliance with policy MC1, and development should be designed in line with the principles as set out in policy MC2 to promote active transport.</p> <p>IIA9: In line with policy BO1, the site must achieve a minimum UGF and BNG targets set out within the Plan.</p> <p>IIA11: Development should be in line with policies PS6 and PS7.</p> <p>IIA12/13: The application of policies CG6, CG7 and CG8 will help mitigate flood risk and water quality impacts.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented on-site during both construction and operation.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4.</p>							

Marsh Wall East

Table G-26 – Marsh Wall East

Site Name	Marsh Wall East							
Site Capacity	2400							
Site Source	Existing allocation							
Site Status	Site partially consented (under construction), remaining existing allocation un-developed							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	++	H	D	L	I	P	LT	The site has potential to provide approximately 2400 homes, which will work positively towards achieving the borough's housing target. Of the 332 residential units currently permitted, 71 are affordable, and 10% will be wheelchair accessible. The site has existing access to some community services which may help to reduce levels of inequalities by bringing communities closer to these facilities. It is expected that the site will provide a small open space, primary school and health facility to meet the needs of groups now, but also the needs of the future population. The site will provide a new primary school and open space, to meet the needs of groups now and in the future.
IIA2: Human Health	++	M	D/I	L	I	P	LT	As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and community facilities, and it also expected to deliver further community services and facilities through the provision of new healthcare and new open spaces which will improve access to health services, as well as improve physical and mental health and wellbeing and reduce level of loneliness. The site will deliver new community facilities and services and so it is expected that improvements to health and wellbeing will be delivered. The site is expected to provide a minimum of 1ha of open space, which will improve physical and mental health and wellbeing and reduce levels of loneliness. Public realm improvements including integration into the green grid and the provision of open spaces are expected to deliver further health benefits for the population. Additionally, the site will ensure that the eastern side of the site is suitably mitigated against potential noise from the data centre uses within this area, in line with the Agent of Change principle. This will reduce noise pollution and nuisance, therefore reducing mental stress and improving mental wellbeing.
IIA3: Economy & Town Centres	+	M	D	L	I	P	LT	The South Quay neighbourhood centre is located at the west of the site. The site also falls within the Isle of Dogs Activity Area, and so the provision of residential and employment space within the site is expected to improve and enhance the connectivity between business clusters and the housing market. The site also includes 10,500sqm of retail floorspace which will improve the local economy. However, it is imperative that any retail development does not detrimentally impact on the vitality of the designated retail centre.
IIA4: Employment & Skills	++	M	D	L	I	P	LT	The site is well located to existing employment areas including the Isle of Dogs Activity Area. This will likely improve access for residents to employment opportunities. It is assumed that employment space will be delivered as part of the development of the site, and so will provide additional employment opportunities. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.

Site Name	Marsh Wall East							
Site Capacity	2400							
Site Source	Existing allocation							
Site Status	Site partially consented (under construction), remaining existing allocation un-developed							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA5: Housing	++	M	D	L	I	P	LT	The provision of 2400 new homes will help towards meeting LBTH's housing target. Of the 332 residential units currently permitted, 71 are affordable, and 10% will be wheelchair accessible. The size, type and tenure of housing will need to take into account different groups in the community, however this is currently unknown. It is important that affordability is taken into account, particularly considering the significant barriers to housing within the locality.
IIA6: Crime & Safety	+	L	D/I	L	I	P	LT	There is limited detail on whether designing out crime principles will be applied as part of the development, however, providing housing, public realm and open space improvements are likely to improve footfall and therefore provide additional natural surveillance, in turn reducing crime and creating a safer community.
IIA7: Sustainable Transport	++	M	D	L	I	P	LT	The site is well situated in proximity to bus stops, rail station and the cycle network, this is reflected in the site having a PTAL level of between 3-4. The site is expected to improve walking and cycling connections, and the provision of a bus interchange which will support new sustainable transport options for future population growth. The site is well located to local facilities and services which will allow residents to live their lives more locally. Improvements to cycle and pedestrian access are expected to be delivered as part of the site.
IIA8: Accessibility	++	M	D	L	I	P	LT	The existing site has access to some facilities and services and the proposal includes further provision for community facilities and services. The site will allow residents to live their lives more locally and reduce the need to travel.
IIA9: Biodiversity & Natural Capital	+/-	L	D/I	L	R/I	P/T	MT/LT	The site is within close proximity to a mudflat priority habitat and a number of SINCs. There is a potential negative effect on ecology as a result, particularly during construction. Green space is proposed as part of the development which will improve urban greening and provide GI, and it is anticipated that improvements will be made to biodiversity and ecology along the water's edge.
IIA10: Landscape & Townscape	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is situated within the Canary Wharf Area Strategically Important Skyline, and the Tall Building Zone. Design will incorporate a variation in heights across the site, with heights generally stepping down towards the west of the site but to the east of the Millwall Cutting. Full details of the height of buildings and its impact on the Canary Wharf Area Strategically Important Skyline are currently unknown - this is likely to be determined by individual design. While there are likely to be temporary negative effects to the local landscape and townscape setting during construction, improvements to public realm at this site will enhance the quality and condition of the townscape and landscape.

Site Name	Marsh Wall East							
Site Capacity	2400							
Site Source	Existing allocation							
Site Status	Site partially consented (under construction), remaining existing allocation un-developed							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA11: Historic Environment	+/-	L	D/I	L	R/I	P/T	ST/LT	The site is situated in the Isle of Dogs APA. The site is also adjacent to the Coldharbour Conservation Area. Any development of the site will need to protect and enhance the setting of heritage assets, including the historic docks and the Maritime Greenwich World Heritage Site. It is therefore anticipated that the built form will need protect and enhance the setting of heritage assets which will depend on the scale, massing, layout and materials that are proposed. Enhancements to public realm are expected to improve the setting of the local historic environment. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets.
IIA12: Flooding	--	H	D	L	I	P	LT	The site is located within flood zone 2 and 3, any flood risk measures are expected to be in line with the borough's Strategic Flood Risk Assessment.
IIA13: Water Quality	-	M	D	L	R/I	P/T	ST/LT	The site is located in close proximity to the River Thames and sits directly next to the Middle and South Docks, thus creating potential for increased surface runoff during construction, further polluting this watercourse.
IIA14: Air Quality	+/-	L	D/I	L	R/I	P/T	ST/LT	Air quality is generally good at the site, and there is fairly good access to local public transport. The site will provide new facilities allowing resident to live their lives more locally and reduce the need for private car usage. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction. There are a number of existing residential receptors surrounding the site which would be negatively impacted during construction.
IIA15: Climate Change & Resilience	+	M	D	L	I	P	LT	The site is located in an area which has a medium overall climate risk and heat risk rating. The site is also located within an area of flood risk and flood zone 2 and 3. Therefore, it is likely to have diminishing resilience to climate change. The development is expected to deliver external landscapes areas to improve GI networks. Buildings will be designed to ensure water efficiency and overheating are mitigated, thus improving overall climate resilience.
IIA16: GHG Emissions	+	H	D	L	I	P	LT	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. Passive design and energy efficiency measures are expected to reduce energy demand. Connections for future heat networks are expected to be delivered as part of the site's development. No renewable energy measures are expected to be included within the scheme's design.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.

Site Name	Marsh Wall East							
Site Capacity	2400							
Site Source	Existing allocation							
Site Status	Site partially consented (under construction), remaining existing allocation un-developed							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA18: Efficient use of Land	+	M	D	L	I	P	LT	The development is located on previously developed land and will support high density housing which will help to make the best use of the site. However, it is not clear whether the site will encourage sustainable use of materials.
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring sites.</p> <p>IIA1/2: If construction of this site and the Limeharbour and Marsh Wall West sites were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Limeharbour and Marsh Wall West sites will significantly increase the number of business and jobs.</p> <p>IIA5: In combination, this site and the Limeharbour and Marsh Wall West sites will significantly increase housing stock.</p> <p>IIA10: There is potential for cumulative negative effects on townscape and the strategically important skyline in combination with neighbouring sites Limeharbour and Marsh Wall West.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Limeharbour and Marsh Wall West.</p> <p>IIA14: If construction of this site and the Limeharbour and Marsh Wall West sites were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA15: The increase in GI provided by both this site and the Limeharbour and Marsh Wall West sites are likely to increase resilience to the UHI effect.</p> <p>IIA16: The construction of both this site and the Limeharbour and Marsh Wall West sites are likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Limeharbour and Marsh Wall West sites are likely to result in a cumulative increase in waste.</p>							
Mitigation and Enhancement Measures	<p>IIA1/2: Further assessment as part of the scheme level design should incorporate an evaluation of the provision of healthcare and education facilities to ensure the current supply is sufficient in supporting new communities.</p> <p>IIA3/4: Development should make efficient use of space and deliver development in line with Policy EG1 to maximise employment opportunities. To ensure that the development does not have a negative impact on existing town centres, development should be in line with policies protecting town centres TC1-TC8.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA7: Development should prioritise the provision of sustainable transport infrastructure through compliance with policy MC1, and development should be designed in line with the principles as set out in policy MC2 to promote active transport.</p> <p>IIA9: In line with policy BO1, the site must achieve a minimum UGF and BNG targets set out within the Plan.</p> <p>IIA10: The application of Policy PS8 will help preserves or enhance visual connections between the public realm and open spaces.</p> <p>IIA11: Development should be in line with policies PS6 and PS7.</p> <p>IIA12/13: The application of policies CG6, CG7 and CG8 will help mitigate flood risk and water quality impacts.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented on-site during both construction and operation.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with policy DV4.</p>							

Marsh Wall West

Table G-27 – Marsh Wall West

Site Name	Marsh Wall West							
Site Capacity	2625 (+1000 student rooms + 800 co-living units)							
Site Source	Existing allocation							
Site Status	Various planning applications determined for some residential and non-residential. Remaining areas of the site are pending planning decision.							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	+	H	D	R	I	P	LT	The site will provide 2,625 new homes and has potential to provide at least 1000 new rooms for students and 800 co-living units, which will work positively towards achieving the borough's housing target. At this stage, it is not known how many of these units will be accessible and wheelchair adaptable across the whole site. Given the inclusion of co-living and PBSA some development of the site will not contribute affordable housing. The site has good existing access to community services which may help to reduce levels of inequalities by bringing communities closer to these facilities. These units have the potential to benefit both students and the wider community, by delivering other priorities such as affordable housing. The introduction of student housing could potentially complement the existing mix of uses and the provision of local services, including public transport.
IIA2: Human Health	++	H	D	R	I	P	LT	As well as housing, the site includes new retail and employment opportunities, new parks and open spaces and improvements to the public realm. The site will reduce levels of health inequalities and provide new facilities which will improve physical and mental health and wellbeing and reduce levels of loneliness. It will ensure that the needs of all groups will be met both now and in the future.
IIA3: Economy & Town Centres	+/-	M	D	L	I	P	LT	There is an allowance for employment floorspace as part of the development of the site, and so it is likely that the site will improve connectivity between business clusters and the housing market. The site will include the formation of active frontages and public realm improvements which will support the vitality of units and increase footfall in the area. The site is partially located within the South Quay neighbourhood centre, and so it is imperative that development does not impact on the function of this retail centre. The site will improve and enhance connectivity between business clusters and the housing market and improve town centre viability.
IIA4: Employment & Skills	++	H	D	L	I	P	LT	The site is well located to existing employment areas including the Isle of Dogs Activity Area, Canary Warf Major Centre and primary shopping areas. This will likely improve access for residents to employment opportunities. Employment space delivered as part of the development of the site will provide additional employment opportunities. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
IIA5: Housing	++	H	D	R	I	P	LT	The site has capacity to provide 2,625 homes, including 1000 student rooms and 800 co-living units which will work positively towards achieving the borough's housing target. At this stage, it is not known how many of these units will be accessible and wheelchair adaptable across the whole site. Given the inclusion of co-living and PBSA some development of the site will not contribute affordable housing. The inclusion of co-living units is assumed to

Site Name	Marsh Wall West							
Site Capacity	2625 (+1000 student rooms + 800 co-living units)							
Site Source	Existing allocation							
Site Status	Various planning applications determined for some residential and non-residential. Remaining areas of the site are pending planning decision.							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
								provide more flexible housing and will contribute a range of housing options within the site. It is assumed the site will deliver a proportion of wheelchair adaptable homes.
IIA6: Crime & Safety	+/-	L	I	L	R	P	MT	The provision of student accommodation has potential for adverse effects on the amenity of neighbouring residents and businesses, particularly in relation to noise and anti-social behaviour. There is limited detail on whether designing out crime principles will be applied as part of the development, however, developing the land from its existing use and providing housing and public realm improvements is likely to help to reduce crime and create a safer community.
IIA7: Sustainable Transport	+	M	D	L	I	P	LT	Access is readily available to the site via public transport through bus, overground, underground and rail. This is reflected by the site having a PTAL scores ranging between 3 and 5. It is not clear whether there will be plans for additional sustainable transport provision.
IIA8: Accessibility	++	H	D	R	I	P	LT	The existing site has good access to facilities and services and the proposal includes further provision for community facilities and services. Improvements to wayfinding across the site will help to improve access to all groups inclusively. The site will allow residents to live their lives more locally and reduce the need to travel.
IIA9: Biodiversity & Natural Capital	+/-	M	D	L	R	T	ST	The site is adjacent to Millwall and West India Docks SINC. There is potential for some adverse effects on some priority habitats including mudflat and species during construction. However, the inclusion of GI and public realm improvements, could help to provide small scale habitats.
IIA10: Landscape & Townscape	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is situated within the Canary Wharf Area Strategically Important Skyline, and the Tall Building Zone. Design will incorporate a variation in heights across the site, with heights generally stepping down towards the west and south of the site. Full details of the height of buildings and its impact on the Canary Wharf Area Strategically Important Skyline are currently unknown - this is likely to be determined by individual design. While there are likely to be temporary negative effects to the local landscape and townscape setting during construction, improvements to public realm at this site will enhance the quality and condition of the townscape and landscape.
IIA11: Historic Environment	+/-	H	D/I	R	R/I	P/T	ST/LT	The site has a number of heritage assets within its vicinity and is located within Isle of Dogs Archaeological Priority Area. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets. Enhancement to the public realm will help to improve the setting of the historic environment.
IIA12: Flooding	?	N/A	N/A	N/A	N/A	N/A	N/A	The site sits between an area of flood zone 2 and flood zone 3. The site gives limited detail as to how it intends to manage the flood risk of the area. The inclusion of rainwater harvesting could help to slow the flow of stormwater and help prevent floods, particularly overflows from sewers. However, it is not known if this will be sufficient in tackle flood risk issues on site.

Site Name	Marsh Wall West							
Site Capacity	2625 (+1000 student rooms + 800 co-living units)							
Site Source	Existing allocation							
Site Status	Various planning applications determined for some residential and non-residential. Remaining areas of the site are pending planning decision.							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA13: Water Quality	+/-	H	D	L	R/I	P/T	ST/LT	The site is located adjacent to the River Thames. There is potential for increased surface runoff during construction, further polluting this watercourse. Rain and stormwater harvesting can also lessen the environmental impact of urbanisation on stormwater drainage systems and receiving water bodies, particularly as surface water run-off from heavy rainfall collects pollutants such as oil and trace metals.
IIA14: Air Quality	+/-	L	D/I	L	R	P/T	ST/LT	The site has good access to local public transport and community facilities and could (assuming provision meets population demands) allow residents to live their lives more locally and reduce the need for private car usage. Although, given it will be utilised by students, car usage is assumed to be low, regardless of location. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction. There are a number of existing residential receptors surrounding the site which would be negatively impacted during construction, and consideration would need to be given as to how to minimise disruption to the local residents.
IIA15: Climate Change & Resilience	+	H	D	R	I	P	LT	Overall climate risk is medium and overall heat risk is medium-high. The site is also located within an area of flood risk and flood zone 2 and 3. Therefore, it is likely to have diminishing resilience to climate change. Various SuDS, landscaping and design measures to limit overheating are expected to be delivered, which in turn will reduce vulnerability to the impacts of climate change.
IIA16: GHG Emissions	+	H	D	R	I	P	LT	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. The development of the site is expected to maximise energy efficiency through a fabric first approach which will reduce energy demand.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	+	H	D	L	I	P	LT	The development is located on previously developed and brownfield land and will support the protection of the borough's green spaces. Existing onsite uses and buildings would be replaced by new development and could address any potential contamination from previous uses. However, it is not clear whether the site will encourage sustainable use of materials.
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring site Marshwall East and Millharbour. The increased demand for services to support the additional population may negatively impact existing local residents if no new facilities are brought forward at sites.</p> <p>IIA1/2: If construction of this site and the Marshwall East and Millharbour site were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Marshwall East and Millharbour site will significantly increase the number of businesses and jobs, providing more opportunities for existing and new residents.</p> <p>IIA5: In combination, this site and the Marshwall East and Millharbour site will significantly increase housing stock, contributing to the borough's housing target, whilst</p>							

Site Name	Marsh Wall West								
Site Capacity	2625 (+1000 student rooms + 800 co-living units)								
Site Source	Existing allocation								
Site Status	Various planning applications determined for some residential and non-residential. Remaining areas of the site are pending planning decision.								
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects	
	<p>tackling issues of affordability.</p> <p>IIA10: If construction of this site and the Marshwall East and Millharbour site were to happen concurrently, there is potential for a temporary negative cumulative effect on the local landscape and townscape setting, as well as the visual amenity. Improvements to the public realm during operation may result in positive cumulative effects in the long term, enhancing the landscape and townscape character.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Marshwall East and Millharbour site, resulting in a negative residual effect.</p> <p>IIA14: If construction of this site and the Marshwall East and Millharbour site were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic, a temporary effect. However, if construction timetables occurred in succession, these negative effects could be long term, though less severe.</p> <p>IIA15: The increase in open space GI potentially provided by both this site and the Marshwall East and Millharbour site is likely to increase resilience to the UHI effect. However, the exact climate resilience measures are not yet known.</p> <p>IIA16: The construction of both this site and the Marshwall East and Millharbour site is likely to result in a significant cumulative increase in embodied carbon. Embodied carbon could be reduced if circular economy principles are applied and existing materials are repurposed.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Marshwall East and Millharbour is likely to result in a cumulative increase in waste. Alignment with circular economy principles is not yet confirmed, however this could reduce the negative effect associated with waste generation.</p>								
Mitigation and Enhancement Measures	<p>IIA1: Housing should deliver at least 35% affordable home and include provision of housing to meet the needs of all population groups as set out in the Homes for the Community policies.</p> <p>IIA1/2: Further assessment as part of scheme level design, should incorporate an evaluation of the provision of healthcare and education, to ensure that the current supply is sufficient in supporting new communities. The application of Policy C11 may also help to mitigate impacts on existing community facilities.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA8/9/11: A lighting strategy should be prepared to minimise light spill onto retained or newly created habitat features, and to avoid interference with the visual amenity of the historic environment.</p> <p>IIA9: In line with Policy BO1 and BO4, the site must achieve a minimum UGF and BNG targets set out within the Plan. Developments must demonstrate BNG and ensure it is measurable against metrics.</p> <p>IIA10: The application of Policy PS8 will help manage adverse effects on the skyline and preserves or enhance visual connections between the public realm and open spaces. Compliance with the requirements of the London View Management Framework and World Heritage Site Management Plans is essential.</p> <p>IIA12: Development should accord with any flood mitigation and adaptation measures stated within the borough's Strategic Flood Risk Assessment (SFRA) in line with Policy CG6, including a sequential test. The application of SuDS techniques (in line with Policy CG7) should be demonstrated by developments to reduce the risk of run-off and surface water flooding. A revised flood risk assessment should be submitted to demonstrate compliance with London Plan Policy 5.12.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented onsite during both construction and operation.</p> <p>IIA14/15/16: Development should look to incorporate renewable energy generation methods (in line with Policy CG1), such as solar panels and use of low carbon heat networks, to reduce operational GHG emissions. The site should consider undertaking BREEAM Infrastructure to ensure that sustainability is integral to development.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4. Development proposals which seek to maximise the efficiency and/or capacity of waste facilities in the borough will be supported in line with Policy RW1.</p>								

Table G-28 – Millharbour

Site Name	Millharbour							
Site Capacity	1700							
Site Source	Existing allocation							
Site Status	Consented							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	++	H	D	R	I	P	LT	The site will provide 1,700 new residential units, which will work positively towards achieving the borough's housing target. The site has good existing access to community services which may help to reduce levels of inequalities by bringing communities closer to these facilities. It is expected that the site will provide a small open space, primary school and secondary school to ensure that the needs of all groups will be met both now and in the future.
IIA2: Human Health	+	H	D	R	I	P	LT	As well as housing, the site includes new retail and employment opportunities, new parks and open spaces and improvements to the public realm. The site will reduce levels of health inequalities and provide new facilities which will improve physical and mental health and wellbeing and reduce levels of loneliness.
IIA3: Economy & Town Centres	++	M	D	L	I	P	LT	There is an allowance for employment uses including office and retail space as part of the development of the site, and so it is likely that the site will improve connectivity between business clusters and the housing market. The site will include the formation of active frontages and public realm improvements which will support the vitality of units and increase footfall in the area. The site is partially located within the South Quay neighbourhood centre, and so it is imperative that development does not impact on the function of this retail centre. The site will improve and enhance connectivity between business clusters and the housing market and improve town centre viability.
IIA4: Employment & Skills	++	H	D	L	I	P	LT	The site is well located to existing employment areas including the Isle of Dogs Activity Area, Canary Warf Major Centre and primary shopping areas. This will likely improve access for residents to employment opportunities. Employment space delivered as part of the development of the site will provide additional employment opportunities. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
IIA5: Housing	+/-	H	D	R	I	P	LT	Housing prices in the ward far exceed the London average. The provision of 1,700 new homes will help towards meeting the borough's housing target. It is expected that 26.6% affordable housing will be delivered. It is expected that 10% of housing units will be accessible and wheelchair adaptable.
IIA6: Crime & Safety	+	L	I	L	R	P	MT	The site is currently located within an area of moderate crime deprivation (predominantly the top 40% of neighbourhoods nationally). There is limited detail on whether designing out crime principles will be applied as part of the development, however, developing the land from its existing use and providing housing and public realm improvements is likely to help to reduce crime and create a safer community.

Site Name	Millharbour							
Site Capacity	1700							
Site Source	Existing allocation							
Site Status	Consented							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA7: Sustainable Transport	+	M	D	L	I	P	LT	The site has average access to public transport via public transport through bus, overground, underground and rail. This is reflected by the site having a PTAL scores ranging between 2 and 4. It is not clear whether there will be plans for additional sustainable transport provision.
IIA8: Accessibility	+	M	D	L	I	P	LT	The existing site has good access to facilities and services and will allow residents to live their lives more locally and may reduce the need to travel. However, it is not clear whether additional services will be provided on site and the current capacity of these facilities. There is potential for essential services to be stretch by a large increase in population. This may conversely increase the need to travel.
IIA9: Biodiversity & Natural Capital	+/-	M	D	L	R	T	ST	The site is adjacent to Millwall and West India Docks SINC. There is potential for some adverse effects on some priority habitats including mudflat and species during construction. However, the inclusion of GI and public realm improvements, could help to provide small scale habitats
IIA10: Landscape & Townscape	+/-	H	D/I	R	R/I	P/T	ST/LT	The site lies predominantly within the Tall Building Zone. Development of the site is therefore expected to provide an appropriate transition in building heights to respect the existing character of the site and avoiding adverse effects on the skyline. While there are likely to be temporary negative effects to the local landscape and townscape setting during construction, improvements to public realm at this site will enhance the quality and condition of the townscape and landscape.
IIA11: Historic Environment	+/-	H	D/I	R	R/I	P/T	ST/LT	The site has a number of heritage assets within its vicinity and is located within Isle of Dogs Archaeological Priority Area. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets. Enhancement to the public realm will help to improve the setting of the historic environment.
IIA12: Flooding	?	N/A	N/A	N/A	N/A	N/A	N/A	The site sits between an area of flood zone 2 and flood zone 3. The site gives limited detail as to how it intends to manage the flood risk of the area. The inclusion of rainwater harvesting could help to slow the flow of stormwater and help prevent floods, particularly overflows from sewers. However, it is not known if this will be sufficient in tackle flood risk issues on site.
IIA13: Water Quality	+/-	H	D	L	R/I	P/T	ST/LT	The site is located adjacent to the River Thames. There is potential for increased surface runoff during construction, further polluting this watercourse. Rain and stormwater harvesting can also lessen the environmental impact of urbanisation on stormwater drainage systems and receiving water bodies, particularly as surface water run-off from heavy rainfall collects pollutants such as oil and trace metals.
IIA14: Air Quality	+/-	L	D/I	L	R	P/T	ST/LT	The site has good access to local public transport and community facilities and could (assuming provision meets population demands) allow residents to live their lives more locally and reduce the need for private car usage. However, there will be temporary negative

Site Name	Millharbour							
Site Capacity	1700							
Site Source	Existing allocation							
Site Status	Consented							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
								effects on air quality due to dust generation and emissions from construction. There are a number of existing residential receptors surrounding the site which would be negatively impacted during construction, and consideration would need to be given as to how to minimise disruption to the local residents.
IIA15: Climate Change & Resilience	-	H	D	L	I	P	LT	Overall climate risk and overall heat risk are medium-high. The site is expected to include public realm improvements and additional GI, which could help to alleviate the UHI effect. Currently, specific climate resilience design measures are unknown.
IIA16: GHG Emissions	+	H	D	L	I	P	T	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. A range of passive design measures are expected to reduce energy demand. A site wide district heating network is expected to be delivered.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	+	H	D	L	I	P	LT	The development is located on previously developed and brownfield land and will support the protection of the borough's green spaces. Existing onsite uses and buildings would be replaced by new development and could address any potential contamination from previous uses. However, it is not clear whether the site will encourage sustainable use of materials.
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring site Marshwall West and Marshwall East. The increased demand for services to support the additional population may negatively impact existing local residents if no new facilities are brought forward at sites.</p> <p>IIA1/2: If construction of this site and the Marshwall West and Marshwall East site were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Marshwall West and Marshwall East site will significantly increase the number of businesses and jobs, providing more opportunities for existing and new residents.</p> <p>IIA5: In combination, this site and the Marshwall West and Marshwall East site will significantly increase housing stock, contributing to the borough's housing target, whilst tackling issues of affordability.</p> <p>IIA10: If construction of this site and the Marshwall West and Marshwall East site were to happen concurrently, there is potential for a temporary negative cumulative effect on the local landscape and townscape setting, as well as the visual amenity. Improvements to the public realm during operation may result in positive cumulative effects in the long term, enhancing the landscape and townscape character.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Marshwall West and Marshwall East site, resulting in a negative residual effect.</p> <p>IIA14: If construction of this site and the Marshwall West and Marshwall East site were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic, a temporary effect. However, if construction timetables occurred in succession, these negative effects could be long term, though less severe.</p> <p>IIA15: The increase in open space GI potentially provided by both this site and the Marshwall West and Marshwall East site is likely to increase resilience to the UHI</p>							

Site Name	Millharbour							
Site Capacity	1700							
Site Source	Existing allocation							
Site Status	Consented							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
	<p>effect. However, the exact climate resilience measures are not yet known.</p> <p>IIA16: The construction of both this site and the Marshwall West and Marshwall East site is likely to result in a significant cumulative increase in embodied carbon. Embodied carbon could be reduced if circular economy principles are applied and existing materials are repurposed.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Marshwall West and Marshwall East is likely to result in a cumulative increase in waste. Alignment with circular economy principles is not yet confirmed, however this could reduce the negative effect associated with waste generation.</p>							
Mitigation and Enhancement Measures	<p>IIA1: Housing should deliver at least 35% affordable home and include provision of housing to meet the needs of all population groups as set out in the Homes for the Community policies.</p> <p>IIA1/2: Further assessment as part of scheme level design, should incorporate an evaluation of the provision of healthcare and education, to ensure that the current supply is sufficient in supporting new communities. The application of Policy C11 may also help to mitigate impacts on existing community facilities.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA8/9/11: A lighting strategy should be prepared to minimise light spill onto retained or newly created habitat features, and to avoid interference with the visual amenity of the historic environment.</p> <p>IIA9: In line with Policy BO1 and BO4, the site must achieve a minimum UGF and BNG targets set out within the Plan. Developments must demonstrate BNG and ensure it is measurable against metrics.</p> <p>IIA10: The application of Policy PS8 will help manage adverse effects on the skyline and preserves or enhance visual connections between the public realm and open spaces. Compliance with the requirements of the World Heritage Site Management Plans is essential.</p> <p>IIA12: Development should accord with any flood mitigation and adaptation measures stated within the borough's Strategic Flood Risk Assessment (SFRA) in line with Policy CG6, including a sequential test. The application of SuDS techniques (in line with Policy CG7) should be demonstrated by developments to reduce the risk of run-off and surface water flooding. A revised flood risk assessment should be submitted to demonstrate compliance with London Plan Policy 5.12.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented onsite during both construction and operation.</p> <p>IIA14/15/16: Development should look to incorporate renewable energy generation methods (in line with Policy CG1), such as solar panels and use of low carbon heat networks, to reduce operational GHG emissions. The site should consider undertaking BREEAM Infrastructure to ensure that sustainability is integral to development.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA16: The application of Policy CG4 will require major developments to assess whole lifecycle carbon emissions and meet best practice embodied carbon emissions targets for building elements. This policy sets out limits for embodied carbon which should be monitored.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4. Development proposals which seek to maximise the efficiency and/or capacity of waste facilities in the borough will be supported in line with Policy RW1.</p>							

Table G-29 – North Quay

Site Name		North Quay						
Site Capacity		1250						
Site Source		Existing allocation						
Site Status		Consented						
I/A Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
I/A1: Population & Equalities	+	H	D	R	I	P	LT	The site has capacity to provide 1250 homes, which will work positively towards achieving the borough's housing target. It is expected that the site will provide 30% affordable housing, however this falls below the target set in policy. The site has good existing access to some community services which may help to reduce levels of inequalities by bringing communities closer to these facilities.
I/A2: Human Health	++	H	D	L	I	P	LT	As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and community facilities; however, no new health facilities are proposed. The development of the site will include open spaces and improvements to public realm, which is expected to improve physical and mental health and wellbeing and reduce levels of loneliness.
I/A3: Economy & Town Centres	++	H	D	R	I	P	LT	The site borders the Isle of Dogs Activity Area, and so it is expected that key employment opportunities are available for future residents and will improve and enhance connectivity between business clusters and the housing market. It is expected that development will also deliver gyms, hotels and restaurants to expand the provision of different markets. The site is well located to local retail centres, including the Westferry/Pennyfields neighbourhood parade and the Canary Wharf primary shopping area, and so development is likely to improve footfall to these areas. However, it is imperative that any retail provision within the site does not impact on the vitality of local high streets.
I/A4: Employment & Skills	++	H	D	L	I	P	LT	Employment and income deprivation is low in the area, as reflected in the proximity to the Isle of Dogs Activity Area. The development of the site is expected to provide additional employment space through the delivery of mixed-use development and extend the existing good access to jobs. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
I/A5: Housing	+	H	D	L	I	P	LT	The site has capacity to provide 1250 new homes. The site is amongst the most deprived in terms of barriers to housing, and house prices. It is expected that the site will provide 30% affordable housing, however this falls below the target set in policy HF2. The site is expected to deliver 10% accessible homes within the affordable rented tenure and 10% within the immediate sector.
I/A6: Crime & Safety	++	L	D/I	L	I	P	LT	The site is expected to deliver improvements to public realm, including the provision of open spaces, and the creation of a green grid. Active frontages are also expected to be a key feature of the site which will improve natural surveillance within the site and in turn improve rates of crime. It is expected that the site will be delivered in accordance with designing out crime principles.

Site Name	North Quay							
Site Capacity	1250							
Site Source	Existing allocation							
Site Status	Consented							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA7: Sustainable Transport	++	M	D	L	I	P	LT	The site has average to good access to public transport, as reflected in a PTAL score between 4-5, and is situated within good proximity to bus stops and underground and overground stations. Improvements are expected to include a pedestrian route and enhancement of the Aspen Way pedestrian bridge to connect to the wider movement network and the DLR and underground stations adjoining the site are expected to promote the use of existing public transport provision. The site is well located to local facilities and services which will allow residents to live their lives more locally. Improvements to public realm are expected to increase uptake of active modes of transport.
IIA8: Accessibility	++	M	D	L	I	P	LT	The existing site has good access to facilities and services. Improvements to pedestrian routes within the site will help to improve access to all groups inclusively. The site will allow residents to live their lives more locally and reduce the need to travel.
IIA9: Biodiversity & Natural Capital	+/-	M	D	L	R/I	P/T	MT/LT	The site is located less than 0.8km from an area of mudflat priority habitats. The site is adjacent to the Millwall and West India Docks SINC. There is a potential negative effect on ecology as a result, particularly during construction. Green space is proposed as part of the development which will improve urban greening and provide GI; however, it is unknown whether the site will be in line with BNG targets of 2.5 biodiversity unit (BU) per hectare or 30% gain
IIA10: Landscape & Townscape	?	N/A	N/A	N/A	N/A	N/A	N/A	The site lies within the Canary Wharf Area Strategically Important Skyline, and within the Tall Building Zone. It is currently uncertain if development of the site will provide an appropriate transition in building heights to respect the existing character of the site and avoiding adverse effects on the skyline. Full details of the scale of buildings are currently unknown, this is likely to be determined by individual design. While there are likely to be temporary negative effects to the local landscape and townscape setting during construction, improvements to public realm at this site will enhance the quality and condition of the townscape and landscape
IIA11: Historic Environment	+/-	M	D/I	L	R/I	P/T	ST/LT	The site is located adjacent to the West India Dock Conservation Area, and the quay walls to the dock to the south of the site are Grade I listed. The site also falls within the Isle of Dogs Archaeological Priority Area. It is therefore anticipated that the built form will need protect and enhance the setting of heritage assets which will depend on the scale, massing, layout and materials that are proposed. Enhancements to public realm are expected to improve the setting of the local historic environment. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets.
IIA12: Flooding	--	H	D	L	I	P	LT	The site is predominantly located within Flood Zone 3 and therefore is within a Flood Risk Area. Development will therefore need to comply with any flood mitigation and adaptation measures. The site does sit within the South Poplar Masterplan area and therefore will include co-ordinated development to manage surface water and enable discharge into the docks to the south.

Site Name	North Quay							
Site Capacity	1250							
Site Source	Existing allocation							
Site Status	Consented							
I/A Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
I/A13: Water Quality	-	H	D	L	R/I	P/T	ST/LT	The site is located in close proximity to North Dock. There is potential for increased surface runoff during construction, further polluting this watercourse. The management of surface water and the enablement of discharge into the docks to the south of the site, may also impact on water quality. In line with the South Poplar Masterplan area and the Isle of Dogs and South Poplar Integrated Water Management Plan, water management should be considered in the planning and design of development proposals.
I/A14: Air Quality	+/-	L	D/I	L	R/I	P/T	ST/LT	The site has generally good access to local public transport and will provide new facilities allowing residents to live their lives more locally and reduce the need for private car usage. Public realm improvements will also include GI which could reduce exposure to the effects of urban air pollution. There are likely to be temporary negative effects on air quality due to dust generation and emissions from construction, and consideration would need to be given as to how to minimise disruption.
I/A15: Climate Change & Resilience	-	H	D	L	I	P	LT	The site is located in an area which has a high overall climate risk and heat risk rating. The site is also located within an area of flood risk and flood zone 2 and 3. Therefore, it is likely to have diminishing resilience to climate change. At this stage, full climate resilience measures are unknown. The addition of more GI and open space will help to reduce the UHI effect. SuDS and rainwater harvesting is expected to be integrated into buildings and the public realm.
I/A16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. It is expected that measures to improve energy efficiency of buildings will be included, as well as the use of renewable energy technologies will be delivered at the site.
I/A17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
I/A18: Efficient use of Land	+	M	D	L	I	P	LT	The development is located on previously developed land and will support high density housing which will help to make the best use of the site. However, it is not clear whether the site will encourage sustainable use of materials.

Site Name	North Quay							
Site Capacity	1250							
Site Source	Existing allocation							
Site Status	Consented							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring site Aspen Way and Billingsgate Market. The increased demand for services to support the additional population may negatively impact existing local residents if no new facilities are brought forward at sites.</p> <p>IIA1/2: If construction of this site and the Aspen Way and Billingsgate Market site were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Aspen Way and Billingsgate Market site will significantly increase the number of businesses and jobs, providing more opportunities for existing and new residents.</p> <p>IIA5: In combination, this site and the Aspen Way and Billingsgate Market site will significantly increase housing stock, contributing to the borough's housing target, whilst tackling issues of affordability.</p> <p>IIA10: If construction of this site and the Aspen Way and Billingsgate Market site were to happen concurrently, there is potential for a temporary negative cumulative effect on the local landscape and townscape setting, as well as the visual amenity. Improvements to the public realm during operation may result in positive cumulative effects in the long term, enhancing the landscape and townscape character.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archaeology from both this site and the Aspen Way and Billingsgate Market site, resulting in a negative residual effect.</p> <p>IIA14: If construction of this site and the Aspen Way and Billingsgate Market site were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic, a temporary effect. However, if construction timetables occurred in succession, these negative effects could be long term, though less severe.</p> <p>IIA16: The construction of both this site and the Aspen Way and Billingsgate Market site is likely to result in a significant cumulative increase in embodied carbon. Embodied carbon could be reduced if circular economy principles are applied and existing materials are repurposed.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Aspen Way and Billingsgate Market is likely to result in a cumulative increase in waste. Alignment with circular economy principles is not yet confirmed, however this could reduce the negative effect associated with waste generation.</p>							
Mitigation and Enhancement Measures	<p>IIA1/2: Further assessment as part of the scheme level design should incorporate an evaluation of the provision of healthcare and education facilities to ensure the current supply is sufficient in supporting new communities.</p> <p>IIA3/4: Development should make efficient use of space and deliver development in line with Policy EG1 to maximise employment opportunities. To ensure that the development does not have a negative impact on existing town centres, development should be in line with policies protecting town centres TC1-TC8.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA7: Development should prioritise the provision of sustainable transport infrastructure through compliance with policy MC1, and development should be designed in line with the principles as set out in policy MC2 to promote active transport.</p> <p>IIA9: In line with policy BO1, the site must achieve a minimum UGF and BNG targets set out within the Plan.</p> <p>IIA10: The application of Policy PS8 will help preserves or enhance visual connections between the public realm and open spaces.</p> <p>IIA11: Development should be in line with policies PS6 and PS7.</p> <p>IIA12/13: The application of policies CG6, CG7 and CG8 will help mitigate flood risk and water quality impacts</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented onsite during both construction and operation.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4.</p>							

Table G-30 – Reuters

Site Name	Reuters							
Site Capacity	900							
Site Source	Existing Allocation							
Site Status	Consented							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	++	H	D	R	I	P	LT	The site has capacity to provide 900 homes, which will work positively towards achieving the borough's housing target. The site has good existing access to some community services which may help to reduce levels of inequalities by bringing communities closer to these facilities. The site is located within an area of high population density (>15,695p/h). However, the site also includes space for additional community facilities, including a primary school and nursery.
IIA2: Human Health	++	H	D	L	I	P	LT	As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and community facilities; however, no new health facilities are proposed. The development of the site will include landscaping and improvements to public realm, which is expected to improve physical and mental health and wellbeing and reduce levels of loneliness.
IIA3: Economy & Town Centres	++	H	D	R	I	P	LT	The proposed site includes mixed use development, including commercial, business, communal and public house spaces. The site will improve and enhance connectivity between business clusters and the housing market. The site is also well located close to existing town centres and economic hubs.
IIA4: Employment & Skills	+	M	D	R	I	P	LT	The site is located 500m from the existing employment area of the Isle of Dogs Activity Area and a locally significant industrial site. The site also includes space for additional employment space. The construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
IIA5: Housing	++	H	D	L	I	P	LT	The site has capacity to provide 900 new homes. The site is amongst the most deprived in terms of barriers to housing, and house prices. It is expected that the site will provide 30% affordable housing, however this falls below the target set in Policy HF2. However, the site includes a range of housing type and tenures. It is assumed the site will deliver a proportion of accessible homes.
IIA6: Crime & Safety	+/-	M	D/I	L	I	P	LT	The site is expected to deliver improvements to public realm, including the provision of open spaces, and the creation of a green grid. Active frontages are also expected to be a key feature of the site which will improve natural surveillance within the site and in turn improve rates of crime. It is expected that the site will be delivered in accordance with designing out crime principles. However, the inclusion of a public house space at the site has the potential to result in increases in anti-social behaviour, particularly during night time hours. There is also the potential for this use to increase the fear of crime in the local community.
IIA7: Sustainable Transport	++	H	D	L	I	P	LT	The site has average access to public transport, as reflected in a PTAL score of 3, and is situated within good proximity to bus stops and underground and overground stations. Improvements are expected to include walking and cycling connections to connect to the

Site Source	Existing Allocation							
Site Status	Consented							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
								wider network. Development at the site will also be accompanied by the delivery of a new riverbus station. This will improve access to the site and surrounding area. The site is well located to local facilities and services which will allow residents to live their lives more locally. Improvements to public realm are expected to increase uptake of active modes of transport.
IIA8: Accessibility	++	M	D	L	I	P	LT	The existing site has good access to facilities and services. Improvements to pedestrian routes within the site will help to improve access to all groups inclusively. The site will allow residents to live their lives more locally and reduce the need to travel.
IIA9: Biodiversity & Natural Capital	+/-	L	D	L	R	P	MT	The site is adjacent to the River Thames and Tidal Tributaries SINC and in close proximity to the Saffron Avenue Pond SINC. The site also borders an area of priority habitat for mudflats. There is potential for some adverse effects on some priority habitats including mudflat and species during construction. However, the site has potential to contribute to biodiversity along within landscaping and open spaces, which could help to provide new small-scale habitats.
IIA10: Landscape & Townscape	+/-	M	D/I	L	I	P	LT	The site is located within the boundaries of the Tall Buildings Zone. Development of the site is therefore expected to provide an appropriate transition in building heights to respect the existing character of the site and avoiding adverse effects on the skyline. There are also two areas of open space located in close proximity to the site. While there are likely to be temporary negative effects to the local landscape and townscape setting during construction, improvements to public realm at this site will enhance the quality and condition of the townscape and landscape.
IIA11: Historic Environment	+/-	M	D/I	L	R/I	P/T	ST/LT	The site is situated within the Blackwall APA. There are also a small number of heritage assets located around the site. The Naval Row conservation area is also located 80m north of the site. It is therefore anticipated that the built form will need to protect and enhance the setting of heritage assets which will depend on the scale, massing, layout and materials that are proposed. Enhancements to public realm are expected to improve the setting of the local historic environment. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets.
IIA12: Flooding	-	H	D	L	I	P	LT	The site is located within an area of Flood Zone 3 and a flood risk zone and is directly adjacent to the River Thames. The site is low lying and therefore has a greater probability of flooding. However, development proposals must include the raising of flood defences in line with the Thames Estuary 2100 Plan. Along the riverside, development should be set back from the water by a minimum of 16m to allow adequate access to flood defences for future maintenance and upgrading.
IIA13: Water Quality	-	M	D	L	R/I	P/T	ST/LT	The site is located adjacent to the River Thames. There is potential for increased surface runoff during construction, further polluting this watercourse. Similarly, surface water drainage outfalls may result in increased pollution of the watercourse.

Site Name	Reuters							
Site Capacity	900							
Site Source	Existing Allocation							
Site Status	Consented							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
								In line with the South Poplar Masterplan area and the Isle of Dogs and South Poplar Integrated Water Management Plan, water management should be considered in the planning and design of development proposals.
IIA14: Air Quality	+/-	H	D/I	R	R/I	P/T	ST/LT	Public realm improvements include GI which could reduce exposure to the effects of urban air pollution. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction. There are a number of existing residential receptors surrounding the site which would be negatively impacted during construction, and consideration would need to be given as to how to minimise disruption to the local residents.
IIA15: Climate Change & Resilience	-	H	D	L	I	P	LT	The site is located in an area of medium high overall climate risk and medium heat risk rating. The site is also located within an area of flood zone 3 and has a diminishing resilience to climate change. Design measures have been incorporated to mitigate impacts of overheating. Green and blue infrastructure is expected to be delivered across the site. At this stage, it is understood that SuDS will be incorporated, however final details are yet to be confirmed. At this stage, climate resilience measures are unknown.
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and plant. At this stage, it is not clear whether the development will utilise renewable energy sources or low carbon heat networks once operational. Further design details are required.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	+	H	D	L	I	P	LT	The site is located on brownfield land. The site will support high density housing which will help to make the best use of the site. However, it is not clear whether the site will encourage sustainable use of materials.

Site Name	Reuters							
Site Capacity	900							
Site Source	Existing Allocation							
Site Status	Consented							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with the Republic Estate site.</p> <p>IIA1/2: If construction of this site and the Republic Estate site were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Republic Estate site will significantly increase the number of business and jobs.</p> <p>IIA5: In combination, this site and the Republic Estate site will significantly increase housing stock.</p> <p>IIA10: There is potential for cumulative negative effects within the Tall Building Zone areas in combination with neighbouring sites.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Republic Estate site.</p> <p>IIA14: If construction of this site and the Republic Estate site were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA15: The increase in GI provided by both this site and surrounding sites are likely to increase resilience to the UHI effect.</p> <p>IIA16: The construction of both this site and the Republic Estate site are likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and the neighbouring site Republic Estate site are likely to result in a cumulative increase in waste.</p>							
Mitigation and Enhancement Measures	<p>IIA1/2: Further assessment as part of the scheme level design should incorporate an evaluation of the provision of healthcare and education facilities to ensure the current supply is sufficient in supporting new communities.</p> <p>IIA3/4: Development should make efficient use of space and deliver development in line with Policy EG1 to maximise employment opportunities. To ensure that the development does not have a negative impact on existing town centres, development should be in line with policies protecting town centres TC1-TC8.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA7: Development should prioritise the provision of sustainable transport infrastructure through compliance with policy MC1, and development should be designed in line with the principles as set out in policy MC2 to promote active transport.</p> <p>IIA9: In line with policy BO1, the site must achieve a minimum UGF and BNG targets set out within the Plan.</p> <p>IIA10: The application of Policy PS8 will help preserves or enhance visual connections between the public realm and open spaces.</p> <p>IIA11: Development should be in line with policies PS6 and PS7.</p> <p>IIA12/13: The application of policies CG6, CG7 and CG8 will help mitigate flood risk and water quality impacts.</p> <p>IIA12/13: Surface water discharge should be coordinated with Thames Water to manage discharge and minimise pollutants that are discharged into the watercourse.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented on-site during both construction and operation.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4.</p>							

Table G-31 – Riverside South

Site Name	Riverside South							
Site Capacity	1650							
Site Source	Existing allocation							
Site Status	Consented for office development, un-developed.							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	+	H	D	R	I	P	LT	The site has potential to provide approximately 1,650 homes, which will work positively towards achieving the borough's housing target. However, at this stage, it is not known how many of these units will be accessible and wheelchair adaptable. The site is situated in a least deprived area (10-20%) and has good existing access to some community services which may help to reduce levels of inequalities by bringing communities closer to these facilities.
IIA2: Human Health	+	H	D	R	I	P	LT	As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and community facilities; however, health deprivation is moderate with the site being situated in the top 30-50% of most deprived neighbourhoods nationally. There is limited information on the level of additional community infrastructure. However, it is expected the scheme will deliver a new community centre and retail complexes which will promote active and healthy lifestyles.
IIA3: Economy & Town Centres	+	H	D	R	I	P	LT	The site is well located to existing employment areas including the Isle of Dogs Activity Area and Canary Warf Major Centre. This will likely improve access for residents to employment opportunities. There is an allowance for employment floorspace as part of the development of the site, and so it is likely that the site will improve connectivity between business clusters and the housing market. The site will include the formation of active frontages and public realm improvements which will support the vitality of units and increase footfall in the area.
IIA4: Employment & Skills	++	H	D	R	I	P	LT	Riverside South is well located to existing employment areas including the Isle of Dogs Activity Zone. The proposal of mixed-use development to include employment floorspace in a range of sizes will ensure an increase in the number of jobs and provide additional employment opportunities. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
IIA5: Housing	?	N/A	N/A	N/A	N/A	N/A	N/A	The site has capacity to provide approximately 1,650 homes, which will provide a net increase in the number of dwellings within the borough. Further details will be required regarding the affordability of units, and the number of wheelchair accessible homes. The size, type and tenure of housing will need to take into account different groups in the community, and it is expected that the site will maximise the provision of family homes. It is important that affordability is taken into account, particularly considering the significant barriers to housing (10-20% most deprived with house prices exceeding London Average) within the locality.

Site Name	Riverside South							
Site Capacity	1650							
Site Source	Existing allocation							
Site Status	Consented for office development, un-developed.							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA6: Crime & Safety	+	L	D/I	L	R/I	P/T	LT	Currently, the site sits within the 10-20% least deprived neighbourhoods in terms of crime. There is limited detail on whether designing out crime principles will be applied as part of the development, however, providing housing, public realm and open space improvements are likely to improve footfall and therefore provide additional natural surveillance, in turn reducing crime and creating a safer community. Additionally, the development will provide appropriate riparian lifesaving infrastructure along the riverside path, improving user safety.
IIA7: Sustainable Transport	++	M	D	L	I	P	LT	The site has good access to public transport, as reflected in a PTAL score of 5, the site is situated within reasonable proximity to bus stops, underground and overground stations, as well as the national and London cycle networks. Improvements to cycling and walking connections to, from and within the site are expected including to the wider area's employment and amenity spaces. The site is well located to local facilities and services which will allow residents to live their lives more locally. Improvements to public realm are expected to increase uptake of active modes of transport.
IIA8: Accessibility	++	L	D	L	I	P	LT	The existing site has good access to facilities and services and the proposal includes further provision for community facilities and services. Improvements to the legibility of the site will improve the accessibility of the site. The site will allow residents to live their lives more locally and reduce the need to travel.
IIA9: Biodiversity & Natural Capital	+/-	L	D/I	L	R/I	P/T	ST/LT	Mud flat priority habitats are located directly to the southwest of the site so there is a potential negative effect on ecology as a result, particularly during construction. Green space is proposed as part of the development which will improve urban greening and provide GI.
IIA10: Landscape & Townscape	?	N/A	N/A	N/A	N/A	N/A	N/A	The Canary Wharf Area Strategically Important Skyline is situated to the East and North of the site, and the site itself is within the boundaries of the Tall Buildings Zone. Full details of the scale of buildings are currently unknown, this is likely to be determined by individual design. While there are likely to be temporary negative effects to the local landscape and townscape setting during construction, improvements to public realm at this site will enhance the quality and condition of the townscape and landscape.
IIA11: Historic Environment	+/-	M	D/I	L	R/I	P/T	ST/LT	The site is situated within the Isle of Dogs APA, furthermore it is pertinent to protect and enhance the setting of heritage assets in and around the area, including the Grade II Historic Lock south of the site, the Grade II listed building also south of the site and a Grade II listed gate North-East of the site. Two conservation areas are located within 0.4km North of the site. It is therefore anticipated that the built form will need to protect and enhance the setting of heritage assets which will depend on the scale, massing, layout and materials that are proposed. Enhancements to public realm are expected to improve the setting of the local historic environment. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets.

Site Name	Riverside South							
Site Capacity	1650							
Site Source	Existing allocation							
Site Status	Consented for office development, un-developed.							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA12: Flooding	-	H	D	L	I	P	LT	The site is located within an area of Flood Zone 3 and a flood risk zone and is directly adjacent to the River Thames. The site is low lying and therefore has a greater probability of flooding. However, development proposals must include the raising of flood defences in line with the Thames Estuary 2100 Plan. Along the riverside, development should be set back from the water by a minimum of 16m to allow adequate access to flood defences for future maintenance and upgrading.
IIA13: Water Quality	-	M	D	L	R/I	P/T	ST/LT	The site is located adjacent to the River Thames. There is potential for increased surface runoff during construction, further polluting this watercourse. Similarly, surface water drainage outfalls may result in increased pollution of the watercourse. In line with the South Poplar Masterplan area and the Isle of Dogs and South Poplar Integrated Water Management Plan, water management should be considered in the planning and design of development proposals.
IIA14: Air Quality	+/-	L	D/I	L	R/I	P/T	ST/LT	The site has fairly good access to local public transport and will provide new facilities allowing residents to live their lives more locally and reduce the need for private car usage. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction. There are a number of existing residential receptors surrounding the site which would be negatively impacted during construction.
IIA15: Climate Change & Resilience	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is located in an area which has a low-medium overall climate risk and heat risk rating. The site is also located within an area of flood risk and flood zone 2 and 3. At this stage, specific climate resilience design measures are unknown.
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. At this stage, it is not clear whether the development will utilise renewable energy sources or low carbon heat networks once operational.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	+	L	D	R	I	P	LT	The development is located on previously developed land and will support high density housing which will help to make the best use of the site. However, it is not clear whether the site will encourage sustainable use of materials.

Site Name	Riverside South							
Site Capacity	1650							
Site Source	Existing allocation							
Site Status	Consented for office development, un-developed.							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring sites Westferry and Park Place and 10 Bank Street as well as other developments within Canary Warf</p> <p>IIA1/2: If construction of this site and the Westferry and Park Place and 10 Bank Street sites were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Westferry and Park Place and 10 Bank Street sites will significantly increase the number of business and jobs.</p> <p>IIA5: In combination, this site and the Westferry and Park Place and 10 Bank Street sites will significantly increase housing stock.</p> <p>IIA10: There is potential for cumulative negative effects on LVMF areas in combination with neighbouring sites Westferry and Park Place and 10 Bank Street.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Westferry and Park Place.</p> <p>IIA14: If construction of this site and the Westferry and Park Place and 10 Bank Street sites were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA15: The increase in GI provided by both this site and the Westferry and Park Place and 10 Bank Street sites are likely to increase resilience to the UHI effect.</p> <p>IIA16: The construction of both this site and the Westferry and Park Place and 10 Bank Street sites are likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Westferry and Park Place and 10 Bank Street sites are likely to result in a cumulative increase in waste.</p>							
Mitigation and Enhancement Measures	<p>IIA1/2: Further assessment as part of the scheme level design should incorporate an evaluation of the provision of healthcare and education facilities to ensure the current supply is sufficient in supporting new communities.</p> <p>IIA3/4: Development should make efficient use of space and deliver development in line with Policy EG1 to maximise employment opportunities. To ensure that the development does not have a negative impact on existing town centres, development should be in line with policies protecting town centres TC1-TC8.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA7: Development should prioritise the provision of sustainable transport infrastructure through compliance with policy MC1, and development should be designed in line with the principles as set out in policy MC2 to promote active transport.</p> <p>IIA9: In line with policy BO1, the site must achieve a minimum UGF and BNG targets set out within the Plan.</p> <p>IIA10: The application of Policy PS8 will help preserves or enhance visual connections between the public realm and open spaces.</p> <p>IIA11: Development should be in line with policies PS6 and PS7.</p> <p>IIA12/13: The application of policies CG6, CG7 and CG8 will help mitigate flood risk and water quality impacts.</p> <p>IIA12: Surface water discharge should be coordinated with Thames Water to manage discharge and minimise pollutants that are discharged into the watercourse.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented onsite during both construction and operation.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4.</p>							

Westferry Printworks

Table G-32 – Westferry Printworks

Site Name	Westferry Printworks							
Site Capacity	950							
Site Source	Existing allocation							
Site Status	Consented, un-developed.							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	+	H	D	L	I	P	LT	The site has potential to provide approximately 950 homes. However, at this stage, it is not known how many of these units will be accessible and wheelchair adaptable. The site has good existing access to some community services which may help to reduce levels of inequalities by bringing communities closer to these facilities. It is expected that the site will provide open space and additional educational infrastructure through a secondary school.
IIA2: Human Health	+	M	D	L	I	P	LT	As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and community facilities; however, health deprivation is high. There is limited information on the nature of additional community infrastructure that will be delivered to support health and wellbeing, and so further information will be required on whether the provision of services will be adequate for the increasing population. However, the site will deliver open space which will promote active and healthy lifestyles and reduce social isolation.
IIA3: Economy & Town Centres	+	M	D	R	I	P	LT	The site is within the most deprived in terms of income. The site is expected to deliver mixed use development including a range of employment spaces to meet the needs of various sizes of businesses. The site is also situated in close proximity to the Isle of Dogs Activity Area, which will improve connectivity between residential uses and business clusters. Given that the site is not located in a designated retail centre, imperative that the any uses do not impact on the viability of nearby town centres.
IIA4: Employment & Skills	+	M	D	R	I	P	LT	The site is expected to provide access employment opportunities for residents. This is expected to include a range of employment spaces to meet the needs of various sizes of businesses. The Site is also within close proximity to the Isle of Dogs Activity Area, which will improve access to a range of jobs. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
IIA5: Housing	?	N/A	N/A	N/A	N/A	N/A	N/A	The site has the potential to provide approximately 950 homes, which will work positively towards achieving the borough's housing target. Further details on the level of affordable and accessible housing are required.
IIA6: Crime & Safety	+	L	D/I	L	R	P	LT	The site is within the 30-50% most deprived neighbourhoods nationally with regards to crime. The site is expected to improve public realm and provide additional open spaces which should increase natural surveillance and therefore reduce crime and fear of crime.
IIA7: Sustainable Transport	-	L	D	L	I	P	LT	The site is in good proximity to local bus stops and rail links, however there is limited access to underground links, and poor connectivity to cycle networks, this is reflected in the PTAL score of between 1b-2. It is expected that walking and cycling connections to, from and within the site will improve sustainable transport links and reduce car dependency within the local area.

Site Name	Westferry Printworks							
Site Capacity	950							
Site Source	Existing allocation							
Site Status	Consented, un-developed.							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA8: Accessibility	+	L	D	L	I	P	LT	The exiting site has good access to facilities and services, and new community infrastructure is proposed, so residents will be able to live more locally and reduce their need to travel. Development at the site is expected to ensure connectivity to existing infrastructure.
IIA9: Biodiversity & Natural Capital	+/-	L	D/I	L	R/I	P/T	ST/LT	There are no statutory or non-statutory designated sites located within the site area. Mudflats (priority habitats) are located approximately 0.1km to the south west of the site and the site is adjacent to the Millwall and West India Docks SINC. There is potential for some adverse effects during construction, however increased green space is proposed as part of the development which will improve urban greening and provide GI
IIA10: Landscape & Townscape	+/-	L	D/I	L	R/I	P/T	ST/LT	The site is situated within the Millwall Inner Cluster TBZ. It is expected that development will respond positively to the existing character of the surrounding built environment and its dockside location, however finalised details of this have not currently been realised. There are likely to be temporary negative effects to the local landscape and townscape setting during construction. The site is adjacent to the Queen Mother Gardens and Sir John McDougall Gardens, it is assumed the built form will respect these open spaces in regard to their scale.
IIA11: Historic Environment	+/-	M	D/I	L	R/I	P/T	ST/LT	The site is situated in the Isle of Dogs APA and will be visible from some areas of the Chapel House conservation area, the site is outside the buffer zone of the Maritime World Heritage Site but may impact on its setting. The built form will need protect and enhance the setting of heritage assets which will depend on the scale, massing, layout and materials that are proposed. Enhancements to public realm are expected to improve the setting of the local historic environment. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets.
IIA12: Flooding	-	H	D	L	I	P	LT	The site is located within flood zone 2 and 3, any flood risk measures are expected to be in line with the borough's Strategic Flood Risk Assessment. In line with the Integrated Water Management Plan for the Isle of Dogs and South Poplar, the site will also provide an outfall for surface water drainage into the docks.
IIA13: Water Quality	-	H	D/I	L	I	P/T	ST/LT	The site is located adjacent to Millwall Dock. There is potential for increased surface runoff during construction, further polluting this watercourse. Similarly, surface water drainage outfalls may result in increased pollution of the watercourse. In line with the South Poplar Masterplan area and the Isle of Dogs and South Poplar Integrated Water Management Plan, water management should be considered in the planning and design of development proposals.
IIA14: Air Quality	+/-	L	D/I	L	R/I	P/T	ST/LT	The site will provide new facilities allowing resident to live their lives more locally and reduce the need for private car usage. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction.

Site Name	Westferry Printworks							
Site Capacity	950							
Site Source	Existing allocation							
Site Status	Consented, un-developed.							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA15: Climate Change & Resilience	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is located in an area which has a high overall climate risk and heat risk rating. The site is also located within an area of flood risk and flood zone 3. Therefore, it is likely to have diminishing resilience to climate change. At this stage, climate resilience measures are unknown.
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. At this stage, it is not clear whether the development will utilise renewable energy sources or low carbon heat networks once operational. Further design details are required.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	+	H	D	R	I	P	LT	The development is located on previously developed land and will support the protection of the borough's green spaces. The site will support high density housing which will help to make the best use of the site. However, it is not clear whether the site will encourage sustainable use of materials.
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring site Millharbour South.</p> <p>IIA1/2: If construction of this site and the Millharbour South site were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Millharbour South site will significantly increase the number of business and jobs.</p> <p>IIA5: In combination, this site and the Millharbour South site will significantly increase housing stock.</p> <p>IIA10: There is potential for cumulative negative effects on the townscape in combination with neighbouring site Millharbour South.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Millharbour South.</p> <p>IIA14: If construction of this site and the Millharbour South site were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA15: The increase in GI provided by both this site and the Millharbour South site is likely to increase resilience to the UHI effect.</p> <p>IIA16: The construction of both this site and the Millharbour South site is likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Millharbour South is likely to result in a cumulative increase in waste.</p>							

Site Name	Westferry Printworks							
Site Capacity	950							
Site Source	Existing allocation							
Site Status	Consented, un-developed.							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
Mitigation and Enhancement Measures	<p>IIA1/2: Further assessment as part of the scheme level design should incorporate an evaluation of the provision of healthcare and education facilities to ensure the current supply is sufficient in supporting new communities.</p> <p>IIA3/4: Development should make efficient use of space and deliver development in line with Policy EG1 to maximise employment opportunities. To ensure that the development does not have a negative impact on existing town centres, development should be in line with policies protecting town centres TC1-TC8.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA7: Development should prioritise the provision of sustainable transport infrastructure through compliance with policy MC1, and development should be designed in line with the principles as set out in policy MC2 to promote active transport.</p> <p>IIA9: In line with policy BO1, the site must achieve a minimum UGF and BNG targets set out within the Plan.</p> <p>IIA10: The application of Policy PS8 will help preserves or enhance visual connections between the public realm and open spaces.</p> <p>IIA11: Development should be in line with policies PS6 and PS7.</p> <p>IIA12/13: The application of policies CG6, CG7 and CG8 will help mitigate flood risk and water quality impacts.</p> <p>IIA12/13: Surface water discharge should be coordinated with Thames Water to manage discharge and minimise pollutants that are discharged into the watercourse.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented onsite during both construction and operation.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4.</p>							

Table G-33 – Wood Wharf

Site Name	Wood Wharf							
Site Capacity	3600							
Site Source	Existing allocation							
Site Status	Consented, under construction							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	++	H	D	R	I	P	LT	The site will provide up to 3,600 new homes, of which at least 25% will be affordable and the development will include at least 10% wheelchair adaptable homes. In addition, there will be new retail and employment opportunities, healthcare facilities, new parks and open spaces and improvements to the public realm. The site has good existing access to community services and will likely reduce levels of inequalities and provide new facilities which will help to bring communities together and support a changing demographic.
IIA2: Human Health	++	H	D	R	I	P	LT	The site is located in an area with an overall moderate health deprivation (30-50% most deprived). As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and community facilities, and it also expected to deliver further community services and facilities through the provision of new healthcare and new open spaces which will improve access to health services, as well as improve physical and mental health and wellbeing and reduce level of loneliness. Public realm improvements including integration into the green grid and the provision of open spaces are expected to be delivered. The site will deliver new community facilities and services and so it is expected that it will facilitate improvements to health and wellbeing. The site is expected to provide a minimum of 1ha of open space, which will improve physical and mental health and wellbeing and reduce levels of loneliness. Public realm improvements including integration into the green grid and the provision of open spaces are expected to deliver further health benefits for the population.
IIA3: Economy & Town Centres	+	M	D	L	I	P	LT	The South Quay neighbourhood centre is located at the west of the site. The site also falls within the Isle of Dogs Activity Area and Canary Wharf Major Town Centre, and so the provision of residential and employment space within the site is expected to improve and enhance the connectivity between business clusters and the housing market. It is not anticipated that retail development will be a feature of the site, however it is imperative that any retail development does not detrimentally impact on the vitality of the designated retain centre.
IIA4: Employment & Skills	++	H	D	L	I	P	LT	The site is well located to existing employment areas including the Isle of Dogs Activity Area, Canary Warf town centre and primary shopping areas. This will likely improve access for residents to employment opportunities. It is assumed that employment space will be delivered as part of the development of the site, and so will provide additional employment opportunities. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.

Site Name	Wood Wharf							
Site Capacity	3600							
Site Source	Existing allocation							
Site Status	Consented, under construction							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA5: Housing	+	M	D	L	I	P	LT	The provision of 3,600 new homes will help towards meeting LBTH's housing target The site will provide up to 3,600 new homes, of which at least 25% will be affordable and the development will include at least 10% wheelchair adaptable homes The size, type and tenure of housing will need to take into account different groups in the community, however this is currently unknown.
IIA6: Crime & Safety	+	M	D/I	L	R/I	P/T	ST/LT	The site is situated within a 30-50% most deprived area in terms of crime. There is limited detail on whether designing out crime principles will be applied as part of the development, however, providing housing, public realm and open space improvements are likely to improve footfall and therefore provide additional natural surveillance, in turn reducing crime and creating a safer community.
IIA7: Sustainable Transport	++	M	D	L	I	P	LT	The site is well situated in proximity to bus stops, rail station and the cycle network, this is reflected in the site having a PTAL level of between 3-6a. The site is expected to improve walking and cycling connections, which will support new sustainable transport options for future population growth, The site is well located to local facilities and services which will allow residents to live their lives more locally. Improvements to cycle and pedestrian access are expected to be delivered as part of the site.
IIA8: Accessibility	++	H	D	L	I	P	LT	The existing site has access to some facilities and services and the proposal includes further provision for community facilities and services. In addition, the site will be provisioning a new primary school and GP surgery thus increasing the allowance for residents to live their lives more locally and reduce the need to travel.
IIA9: Biodiversity & Natural Capital	+/-	L	D/I	L	R/I	P/T	MT/LT	The site is within close proximity to a mudflat priority habitat. There is a potential negative effect on ecology as a result, particularly during construction. Green space is proposed as part of the development which will improve urban greening and provide GI, and it is anticipated that improvements will be made to biodiversity and ecology along the water's edge. However, it is unknown whether the site will be in line with BNG targets of 2.5 biodiversity unit (BU) per hectare or 30% gain
IIA10: Landscape & Townscape	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is situated within the Canary Wharf Area Strategically Important Skyline, and the Tall Building Zone. Full details of the scale of buildings are currently unknown, this is likely to be determined by individual design. While there are likely to be temporary negative effects to the local landscape and townscape setting during construction, improvements to public realm at this site will enhance the quality and condition of the townscape and landscape.

Site Name	Wood Wharf							
Site Capacity	3600							
Site Source	Existing allocation							
Site Status	Consented, under construction							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA11: Historic Environment	+/-	L	D/I	L	R/I	P/T	ST/LT	The site is situated in the Isle of Dogs Archaeological Priority Area. The site is also adjacent to the Coldharbour Conservation Area and sits directly on the grade 1 Blackwall Basin. Any development of the site will need to protect and enhance the setting of heritage assets, including the historic docks and the Maritime Greenwich World Heritage Site. It is therefore anticipated that the built form will need protect and enhance the setting of heritage assets which will depend on the scale, massing, layout and materials that are proposed. Enhancements to public realm are expected to improve the setting of the local historic environment. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets.
IIA12: Flooding	+	H	D/I	L	I	P	LT	The site is located within flood zone 2 and 3. The development of the site is supported by a Flood Risk Assessment (FRA) and will or has the capacity to raise site level defences to 6.2m AOD. Accordingly, it is considered flood risk can be adequately mitigated.
IIA13: Water Quality	+/-	H	D	L/R	I	P	ST/LT	Storm water discharge from buildings and promenades would be discharged into the docks where possible. This is more sustainable than discharging into the sewer system as the trunk sewer in Preston's 155 Road is combined. In addition, it would also increase the risk that combined sewer overflows (CSO's) would discharge foul sewerage into the River Thames during storm events. Conditions will ensure that run-off from the road network are appropriately attenuated to ensure that pollutants do not enter the dock system. However, there is potential that construction at the site may result in contamination of this water body as a result of surface runoff. The site will include opportunities for greywater re-use. If implemented, this could contribute to improving the water efficiency of the site.
IIA14: Air Quality	+/-	L	D/I	L	R/I	P/T	ST/LT	Air quality is generally good at the site, and there is fairly good access to local public transport. The site provides new facilities allowing resident to live their lives more locally and reduce the need for private car usage. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction. There are a number of existing residential receptors surrounding the site which would be negatively impacted during construction.
IIA15: Climate Change & Resilience	+	H	D	R	I	P	T	The site is located in an area which has a medium overall climate risk and heat risk rating. The site is also located within an area of flood risk and flood zone 2 and 3. Therefore, it is likely to have diminishing resilience to climate change. The site will deliver SuDS, green spaces will be used within the development to reduce the UHI effect. The design of the scheme is expected to minimise the effects of solar gains and the UHI effect by virtue of scale, massing and layout.

Site Name	Wood Wharf							
Site Capacity	3600							
Site Source	Existing allocation							
Site Status	Consented, under construction							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA16: GHG Emissions	+	H	D	L	I	P	LT	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. Heating will be delivered using a site wide energy network served by a combined heat and power system. Solar PV will be incorporated into the construction of buildings. Energy efficiency design measures will minimise the energy demand of the site.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	+	M	D	L	I	P	LT	The development is located on previously developed land and will support high density housing which will help to make the best use of the site. However, it is not clear whether the site will encourage sustainable use of materials.
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring sites.</p> <p>IIA1/2: If construction of this site and the Canada Square and Churchill Place and Billingsgate Market sites were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Canada Square and Churchill Place and Billingsgate Market sites will significantly increase the number of business and jobs.</p> <p>IIA5: In combination, this site and the Canada Square and Churchill Place and Billingsgate Market sites will significantly increase housing stock.</p> <p>IIA10: There is potential for cumulative negative effects on townscape and the strategically important skyline in combination with neighbouring sites Canada Square and Churchill Place and Billingsgate Market.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Canada Square and Churchill Place and Billingsgate Market sites.</p> <p>IIA14: If construction of this site and the Canada Square and Churchill Place and Billingsgate Market sites were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA15: The increase in GI provided by both this site and the Canada Square and Churchill Place and Billingsgate Market sites are likely to increase resilience to the UHI effect.</p> <p>IIA16: The construction of both this site and the Canada Square and Churchill Place and Billingsgate Market sites are likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring sites, Canada Square and Churchill Place and Billingsgate Market, are likely to result in a cumulative increase in waste.</p>							

Site Name	Wood Wharf							
Site Capacity	3600							
Site Source	Existing allocation							
Site Status	Consented, under construction							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
Mitigation and Enhancement Measures	<p>IIA3/4: Development should make efficient use of space and deliver development in line with Policy EG1 to maximise employment opportunities. To ensure that the development does not have a negative impact on existing town centres, development should be in line with policies protecting town centres TC1-TC8.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA7: Development should prioritise the provision of sustainable transport infrastructure through compliance with policy MC1, and development should be designed in line with the principles as set out in policy MC2 to promote active transport.</p> <p>IIA9: In line with policy BO1, the site must achieve a minimum UGF and BNG targets set out within the Plan.</p> <p>IIA10: The application of Policy PS8 will help preserves or enhance visual connections between the public realm and open spaces.</p> <p>IIA11: Development should be in line with policies PS6 and PS7.</p> <p>IIA12/13: The application of policies CG6, CG7 and CG8 will help mitigate flood risk and water quality impacts.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of policy CG9 will help to ensure that measures to improve air quality should be implemented onsite during both construction and operation.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4.</p>							

Table G-34 – 10 Bank Street

Site Name	10 Bank Street							
Site Capacity	575							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	+	M	D	R	I	P	LT	The site has potential to provide approximately 575 homes, which will work positively towards achieving the borough's housing target. However, at this stage, it is not known how many of these units will be accessible and wheelchair adaptable. The site has good existing access to some community services which may help to reduce levels of inequalities by bringing communities closer to these facilities. It is expected that the site will provide additional facilities and services including health and community facilities. However, the closest secondary school is 1.35km away and requires crossing the river using Canary Wharf underground or ferry links.
IIA2: Human Health	+	M	D	L	I	P	LT	As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and leisure facilities; however, health deprivation is in the top 30-50% nationally. There is limited information on the nature of additional community infrastructure that will be delivered to support health and wellbeing, and so further information will be required on whether the provision of services will be adequate for the increasing population. However, the site will deliver pocket parks, which will provide publicly accessible open space, improving wellbeing for the local community.
IIA3: Economy & Town Centres	+	M	D	L	I	P	LT	The site is within the 30-50% most deprived nationally in terms of income. The site is located within Canary Warf Major Town Centre and is in close proximity to the Isle of Dogs Activity Area and Canary Warf primary shopping areas. The site will also include retail space within the development. This will improve proximity and availability of town centre uses within the development. The site will include the formation of active frontages and public realm improvements which will support the vitality of units and increase footfall in the area.
IIA4: Employment & Skills	+	M	D	L	I	P	LT	The site is expected to provide access employment opportunities for residents. This is expected to include a range of employment spaces, including office and retail space. The site is well located to existing employment areas including the Canary Warf Major Town Centre, the Isle of Dogs Activity Area and Canary Warf primary shopping areas. It is unclear if there will be any provision for additional employment within the site. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
IIA5: Housing	+	H	D	R	I	P	LT	The provision of 575 new homes will help towards meeting LBTH's housing target. However, it is unclear what proportion of homes will be made affordable and the size, type and tenure of homes. It is assumed that the site will provide 35% affordable housing, meeting the minimum target.

Site Name	10 Bank Street							
Site Capacity	575							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA6: Crime & Safety	+	L	I	L	I	P	LT	The site is located within an area of low crime deprivation (10%-20% least deprived neighbourhoods nationally). There is limited detail on whether designing out crime principles will be applied as part of the development, however, developing the land from its existing use and providing housing and public realm improvements is likely to help to reduce crime and create a safer community.
IIA7: Sustainable Transport	+	L	D	L	I	P	LT	The site has good connectivity via public transport through bus and overground and underground rail. This is reflected in the PTAL score of between 5 and 6a. The site is also close to the national and London cycle networks. The site will also improve the walking and cycling connections to the South Dock from the site and create additional public access routes on the east and west, as well as between Middle and South Docks.
IIA8: Accessibility	+	M	D	L	I	P	LT	The existing site has good access to facilities and services. However, it is not clear whether additional services will be provided on-site and the current capacity of these facilities. There is potential for essential services to be stretch by a large increase in population. This may conversely increase the need to travel.
IIA9: Biodiversity & Natural Capital	-	L	I	L	R/I	P/T	ST/LT	Mud flat priority habitats are located directly to the northwest of the adjacent site, Riverside South, so there is a potential negative effect on ecology as a result, particularly from noise and dust spoiling during construction. However, it is unknown whether the site will be in line with BNG targets of 2.5 biodiversity unit (BU) per hectare or 30% gain (whichever is higher).
IIA10: Landscape & Townscape	?	N/A	N/A	N/A	N/A	N/A	N/A	The Canary Wharf Area Strategically Important Skyline is situated to the East and North of the site, and the site itself is within the boundaries of the Tall Buildings Zone. It is currently uncertain if development of the site will provide an appropriate transition in building heights to respect the existing character of the site and avoiding adverse effects on the skyline. Full details of the scale of buildings are currently unknown, this is likely to be determined by individual design. While there are likely to be temporary negative effects to the local landscape and townscape setting during construction, improvements to public realm at this site will enhance the quality and condition of the townscape and landscape.
IIA11: Historic Environment	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is situated within the Isle of Dogs APA, so it is pertinent to protect and enhance the setting of heritage assets in and around the area, including the Grade 2 Historic Lock south of the Riverside South site, the Grade 2 listed building also south of Riverside South and a Grade 2 listed gate at Wesferry/Park Place. Two conservation areas are located within 0.7km North of the site. It is therefore pertinent that the built form will need to protect and enhance the setting of heritage assets which will depend on the scale, massing, layout and materials that are proposed. It is unknown whether there will be any enhancements to the public realm which may improve the setting of the local historic environment. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets.

Site Name	10 Bank Street							
Site Capacity	575							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA12: Flooding	-	H	D	L	I	P	LT	The site is located within flood zone 2 and 3. Any flood risk measures for the site are currently unknown and are likely to be determined during the design phase. In line with the Integrated Water Management Plan for the Isle of Dogs and South Poplar, the site will also provide an outfall for surface water drainage into the docks.
IIA13: Water Quality	-	M	D	L	R/I	P/T	ST/LT	The site is located in close proximity to the River Thames and sits directly next to the Middle and South Docks, thus creating potential for increased surface runoff during construction, further polluting this watercourse. In line with the South Poplar Masterplan area and the Isle of Dogs and South Poplar Integrated Water Management Plan, water management should be considered in the planning and design of development proposals.
IIA14: Air Quality	+/-	L	D/I	L	R/I	P/T	ST/LT	Air quality is generally good at the site. The site has average access to local public transport and will provide new facilities allowing residents to live their lives more locally and reduce the need for private car usage. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction. There are a number of existing residential receptors surrounding the site which would be negatively impacted during construction.
IIA15: Climate Change & Resilience	+/-	M	D	L	I	P	LT	Climate and heat risk at the site is medium. The site is also located within an area of flood risk and flood zone 2 and 3. Therefore, it is likely to have diminishing resilience to climate change. At this stage, development specific climate resilience measures are unknown. It is assumed that the site will adhere to the London Plan, Policy G5 – Urban Greening. This will provide opportunities for increased climate resilience at the site.
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. At this stage, it is not clear whether the development will utilise renewable energy sources or low carbon heat networks once operational. Further design details are required.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	?	N/A	N/A	N/A	N/A	N/A	N/A	The development is located on previously developed land and will support high density housing which will help to make the best use of the site. However, it is not clear whether the site will encourage sustainable use of materials.

Site Name	10 Bank Street							
Site Capacity	575							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring sites Westferry and Park Place and 10 Bank Street.</p> <p>IIA1/2: If construction of this site and the Riverside South and Marsh Wall West sites were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA5: In combination, this site and the Westferry and Park Place and Riverside South sites will significantly increase housing stock.</p> <p>IIA10: There is potential for cumulative negative effects on LVMF areas in combination with neighbouring sites Westferry and Park Place and Riverside South.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets.</p> <p>IIA14: If construction of this site, the Westferry and Park Place, Riverside South and Marsh Wall West sites were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA16: The construction of both this site, Westferry/Park Place, Riverside South and Marsh Wall West sites are likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring sites, Westferry and Park Place, Riverside South and Marsh Wall West sites are likely to result in a cumulative increase in waste.</p>							
Mitigation and Enhancement Measures	<p>IIA1/2: Further assessment as part of the scheme level design should incorporate an evaluation of the provision of healthcare and education facilities to ensure the current supply is sufficient in supporting new communities.</p> <p>IIA3/4: Development should make efficient use of space and deliver development in line with Policy EG1 to maximise employment opportunities. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented on-site during both construction and operation.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4.</p>							

Westferry/Park Place

Table G-35 – Westferry/Park Place

Site Name	Westferry/ Park Place							
Site Capacity	550							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	+	M	D	R	I	P	LT	This site has potential to provide approximately 550 homes, which will work positively towards achieving the borough's housing target. However, at this stage, it is not known how many of these units will be accessible and wheelchair adaptable. The site has good existing access to some community services which may help to reduce levels of inequalities by bringing communities closer to these facilities. The site will also provide additional community facilities, however the nature of these is currently unknown.
IIA2: Human Health	+	M	D	L	I	P	LT	As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and community facilities; however, health deprivation is in the top 30-50% nationally. There is limited information on the nature of additional community infrastructure that will be delivered to support health and wellbeing, and so further information will be required on whether the provision of services will be adequate for the increasing population. However, the site will deliver pocket parks, which will provide publicly accessible open space and improved public realm, improving wellbeing for the local community.
IIA3: Economy & Town Centres	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is within the 30-50% most deprived nationally in terms of income. The site is located within Canary Warf Major Town Centre and is in close proximity to the Isle of Dogs Activity Area and Canary Warf primary shopping areas. The site will also include commercial space, however at this stage it is not known if the site will include any additional retail space.
IIA4: Employment & Skills	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is within the 30-50% most deprived nationally in terms of employment. The site is well located to existing employment areas including the Canary Warf Major Town Centre, the Isle of Dogs Activity Area and Canary Warf primary shopping areas. It is unclear if there will be any provision for additional employment within the site. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
IIA5: Housing	+	H	D	R	I	P	LT	The provision of 550 new homes will help towards meeting LBTH's housing target. However, it is currently unclear what proportion of homes will be made affordable and the size, type and tenure of homes. It is assumed that the site will provide 35% affordable housing, meeting the minimum target.
IIA6: Crime & Safety	+	M	I	L	I	P	LT	The site is located within an area of low crime deprivation (10%-20% least deprived neighbourhoods nationally). There is limited detail on whether designing out crime principles will be applied as part of the development. However, developing the land from its existing use and providing housing and public realm improvements is likely to help to reduce crime and create a safer community.

Site Name	Westferry/ Park Place							
Site Capacity	550							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA7: Sustainable Transport	+	H	D	L	I	P	LT	The site has good connectivity via public transport through bus and overground and underground rail. This is reflected in the PTAL score of between 5 and 6. The site is also close to the national and London cycle networks. The site will also improve walking and cycling connections between the site and Middle Dock.
IIA8: Accessibility	+	H	D	L	I	P	LT	The existing site has good access to a range of facilities and services. The site will allow residents to live their lives more locally and reduce the need to travel by car as multiple public transport options are nearby, including bus stops, underground (of which Canary Wharf is wheelchair accessible and has 14 Electric Vehicle (EV) charging points), rail and ferry. The national and London cycle networks are also nearby.
IIA9: Biodiversity & Natural Capital	-	M	D	L	R/I	P/T	ST/LT	Mud flat priority habitats are located directly to the southwest of the adjacent site, Riverside South so there is a potential negative effect on ecology as a result, particularly from noise and dust spoiling during construction. Limited information on the provision of GI is known at this stage and whether the site will be in line with BNG targets of BNG benchmark of 2.5 biodiversity unit (BU) per hectare or 30% gain (whichever is higher) is unclear.
IIA10: Landscape & Townscape	?	N/A	N/A	N/A	N/A	N/A	N/A	The Canary Wharf Area Strategically Important Skyline is situated to the East and North of the site, and the site itself is within the boundaries of the Tall Buildings Zone. The tallest point should be located in the west of the site, fronting Westferry Circus and heights will be stepped down to the east and south. Full details of the scale of buildings and their impact on the Canary Wharf Area Strategically Important Skyline are currently unknown, this is likely to be determined by individual design. While there are likely to be temporary negative effects to the local landscape and townscape setting during construction, improvements to public realm at this site will enhance the quality and condition of the townscape and landscape.
IIA11: Historic Environment	--	H	D	R	R/I	P/T	ST/LT	The site is situated within the Isle of Dogs APA, so it is pertinent to protect and enhance the setting of heritage assets in and around the area as the proposed location sits directly on a Grade 2 listed gate. Two conservation areas are located within 0.4km North of the site. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Development of the site may also result in damage to, or loss of, the Grade 2 listed gate. Excavation works required may result in the loss of buried archaeological assets.
IIA12: Flooding	--	H	D	L	I	P	LT	This site is located within flood zone 2 and 3 and a flood risk zone. Any flood risk measures for the site are currently unknown and are likely to be determined during the design phase.
IIA13: Water Quality	-	M	D	L	R/I	P/T	ST/LT	The site is located in close proximity to the River Thames and sits directly next to the North Dock, thus creating potential for increased surface runoff during construction, further polluting this watercourse. No details have been provided on how water quality will be protected through development.

Site Name	Westferry/ Park Place							
Site Capacity	550							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA14: Air Quality	+/-	M	D/I	L	R	T/P	ST/LT	Air quality is generally good at the site, however, levels of NO ₂ are >28-43µ/m ³ . The site has fairly good access to local public transport and will provide new facilities allowing residents to live their lives more locally and reduce the need for private car usage. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction. There are a number of existing residential receptors surrounding the site which would be negatively impacted during construction.
IIA15: Climate Change & Resilience	+/-	M	D	L	I	P	LT	The site is located in an area which has a low-medium overall climate risk and heat risk rating. However, the site is located within an area of flood risk and flood zone 2 and 3. It is assumed that the site will adhere to the London Plan, Policy G5 – Urban Greening. This will provide opportunities for increased climate resilience at the site.
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. At this stage, it is not clear whether the development will utilise renewable energy sources or low carbon heat networks once operational.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	?	N/A	N/A	N/A	N/A	N/A	N/A	The development is located on previously developed land and will support high density housing which will help to make the best use of the site. However, it is not clear whether the site will encourage sustainable use of materials.
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring site Riverside South.</p> <p>IIA1/2: If construction of this site and the Westferry and Park Place and 10 Bank Street sites were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA5: In combination, this site and the Riverside South site will significantly increase housing stock.</p> <p>IIA10: In combination with construction at the Riverside South site, temporary adverse impacts on landscape and townscape during the construction phase will be more severe in extent</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Riverside South.</p> <p>IIA14: If construction of this site and the Riverside South site were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA16: The construction of both this site and the Riverside South site are likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site, Riverside South, are likely to result in a cumulative increase in waste.</p>							

Site Name	Westferry/ Park Place							
Site Capacity	550							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
Mitigation and Enhancement Measures	<p>IIA1/2: Further assessment as part of the scheme level design should incorporate an evaluation of the provision of healthcare and education facilities to ensure the current supply is sufficient in supporting new communities.</p> <p>IIA3/4: Development should make efficient use of space and deliver development in line with Policy EG1 to maximise employment opportunities. To ensure that the development does not have a negative impact on existing town centres, development should be in line with policies protecting town centres TC1-TC8.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA7: Development should prioritise the provision of sustainable transport infrastructure through compliance with policy MC1, and development should be designed in line with the principles as set out in policy MC2 to promote active transport.</p> <p>IIA9: In line with policy BO1, the site must achieve a minimum UGF and BNG targets set out within the Plan (2.5 biodiversity units per hectare or a 30% gain in habitat value for wildlife).</p> <p>IIA10: The application of Policy PS8 will help preserves or enhance visual connections between the public realm and open spaces.</p> <p>IIA11: Development should be in line with policies PS6 and PS7.</p> <p>IIA12/13: The application of policies CG6, CG7 and CG8 will help mitigate flood risk and water quality impacts.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented on-site during both construction and operation.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4.</p>

Alternative Sites Assessment Summaries

Neptune Wharf

Table G-37 - Neptune Wharf

Site Name	Neptune Wharf							
Site Capacity	100							
Site Source	New allocation - LLDC Allocation							
Site Status	New allocation							
I/A Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
I/A1: Population & Equalities	?	N/A	N/A	N/A	N/A	N/A	N/A	The site has potential to provide around 100 new homes, this is well below the threshold, but will work towards achieving the borough's housing target. At this stage, it is unknown whether these units will be accessible and wheelchair adaptable, and the number of homes which will be affordable, the area is located within the 30-50% most deprived neighbourhoods and so affordability will be a key consideration. The site has access to some community facilities which may help to reduce levels of inequalities. It is not clear on whether the site will provide any additional facilities. The site is not located within close proximity to secondary and higher educational institutions. The site was originally allocated to deliver a school, the site is now earmarked for housing. Therefore, further consideration as to the range and access to educational services will need to be considered to ensure that there is sufficient provision for communities.
I/A2: Human Health	?	N/A	N/A	N/A	N/A	N/A	N/A	As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and community facilities; however, health deprivation is high and life expectancy is worse than the national average for males. It is not clear whether the current provision will meet the needs of the new population. There is limited information of the type of housing and the additional provisions the site may make e.g. public realm, employment, health facilities.
I/A3: Economy & Town Centres	?	N/A	N/A	N/A	N/A	N/A	N/A	The finer details of the development are not yet known. It is assumed that there could be potential to provide a mixed-use development which may include employment space and retail offering, which may help to improve the viability of the site. The site is adjacent to the Hackney Wick neighbourhood centre, and so consideration of maintaining the vitality and vibrancy of the existing centre will be necessary.
I/A4: Employment & Skills	+	M	D	R	I	P	LT	The site is well located within 350m of a locally significant industrial site, which may improve access for residents to employment opportunities. The potential to include employment space could provide new jobs, however details of this are not currently realised. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
I/A5: Housing	?	N/A	N/A	N/A	N/A	N/A	N/A	The site has potential to provide approximately 100 new homes, which will contribute somewhat to the borough's housing targets, it will fall significantly below the threshold. No information is currently available on the level of affordable housing; however, affordability

Site Name	Neptune Wharf							
Site Capacity	100							
Site Source	New allocation - LLDC Allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
								issues are apparent in the local area, therefore affordable housing must be a main consideration in the delivery of the site.
IIA6: Crime & Safety	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is currently located within an area of high crime deprivation (top 10-20% of neighbourhoods nationally). There is limited detail on whether designing out crime principles will be applied as part of the development or whether there will be improvements to the public realm, to support crime reductions.
IIA7: Sustainable Transport	?	N/A	N/A	N/A	N/A	N/A	N/A	Access is available to the site via public transport through bus, Overground, underground and rail. The site currently has a PTAL score of 2. Public transport access, and improvements to walking and cycling should be the main consideration in the delivery of the site. It is not clear whether there will be plans for additional sustainable transport provision.
IIA8: Accessibility	+	M	D	L	I	P	LT	The existing site has fairly good access to facilities and services and will allow residents to live their lives more locally and may reduce the need to travel. However, it is not clear whether additional services will be provided on-site and the current capacity of these facilities. There is potential for essential services to be stretched by a large increase in population. This may conversely increase the need to travel. Details are currently not available regarding any potential improvements to public realm. Any improvements should seek to improve legibility.
IIA9: Biodiversity & Natural Capital	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is located in close proximity to a number of SINCs. There is potential for some adverse effects on some small-scale habitats and species during construction. It is unknown whether additional greenspace will be included within the site, or if BNG targets will be met.
IIA10: Landscape & Townscape	+	M	D	L	I	P	LT	The site is not situated within any designations relating to townscape nor landscape. There are likely to be temporary negative effects to the local landscape and townscape setting during construction. At this stage the design details are unknown, however, it is assumed that the development will likely improve townscape and landscape setting.
IIA11: Historic Environment	?	N/A	N/A	N/A	N/A	N/A	N/A	The site lies within the Fish Island Conservation Area and is situated with the boundary of the Lea Valley Archaeological Priority Area. During construction, there is potential for adverse effects on the setting of heritage assets from construction traffic, emissions and noise and vibration. Excavation works may result in the loss of buried archaeological assets. At this stage it is not clear whether development will include measures to enhance and restore the local historic environment.
IIA12: Flooding	--	N/A	N/A	N/A	N/A	N/A	N/A	The site is located in Flood Zones 2 and 3, no details are currently understood relating to flood risk measures for the site.
IIA13: Water Quality	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is east-adjacent to a main river. No details are currently known relating to any measures to mitigate against water quality impacts.

Site Name	Neptune Wharf							
Site Capacity	100							
Site Source	New allocation - LLDC Allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA14: Air Quality	+/-	M	I	L	R	P/T	ST/LT	Air quality at the site is good with low levels of NO ₂ and PM ₁₀ . The site has good access to local public transport and community facilities and could allow residents to live their lives more locally and reduce the need for private car usage. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction. Consideration would need to be given as to how to minimise disruption to the local residents.
IIA15: Climate Change & Resilience	?	N/A	N/A	N/A	N/A	N/A	N/A	Overall climate risk is high and overall heat risk is medium. Development specific climate resilience measures are not known at this stage. Measures to reduce the risk of overheating will need to be considered. It is assumed that the site will adhere to the London Plan, Policy G5 – Urban Greening. This will provide opportunities for increased climate resilience at the site.
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. At this stage, it is not clear whether the development will utilise renewable energy sources or low carbon heat networks once operational. Further design details are required.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	+	H	D	L	I	P	LT	The development is located on previously developed land and will support the protection of the borough's green spaces. The site will support high density housing which will help to make the best use of the site. It is not clear whether the site will encourage sustainable use of materials.

Site Name	Neptune Wharf							
Site Capacity	100							
Site Source	New allocation - LLDC Allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with nearby site Hepscoot Road, Hackney Wick Station, Hamlet Industrial Estate and Sweetwater</p> <p>IIA1/2: If construction of this site and the other allocated sites at Hepscoot Road, Hackney Wick Station, Hamlet Industrial Estate and Sweetwater were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Hepscoot Road, Hackney Wick Station, Hamlet Industrial Estate and Sweetwater sites will significantly increase the number of business and jobs.</p> <p>IIA10: In combination with construction at the Hepscoot Road, Hackney Wick Station, Hamlet Industrial Estate and Sweetwater sites, temporary adverse impacts on landscape and townscape during the construction phase will be more severe in extent.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Hepscoot Road, Hackney Wick Station, Hamlet Industrial Estate and Sweetwater sites.</p> <p>IIA14: If construction of this site and the Hepscoot Road, Hackney Wick Station, Hamlet Industrial Estate and Sweetwater sites were to happen concurrently, there is potential for an increased deterioration in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA15: The increase in GI provided by both this site and other allocated sites in the vicinity is likely to increase resilience to the UHI effect.</p> <p>IIA16: The construction of both this site and the Hepscoot Road, Hackney Wick Station, Hamlet Industrial Estate and Sweetwater sites is likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Hepscoot Road, Hackney Wick Station, Hamlet Industrial Estate and Sweetwater sites is likely to result in a cumulative increase in waste.</p>							
Mitigation and Enhancement Measures	<p>IIA1/2: Further assessment as part of the scheme level design should incorporate an evaluation of the provision of healthcare and education facilities to ensure the current supply is sufficient in supporting new communities. This should take into consideration the removal of the school from the development.</p> <p>IIA3/4: Development should make efficient use of space and deliver development in line with Policy EG1 to maximise employment opportunities. To ensure that the development does not have a negative impact on existing town centres, development should be in line with policies protecting town centres TC1-TC8.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4</p> <p>IIA7: Development should prioritise the provision of sustainable transport infrastructure through compliance with policy MC1, and development should be designed in line with the principles as set out in policy MC2 to promote active transport.</p> <p>IIA9: In line with policy BO1, the site must achieve a minimum UGF and BNG targets set out within the Plan (2.5 biodiversity units per hectare or a 30% gain in habitat value for wildlife).</p> <p>IIA10: The application of Policy PS8 will help preserves or enhance visual connections between the public realm and open spaces.</p> <p>IIA12/13: The application of policies CG6, CG7 and CG8 will help mitigate flood risk and water quality impacts.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented on-site during both construction and operation.</p> <p>IIA15/16: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices. The application of policies CG1, CG2, CG3, CG4 and CG5 will help to reduce the impacts of GHGs and increase climate resilience.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with policy DV4.</p>							

Hamlet Industrial Estate

Table G-38 - Hamlet Industrial Estate

Site Name	Hamlet Industrial Estate							
Site Capacity	100							
Site Source	New allocation - LLDC Allocation							
Site Status	New allocation							
I/A Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
I/A1: Population & Equalities	+/-	L	D	R	I	P	LT	The site has potential to provide around 100 new homes, this is well below the threshold, but will work towards achieving the borough's housing target. It is expected that an affordable housing threshold of 50% may be delivered, which is key given the area is located within the 30-50% most deprived neighbourhoods. At this stage, it is unknown whether these units will be accessible and wheelchair adaptable. The site has access to some community facilities which may help to reduce levels of inequalities. It is not clear on whether the site will provide any additional facilities. The site is not located within close proximity to secondary and higher educational institutions. Therefore, further consideration as to the range and access to healthcare and educational services will need to be considered to ensure that there is sufficient provision for communities.
I/A2: Human Health	?	N/A	N/A	N/A	N/A	N/A	N/A	As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and community facilities; however, health deprivation is high and life expectancy is worse than the national average for males. It is not clear whether the current provision will meet the needs of the new population. There is limited information of the type of housing and the additional provisions the site may make e.g. public realm, employment, health facilities.
I/A3: Economy & Town Centres	?	N/A	N/A	N/A	N/A	N/A	N/A	The finer details of the development are not yet known, however the site is allocated for mixed use development which will include employment and residential floorspace, as well as restaurants and cafes. The site is adjacent to the Hackney Wick neighbourhood centre, and so consideration of maintaining the vitality and vibrancy of the existing centre will be necessary.
I/A4: Employment & Skills	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is well located within 300m of a locally significant industrial site, which may improve access for residents to employment opportunities. The existing uses of the site comprise of light industrial units, whilst details are not currently available, this may lead to a loss of jobs. New employment is however expected to be created through the provision of employment floorspace, however the details of this are not currently fully understood. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
I/A5: Housing	+/-	L	D	R	I	P	LT	The site has potential to provide approximately 100 new homes, which will contribute somewhat to the borough's housing targets, it will fall significantly below the threshold. No information is currently available on the level of affordable housing, however due to affordability issues prevalent in the local area, affordable housing must be a main consideration in the delivery of the site.

Site Name	Hamlet Industrial Estate							
Site Capacity	100							
Site Source	New allocation - LLDC Allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA6: Crime & Safety	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is currently located within an area of high crime deprivation (top 10-20% of neighbourhoods nationally). Active frontages and increased access will improve public use and improve natural surveillance. There is limited detail on whether designing out crime principles will be applied as part of the development or whether there will be improvements to the public realm, to support crime reductions.
IIA7: Sustainable Transport	?	N/A	N/A	N/A	N/A	N/A	N/A	Access is available to the site via public transport through bus, overground, underground and rail. The site currently has a PTAL score of 2. Public transport access, and improvements to walking and cycling should be the main consideration in the delivery of the site. It is not clear whether there will be plans for additional sustainable transport provision.
IIA8: Accessibility	+	L	D	L	I	P	LT	The existing site has fairly good access to facilities and services and will allow residents to live their lives more locally and may reduce the need to travel. However, it is not clear whether additional services will be provided on-site and the current capacity of these facilities. There is potential for essential services to be stretched by population increases. This may conversely increase the need to travel. The site will deliver improved access to the lower-level towpath along the western bank of the Lee Navigation Canal; however, details are currently not available regarding any potential improvements to public realm. Any improvements should seek to improve legibility.
IIA9: Biodiversity & Natural Capital	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is located in close proximity to a number of SINCs. There is potential for some adverse effects on some small-scale habitats and species during construction. It is unknown whether additional greenspace will be included within the site, nor are there any details on BNG.
IIA10: Landscape & Townscape	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is not situated within any designations relating to townscape nor landscape. There are likely to be temporary negative effects to the local landscape and townscape setting during construction. At this stage the design details are unknown, however, it is assumed that the development will likely improve townscape and landscape setting.
IIA11: Historic Environment	?	N/A	N/A	N/A	N/A	N/A	N/A	The site lies within the Fish Island Conservation Area and is situated with the boundary of the Lea Valley Archaeological Priority Area. During construction, there is potential for adverse effects on the setting of heritage assets from construction traffic, emissions and noise and vibration. Excavation works may result in the loss of buried archaeological assets. It is assumed the site will be designed to be in-keeping with the designated heritage assets and their setting.
IIA12: Flooding	--	H	D	L	I	P	LT	The site is located in Flood Zones 2 and 3, no details are currently understood relating to flood risk measures for the site.
IIA13: Water Quality	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is east-adjacent to a main river. No details are currently known relating to any measures to mitigate against water quality impacts.

Site Name	Hamlet Industrial Estate							
Site Capacity	100							
Site Source	New allocation - LLDC Allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA14: Air Quality	+-	M	D	L	R/I	P/T	ST/LT	Air quality is good at the site, with low levels of NO ₂ and PM ₁₀ . The site has good access to local public transport and community facilities and could allow residents to live their lives more locally and reduce the need for private car usage. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction. Consideration would need to be given as to how to minimise disruption to the local residents.
IIA15: Climate Change & Resilience	--	H	D	L	I	P	LT	Overall climate risk is high and overall heat risk is medium and the site is at risk of flooding. Climate resilience measures are not known at this stage. Measures to reduce the risk of overheating will need to be considered. It is assumed that the site will adhere to the London Plan, Policy G5 – Urban Greening. This will provide opportunities for increased climate resilience at the site.
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. At this stage, it is not clear whether the development will utilise renewable energy sources or low carbon heat networks once operational. Further design details are required.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	+	H	D	L	I	P	LT	The development is located on previously developed land and will support the protection of the borough's green spaces. The site will support high density housing which will help to make the best use of the site. It is not clear whether the site will encourage sustainable use of materials.

Site Name	Hamlet Industrial Estate							
Site Capacity	100							
Site Source	New allocation - LLDC Allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with nearby site Hepscoot Road, Hackney Wick Station, Neptune Wharf and Sweetwater</p> <p>IIA1/2: If construction of this site and the other allocated sites at Hepscoot Road, Hackney Wick Station, Neptune Wharf and Sweetwater were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Hepscoot Road, Hackney Wick Station, Neptune Wharf and Sweetwater sites will significantly increase the number of business and jobs.</p> <p>IIA10: In combination with construction at the Hepscoot Road, Hackney Wick Station, Neptune Wharf and Sweetwater sites, temporary adverse impacts on landscape and townscape during the construction phase will be more severe in extent.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Hepscoot Road, Hackney Wick Station, Neptune Wharf and Sweetwater sites.</p> <p>IIA14: If construction of this site and the Hepscoot Road, Hackney Wick Station, Neptune Wharf and Sweetwater sites were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA15: The increase in GI provided by both this site and other allocated sites in the vicinity is likely to increase resilience to the UHI effect.</p> <p>IIA16: The construction of both this site and the Hepscoot Road, Hackney Wick Station, Neptune Wharf and Sweetwater sites is likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Hepscoot Road, Hackney Wick Station, Neptune Wharf and Sweetwater sites is likely to result in a cumulative increase in waste.</p>							
Mitigation and Enhancement Measures	<p>IIA1/2: Further assessment as part of the scheme level design should incorporate an evaluation of the provision of healthcare and education facilities to ensure the current supply is sufficient in supporting new communities.</p> <p>IIA3/4: Development should make efficient use of space and deliver development in line with Policy EG1 to maximise employment opportunities. To ensure that the development does not have a negative impact on existing town centres, development should be in line with policies protecting town centres TC1-TC8.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA7: Development should prioritise the provision of sustainable transport infrastructure through compliance with policy MC1, and development should be designed in line with the principles as set out in policy MC2 to promote active transport.</p> <p>IIA9: In line with policy BO1, the site must achieve a minimum UGF and BNG targets set out within the Plan (2.5 biodiversity units per hectare or a 30% gain in habitat value for wildlife).</p> <p>IIA10: The application of Policy PS8 will help preserves or enhance visual connections between the public realm and open spaces.</p> <p>IIA12/13: The application of policies CG6, CG7 and CG8 will help mitigate flood risk and water quality impacts.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4.</p>							

Table G-39 – Millharbour South

Site Name		Millharbour South						
Site Capacity		320						
Site Source		New allocation						
Site Status		New allocation						
I/A Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
I/A1: Population & Equalities	+	M	D	L	I	P	LT	The site has potential to provide around 320 new homes, this is well below the threshold, but will work towards achieving the borough's housing target. The area is within the 30-50% most deprived neighbourhoods. The site should seek to deliver at least 35% affordable housing and wheelchair accessible units. The site has good access to community facilities and is intended to provide further community infrastructure which will help to reduce levels of inequalities. Further consideration as to the range and access to healthcare and educational services will need to be considered to ensure that there is sufficient provision for communities.
I/A2: Human Health	++	M	D	L	I	P	LT	As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and community facilities; however, health deprivation is high. The site will lead to additional community facilities, including open spaces which are likely to improve local health and wellbeing. A green grid is proposed which will promote active transport modes and support sustainable and healthy living for residents.
I/A3: Economy & Town Centres	+	M	D	L	I	P	LT	Finer details of the development are not yet known. It is assumed that there could be potential to provide a mixed-use development to include employment space and retail offering which may improve the footfall to the Crossharbour district centre, therefore improving vitality. There are some businesses currently located across the site and it is not clear whether these will be re-provisioned elsewhere and whether existing business owners will be compensated and/or given opportunities to buy or rent new units. Affordability of new units may be a key concern.
I/A4: Employment & Skills	++	H	D	L	I	P	LT	The site is well located to the Isle of Dogs activity area, which will improve access for residents to employment opportunities. The site is within the 30-50% most deprived in terms of income and employment, and so ensuring sufficient access to a range of employment opportunities is imperative, a range of sizes of employment floorspaces are proposed to serve small to medium enterprises and therefore respond to changing demands in the employment market. There are some businesses located across the site and it could result in a net loss of jobs. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
I/A5: Housing	?	N/A	N/A	N/A	N/A	N/A	N/A	The site has the potential to provide 320 new homes. which will contribute to the borough's housing targets, however, it will fall significantly below the threshold. Significant affordability issues are apparent in the local area, therefore affordable housing must be a main consideration in the delivery of the site.

Site Name	Millharbour South							
Site Capacity	320							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA6: Crime & Safety	+	L	D/I	L	R	P	LT	The site is located within the 30-50% most deprived neighbourhoods in terms of crime. Improvements to public open spaces, provision of walking and cycling links and the prioritisation of active frontages are expected to increase natural surveillance and therefore improve crime rates and fear of crime. There is limited detail on whether designing out crime principles will be applied as part of the development, or whether there will be improvements to the public realm, to support crime reductions.
IIA7: Sustainable Transport	+/-	M	D	L	I	P	LT	The site is within close proximity to Tube and Train Stations, and easily access from bus stop within the site's proximity. The site is also served by both the National and London Cycle Network. Despite this, within the site there appear to be significant variances, as reflected in a PTAL score of 1b-5. Improvements and enhancements to walking and cycle links will help to facilitate a modal shift towards more sustainable modes.
IIA8: Accessibility	+	M	D	L	I	P	LT	The existing site has good access to facilities and services, and new community infrastructure is proposed, so residents will be able to live more locally and reduce their need to travel.
IIA9: Biodiversity & Natural Capital	+/-	M	D	L	R/I	P/T	ST/LT	The site is less than 0.8km from the Mudchute Park Farm Local Nature Reserve and the site is adjacent to the Millwall and West India Docks SINC. There are no designated sites within the site's boundary. There is potential for some adverse effects during construction, however increased green space is proposed as part of the development which will improve urban greening and provide GI
IIA10: Landscape & Townscape	+	M	D	L	I	P	ST/MT	While there are likely to be temporary negative effects to the local landscape and townscape setting during construction, improvements to public realm at this Site will enhance the quality and condition of the townscape and landscape. The site is located within the Millwall Inner Dock Cluster Tall Buildings Zone, and so it is expected that the built form of development will respond positively to the surrounding built environment.
IIA11: Historic Environment	+/-	M	D/I	L	R/I	P/T	ST/LT	The site is located within the Isle of Dogs Archaeological Priority Area and is located close to the Maritime Greenwich world heritage site. It is therefore anticipated that the built form will protect and enhance the setting of heritage assets. Enhancements to public realm are expected to improve the setting of the local historic environment. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets
IIA12: Flooding	-	H	D	L	I	P/T	ST/LT	The site is located within flood zone 2 and 3, any flood risk measures are expected to be in line with the borough's Strategic Flood Risk Assessment.
IIA13: Water Quality	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is located adjacent to Millwall Dock. There is potential that construction at the site may result in contamination of this water body as a result of surface runoff.
IIA14: Air Quality	+/-	L	D/I	L	R/I	P/T	ST/LT	The site has good access to local public transport and will provide new facilities allowing resident to live their lives more locally and reduce the need for private car usage. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction.

Site Name	Millharbour South							
Site Capacity	320							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA15: Climate Change & Resilience	--	H	D	L	I	P	LT	The site is located in an area which has a high overall climate risk and heat risk rating. The site is also located within an area of flood risk and flood zone 2 and 3. Therefore, it is likely to have diminishing resilience to climate change. At this stage, climate resilience measures are unknown. It is assumed that the site will adhere to the London Plan, Policy G5 – Urban Greening. This will provide opportunities for increased climate resilience at the site.
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. It is expected that the development could demonstrate potential to connect to the Barkantine Energy Centre and utilise the low carbon heat network. Further design details are required.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	+	H	D	R	I	P	LT	The development is located on previously developed land and will support the protection of the borough's green spaces. The site will support high density housing which will help to make the best use of the site. However, it is not clear whether the site will encourage sustainable use of materials.
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring site Westferry Printworks.</p> <p>IIA1/2: If construction of this site and the Westferry Printworks site were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Westferry Printworks site will significantly increase the number of business and jobs.</p> <p>IIA5: In combination, this site and the Westferry Printworks site will significantly increase housing stock.</p> <p>IIA10: There is potential for cumulative negative effects on townscape in combination with neighbouring site Westferry Printworks.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Westferry Printworks site.</p> <p>IIA14: If construction of this site and the Westferry Printworks site were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA15: The increase in GI provided by both this site and the Westferry Printworks site is likely to increase resilience to the UHI effect.</p> <p>IIA16: The construction of both this site and the Westferry Printworks site is likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Westferry Printworks is likely to result in a cumulative increase in waste.</p>							

Site Name	Millharbour South							
Site Capacity	320							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
Mitigation and Enhancement Measures	<p>IIA1/2: Further assessment as part of the scheme level design should incorporate an evaluation of the provision of healthcare and education facilities to ensure the current supply is sufficient in supporting new communities.</p> <p>IIA3/4: Development should make efficient use of space and deliver development in line with Policy EG1 to maximise employment opportunities. To ensure that the development does not have a negative impact on existing town centres, development should be in line with policies protecting town centres TC1-TC8.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA7: Development should prioritise the provision of sustainable transport infrastructure through compliance with policy MC1, and development should be designed in line with the principles as set out in policy MC2 to promote active transport.</p> <p>IIA9: In line with policy BO1, the site must achieve a minimum UGF and BNG targets set out within the Plan (2.5 biodiversity units per hectare or a 30% gain in habitat value for wildlife).</p> <p>IIA10: The application of Policy PS8 will help preserves or enhance visual connections between the public realm and open spaces.</p> <p>IIA11: Development should be in line with policies PS6 and PS7.</p> <p>IIA12/13: The application of policies CG6, CG7 and CG8 will help mitigate flood risk and water quality impacts.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4.</p>							

Table G-40 – Orchard Wharf

Site Name		Orchard Wharf						
Site Capacity		350						
Site Source		New allocation						
Site Status		New allocation						
I/A Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
I/A1: Population & Equalities	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is likely to provide 350 homes, which will not meet the borough's housing target. However, at this stage, it is not known how many of these units will be affordable and whether there will be provision made for wheelchair adaptable homes. The site has high levels of population density (higher than the 15,695p/h). The site has good existing access to community services which may help to reduce levels of inequalities by bringing communities closer to these facilities. It is not clear on whether the site will provide any additional facilities. Additional housing may therefore put strains on existing community facilities.
I/A2: Human Health	?	N/A	N/A	N/A	N/A	N/A	N/A	As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and community facilities; however, life expectancy is worse than the national average for males and females. It's unlikely that the current provision will meet the needs of the new population. There is limited information of the type of housing and the additional provisions the site may make e.g. public realm, employment, health facilities.
I/A3: Economy & Town Centres	+	L	D	L	I	P	LT	The proposed site is located close to London City Island town centre, providing opportunities for residents to live locally and improved connectivity between the housing market and town centres. It is currently uncertain if the site will include any additional retail space.
I/A4: Employment & Skills	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is located away from employment areas. It is unclear if there will be any provision for additional employment within the site.
I/A5: Housing	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is likely to provide 350 homes, which would work towards but not meet LBTH's housing target. It is also unclear what proportion of homes will be made affordable and the size, type and tenure of homes. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
I/A6: Crime & Safety	+	L	I	L	R	P	MT	The site is located within an area of medium crime deprivation (30%-50% most deprived neighbourhoods nationally). There is limited detail on whether designing out crime principles will be applied as part of the development, however, developing the land from its existing use and providing housing and public realm improvements is likely to help to reduce crime and create a safer community.
I/A7: Sustainable Transport	--	M	D	L	R	P	LT	The site is not well located for public transport use. There is one bus stop in close proximity to the site and the closest overground rail station is 650m away. The site has a PTAL score of between 0 and 1b. This is likely to increase the need for residents to travel by car to access local services and facilities. It is also unclear if any additional public transport provision will be proposed as part of the site.

Site Name	Orchard Wharf							
Site Capacity	350							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA8: Accessibility	--	M	D	L	R	P	LT	The site is not well located for public transport use or local facilities and services. The site has a PTAL score of between 0 and 1b. Therefore, there is potential for the exclusion of social groups who rely on public transport. It is unclear if the site includes new facilities or services to meet the needs of the growing population in this area.
IIA9: Biodiversity & Natural Capital	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is located adjacent to areas of priority habitat. There is potential for some adverse effects on some small-scale habitats and species during construction, as a result of noise and dust spoiling. At this stage BNG is assumed but whether the site meets the BNG target of 2.5 biodiversity unit (BU) per hectare or 30% gain is unknown.
IIA10: Landscape & Townscape	+/-	H	D/I	R	R/I	P/T	ST/LT	The site is located in close proximity to Local Open Space. There are likely to be temporary negative effects to the local landscape and townscape setting during construction. However, as the site currently has low townscape value, there is potential for the redevelopment of the site to result in positive effects on the public realm, improving the landscape setting. The site also borders the tall building zone, and there is potential for tall buildings to occur at this site, altering the view. However, this is currently uncertain.
IIA11: Historic Environment	+/-	H	D/I	R	R/I	P/T	ST/LT	The site has a number of heritage assets within its vicinity. The site is located within Limmo APA. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets. However, the site may enhance the public realm, improving the setting of the historic environment.
IIA12: Flooding	--	H	D	L	I	P	LT	The site is located within a flood risk area and within flood zone 3. Any flood risk measures for the site are currently unknown and are likely to be determined during the design phase.
IIA13: Water Quality	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is located adjacent to the River Thames. There is potential that construction at the site may result in contamination of this water body as a result of surface runoff. Currently, no water quality measures are known to be included within the development.
IIA14: Air Quality	+/-	M	D/I	L	R	P/T	ST/LT	The site provides access to bus and train services, providing the opportunity to reduce the need for private car usage, improving air quality. Public realm improvements may also include GI which could reduce exposure to the effects of urban air pollution. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction.
IIA15: Climate Change & Resilience	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is located in an area which has a medium overall climate risk and heat risk rating and is likely to have diminishing resilience to climate change. However, climate resilience measures are unknown at this stage. It is assumed that the site will adhere to the London Plan, Policy G5 – Urban Greening. This will provide opportunities for increased climate resilience at the site.
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. At this stage, it is not clear whether the

Site Name	Orchard Wharf							
Site Capacity	350							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
								development will utilise renewable energy sources or low carbon heat networks once operational. Further design details are required.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	+	H	D	R	I	P	LT	The development is located on previously developed land and will support the protection of the borough's green spaces. The site will support high density housing which will help to make the best use of the site. However, it is not clear whether the site will encourage sustainable use of materials.
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with the nearby sites of Blackwall Trading Estate and Leamouth Road Depot and Reuters.</p> <p>IIA1/2: If construction of this site and the Blackwall Trading Estate and Leamouth Road Depot and Reuters sites were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA10: In combination with construction at the Blackwall Trading Estate and Leamouth Road Depot and Reuters sites, temporary adverse impacts on landscape and townscape during the construction phase will be more severe in extent.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Blackwall Trading Estate and Leamouth Road Depot and Reuters sites.</p> <p>IIA14: If construction of this site and the Blackwall Trading Estate and Leamouth Road Depot and Reuters sites were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA16: The construction of both this site and the Blackwall Trading Estate and Leamouth Road Depot and Reuters sites is likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring sites of Blackwall Trading Estate and Leamouth Road Depot and Reuters is likely to result in a cumulative increase in waste.</p>							

Site Name	Orchard Wharf							
Site Capacity	350

Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
Mitigation and Enhancement Measures	<p>IIA1/2: Further assessment as part of scheme level design, should incorporate an evaluation of the provision of healthcare and education, to ensure that the current supply is sufficient in supporting new communities. The application of Policy CI1 may also help to mitigate impacts on existing community facilities.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA8/9/11: A lighting strategy should be prepared to minimise light spill onto retained or newly created habitat features.</p> <p>IIA9: In line with policy BO1, the site must achieve a minimum UGF and BNG targets set out within the Plan (2.5 biodiversity units per hectare or a 30% gain in habitat value for wildlife).</p> <p>IIA10: The application of Policy PS8 will help manage adverse effects on the skyline and preserves or enhance visual connections between the public realm and open spaces.</p> <p>IIA12/13: The application of SuDS techniques (in line with Policy CG7) should be demonstrated by developments to reduce the risk of run-off and surface water flooding.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented onsite during both construction and operation.</p> <p>IIA14/15/16: Development should look to incorporate renewable energy generation methods (in line with Policy CG1), such as solar panels and use of low carbon heat networks, to reduce operational GHG emissions. The site should consider undertaking BREEAM Infrastructure to ensure that sustainability is integral to development.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4.</p>							

Tobacco Dock

Table G-41 – Tobacco Dock

Site Name	Tobacco Dock							
Site Capacity	TBC							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	?	N/A	N/A	N/A	N/A	N/A	N/A	It is currently uncertain how many homes would be provided at the site. Additionally, at this stage, it is not known how many of these units will be affordable and whether there will be provision made for wheelchair adaptable homes. The site has good existing access to community services which may help to reduce levels of inequalities by bringing communities closer to these facilities. It is not clear on whether the site will provide any additional facilities. Additional housing may therefore put strains on existing community facilities.
IIA2: Human Health	?	N/A	N/A	N/A	N/A	N/A	N/A	As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and community facilities, however it's unlikely that the current provision will meet the needs of the new population. There is limited information of the type of housing and the additional provisions the site may make e.g. public realm, employment, health facilities.
IIA3: Economy & Town Centres	+	L	D	L	I	P	LT	The proposed site is located close to multiple town centres, including Watney, Wapping Lane and Thomas Moore Street, providing opportunities for residents to live locally and improved connectivity between the housing market and town centres. It is currently uncertain if the site will include any additional retail space.
IIA4: Employment & Skills	+	L	D	R	I	P	LT	The site is well located to existing employment areas including the City Fringe Activity Area and the Central Activity Zone. It is currently uncertain if the site will include any additional retail space.
IIA5: Housing	?	N/A	N/A	N/A	N/A	N/A	N/A	It is currently unclear how many homes the site will provide. It is also unclear what proportion of homes will be made affordable and the size, type and tenure of homes. However, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
IIA6: Crime & Safety	+	L	I	L	R	P	MT	The site is located within an area of medium crime deprivation (30%-50% most deprived neighbourhoods nationally). There is limited detail on whether designing out crime principles will be applied as part of the development, however, developing the land from its existing use and providing housing and public realm improvements is likely to help to reduce crime and create a safer community.
IIA7: Sustainable Transport	+	M	D	L	I	P	LT	The site is well connected via public transport through bus, Overground, underground and rail. The site has a PTAL score of between 2 and 4. It is uncertain if there are plans for additional transport provision.
IIA8: Accessibility	+	M	D	R	I	P	LT	The existing site has good access to transport, facilities and services. The site will allow residents to live their lives more locally and reduce the need to travel.

Site Name	Tobacco Dock							
Site Capacity	TBC							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA9: Biodiversity & Natural Capital	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is located adjacent to areas of priority habitat for deciduous woodland. There is potential for some adverse effects on some small scale habitats and species during construction, as a result of noise and dust spoiling. No information has been provided on provision of GI. At this stage BNG is assumed but whether the site meets the target of 2.5 biodiversity unit (BU) per hectare or 30% gain (whichever is higher).is unknown.
IIA10: Landscape & Townscape	+/-	H	D/I	R	R/I	P/T	ST/LT	The site is located in close proximity to multiple areas of Local Open Space. There are likely to be temporary negative effects to the local landscape and townscape setting during construction. However, there is potential for the redevelopment of the site to result in positive effects on the public realm, improving the landscape and townscape setting.
IIA11: Historic Environment	--	H	D/I	R	R/I	P/T	ST/LT	The site has a number of heritage assets within its vicinity, including the Shadwell Roman Settlement Scheduled Monument. The site is located within the Shadwell Roman Settlement archaeological priority area. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets. Development of the site may also result in damage to, or loss of, the scheduled monument.
IIA12: Flooding	--	H	D	L	I	P	LT	The site is located within a flood risk area and an area of flood zone 3. Any flood risk measures for the site are currently unknown and are likely to be determined during the design phase.
IIA13: Water Quality	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA14: Air Quality	+/-	M	D/I	L	R	P/T	ST/LT	The site provides good access to local public transport, providing the opportunity to reduce the need for private car usage, improving air quality. Public realm improvements may also include GI which could reduce exposure to the effects of urban air pollution. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction.
IIA15: Climate Change & Resilience	--	H	D	L	I	P	LT	The site is located in an area which has a high overall climate risk and heat risk rating. The site is also located within an area of flood zone 3. Therefore, it is likely to have diminishing resilience to climate change. At this stage, climate resilience measures are unknown. It is assumed that the site will adhere to the London Plan, Policy G5 – Urban Greening. This will provide opportunities for increased climate resilience at the site.
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. At this stage, it is not clear whether the development will utilise renewable energy sources or low carbon heat networks once operational. Further design details are required.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.

Site Name	Tobacco Dock							
Site Capacity	TBC							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA18: Efficient use of Land	+	H	D	R	I	P	LT	The development is located on previously developed land and will support the protection of the borough's green spaces. The site will support high density housing which will help to make the best use of the site. However, it is not clear whether the site will encourage sustainable use of materials.
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with the nearby site of London Dock.</p> <p>IIA1/2: If construction of this site and the London Dock site were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA10: In combination with construction at the London Dock site, temporary adverse impacts on landscape and townscape during the construction phase will be more severe in extent.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the London Dock site.</p> <p>IIA14: If construction of this site and the London Dock site were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA16: The construction of both this site and the London Dock site is likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site of London Dock is likely to result in a cumulative increase in waste.</p>							
Mitigation and Enhancement Measures	<p>IIA1/2: Further assessment as part of scheme level design, should incorporate an evaluation of the provision of healthcare and education, to ensure that the current supply is sufficient in supporting new communities. The application of Policy CI1 may also help to mitigate impacts on existing community facilities.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA8/9/11: A lighting strategy should be prepared to minimise light spill onto retained or newly created habitat features.</p> <p>IIA9: In line with policy BO1, the site must achieve a minimum UGF and BNG targets set out within the Plan (2.5 biodiversity units per hectare or a 30% gain in habitat value for wildlife).</p> <p>IIA10: The application of Policy PS8 will help manage adverse effects on the skyline and preserves or enhance visual connections between the public realm and open spaces.</p> <p>IIA12: The application of SuDS techniques (in line with Policy CG7) should be demonstrated by developments to reduce the risk of run-off and surface water flooding.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. Canada Square/Churchill Place

Table G-42 – Canada Square/Churchill Place

Site Name	Canada Square/Churchill Place							
Site Capacity	250							
Site Source	New allocation							
Site Status	New allocation							
I/A Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
I/A1: Population & Equalities	?	N/A	N/A	N/A	N/A	N/A	N/A	The site will provide 250 new homes, which will not make a significant contribution to meeting the borough's housing target. At this stage it is not known how many units will be accessible and wheelchair adaptable. Overall deprivation is very high so affordability needs to be a key consideration. The site has good existing access to community services which may help to reduce levels of inequalities by bringing communities closer to these facilities. It is not clear on whether the site will provide any additional facilities, and if so whether these will be open to the public.
I/A2: Human Health	?	N/A	N/A	N/A	N/A	N/A	N/A	As housing is a key determinant of health, the delivery of this is likely to provide health benefits, however not to the threshold required to meet the borough's housing target. The site does have good access to healthcare and community facilities, and the life expectancy is higher than the national average for both males and females and health deprivation is low. It is not clear whether the current provision will meet the needs of the population of this housing allocation.
I/A3: Economy & Town Centres	+	L	D	L	I	P	LT	The proposed site is located in a town centre and is adjacent to a primary shopping area, providing opportunities for residents to live locally and improved connectivity between the housing market and town centres. It is currently uncertain if Churchill Place Shopping Mall will be lost as a result of the site and if the site will include any additional retail space.
I/A4: Employment & Skills	+/-	L	D	R	I	P	LT	The site is well located to existing employment areas including the City Fringe Activity Area and the Central Activity Zone. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document. The site does however remove the opportunity for potential employment space in this location.
I/A5: Housing	?	N/A	N/A	N/A	N/A	N/A	N/A	The site will provide 250 new homes, which will not make a significant contribution to meeting the borough's housing target. At this stage it is not known how many units will be accessible and wheelchair adaptable.
I/A6: Crime & Safety	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is currently located within an area of low crime deprivation (lowest 10-20% of neighbourhoods nationally). There is limited detail on whether designing out crime principles will be applied as part of the development.
I/A7: Sustainable Transport	-	L	D	L	I	P	LT	Access is readily available to the site via public transport through bus, Overground, underground and rail. This is reflected by the site having a PTAL scores ranging between 6a and 5. There are no plans for additional transport provision.
I/A8: Accessibility	+	M	D	R	I	P	LT	The existing site has good access to facilities and services, shown by the site having a PTAL scores ranging between 6a and 5. The site will allow residents to live their lives more locally and reduce the need to travel.

Site Name	Canada Square/Churchill Place							
Site Capacity	250							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA9: Biodiversity & Natural Capital	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA10: Landscape & Townscape	-	L	D/I	L	R	T	ST	The site is located next to designated open space. There are likely to be temporary negative effects to the local landscape and townscape setting during construction. At this stage it is uncertain if the site aims to enhance the existing and provide further open spaces and the public realm and improve the quality and condition of the townscape and landscape.
IIA11: Historic Environment	-	L	I	R	I	P	LT	The site is located within an APA, and 0.3km from Coldharbour Conservation Area. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets.
IIA12: Flooding	--	H	D	L	I	P	LT	The site is partially located within Flood Zones 2 and 3 and therefore is within a Flood Risk Area. Development will therefore need to comply with any flood mitigation and adaptation measures.
IIA13: Water Quality	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is located adjacent to a waterway leading from the River Thames. There is potential that construction at the site may result in contamination of this water body as a result of surface runoff. Currently, no water quality measures are known to be included within the development.
IIA14: Air Quality	+/-	L	D/I	L	R	P/T	ST/LT	The site has good access to local public transport and will provide new facilities allowing resident to live their lives more locally and reduce the need for private car usage. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction. There are a number of existing residential receptors surrounding the site which would be negatively impacted during construction, and consideration would need to be given as to how to minimise disruption to the local residents.
IIA15: Climate Change & Resilience	+/-	M	D	L	I	P	LT	The site is located in an area which has a low overall climate risk and heat risk rating and is likely to have some resilience to climate change. The addition of more GI and open space will help to reduce the UHI effect. However, not all climate resilience measures are known at this stage. It is assumed that the site will adhere to the London Plan, Policy G5 – Urban Greening. This will provide opportunities for increased climate resilience at the site.
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. At this stage, it is not clear whether the development will utilise renewable energy sources or low carbon heat networks once operational. Further design details are required.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.

Site Name	Canada Square/Churchill Place							
Site Capacity	250							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA18: Efficient use of Land	+/-	L	D	R	I	P	LT	The development is located on previously developed land and will support the protection of the borough's green spaces. The site will provide 250 new homes, which is below the threshold to reach the borough's housing target. It is also not clear whether the site will encourage sustainable use of materials.
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with nearby sites of Wood Wharf and Billingsgate Market.</p> <p>IIA1/2: If construction of this site and the Wood Wharf and Billingsgate Market sites were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Wood Wharf and Billingsgate Market sites will significantly increase the number of business and jobs.</p> <p>IIA10: In combination with construction at the Wood Wharf and Billingsgate Market sites, temporary adverse impacts on landscape and townscape during the construction phase will be more severe in extent.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Wood Wharf and Billingsgate Market sites.</p> <p>IIA14: If construction of this site and the Wood Wharf and Billingsgate Market sites were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA16: The construction of both this site and the Wood Wharf and Billingsgate Market sites is likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring sites of Wood Wharf and Billingsgate Market is likely to result in a cumulative increase in waste.</p>							
Mitigation and Enhancement Measures	<p>IIA1/5/8: Units within the site should be made accessible and wheelchair adaptable.</p> <p>IIA1/2: Further assessment as part of scheme level design, should incorporate an evaluation of the provision of healthcare and education, to ensure that the current supply is sufficient in supporting new communities. The application of Policy CI1 may also help to mitigate impacts on existing community facilities.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA8/9/11: A lighting strategy should be prepared to minimise light spill onto retained habitat features.</p> <p>IIA9: In line with policy BO1, the site must achieve a minimum urban greening factor UGF and BNG targets set out within the Plan (2.5 biodiversity units per hectare or a 30% gain in habitat value for wildlife).</p> <p>IIA10: The application of Policy PS8 will help manage adverse effects on the skyline and preserves or enhance visual connections between the public realm and open spaces.</p> <p>IIA12/13: The application of SuDS techniques (in line with Policy CG7) should be demonstrated by developments to reduce the risk of run-off and surface water flooding.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented onsite during both construction and operation.</p> <p>IIA14/15/16: Development should look to incorporate renewable energy generation methods (in line with Policy CG1), such as solar panels and use of low carbon heat networks, to reduce operational GHG emissions. The site should consider undertaking BREEAM Infrastructure to ensure that sustainability is integral to development.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4.</p>							

London Chest Hospital

Table G-43 - London Chest Hospital

Site Name	London Chest Hospital							
Site Capacity	290							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is likely to provide 290 homes, which will not meet the borough's housing target. However, at this stage, it is not known how many of these units will be affordable and whether there will be provision made for wheelchair adaptable homes. Overall deprivation is high, so affordability needs to be a key consideration. The site has high levels of population density (higher than the 15,695p/h). The site has good existing access to community services which may help to reduce levels of inequalities by bringing communities closer to these facilities. It is not clear on whether the site will provide any additional facilities. Additional housing may therefore put strains on existing community facilities.
IIA2: Human Health	?	N/A	N/A	N/A	N/A	N/A	N/A	As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and community facilities; however, health deprivation is high (30%-50% of most deprived neighbourhoods) and life expectancy is worse than the national average for males. It's unlikely that the current provision will meet the needs of the new population. There is limited information of the type of housing and the additional provisions the site may make e.g. public realm, employment, health facilities.
IIA3: Economy & Town Centres	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is located within close proximity to a primary shopping area, neighbourhood parade and town centre. It is currently uncertain if the site will include any additional retail space.
IIA4: Employment & Skills	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is located away from employment areas. It is unclear if there will be any provision for additional employment within the site. However, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
IIA5: Housing	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is likely to provide 290 homes, which would work towards but not meet LBTH's housing target. It is also unclear what proportion of homes will be made affordable and the size, type and tenure of homes.
IIA6: Crime & Safety	+	L	I	L	R	P	MT	The site is located within an area of medium crime deprivation (top 30-50% of most deprived neighbourhoods nationally). There is limited detail on whether designing out crime principles will be applied as part of the development, however, developing the land from its existing use and providing housing and public realm improvements is likely to help to reduce crime and create a safer community.
IIA7: Sustainable Transport	+	M	D	L	I	P	LT	The site has good access to the site via public transport through bus, overground, underground and rail. However, the underground rail is located 610m from the site. This is reflected by the site having a PTAL scores ranging between 2 and 4. It is uncertain if there are plans for additional transport provision.

Site Name	London Chest Hospital							
Site Capacity	290							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA8: Accessibility	+	M	D	R	I	P	LT	The existing site has good access to facilities and services. The site will allow residents to live their lives more locally and reduce the need to travel.
IIA9: Biodiversity & Natural Capital	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is located adjacent to areas of priority habitat for deciduous woodland. There is potential for some adverse effects on some small-scale habitats and species during construction, as a result of noise and dust spoiling. At this stage BNG is assumed but whether the site meets the target of 2.5 biodiversity unit (BU) per hectare or 30% gain (whichever is higher).is unknown.
IIA10: Landscape & Townscape	+/-	H	D/I	R	R/I	P/T	ST/LT	The site is located 60m south of Local Open Space at Victoria Park. There are likely to be temporary negative effects to the local landscape and townscape setting during construction. However, there is potential for the redevelopment of the site to result in positive effects on the public realm, improving the landscape setting.
IIA11: Historic Environment	--	H	D/I	R	R/I	P/T	ST/LT	The site has a number of heritage assets within its vicinity and is located within St James' Cemetery and Bonner Manor Archaeological Priority Area, and within the Victoria Park Conservation Area. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets. The site is also likely to result in the demolition of existing listed buildings at the site, and alterations to the remaining main hospital listed building. However, the site may enhance the public realm, improving the setting of the historic environment.
IIA12: Flooding	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA13: Water Quality	-	L	D	L	I	T	ST	The site is located 50m south of the Grand Union Canal. There is potential for increased surface runoff during construction, further polluting this watercourse.
IIA14: Air Quality	+/-	L	D/I	L	R	P/T	ST/LT	The site has good access to local public transport, providing the opportunity to reduce the need for private car usage, improving air quality. Public realm improvements may also include GI which could reduce exposure to the effects of urban air pollution. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction. There are a number of existing residential receptors and schools surrounding the site which would be negatively impacted during construction, and consideration would need to be given as to how to minimise disruption to the local residents.
IIA15: Climate Change & Resilience	+/-	M	D	L	I	P	LT	The site is located in an area which has a medium overall climate risk and heat risk rating and is likely to have diminishing resilience to climate change. The addition of more GI and open space will help to reduce the UHI effect. However, climate resilience measures are unknown at this stage. It is assumed that the site will adhere to the London Plan, Policy G5 – Urban Greening. This will provide opportunities for increased climate resilience at the site.

Site Name	London Chest Hospital							
Site Capacity	290							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. At this stage, it is not clear whether the development will utilise renewable energy sources or low carbon heat networks once operational. Further design details are required.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	+	H	D	R	I	P	LT	The development is located on previously developed land and will support the protection of the borough's green spaces. The site will support high density housing which will help to make the best use of the site. However, it is not clear whether the site will encourage sustainable use of materials.
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring site Marian Place Gasworks and The Oval.</p> <p>IIA1/2: If construction of this site and the Marian Place Gasworks and The Oval site were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA5: There is potential for cumulative effects on housing as a result of this site in combination with Marian Place Gasworks and The Oval.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archelogy from both this site and the Marian Place Gasworks and The Oval site.</p> <p>IIA14: If construction of this site and the Marian Place Gasworks and The Oval site were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA16: The construction of both this site and the Marian Place Gasworks and The Oval site is likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Marian Place Gasworks and The Oval is likely to result in a cumulative increase in waste.</p>

Table G-45 – 72-90 Chrisp Street

Site Name	72-90 Chrisp Street							
Site Capacity	150							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is likely to provide 190 homes, which will not make a significant contribution to meeting the borough's housing target. However, at this stage, it is not known how many of these units will be affordable and whether there will be provision made for wheelchair adaptable homes. The site has high levels of population density (higher than the 15,695p/h). The site has good existing access to community services which may help to reduce levels of inequalities by bringing communities closer to these facilities. It is not clear on whether the site will provide any additional facilities. Additional housing may therefore put strains on existing community facilities.
IIA2: Human Health	?	N/A	N/A	N/A	N/A	N/A	N/A	As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and community facilities; however, life expectancy is worse than the national average for males and females. It's unlikely that the current provision will meet the needs of the new population. There is limited information of the type of housing and the additional provisions the site may make e.g. public realm, employment, health facilities.
IIA3: Economy & Town Centres	+	L	D	L	I	P	LT	The site is well located, in close proximity to a number of town centres, providing opportunities for residents to live locally and improved connectivity between the housing market and town centres. It is currently uncertain if the site will include any additional retail space.
IIA4: Employment & Skills	+	M	D	L	I	P	LT	The site is well located close to Empson Street SIL, Canary Wharf major centre, and the Isle of Dogs Activity Area, providing opportunities for access to employment. However, it is unclear if there will be any provision for additional employment within the site. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
IIA5: Housing	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is likely to provide 190 homes, which will not make a significant contribution to meeting the borough's housing target. It is also unclear what proportion of homes will be made affordable and the size, type and tenure of homes.
IIA6: Crime & Safety	+	L	I	L	R	P	MT	The site is located within an area of high crime deprivation (10%-20% most deprived neighbourhoods nationally). There is limited detail on whether designing out crime principles will be applied as part of the development, however, developing the land from its existing use and providing housing and public realm improvements is likely to help to reduce crime and create a safer community.
IIA7: Sustainable Transport	+	L	D	L	I	P	LT	The site is well connected via public transport through bus and Overground rail. However, the site is located more than 800m from the closest tube station. This is reflected in the site's PTAL score, ranging between 2 and 4. It is uncertain if there are plans for additional transport provision.

Site Name	72-90 Chrisp Street							
Site Capacity	150							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA8: Accessibility	+	M	D	R	I	P	LT	The existing site has good access to facilities and services. The site will allow residents to live their lives more locally and reduce the need to travel.
IIA9: Biodiversity & Natural Capital	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA10: Landscape & Townscape	+/-	H	D/I	R	R/I	P/T	ST/LT	The site is located in close proximity to Local Open Space at Alton Street. There are likely to be temporary negative effects to the local landscape and townscape setting during construction. However, as the site currently has low townscape value, there is potential for the redevelopment of the site to result in positive effects on the public realm, improving the landscape setting.
IIA11: Historic Environment	+/-	H	D/I	R	R/I	P/T	ST/LT	The site has a number of heritage assets within its vicinity. The site is located within Lea Valley archaeological priority area, and within Lansbury Conservation Area. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets. However, the site may enhance the public realm, improving the setting of the historic environment.
IIA12: Flooding	--	H	D	L	I	P	LT	The site is located within a flood risk area and an area of flood zone 2, with the eastern border of the site located in an area of flood zone 3. Any flood risk measures for the site are currently unknown and are likely to be determined during the design phase.
IIA13: Water Quality	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA14: Air Quality	+/-	L	D/I	L	R	P/T	ST/LT	The site has existing good air quality and provides good access to local public transport, providing the opportunity to reduce the need for private car usage, improving air quality. Public realm improvements may also include GI which could reduce exposure to the effects of urban air pollution. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction.
IIA15: Climate Change & Resilience	--	H	D	L	I	P	LT	The site is located in an area which has a high overall climate risk and heat risk rating. The site is also located within an area of flood risk and flood zone 3. Therefore, it is likely to have diminishing resilience to climate change. At this stage, climate resilience measures are unknown. It is assumed that the site will adhere to the London Plan, Policy G5 – Urban Greening. This will provide opportunities for increased climate resilience at the site.
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. At this stage, it is not clear whether the development will utilise renewable energy sources or low carbon heat networks once operational. Further design details are required.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.

Site Name	72-90 Chrisp Street							
Site Capacity	150							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA18: Efficient use of Land	+	H	D	R	I	P	LT	The development is located on previously developed land and will support the protection of the borough's green spaces. The site will support high density housing which will help to make the best use of the site. However, it is not clear whether the site will encourage sustainable use of materials.
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with Chrisp Street and Teviot Estate.</p> <p>IIA1/2: If construction of this site, Chrisp Street, and Teviot Estate were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site, the Chrisp Street, and Teviot Estate sites will significantly increase the number of business and jobs.</p> <p>IIA5: In combination, this site, Chrisp Street, and Teviot Estate sites will significantly increase housing stock.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from this site, Chrisp Street and Teviot Estate.</p> <p>IIA14: If construction of this site, Chrisp Street and Teviot Estate were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA16: The construction of both this site, Chrisp Street and Teviot Estate is likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring sites of Chrisp Street and Teviot Estate is likely to result in a cumulative increase in waste.</p>							
Mitigation and Enhancement Measures	<p>IIA1/2: Further assessment as part of scheme level design, should incorporate an evaluation of the provision of healthcare and education, to ensure that the current supply is sufficient in supporting new communities. The application of Policy CI1 may also help to mitigate impacts on existing community facilities.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA8/9/11: A lighting strategy should be prepared to minimise light spill onto retained or newly created habitat features.</p> <p>IIA9: In line with policy BO1, the site must achieve a minimum UGF and BNG targets set out within the Plan (2.5 biodiversity units per hectare or a 30% gain in habitat value for wildlife).</p> <p>IIA10: The application of Policy PS8 will help manage adverse effects on the skyline and preserves or enhance visual connections between the public realm and open spaces.</p> <p>IIA12: The application of SuDS techniques (in line with Policy CG7) should be demonstrated by developments to reduce the risk of run-off and surface water flooding.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented onsite during both construction and operation.</p> <p>IIA14/15/16: Development should look to incorporate renewable energy generation methods (in line with Policy CG1), such as solar panels and use of low carbon heat networks, to reduce operational GHG emissions. The site should consider undertaking BREEAM Infrastructure to ensure that sustainability is integral to development.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4.</p>							

Tower Hamlets Car Pound

Table G-46 – Tower Hamlets Car Pound

Site Name	Tower Hamlets Car Pound							
Site Capacity	120							
Site Source	New allocation							
Site Status	New allocation							
I/A Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
I/A1: Population & Equalities	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is likely to provide 120 homes, which will not make a significant contribution to meeting the borough's housing target. However, at this stage, it is not known how many of these units will be affordable and whether there will be provision made for wheelchair adaptable homes. Overall deprivation is high, so affordability needs to be a key consideration. The site has good existing access to community services which may help to reduce levels of inequalities by bringing communities closer to these facilities. It is not clear on whether the site will provide any additional facilities.
I/A2: Human Health	?	N/A	N/A	N/A	N/A	N/A	N/A	As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and community facilities; however, health deprivation is high (10%-20% of most deprived neighbourhoods) and life expectancy is worse than the national average for males and females. It's unlikely that the current provision will meet the needs of the new population. There is limited information of the type of housing and the additional provisions the site may make e.g. public realm, employment, health facilities.
I/A3: Economy & Town Centres	+	L	D	L	I	P	LT	The site is well located, adjacent to Limehouse town centre, providing opportunities for residents to live locally and improved connectivity between the housing market and town centres. It is currently uncertain if the site will include any additional retail space.
I/A4: Employment & Skills	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is located away from employment areas and has a high level of employment deprivation (10% - 20% most deprived). It is unclear if there will be any provision for additional employment within the site. However, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
I/A5: Housing	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is likely to provide 120 homes, which would work towards but not meet LBTH's housing target. It is also unclear what proportion of homes will be made affordable and the size, type and tenure of homes.
I/A6: Crime & Safety	+	L	I	L	R	P	MT	The site is located within an area of high crime deprivation (10%-20% most deprived neighbourhoods nationally). There is limited detail on whether designing out crime principles will be applied as part of the development, however, developing the land from its existing use and providing housing and public realm improvements is likely to help to reduce crime and create a safer community.
I/A7: Sustainable Transport	+	M	D	L	I	P	LT	The site is well connected via public transport through bus and Overground rail. However, the site is located more than 800m from the closest tube station. Despite this, the site has a PTAL score ranging between 5 and 6b. It is uncertain if there are plans for additional transport provision.

Site Name	Tower Hamlets Car Pound							
Site Capacity	120							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA8: Accessibility	+	M	D	R	I	P	LT	The existing site has good access to facilities and services. The site will allow residents to live their lives more locally and reduce the need to travel.
IIA9: Biodiversity & Natural Capital	?	N/A	N/A	N/A	N/A	N/A	N/A	There are no designated sites within the site. There is an area of priority habitat 160m from the site. Construction works have the potential to negatively impact this habitat and the species within it from noise and dust spoiling. At this stage BNG is assumed but whether the site meets the target of 2.5 biodiversity unit (BU) per hectare or 30% gain (whichever is higher).is unknown.
IIA10: Landscape & Townscape	+/-	H	D/I	R	R/I	P/T	ST/LT	The site is located in close proximity to local open space, and the London Square of York Square Gardens. There are likely to be temporary negative effects to the local landscape and townscape setting during construction. However, as the site currently has low townscape value, there is potential for the redevelopment of the site to result in positive effects on the public realm, improving the landscape setting.
IIA11: Historic Environment	+/-	H	D/I	R	R/I	P/T	ST/LT	The site has a number of heritage assets within its vicinity. The site is also located within York Square Conservation Area. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets. However, the site may enhance the public realm, improving the setting of the historic environment.
IIA12: Flooding	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA13: Water Quality	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA14: Air Quality	+/-	L	D/I	L	R	P/T	ST/LT	The site has good access to local public transport, providing the opportunity to reduce the need for private car usage, improving air quality. Public realm improvements may also include GI which could reduce exposure to the effects of urban air pollution. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction.
IIA15: Climate Change & Resilience	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is located in an area which has a high overall climate risk and heat risk rating and is likely to have diminishing resilience to climate change. It is assumed that the site will adhere to the London Plan, Policy G5 – Urban Greening. This will provide opportunities for increased climate resilience at the site.
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. At this stage, it is not clear whether the development will utilise renewable energy sources or low carbon heat networks once operational. Further design details are required.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.

Site Name	Tower Hamlets Car Pound							
Site Capacity	120							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA18: Efficient use of Land	+	L	D	R	I	P	LT	The development is located on previously developed land and will support the protection of the borough's green spaces. The site will support high density housing which will help to make the best use of the site. However, it is not clear whether the site will encourage sustainable use of materials.
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with Watney Market.</p> <p>IIA1/2: If construction of this site and Watney Market were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Watney Market site will significantly increase the number of business and jobs.</p> <p>IIA5: In combination, this site and the Watney Market site will significantly increase housing stock.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Watney Market site.</p> <p>IIA14: If construction of this site and the Watney Market site were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA15: The increase in GI provided by both this site and the Watney Market site is likely to increase resilience to the UHI effect.</p> <p>IIA16: The construction of both this site and the Brick Lane and Pedley Street site is likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Watney Market is likely to result in a cumulative increase in waste.</p>							
Mitigation and Enhancement Measures	<p>IIA1/2: Further assessment as part of scheme level design, should incorporate an evaluation of the provision of healthcare and education, to ensure that the current supply is sufficient in supporting new communities. The application of Policy CI1 may also help to mitigate impacts on existing community facilities.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA8/9/11: A lighting strategy should be prepared to minimise light spill onto retained or newly created habitat features.</p> <p>IIA9: In line with policy BO1, the site must achieve a minimum UGF and BNG targets set out within the Plan (2.5 biodiversity units per hectare or a 30% gain in habitat value for wildlife).</p> <p>IIA10: The application of Policy PS8 will help manage adverse effects on the skyline and preserves or enhance visual connections between the public realm and open spaces.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented onsite during both construction and operation.</p> <p>IIA14/15/16: Development should look to incorporate renewable energy generation methods (in line with Policy CG1), such as solar panels and use of low carbon heat networks, to reduce operational GHG emissions. The site should consider undertaking BREEAM Infrastructure to ensure that sustainability is integral to development.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4.</p>							

Anchor Retail Park

Table G-47 – Anchor Retail Park

Site Name	Anchor Retail Park							
Site Capacity	325							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	+/-	M	D	R	I	P	LT	The site will provide 325 new homes, which is below the threshold to reach the borough's housing target. At this stage it is not known how many units will be accessible and wheelchair adaptable. Overall deprivation is very high so affordability needs to be a key consideration. The site has good existing access to community services which may help to reduce levels of inequalities by bringing communities closer to these facilities. It is not clear on whether the site will provide any additional facilities, and if so whether these will be open to the public.
IIA2: Human Health	?	N/A	N/A	N/A	N/A	N/A	N/A	As housing is a key determinant of health, the delivery of this is likely to provide health benefits, however not to the threshold required to meet the borough's housing target. The site does have good access to healthcare and community facilities; however, health deprivation is high and life expectancy is worse than the national average for males. It is not clear whether the current provision will meet the needs of the population of this housing allocation.
IIA3: Economy & Town Centres	-	L	D	R	R	P	LT	The proposed site does not propose mixed use development such as employment space or retail and removes the current retail provision within the site.
IIA4: Employment & Skills	+/-	M	D	R	I	P	LT	The site is well located to existing employment areas including the City Fringe Activity Area and the Central Activity Zone. The site does however remove the current retail provision within the site. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
IIA5: Housing	-	L	D	R	I	P	LT	The site will provide 325 new homes, which is below the threshold to reach the borough's housing target. At this stage it is not known how many units will be accessible and wheelchair adaptable.
IIA6: Crime & Safety	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is currently located within an area of high crime deprivation (top 10-20% of neighbourhoods nationally). There is limited detail on whether designing out crime principles will be applied as part of the development.
IIA7: Sustainable Transport	+	M	D	L	I	P	LT	Access is readily available to the site via public transport through bus, Overground, underground and rail. This is reflected by the site having a PTAL scores ranging between 5 and 6. It is not clear whether there will be plans for additional sustainable transport provision.

Site Name	Anchor Retail Park							
Site Capacity	325							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA8: Accessibility	+	M	D	L	I	P	LT	The existing site has good access to facilities and services and will allow residents to live their lives more locally and may reduce the need to travel. However, it is not clear whether additional services will be provided on-site and the current capacity of these facilities. There is potential for essential services to be stretch by a large increase in population. This may conversely increase the need to travel.
IIA9: Biodiversity & Natural Capital	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA10: Landscape & Townscape	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be temporary negative effects to the local landscape and townscape setting during construction. At this stage it is uncertain if the site aims to achieve high quality sustainable design for buildings, spaces and the public realm and improve the quality and condition of the townscape and landscape.
IIA11: Historic Environment	-	L	I	R	I	P	LT	The site has a number of heritage assets within its vicinity and is located within an Archaeological Priority Area, and St Peter's and Stepney Green Conservation Area. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets.
IIA12: Flooding	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA13: Water Quality	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA14: Air Quality	+/-	L	D/I	L	R	P/T	ST/LT	The site has good access to local public transport and will provide new facilities allowing resident to live their lives more locally and reduce the need for private car usage. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction. There are a number of existing residential receptors surrounding the site which would be negatively impacted during construction, and consideration would need to be given as to how to minimise disruption to the local residents.
IIA15: Climate Change & Resilience	+/-	M	D	L	I	P	LT	The site is located in an area which has a low overall climate risk and heat risk rating and is likely to have some resilience to climate change. The addition of more GI and open space will help to reduce the UHI effect. However, not all climate resilience measures are known at this stage. It is assumed that the site will adhere to the London Plan, Policy G5 – Urban Greening. This will provide opportunities for increased climate resilience at the site.
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. At this stage, it is not clear whether the development will utilise renewable energy sources or low carbon heat networks once operational. Further design details are required.

Site Name	Anchor Retail Park							
Site Capacity	325							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	+/-	L	D	R	I	P	LT	The development is located on previously developed land and will support the protection of the borough's green spaces. The site will provide 325 new homes, which is below the threshold to reach the borough's housing target. It is also not clear whether the site will encourage sustainable use of materials.
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring site Whitechapel North.</p> <p>IIA1/2: If construction of this site and the Whitechapel North site were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Whitechapel North site.</p> <p>IIA14: If construction of this site and the Whitechapel North site were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA16: The construction of both this site and the Whitechapel North site is likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Whitechapel North site is likely to result in a cumulative increase in waste.</p>							
Mitigation and Enhancement Measures	<p>IIA1/5/8: Units within the site should be made accessible and wheelchair adaptable.</p> <p>IIA1/2: Further assessment as part of scheme level design, should incorporate an evaluation of the provision of healthcare and education, to ensure that the current supply is sufficient in supporting new communities. The application of Policy CI1 may also help to mitigate impacts on existing community facilities.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA8/9/11: A lighting strategy should be prepared to minimise light spill onto retained habitat features.</p> <p>IIA9: In line with policy BO1, the site must achieve a minimum UGF and BNG targets set out within the Plan (2.5 biodiversity units per hectare or a 30% gain in habitat value for wildlife).</p> <p>IIA10: The application of Policy PS8 will help manage adverse effects on the skyline and preserves or enhance visual connections between the public realm and open spaces.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented on-site during both construction and operation.</p> <p>IIA14/15/16: Development should look to incorporate renewable energy generation methods (in line with Policy CG1), such as solar panels and use of low carbon heat networks, to reduce operational GHG emissions. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4.</p>							

Table G-48 – Republic Estate

Site Name	Republic Estate							
Site Capacity	300							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	+/-	M	D	R	I	P	LT	The site will provide 300 new homes, which is below the threshold to reach the borough's housing target. At this stage it is not known how many units will be accessible and wheelchair adaptable. Overall deprivation is very high so affordability needs to be a key consideration. The site has good existing access to community services which may help to reduce levels of inequalities by bringing communities closer to these facilities. It is not clear on whether the site will provide any additional facilities, and if so whether these will be open to the public.
IIA2: Human Health	?	N/A	N/A	N/A	N/A	N/A	N/A	As housing is a key determinant of health, the delivery of this is likely to provide health benefits, however not to the threshold required to meet the borough's housing target. The site does have good access to healthcare and community facilities; however, health deprivation is high and life expectancy is worse than the national average for males. It is not clear whether the current provision will meet the needs of the population of this housing allocation.
IIA3: Economy & Town Centres	+/-	L	D	R	I	P	LT	The proposed site does not propose mixed use development such as employment space or retail. The site will improve and enhance connectivity between business clusters and the housing market however removes the opportunity for potential employment space in this location.
IIA4: Employment & Skills	+/-	L	D	R	I	P	LT	The site is well located to existing employment areas including the City Fringe Activity Area and the Central Activity Zone. The site does however remove the opportunity for potential employment space in this location. However, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
IIA5: Housing	-	L	D	R	I	P	LT	The site will provide 300 new homes, which is below the threshold to reach the borough's housing target. At this stage it is not known how many units will be accessible and wheelchair adaptable.
IIA6: Crime & Safety	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is currently located within an area of high crime deprivation (top 10-20% of neighbourhoods nationally). There is limited detail on whether designing out crime principles will be applied as part of the development.
IIA7: Sustainable Transport	-	L	D	L	I	P	LT	Some access is available to the site via public transport through bus, Overground, underground and rail. This is reflected by the site having a PTAL scores ranging between 3 and 4. There are no plans for additional transport provision.
IIA8: Accessibility	?	N/A	N/A	N/A	N/A	N/A	N/A	The site has average access to facilities and service, reflected by the site having a PTAL scores ranging between 3 and 4. At this stage it is not known how many units will be accessible and wheelchair adaptable, and if any accessible provision will be included as part of the site.

Site Name	Republic Estate							
Site Capacity	300							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA9: Biodiversity & Natural Capital	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA10: Landscape & Townscape	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be temporary negative effects to the local landscape and townscape setting during construction. At this stage it is uncertain if the site aims to achieve high quality sustainable design for buildings, spaces and the public realm and improve the quality and condition of the townscape and landscape.
IIA11: Historic Environment	-	L	I	R	I	P	LT	The site has a number of heritage assets within its vicinity and is located within an Archaeological Priority Area, and adjacent to Naval Row Conservation Area. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets.
IIA12: Flooding	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA13: Water Quality	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA14: Air Quality	+/-	L	D/I	L	R	P/T	ST/LT	The site has average access to local public transport and will provide new facilities allowing resident to live their lives more locally and reduce the need for private car usage. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction. There are a number of existing residential receptors surrounding the site which would be negatively impacted during construction, and consideration would need to be given as to how to minimise disruption to the local residents.
IIA15: Climate Change & Resilience	+/-	M	D	L	I	P	LT	The site is located in an area which has a low overall climate risk and heat risk rating and is likely to have some resilience to climate change. The addition of more GI and open space will help to reduce the UHI effect. However, not all climate resilience measures are known at this stage. It is assumed that the site will adhere to the London Plan, Policy G5 – Urban Greening. This will provide opportunities for increased climate resilience at the site.
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. At this stage, it is not clear whether the development will utilise renewable energy sources or low carbon heat networks once operational. Further design details are required.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.

Site Name	Republic Estate							
Site Capacity	300

The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented on-site during both construction and operation.</p> <p>IIA14/15/16: Development should look to incorporate renewable energy generation methods (in line with Policy CG1), such as solar panels and use of low carbon heat networks, to reduce operational GHG emissions. The site should consider undertaking BREEAM Infrastructure to ensure that sustainability is integral to development.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4.</p>							

Watney Market

Table G-49 – Watney Market

Site Name	Watney Market							
Site Capacity	TBC							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	?	N/A	N/A	N/A	N/A	N/A	N/A	It is currently uncertain how many homes would be provided at the site. Additionally, at this stage, it is not known how many of these units will be affordable and whether there will be provision made for wheelchair adaptable homes. Overall deprivation is very high so affordability needs to be a key consideration. The site has good existing access to community services which may help to reduce levels of inequalities by bringing communities closer to these facilities. It is not clear on whether the site will provide any additional facilities.
IIA2: Human Health	?	N/A	N/A	N/A	N/A	N/A	N/A	As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and community facilities; however, health deprivation is high and life expectancy is worse than the national average for males. It's unlikely that the current provision will meet the needs of the new population. There is limited information of the type of housing and the additional provisions the site may make e.g. public realm, employment, health facilities.
IIA3: Economy & Town Centres	?	N/A	N/A	N/A	N/A	N/A	N/A	The finer details of the development are not yet known. It is assumed that there could be potential to provide a mixed-use development which may include employment space and retail offering, which may help to improve the viability of the town centre. However, there are a number of small businesses located across the site and it is not clear whether these will be re-provisioned elsewhere and whether existing business owners will be compensated and/or given opportunities to buy or rent new units. Affordability of new units will be a key concern.
IIA4: Employment & Skills	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is well located to existing employment areas including the City Fringe Activity Area and the Central Activity Zone as well as primary shopping areas. This will likely improve access for residents to employment opportunities. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
IIA5: Housing	?	N/A	N/A	N/A	N/A	N/A	N/A	It is unclear how many homes will be provided at the site. It is assumed that the site will meet the minimum 35% target of affordable homes, however, the size, type and tenure of housing is not currently known.
IIA6: Crime & Safety	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is currently located within an area of high crime deprivation (top 10-20% of neighbourhoods nationally). There is limited detail on whether designing out crime principles will be applied as part of the development or whether there will be improvements to the public realm, to support crime reductions.

Site Name	Watney Market							
Site Capacity	TBC							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA7: Sustainable Transport	+	M	D	L	I	P	LT	Access is readily available to the site via public transport through bus and overground and underground rail. Access to the national cycle network is also nearby. This is reflected by the site having a PTAL scores ranging between 6a. It is not clear whether there will be plans for additional sustainable transport provision.
IIA8: Accessibility	+	M	D	L	I	P	LT	The existing site has good access to facilities and services and will allow residents to live their lives more locally and may reduce the need to travel. However, it is not clear whether additional services will be provided on-site and the current capacity of these facilities. There is potential for essential services to be stretch by a large increase in population. This may conversely increase the need to travel.
IIA9: Biodiversity & Natural Capital	?	N/A	N/A	N/A	N/A	N/A	N/A	The closest designated sites are priority habitats are located 0.25km south of the site in St George's gardens and whilst it does not fall within the boundary of this site, there is potential for some adverse effects on deciduous woodland found there. At this stage BNG is assumed but whether the site meets the target of 2.5 biodiversity unit (BU) per hectare or 30% gain (whichever is higher).is unknown.
IIA10: Landscape & Townscape	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is not located within any LVMF or tall building areas, however, there are likely to be temporary negative effects to the local landscape and townscape setting during construction. At this stage it is uncertain if the site aims to achieve high quality sustainable design for buildings, spaces and the public realm and improve the quality and condition of the townscape and landscape.
IIA11: Historic Environment	?	N/A	N/A	N/A	N/A	N/A	N/A	The site has a number of heritage assets within its vicinity and is located within close proximity to an APA and is located on the border of a Conservation Area. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets. At this stage it is not clear whether development will include measures to enhance and restore the local historic environment.
IIA12: Flooding	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA13: Water Quality	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA14: Air Quality	+/-	L	D/I	L	R	P/T	ST/LT	Air quality at this site is considered at moderate levels (>28-43µ/m ³ for NO ₂ and PM ₁₀). The site has fairly good access to local public transport and will provide new facilities allowing residents to live their lives more locally and reduce the need for private car usage. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction. There are a number of existing residential receptors surrounding the site which would be negatively impacted during construction.
IIA15: Climate Change & Resilience	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is located in an area which has a high overall climate risk and heat risk rating. Development specific climate resilience is not known at this stage. Measures to reduce the risk of overheating will need to be considered. However, it is assumed that the site will

Site Name	Watney Market							
Site Capacity	TBC							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
								adhere to the London Plan, Policy G5 – Urban Greening. This will provide opportunities for increased climate resilience at the site.
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. At this stage, it is not clear whether the development will utilise renewable energy sources or low carbon heat networks once operational. Further design details are required.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	?	N/A	N/A	N/A	N/A	N/A	N/A	The development is predominantly on previously developed land. The density of housing is not currently known nor is it clear whether the site will encourage sustainable use of materials.
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring site Whitechapel South.</p> <p>IIA1/2: If construction of this site and the Whitechapel South site were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Whitechapel South site will significantly increase the number of business and jobs.</p> <p>IIA5: In combination, this site and the Whitechapel South site will significantly increase housing stock.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from this site.</p> <p>IIA14: If construction of this site and the Whitechapel South site were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA16: The construction of both this site and the Whitechapel South site is likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Whitechapel South is likely to result in a cumulative increase in waste.</p>							

Site Name	Watney Market							
Site Capacity	TBC							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
Mitigation and Enhancement Measures	<p>IIA1: Housing should deliver at least 35% affordable home and include provision of housing to meet the needs of all population groups as set out in the Homes for the Community policies.</p> <p>IIA1/2: Further assessment as part of scheme level design, should incorporate an evaluation of the provision of healthcare and education, to ensure that the current supply is sufficient in supporting new communities. The application of Policy CI1 may also help to mitigate impacts on existing community facilities.</p> <p>IIA3/4: The loss of businesses should be avoided, however, in line with Policy EG4 it is assumed that there will be no net loss in employment space. Where businesses will be lost, discussions with owners should be undertaken to ensure suitable alternative locations are identified. Alternative units should where possible be equivalent in size, layout, rent and connectivity to the existing site and considered suitable by the occupier.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA9: Phase 1 habitat surveys should be undertaken to determine if there are any habitats/ species residing in St George's Gardens.</p> <p>IIA9: In line with policy BO1, the site must achieve a minimum UGF and BNG targets set out within the Plan (2.5 biodiversity units per hectare or a 30% gain in habitat value for wildlife).</p> <p>IIA10: The application of Policy PS8 will help manage adverse effects on the skyline and preserves or enhance visual connections between the public realm and open spaces.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented on-site during both construction and operation.</p> <p>IIA14/15/16: Development should look to incorporate renewable energy generation methods (in line with Policy CG1), such as solar panels and use of low carbon heat networks, to reduce operational GHG emissions. The site should consider undertaking BREEAM Infrastructure to ensure that sustainability is integral to development.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with policy DV4.</p>							

Table G-50 - Devons Road

Site Name	Devons Road							
Site Capacity	2100							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	+	H	D	R	I	P	LT	The site has potential to provide at least 2,100 new homes, which will work positively towards achieving the borough's housing target. However, at this stage, it is not known how many of these units will be affordable and whether there will be provision made for student accommodation or wheelchair adaptable homes. Overall deprivation is very high, so affordability needs to be a key consideration. The site has good existing access to community services which may help to reduce levels of inequalities by bringing communities closer to these facilities. It is not clear on whether the site will provide any additional facilities. At this stage it is not clear whether development would result in the loss of this open space.
IIA2: Human Health	?	N/A	N/A	N/A	N/A	N/A	N/A	As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and community facilities; however, the site is located in the 30-50% most deprived area nationally. It is unknown if the current provision will meet the needs of the new population. There is limited information of the type of housing and the additional provisions the site may make e.g. public realm, employment, health facilities.
IIA3: Economy & Town Centres	+	L	D	L	I	P	LT	The site is well located, adjacent to Devons Road neighbourhood town centre, providing opportunities for residents to live locally and improved connectivity between the housing market and town centres. It is currently uncertain if the site will include any additional retail or business space.
IIA4: Employment & Skills	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is in the 10-20% least deprived nationally in terms of employment. The site is located adjacent to a strategic industrial location, offering opportunities for access to employment. At this stage it is not known if the site will offer additional facilities that offer employment options. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
IIA5: Housing	?	N/A	N/A	N/A	N/A	N/A	N/A	The provision of 2,100 new homes will help towards meeting LBTH's housing target. Further details will be required regarding the affordability of units, and the number of wheelchair accessible homes. The size, type and tenure of housing will need to take into account different groups in the community, however this is currently unknown. It is important that affordability is taken into account, particularly considering the significant barriers to housing within the locality.

Site Name	Devons Road							
Site Capacity	2100							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA6: Crime & Safety	+	L	D/I	L	I	P	LT	The site is located in the 10%-20% most deprived area nationally for crime. There is limited detail on whether designing out crime principles will be applied as part of the development, however, providing housing is likely to improve footfall and therefore provide additional natural surveillance, in turn reducing crime and creating a safer community.
IIA7: Sustainable Transport	+	L	D	L	I	P	LT	The site has average access to bus stops, rail station, the underground and the cycle network. This is reflected in the site having a PTAL level of between 2 and 4. The site is well located to local facilities and services which will allow residents to live their lives more locally.
IIA8: Accessibility	+	L	D	L	I	P	LT	The existing site has good access to facilities and services. The site will allow residents to live their lives more locally and reduce the need to travel. Details on additional services and facilities are unknown at this stage.
IIA9: Biodiversity & Natural Capital	-	L	D/I	L	R/I	T	ST/LT	The site is adjacent to Tower Hamlets Cemetery Park local nature reserve and areas of deciduous woodland. Construction works have the potential to negatively impact small scale habitats and species from noise and dust spoiling. At this stage BNG is assumed but whether the site meets the target of 2.5 biodiversity unit (BU) per hectare or 30% gain (whichever is higher).is unknown.
IIA10: Landscape & Townscape	+/-	M	D/I	R	R/I	P/T	ST/LT	The site is adjacent to local open space, there are likely to be temporary negative effects to the local landscape and townscape setting during construction. However, as the site currently has low townscape value, there is potential for the redevelopment of the site to result in positive effects on the public realm, improving the landscape setting.
IIA11: Historic Environment	+/-	H	D/I	R	R/I	P/T	ST/LT	The site has a number of heritage assets within its vicinity. The site is adjacent to Lea Valley Archaeological Priority Area. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets. However, the site may enhance the public realm, improving the setting of the historic environment.
IIA12: Flooding	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA13: Water Quality	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA14: Air Quality	+/-	L	D/I	L	R	P/T	ST/LT	The site provides access to local public transport, providing the opportunity to reduce the need for private car usage, improving air quality. Public realm improvements may also include GI which could reduce exposure to the effects of urban air pollution. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction.
IIA15: Climate Change & Resilience	+/-	M	D	L	I	P	LT	The site is located in an area which has a medium overall climate risk and heat risk rating and is likely to have diminishing resilience to climate change. The addition of more GI and open space will help to reduce the UHI effect. However, climate resilience measures are

Site Name	Devons Road							
Site Capacity	2100							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
								unknown at this stage. It is assumed that the site will adhere to the London Plan, Policy G5 – Urban Greening. This will provide opportunities for increased climate resilience at the site.
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and plant. At this stage, it is not clear whether the development will utilise renewable energy sources or low carbon heat networks once operational. Further design details are required.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	+	L	D	R	I	P	LT	The development is located on previously developed land and will support the protection of the borough's green spaces. The site will support high density housing which will help to make the best use of the site. However, it is not clear whether the site will encourage sustainable use of materials.
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring site Bow Common Lane.</p> <p>IIA1/2: If construction of this site and the Bow Common Lane site were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA5: There is potential for cumulative effects on housing as a result of this site in combination with Bow Common Lane.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archelogy from both this site and the Bow Common Lane site.</p> <p>IIA14: If construction of this site and the Bow Common Lane site were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA16: The construction of both this site and the Bow Common Lane site is likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Bow Common Lane is likely to result in a cumulative increase in waste.</p>

Hertsmere House

Table G-51 – Hertsmere House

Site Name	Hertsmere House							
Site Capacity	350							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	?	N/A	N/A	N/A	N/A	N/A	N/A	The site has the potential to provide 350 new homes. However, at this stage, it is not known how many of these units will be affordable, and whether there will be provision made for wheelchair adaptable homes. The site has good existing access to community services which may help to reduce levels of inequalities by bringing communities closer to these facilities. At this stage, details on any additional facilities are not available.
IIA2: Human Health	?	N/A	N/A	N/A	N/A	N/A	N/A	As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and community facilities; however, it is unknown whether the current provision will meet the needs of the new population. There is limited information of the type of housing and the additional provisions the site may make e.g. public realm, employment, health facilities.
IIA3: Economy & Town Centres	+	M	D	L	I	P	LT	The site is situated within the Isle of Dogs Activity Area and so there is likely good accessibility to employment opportunities, which is reflected in good levels of employment and income for the area. The finer details of the development are not yet known; however, it is assumed that the site will include some employment space which will provide further jobs for future residents and enhance connectivity between business clusters and the housing market. The site is located outside of a designated retail centre, and so any development should not impact on the vitality of nearby retail centres.
IIA4: Employment & Skills	+	M	D	L	I	P	LT	The site is situated within the Isle of Dogs Activity Area and so there is likely good accessibility to employment opportunities, which is reflected in good levels of employment and income for the area. The finer details of the development are not yet known; however, it is assumed that the site will include some employment space which will provide further jobs for future residents. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
IIA5: Housing	?	N/A	N/A	N/A	N/A	N/A	N/A	The site has potential to deliver 350 homes, which will contribute somewhat to the borough's housing targets, however it will fall below the threshold. No details are currently available on the level of affordable housing. The provision of sufficient affordable housing is imperative given the significant barriers to housing which exist within the site. Currently, no details are known on the provision of accessible homes.
IIA6: Crime & Safety	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is not considered to be within the most deprived neighbourhoods from a crime perspective. There is limited detail on whether designing out crime principles will be applied as part of the development or whether there will be improvements to the public realm, to support crime reductions.
IIA7: Sustainable Transport	-	N/A	N/A	N/A	N/A	N/A	N/A	There is an average provision of public transport at the site, as reflected in a PTAL score between 3-4. The site is in close proximity to bus stops, underground and overground rail

Site Name	Hertsmere House							
Site Capacity	350							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
								links. A section of the London Cycle Network runs to the south of the site. It is not clear whether there will be plans for additional sustainable transport provision.
IIA8: Accessibility	+	M	D	L	I	P	LT	The existing site has good access to facilities and services and will allow residents to live their lives more locally and may reduce the need to travel. However, it is not clear whether additional services will be provided on-site and the current capacity of these facilities. There is potential for essential services to be stretch by a large increase in population. This may conversely increase the need to travel.
IIA9: Biodiversity & Natural Capital	+/-	M	D	L	R/I	P/T	ST/LT	The site is around 0.8km from the Russia Dock Woodland. There is a potential negative effect on ecology as a result, particularly during construction. The site is also located in close proximity to a number of SINC's. Green space is proposed as part of the development which will improve urban greening and provide GI; however, it is unknown whether the site will be in line with BNG targets
IIA10: Landscape & Townscape	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is situated within the Canary Wharf Area Strategically Important Skyline, and the Canary Wharf Cluster Tall Building Zone. Development will need to provide an appropriate transition in building heights to respect the existing character of the site and avoiding adverse effects on the skyline. Full details of the scale of development are currently unknown. There are likely to be temporary negative effects to the local landscape and townscape setting during construction. Improvements to public realm are currently unknown.
IIA11: Historic Environment	+/-	L	D/I	L	R/I	P/T	ST/LT	The site is situated in the Isle of Dogs APA. The site is also adjacent to the West India Dock Conservation Area and the Narrow Street Conservation Area. Any development of the site will need to protect and enhance the setting of heritage assets, this will depend on the scale, massing, layout and materials that are proposed. However, details on this, and any potential enhancements to public realm are expected to improve the setting of the local historic environment. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets.
IIA12: Flooding	--	H	D	L	I	P	LT	The site is located within flood zone 2 and 3, any flood risk measures are expected to be in line with the borough's Strategic Flood Risk Assessment.
IIA13: Water Quality	0	N/A	N/A	N/A	N/A	N/A	N/A	N/A
IIA14: Air Quality	+/-	L	D/I	L	R/I	P/T	ST/LT	Air quality is generally good at the site, and there is fairly good access to local public transport. It is unknown whether the site will provide new facilities allowing resident to live their lives more locally and reduce the need for private car usage. There are likely to be temporary negative effects on air quality due to dust generation and emissions from construction.
IIA15: Climate Change & Resilience	+/-	M	D	L	I	P	LT	The site is located in an area which has a medium overall climate risk and heat risk rating. The site is also located within an area of flood risk and flood zone 2 and 3. Therefore, it is likely to have diminishing resilience to climate change. At this stage, development specific climate resilience measures are unknown. It is assumed that the site will adhere to the

Site Name	Hertsmere House							
Site Capacity	350							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
								London Plan, Policy G5 – Urban Greening. This will provide opportunities for increased climate resilience at the site.
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. At this stage, it is not clear whether the development will utilise renewable energy sources or low carbon heat networks once operational. Further design details are required.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	+	L	D	L	I	P	LT	The development is located on previously developed land and will support high density housing which will help to make the best use of the site. However, it is not clear whether the site will encourage sustainable use of materials.
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring sites Northquay and Westferry and Park Place.</p> <p>IIA1/2: If construction of this site and the Northquay and Westferry and Park Place sites were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Northquay and Westferry and Park Place sites will significantly increase the number of business and jobs.</p> <p>IIA5: In combination, this site and the Northquay and Westferry and Park Place sites will significantly increase housing stock.</p> <p>IIA10: There is potential for cumulative negative effects within the Tall Building Zone areas in combination with neighbouring sites Northquay and Westferry and Park Place.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Northquay and Westferry and Park Place sites.</p> <p>IIA14: If construction of this site and the Northquay and Westferry and Park Place sites were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA15: The increase in GI provided by both this site and the Northquay and Westferry and Park Place sites are likely to increase resilience to the UHI effect.</p> <p>IIA16: The construction of both this site and the Northquay and Westferry and Park Place sites are likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Northquay and Westferry and Park Place sites are likely to result in a cumulative increase in waste.</p>							

Site Name	Hertsmere House							
Site Capacity	350							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
Mitigation and Enhancement Measures	<p>IIA1/2: Further assessment as part of the scheme level design should incorporate an evaluation of the provision of healthcare and education facilities to ensure the current supply is sufficient in supporting new communities.</p> <p>IIA3/4: Development should make efficient use of space and deliver development in line with Policy EG1 to maximise employment opportunities. To ensure that the development does not have a negative impact on existing town centres, development should be in line with policies protecting town centres TC1-TC8.</p> <p>IIA6: Development should incorporate designing out crime principles identified in Policy PS4.</p> <p>IIA7: Development should prioritise the provision of sustainable transport infrastructure through compliance with policy MC1, and development should be designed in line with the principles as set out in policy MC2 to promote active transport.</p> <p>IIA9: In line with policy BO1, the site must achieve a minimum UGF and BNG targets set out within the Plan (2.5 biodiversity units per hectare or a 30% gain in habitat value for wildlife).</p> <p>IIA10: The application of Policy PS8 will help preserves or enhance visual connections between the public realm and open spaces.</p> <p>IIA11: Development should be in line with policies PS6 and PS7.</p> <p>IIA12/13: The application of policies CG6, CG7 and CG8 will help mitigate flood risk and water quality impacts.</p> <p>IIA14: A Dust Management Plan should be prepared as part of the CEMP. The application of Policy CG9 will help to ensure that measures to improve air quality should be implemented on-site during both construction and operation.</p> <p>IIA15: Development should incorporate design measures which will reduce the effects of climate change to infrastructure, residents and visitors. This could include measures such as zonal heating systems, water saving initiatives and energy monitoring devices.</p> <p>IIA17: A Site Waste Management Plan should be prepared as part of the CEMP and OEMP.</p> <p>IIA17/18: Development should support the use of sustainable sourced and/or recycled materials in line with Policy DV4.</p>							

Samuda Estate

Table G-52 – Samuda Estate

Site Name	Samuda Estate							
Site Capacity	850							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA1: Population & Equalities	?	N/A	N/A	N/A	N/A	N/A	N/A	The site has potential to provide 850 new homes, which will work positively towards achieving the borough's housing target. At this stage, it is not known how many of these units will be accessible and wheelchair adaptable. The ward sits in the most deprived decile; therefore, affordability needs to be a key consideration. The site has good existing access to community services which may help to reduce levels of inequalities by bringing communities closer to these facilities and will support a changing demographic.
IIA2: Human Health	?	N/A	N/A	N/A	N/A	N/A	N/A	As housing is a key determinant of health, the delivery of this is likely to provide health benefits. The site does have good access to healthcare and community facilities, and life expectancy is similar to the national average for both men and women. It is not clear whether the current provision will meet the needs of the new population. There is limited information of the type of housing and the additional provisions the site may make e.g. public realm, employment, health facilities.
IIA3: Economy & Town Centres	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is well located to existing employment areas, as it is in close proximity to the Isle of Dogs activity area. This will likely improve access for residents to employment opportunities. The site is located near to the South Quay neighbourhood centre, and it is imperative that any development does not lead to a negative impact on the centre. The site provides an opportunity to provide mixed use development which would further improve connectivity between business clusters and the housing market, however details of how this could be delivered are not currently apparent.
IIA4: Employment & Skills	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is within close proximity to the Isle of Dogs Activity Area and the South Quay Neighbourhood centre, which are likely to improve access for residents to employment opportunities. The site is currently in the most deprived decile in terms of income and employment, and so it is important to ensure sufficient opportunities for a wide range of jobs is provided to avoid stagnation of the labour market. It is currently unclear as to whether any employment space within the site will be provisioned within redevelopment, affordability of new units may be a key concern. Additionally, construction of the site is likely to result in additional local jobs for residents, as outlined in the Tower Hamlets Planning Obligations Supplementary Planning Document.
IIA5: Housing	?	N/A	N/A	N/A	N/A	N/A	N/A	The provision of 850 new homes will help towards meeting LBTH's housing target. It is assumed that the site will meet the minimum 35% target of affordable homes, however, the size, type and tenure of housing is not currently known.
IIA6: Crime & Safety	?	N/A	N/A	N/A	N/A	N/A	N/A	Most of the site area lies within the 20% most deprived neighbourhoods in terms of crime. There is limited detail on whether designing out crime principles will be applied as part of the development or whether there will be improvements to the public realm, to support crime reductions.

Site Name	Samuda Estate							
Site Capacity	850							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
IIA7: Sustainable Transport	?	N/A	N/A	N/A	N/A	N/A	N/A	The site has average access to public transport, as reflected in a PTAL score between 2-3, the site is situated within reasonable proximity to bus stops and underground and overground stations. The site is not currently served by active transport links via the National or Local Cycle Network. It is not clear whether there will be plans for additional sustainable or active transport provision.
IIA8: Accessibility	+	M	D	L	I	P	LT	The existing site has good access to facilities and services. However, it is not clear whether additional services will be provided on-site and the current capacity of these facilities. There is potential for essential services to be stretch by a large increase in population. This may conversely increase the need to travel.
IIA9: Biodiversity & Natural Capital	-	L	I	L	R/I	P/T	ST/LT	The site is located adjacent to a mudflat priority habitat to the East. The Mudchute Park Farm Local Nature Reserve is situated less than 0.3km to the South West of the site. There are also a number of SINCs located in close proximity to the site. There is a potential negative effect on ecology as a result, particularly during construction. Currently, there are no details as to whether GI will be included within proposals, and whether the site will be in line with BNG targets.
IIA10: Landscape & Townscape	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be temporary negative effects to the local landscape and townscape setting during construction. At this stage the design details are unknown, however, it is assumed that the development is likely to improve townscape and landscape setting. An area of local space is found west adjacent to the site, and any proposal coming forward will need to be designed with the preservation of the existing built form and density in mind.
IIA11: Historic Environment	?	N/A	N/A	N/A	N/A	N/A	N/A	The site is situated within the Isle of Dogs archaeological priority area. Consideration should be given to ensure there is no impact on the setting of the historic docks and Maritime Greenwich World Heritage Site to the South, the Coldharbour Conservation Area to the North. It is therefore anticipated that the built form will need protect and enhance the setting of heritage assets which will depend on the scale, massing, layout and materials that are proposed. It is unknown whether there will be any enhancements to the public realm which may improve the setting of the local historic environment. During construction there is potential for adverse effects on the setting of neighbouring heritage assets from construction traffic, emissions and noise and vibration. Excavation works required may result in the loss of buried archaeological assets.
IIA12: Flooding	--	H	D	L	I	P	LT	The site is located within flood zone 2 and 3, any flood risk measures are expected to be in line with the borough's Strategic Flood Risk Assessment.
IIA13: Water Quality	-	L	D/I	L	R/I	P/T	MT/LT	The site is located in close proximity to the River Thames, there is potential for increased surface runoff during construction, further polluting this watercourse.
IIA14: Air Quality	+/-	L	D/I	L	R/I	P/T	ST/LT	Air quality is generally good at the site. The site has average access to local public transport and will provide new facilities allowing residents to live their lives more locally and reduce the need for private car usage. However, there will be temporary negative effects on air quality due to dust generation and emissions from construction. There are a number of

Site Name	Samuda Estate							
Site Capacity	850							
Site Source	New allocation							
Site Status	New allocation							
IIA Objective	Significance	Magnitude	Nature of effect	Spatial Extent	Reversibility	Permanence	Duration	Description of potential Effects
								existing residential receptors surrounding the site which would be negatively impacted during construction.
IIA15: Climate Change & Resilience	--	H	D	L	I	P	LT	Climate and heat risk at the site is medium/medium-high. The site is also located within an area of flood risk and flood zone 2 and 3. Therefore, it is likely to have diminishing resilience to climate change. At this stage, development specific climate resilience measures are unknown. It is assumed that the site will adhere to the London Plan, Policy G5 – Urban Greening. This will provide opportunities for increased climate resilience at the site.
IIA16: GHG Emissions	?	N/A	N/A	N/A	N/A	N/A	N/A	There are likely to be significant GHG emissions associated with the construction phase from embedded carbon within building materials as well as carbon emissions from construction traffic and construction plant. At this stage, it is not clear whether the development will utilise renewable energy sources or low carbon heat networks once operational. Further design details are required.
IIA17: Waste	?	N/A	N/A	N/A	N/A	N/A	N/A	Demolition, excavation, and construction of the site are likely to result in the generation of a significant amount of waste. At this stage it is not clear if it is not clear if the existing buildings and structures at the site will be re-used or recycled and whether recycled materials will be supported as part of construction.
IIA18: Efficient use of Land	?	N/A	N/A	N/A	N/A	N/A	N/A	The development is located on previously developed land and will support high density housing which will help to make the best use of the site. However, it is not clear whether the site will encourage sustainable use of materials.
Potential Cumulative/ Synergistic Effects	<p>IIA1/2: There is potential for cumulative negative effects on existing services, due to the potential significant increase in population from the delivery of this site in combination with neighbouring sites Limeharbour and Crossharbour.</p> <p>IIA1/2: If construction of this site and the Limeharbour and Crossharbour sites were to happen concurrently, there is potential for a cumulative increase in disturbance to existing local residents.</p> <p>IIA3/4: In combination, this site and the Limeharbour and Crossharbour sites will significantly increase the number of business and jobs.</p> <p>IIA5: In combination, this site and the Limeharbour and Crossharbour sites will significantly increase housing stock.</p> <p>IIA10: There is potential for cumulative negative effects within the Tall Building Zone areas in combination with neighbouring sites Limeharbour and Crossharbour.</p> <p>IIA11: There is potential for cumulative increase in the loss of heritage assets and buried archeology from both this site and the Limeharbour and Crossharbour site.</p> <p>IIA14: If construction of this site and the Limeharbour and Crossharbour sites were to happen concurrently, there is potential for an increased worsening in air pollution from construction plant emissions, dust and construction traffic.</p> <p>IIA15: The increase in GI provided by both this site and the Limeharbour and Crossharbour sites are likely to increase resilience to the UHI effect.</p> <p>IIA16: The construction of both this site and the Crossharbour and Limeharbour sites are likely to result in a significant cumulative increase in embodied carbon.</p> <p>IIA17: Demolition, excavation, and construction of this site and neighbouring site Limeharbour and Crossharbour sites are likely to result in a cumulative increase in waste.</p>

1 Introduction

1.1 Background and context

- 1.1.1. The London Borough of Tower Hamlets (LBTH) is currently preparing a New Local Plan (NLP), which will replace The Tower Hamlets Local Plan 2031: Managing Growth and Sharing Benefits adopted in 2020¹. The new Tower Hamlets NLP will comprise five sub-areas, as planning functions for the London Legacy Development Corporation (LLDC) in the north-east of LBTH are expected to be returned to LBTH in 2024. The sub-areas are City Fringe, Central Area, Lower Lea Valley, Isle of Dogs and South Poplar, and Hackney Wick and Fish Island (current LLDC area).
- 1.1.2. An Integrated Impact Assessment (IIA) has been undertaken to ensure that sustainability aspects are incorporated into the NLP. The IIA enables synergies and cross-cutting impacts to be identified and avoids the need to undertake and report on separate assessments and seeks to reduce any duplication of assessment work. This process also helps to simplify outcomes and recommendations for policymakers.
- 1.1.3. As part of the IIA, an Equality Impact Assessment (EqIA) has been undertaken to assess from an equality perspective the impacts and likely effects of policies in the NLP on different groups protected by equalities legislation, notably the Equalities Act 2010. It will also seek to identify whether such policy categories might have an adverse impact on equality of opportunity.
- 1.1.4. The outcomes of the EqIA have informed the IIA.

¹ Tower Hamlets Council (2020) Tower Hamlets Local Plan 2031. Available at: https://www.towerhamlets.gov.uk/Documents/Planning-and-building-control/Strategic-Planning/Local-Plan/TH_Local_Plan_2031_accessibility_checked.pdf

2 Legislation

- 2.1.1. The Equality Act 2010² came into force on 1 October 2010 and brought together over 116 separate pieces of legislation into a single Act. The Act provides a legal framework to protect the rights of individuals that share defined "protected characteristics" and advance equality of opportunity. In addition, the Act states that, when making decisions, an authority must consider methods to reduce any inequalities which may arise for those from a disadvantaged socio-economic background.
- 2.1.2. Those "protected characteristics" which identify the vulnerable groups who may be disproportionately impacted upon or discriminated against are outlined in **Table 2-1**. Protection extends to those who are perceived to have these characteristics or who suffer discrimination because they are associated with someone who has that characteristic, e.g. cares for someone with a disability.

Table 2-1 – Protected groups listed under the Equality Act 2010

Protected Characteristic	People and Aspects Included
Sex	Men, women, married and single people; parenting, caring, flexible working and equal pay concerns.
Religion or belief	People who have a religious belief; people who are atheist or agnostic; people who have a philosophical belief which affects their view of the world or the way they live.
Age	Children (0-16), young people (17-25), working age people (15-64) and elderly people (65 and over).
Disability	People with physical, mental, sensory, visible or hidden impairment (e.g. cancer, HIV, dyslexia).
Race	People from various ethnic groups, as for the Census categories, e.g. White British, Chinese, British Asians, Travellers, Gypsies, Roma, those who are of Caribbean origin, people of mixed heritage, White Irish communities, and people of other nationalities who reside in Britain.

² The Stationary Office, Equality Act 2010. Available at: http://www.legislation.gov.uk/ukpga/2010/15/pdfs/ukpga_20100015_en.pdf (Accessed: 17 January 2022)

Protected Characteristic	People and Aspects Included
Sexual orientation	Heterosexual and bisexual men and women, gay men and lesbians.
Gender reassignment (transgender)	Anyone who is proposing to undergo, is undergoing or has undergone a process for the purpose of reassigning their sex. This applies to anyone at any stage in the transition process, from proposing to reassign their sex, undergoing a process of reassignment, or having fully transitioned.
Pregnancy and maternity	Pregnancy is the condition of being pregnant or expecting a baby - protection against maternity discrimination (including as a result of breast feeding).
Marriage and civil partnership	People who are married or are civil partners.
Deprivation *	People at risk of socio-economic disadvantage. This also includes young people leaving the system.

** Although it is not included as a protected characteristic within the Equality Act 2010, deprivation has been included in the assessment as the Act also requires due regard to reducing the inequalities of outcome which result from socio-economic disadvantage.*

3 Equality Impact Assessment

3.1 What is EqIA?

- 3.1.1. An EqIA considers the impact of a project or policy on persons or groups of persons who share characteristics which are protected under section 4 of the Equality Act 2010 ("protected characteristics") and might also include others considered to be vulnerable within society such as low-income groups. It is an information gathering tool which enables decision makers within public bodies to implement their equality duty under the Equality Act 2010.
- 3.1.2. An EqIA guides decision makers and designers to:
- Consider the effects of existing and proposed policy or practice on people who share a "protected characteristic"; and
 - Identify opportunities to improve equality of opportunity and eliminate discrimination.
- 3.1.3. An EqIA should be carried out before making decisions, to inform and shape the outcomes. They should be updated throughout the decision-making process as necessary, as policy or practices are developed.
- 3.1.4. There are three stages to an EqIA: screening, full assessment and outcome monitoring. The screening stage determines which protected characteristics are likely to experience disproportionate impacts, and therefore require consideration within the EqIA. This considers the nature of the public function being exercised and available information on users and impacts. This document represents the assessment on those groups identified.

4 Social Profile

4.1 Introduction

- 4.1.1. A social profile for LBTH has been compiled from publicly available data to provide context for the assessment. This comprises information on the following:
- Protected characteristic groups;
 - Local communities; and
 - Sensitive receptors, local community facilities and public transport.

4.2 Local Community and Facilities

LBTH Community and Character

- 4.2.1. LBTH is an East London borough, comprising much of the 'traditional' East End. It was formed in 1965 from the merger of the former metropolitan boroughs of Stepney, Poplar, and Bethnal Green, named after the historic Tower Division. The borough now contains much of the regenerated London docklands area.
- 4.2.2. LBTH is a world-class hub for financial, professional, and technical sectors, and is home to London's financial district, Canary Wharf. The boroughs total economic output is higher than any of the core UK cities outside of London at £29.7b.
- 4.2.3. All new development must drive up the quality of design, constructed to the highest safety standards and improve the Borough's built environment and liveability.

LBTH Local Community Facilities

- Homes:
 - The Office for National Statistics (ONS) reports that the median price paid for homes at the end of December 2022 was £500k³.
 - As of 2022 the median house price in the borough was ten times the median income level⁴.
 - In 2019 there were 19,826 households on the Tower Hamlets housing register. This is the third highest waiting list in London after Newham and Lambeth, and the eighth highest nationally⁵.
- Businesses:

³ [Median house prices for administrative geographies: HPSSA dataset 9 - Office for National Statistics \(ons.gov.uk\)](https://ons.gov.uk)

⁴ [House price to workplace-based earnings ratio](#)

⁵ [Housing Borough profile \(towerhamlets.gov.uk\)](https://towerhamlets.gov.uk)

- There are 17,000 businesses across the entire borough; and
- 278,000 jobs are generated by their presence⁶.
- Social infrastructure:
 - The Borough has three NHS hospitals; and
 - There are 60 nursery schools, 69 primary schools, 18 secondary schools, 13 sixth form colleges and six special schools.

Key Borough Concerns

4.2.4. LBTH Strategic Plan 2022-2026 highlights eight key priorities for the borough. These consist of:

- Tackling the cost-of-living crisis;
- Providing homes for the future;
- Accelerating education;
- Boosting culture, business, jobs, and leisure;
- Investing in public services;
- Empowering communities and fighting crime;
- Working towards a clean and green future; and
- A council that listens and works for everyone.

4.3 Protected Characteristics Profile

4.3.1. Data from the Office of National Statistics (ONS) has been gathered on the following protected characteristics from Section 4 of the Equality Act 2010:

- Sex;
- Religion;
- Age;
- Disability;
- Race;
- Sexual orientation;
- Pregnancy and maternity;
- Marriage and civil Partnership; and
- Gender reassignment.

4.3.2. Although not a protected characteristic under the Equality Act 2010, the social profile also includes data on deprivation as it provides a measure of a combination of social-economic metrics.

⁶ Tackling the housing crisis https://www.towerhamlets.gov.uk/lgnl/housing/Tackling_the_housing_crisis.aspx

4.3.3. It should be noted that the last Census was taken in 2021. Where there may be some datasets that are not yet available data has been substituted with 2011 census data and other more recent information.

4.4 Sex

4.4.1. The total population Tower Hamlets was recorded in 2021⁷ as 310,300 people. Within the Borough, approximately 50.2 % of the population were recorded as male and 49.8% as female, which is discordant with the wider London population of 48.5% male and 51.5% female. The percentage of the population who are male in the LBTH area is slightly higher than the national average, and the percentage of the population who are female is slightly lower, as shown in **Table 4-1**. Table 4-1 – Sex Profile 2021⁷

Sex	Tower Hamlets	%	London	%	Great Britain	%
All people	310,300		8,796,600		65,121,700	
Male	155,770	50.2%	4,267,500	48.5%	31,874,600	48.9%
Female	154,530	49.8%	4,529,100	51.5%	33,247,100	51.1%

4.5 Religion

4.5.1. As stated in the 2021 Census, of those in LBTH who identify with a religion, the largest group identify as Muslim (39.9%), which is discordant with the national trend. The second largest proportion of the population identify as having no religion (26.6%) as shown in **Table 4-2**.

Table 4-2 – Religion Profile 2021⁷

Religion	Tower Hamlets		England %
	Number in 2021	% Total pop in 2021	
Christian	69,223	22.3	46.3
Buddhist	2,961	1.0	0.5

⁷ <https://www.nomisweb.co.uk/reports/lmp/la/1946157252/report.aspx>

Religion	Tower Hamlets		England %
	Number in 2021	% Total pop in 2021	
Hindu	6,298	2.0	1.8
Jewish	1,341	0.4	0.5

No religion	82,635	26.6	36.7
Religion not stated	21,318	6.9	6.0

4.6 Age

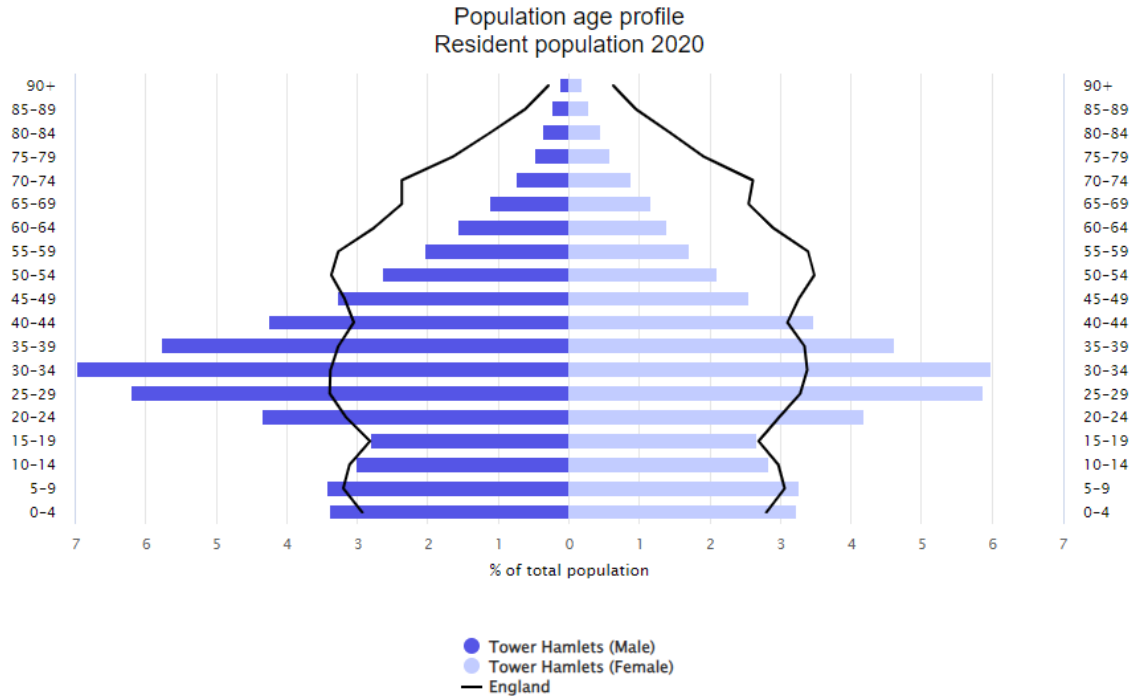

- 4.6.1. As of 2021, the median age in LBTH was 30 years of age, making Tower Hamlets the youngest borough by median age in England and Wales. In accordance with this, 52.9% of the population are aged 16-34.
- 4.6.2. The 2019 Local Authority Health Profiles data on population age shows that Tower Hamlets has a largely differing age structure to England across all age categories (**Table 4-3**). The age category with the greatest difference is 25 to 34 years old, which is 9.5% higher than the average for London and 13.9% higher than England.

4.6.3. **Figure 4-1** shows the population pyramid of the LBTH area population in 2020, which is the latest available population profile graphic. Although the data is slightly different to the 2021 data presented in Table 4-3 it still illustrates the general trends.

Table 4-3 – Age Profile 2021⁷

Age	Tower Hamlets		London %	England %
	Number in 2021	% Total pop in 2021		
Aged 4 years and under	19,090	6.2	6.0	5.4
Aged 5 to 9 years	17,658	5.7	6.0	5.9
Aged 10 to 15 years	20,675	6.7	7.2	7.2
Aged 16 to 19 years	15,085	4.9	4.4	4.6
Aged 20 to 24 years	31,988	10.3	6.7	6.0
Aged 25 to 34 years	85,181	27.5	18.1	13.6
Aged 35 to 49 years	69,956	22.5	22.7	19.4
Aged 50 to 64 years	33,199	10.7	16.9	19.4
Aged 65 to 74 years	10,379	3.3	6.5	9.8
Aged 75 to 84 years	5,024	1.6	3.8	6.1
Aged 85 years and over	2,068	0.7	1.6	2.4

Figure 4-1 - Population age profile of the LBTH area in 2020⁸

Projected Population

- 4.6.4. Between the last two censuses (held in 2011 and 2021), the population of Tower Hamlets increased by 22.1%, from around 254,100 in 2011 to around 310,300 in 2021. This means the borough’s population saw the largest percentage increase in England. The population of London increased by 7.7%, while the population of England rose by 6.6%⁹.
- 4.6.5. The total population in the LBTH area is set to increase across most age groups by 2043, with an overall increase of 18.3%¹⁰. This projection is higher than the national trend of an expected 7.3% growth. The age group set to experience the biggest growth in this

All ages	348,804	412,571	29.9%

4.7 Disability

4.7.1. The social model of disability states that people are disabled by barriers in society, not by their impairment or difference. Barriers can be physical, like buildings not having accessible toilets. Or they can be caused by people's attitudes to difference, like assuming disabled people can't do certain things¹¹. **Table 4-5** shows the proportion of the population whose day-to-day activities are limited by a long-term health problem or disability in comparison to those that are not. The proportion of the population of LBTH who are limited in their day-to-day activities is representative of the regional average, at 13% and 13.2% respectively. The national average is slightly higher with 17.3% of the population experiencing some degree of limitation⁷.

Table 4-5 – Proportion of those living with limiting health problems or disability 2021⁷

Day to Day activities	Tower Hamlets		London %	England %
	Number in 2021	% Total pop in 2021		
Limited a Lot	17,599	5.7	5.7	7.3
Limited a little	22,526	7.3	7.5	10.0
Not limited	14,091	4.5	5.2	6.8
No long-term physical or mental health conditions	256,090	82.5	81.5	75.9

¹¹ Social model of disability. Scope [online] available at: <https://www.scope.org.uk/about-us/social-model-of-disability/>

Figure 4-2 - Proportion of the LBTH population classified as disabled under the equality act in comparison to neighbouring boroughs¹².

- 4.7.2. **Figure 4-2** demonstrates the raised proportion of the LBTH population living with disability in comparison to neighbouring boroughs. 79.9% of the Tower Hamlets population live without disability, compared to 82.5% in Newham, and 85.5% in Redbridge.
- 4.7.3. Caring, as defined by the census question, refers to giving unpaid help to someone requiring help due to a health condition or disability or because of old age. 6.4% of LBTH residents aged 5 and over were defined as care providers in 2021. This figure is lower than the London average at 7.3%.
- 4.7.4. As of March 2023, there is an estimated 4,850 (1.4 %) people living with sight loss in the LBTH area. This includes around 3,180 (65.5%) people living with mild sight loss, 1,110 (22.8%) people living with moderate sight loss and 560 (11.5%) people living with severe sight loss. By 2032 there are expected to be 6,520 people in Tower Hamlets living with sight loss, an estimated increase of 34% over the next decade¹³.

¹² Census Maps (2021) <https://www.ons.gov.uk/census/maps/choropleth/health/disability-age-standardised/disability-4a/not-disabled-under-the-equality-act?lta=E06000023&lbd=E09000030> (Accessed: 05/09/2023)

¹³ RNIB Sight Loss Data Tool - statistics on sight loss | RNIB | RNIB

Table 4-6 – Age profile of those living with sight loss 2021¹³

Age	Tower Hamlets		England %
	Number in 2021 living with sight loss	% of Total in 2021 living with sight loss	
0-17	0	23	23
18-49	205	60	49
50-64	150	11	17
65-74	100	4	7
75+	305	3	6

4.7.5. As of 2019, it was estimated that 24,500 (7.9%) people in LBTH suffered from hearing loss¹⁴. NHS projections estimate an increase in those suffering from hearing loss of 5.1% by 2035, totalling a hearing loss prevalence of 13%, which is less than both the regional and national predictions of 19% and 25% prevalence respectively¹⁵.

4.8 Race

4.8.1. The 2021 Census data indicates that the majority of the population in the LBTH area is Asian, Asian British or Asian Welsh (44.4%). This group is represented at a percentage of 23.7% higher than the regional average and 34.8% higher than the national average respectively⁷. The largest sub group within this category is Bangladeshi, who make up 34.6% of the population.

Table 4-7 – Ethnicity Profile⁷

Ethnic Group	Tower Hamlets		London %	England %
	Number in 2021	% Total pop in 2021		
Asian, Asian British or Asian Welsh	137,856	44.4	20.7	9.6
Black, Black British, Black Welsh, Caribbean or African	22,693	7.3	13.5	4.2
Mixed or Multiple ethnic groups	15,409	5.0	5.7	3.0
White	122,266	39.4	53.8	81.0
Other ethnic group	12,082	3.9	6.3	2.2

4.9 Sexual Orientation

- 4.9.1. In LBTH the vast majority of the population identified as heterosexual at 83.1%. This is marginally lower than the regional and national average of 86.2% and 89.4% respectively. The proportion of the population that identify as gay or lesbian in LBTH is 2.2% higher than the London figure and 2.5% higher than the national figure. Bisexual identification follows a similar pattern in that the proportion is higher in LBTH than it is London and England⁷.
- 4.9.2. Taken together this means that 7.2% of residents identified as part of the LGBTQIA+¹⁶ community. This is significantly higher than the proportions of 4.2% in London and 3.1% in England and Wales¹⁷.

¹⁶ lesbian, gay, bisexual, transgender, queer, questioning, intersex, or asexual

¹⁷ Tower Hamlets, 2021 Census Findings, 2023 [online] available at: https://www.towerhamlets.gov.uk/Documents/Borough_statistics/Census-2021/2021-Census-key-finding.pptx#:~:text=Overall%20borough%20population.of%20Tower%20Hamlets%20was%20310%2C300.

All other sexual orientations	90	0.0	0.0	0.0
Not answered	24,688	9.8	9.5	7.5

4.10 Pregnancy and Maternity

- 4.10.1. A maternity is a pregnancy resulting in the birth of one or more children, including stillbirths. In 2016 the maternity rate in the LBTH area was 53.1 (maternities per 1,000 women aged 15 to 44), lower than the maternity rates for London and England, of 62.8 and 61.8 respectively¹⁸. The greatest amount of live births in the LBTH area are from women in the age category 30-34, which is in line with London and England. Births in the under eighteen age group are less prevalent in LBTH than they are in London and England, with only 0.1% of all live births being to mothers aged eighteen and under compared to 0.4% and 0.8% respectively. Table 4-9 shows Live Births by Age of Mother for LBTH, London and England.
- 4.10.2. In the LBTH area 34.7% of all live births occur outside of marriage or civil partnership. This is a lower proportion than the regional and national averages by 1.7% and 12.2% respectively. This indicates that more live births in the LBTH area occur within marriage or civil partnership than outside of it.

¹⁸ ONS (2016) Live births in the UK by area of usual residence of mother. Available at : <https://www.ons.gov.uk/peoplepopulationandcommunity/birthsdeathsandmarriages/livebirths/datasets/birthsbyareaofusualresidenceofmotheruk> (Accessed 20/01/2022)

Table 4-9 – Live Births by Age of Mother 2016¹⁸

Age of Mother at Birth	Tower Hamlets		London %	England %
	Number in 2016	% of Total live births in 2016		
Under 18	6	0.1	0.4	0.8
Under 20	63	1.4	1.8	3.2
20 to 24	448	9.8	9.9	14.6
25 to 29	1,285	28.0	23.6	28.0
30 to 34	1,643	35.8	34.9	31.8
35 to 39	922	20.1	23.4	18.1
40 to 44	211	4.6	5.7	4.0
45 and over	20	0.4	0.6	0.3
Total Live Births (Number in 2016)	4,592		128,803	663,157
Total Fertility Rate Total Live Births (Number in 2016)	1.39		1.72	1.81

4.11 Marriage and Civil Partnership

4.11.1. The percentage of the population which is married or in civil partnership in LBTH is 8% lower than the regional average and 12.7% lower than the national average. In line with this the proportion of the population who are divorced is also lower than the regional and national average by 1.5% and 4.1% respectively.

Table 4-10 – Marriage and Civil Partnership Profile 2021⁷

Marriage / Civil Partnership	Tower Hamlets		London %	England %
	Number in 2021	% Total pop in 2021		
Never married and never registered a civil partnership	147,392	58.3	46.2	37.9
Married or in a registered civil partnership	80,955	32.0	40.0	44.7
Separated, but still legally married or still legally in a civil partnership	5,013	2.0	2.3	2.2
Divorced or civil partnership dissolved	12,738	5.0	7.3	9.1
Widowed or surviving civil partnership partner	6,787	2.7	4.2	6.1

4.12 Unemployment and Deprivation

4.12.1. There is a smaller proportion of economically active population in LBTH than in the wider London region and the UK. The proportion of unemployment in LBTH is also marginally higher than the national average by 1%.

Table 4-11 – Employment status in LBTH, London and England

Employment and Unemployment	Tower Hamlets		London %	England %
	Number in 2021	% Total pop in 2021		
Economically active	190,300	76.6	79.8	78.5
In employment	180,900	72.8	76.2	75.6
Unemployed	8,700	4.6	4.4	3.6

4.12.2. The Index of Multiple Deprivation (IMD) is the official measure of relative deprivation for small neighbourhoods in England. IMD is used by local governments to focus programmes in the most deprived areas and develop strategies, such as the NLPR. IMD measures deprivation in small areas / neighbourhoods called Lower Super Output Areas (LSOAs). There 32,844 LSOAs in England.

4.12.3. In the LBTH area, there are 144 LSOAs. In 2019 of the 144 LSOAs¹⁹:

- Two LSOAs are within the top 10% most deprived neighbourhoods;
- 84 LSOAs are within the 20-30% most deprived neighbourhoods;
- 35 LSOA's are within the 40-50% of most deprived neighbourhoods;
- 14 LSOA's are within the 40-50% least deprived neighbourhoods;
- Eight LSOA's are within the 30-20% least deprived neighbourhoods; and
- One LSOA's in LBTH are within the 10% least deprived neighbourhoods.

4.12.4. The most deprived LSOAs in the LBTH area are located in the north of the borough and consist of the wards Lansbury, St. Peter's and Stepney green.

4.12.5. The least deprived LSOAs in the LBTH area are located in the south of the borough and consist of the wards Island Gardens, Canary Wharf and St Katherine's and Wapping.

4.12.6. As of 2013, 32,220 of the total population of LBTH were recipients of both housing benefits and council tax benefits. This is a relatively high proportion of the population in comparison

¹⁹ Indices of Deprivation (2019) Indices of Deprivation: 2015 and 2019- Open Data Blog [online] Available at: http://dclgapps.communities.gov.uk/imd/iod_inex.html (Accessed 25/01/2022)

to alternative London boroughs. For neighbouring borough Newham, only 30,740 residents were in receipt of these benefits²⁰.

4.13 Gender Reassignment

4.13.1. Trans is a general term for people whose gender is different from the gender assigned to them at birth. According to 2021 Census data, only 1% of the LBTH population have a gender identity different from their sex registered at birth. Neighbouring boroughs have similar figures of 1.07% for Hackney and 1.51% for Newham. Outside of the London area these figures are even lower, predominantly <1%.

Table 4-12 – Gender Identity in Tower Hamlets and London

Gender Identity	Tower Hamlets	Tower Hamlets %	London	London %
Gender identity the same as sex registered at birth	229,263	90.7	6,479,664	91.2
Gender identity different from sex registered at birth but no specific identity given	1,438	0.6	32,753	0.5
Trans Woman	344	0.1	11,266	0.2
Trans Man	350	0.1	11,480	0.2
Non-binary	350	0.1	5,407	0.1
All other gender identities	161	0.06		0.05

4.13.2. **Figure 4-3** displays a comparison of gender identity across neighbouring London boroughs as well as the wider regional area.

4.14 Baseline Summary

- As of 2021, LBTH have a population of 310,300, with 50.2% being male and 49.8% being female.
- LBTH is considered a relatively youthful borough with 52.9% of the population being aged 16-34.
- The total population in the LBTH area is set to increase across all age groups between 2018 and 2043, with an overall increase of 0.3%
- Under the Equality Act, 20.1% of the population of LBTH are considered to be disabled. Of this, 5.7% are considered to be limited a lot in engaging with day-to-day activities by their disability.
- The largest ethnic group represented in the borough is Asian, Asian British or Asian Welsh at 44.4% of the total population. Within this, the Bangladeshi community are the largest sub group, making up 34.6%.
- The majority of the population in LBTH identify as heterosexual. 4.% reported being gay or lesbian, and 2.5% bisexual.
- The greatest amount of live births in the LBTH area are from women in the age category 30-34, which is in line with London and England.
- The percentage of the population which is married or in civil partnership in LBTH is 8% lower than the regional average and 12.7% lower than the national average.
- 76.6% of the total population in LBTH were classed as economically active compared to 4.6% who were unemployed in 2021.
- Two LSOAs in LBTH fall within the top 10% most deprived neighbourhoods in the UK. These are Lansbury and St. Peter's.
- According to 2021 Census data, only 1% of the LBTH population have a gender identity different from their sex registered at birth.
- As detailed schemes and interventions come forward framed by the New Local Plan, these should be assessed in more detail to understand the potential impacts on specific local populations and vulnerable groups.

5 Impact Assessment

5.1 Introduction

5.1.1. The New Local Plan sets out the vision for future development in the Borough over a 20-year period and includes the planning policies to help achieve this vision. It can do so by identifying locations that are suitable for good growth as well as for conservation and by setting clear guidelines for appropriate land uses, the form and design of development. The aim is to achieve good accessible placemaking that protects and improves resident's health and well-being, provides good quality homes, enhancing the economy and the environment.

Policies

5.1.2. The following proposed policies have been assessed from an equality perspective.

5.1.3. Policies have been split by their themes under the following categories:

- Delivering the Local Plan;
- Homes for the Community;
- Clean Green Future;
- People, Places and Spaces;
- Inclusive Economy and Good Growth;
- Town Centres;
- Community Infrastructure;
- Biodiversity and Open Space;
- Movement and Connectivity; and
- Reuse, Recycling and Waste.

5.2 Assessment methodology

5.2.1. The impact assessment will assess the proposed policies, based on their potential to directly or indirectly cause likely disproportionate impacts on people with the protected characteristics outlined previously. Impacts have also been considered with impact on those with levels of deprivation, as an indicator of socio-economic disadvantage.

5.2.2. Impacts on protected characteristic groups in particular are identified as positive, neutral or negative. Mitigation or recommendations are provided for each policy where this is applicable. Where the impact is deemed positive or neutral, any recommendations will outline how to ensure there is no negative impact or opportunities to further advance equality and inclusivity.

5.2.3. **Table 5-1** below provides the assessment key to the assessment **Table 5-2** below.

Table 5-1 – Assessment Key

Symbol	Impact
+	Positive
0	Neutral
-	Negative

5.3 Assessment Summary

- 5.3.1. Overall, the policies will likely result in positive impacts on protected characteristic group members in the Borough. The policies aim to address a wide range of issues, identified by the key themes above. An overall neutral impact has been given where positive impacts will affect the general public equally and not specifically those from protected characteristic groups.
- 5.3.2. The main protected characteristic groups that will particularly benefit include:
- Age – older people who have reduced mobility and require access to health and other services. Also, children who are likely to benefit from air quality improvements that numerous policies look to achieve;
 - Disability – people with a variety of disabilities will benefit from a more accessible environment; and
 - Deprivation – people from low-incomes who require access to employment, education and housing and people with underlying health issues.
 - Sex, Gender reassignment and Race – women and girls, gender diverse people, and people from a range of different diverse backgrounds will benefit from inclusive design, creation of safer and inclusive spaces and greater community engagement.
- 5.3.3. Some protected characteristics may be disproportionately adversely affected by the proposed policies. These include:
- Age, Disability and Pregnancy and maternity – The inclusion of public realm improvements and subsequent street furniture, addition of EV charging points and reduction in car parking and motorised vehicles could act as an obstacle to these groups.
 - Deprivation – Low income groups may be disproportionately affected by the development of large-scale purpose-built shared living as it has the potential to compromise the generation of affordable housing throughout the borough. Additionally, there is potential for low levels of engagement from the community in which estate regeneration schemes are proposed.

5.3.4. The assessment concludes that there will likely be a neutral impact for the following protected characteristic groups, assuming no unforeseen barriers emerge:

- Religion or belief;
- Sexual orientation; and
- Marriage and civil partnerships.

Table 5-2 – Summary of Policies and Equality Effects

Policy	Impact										Summary of impact on protected characteristics	Mitigation measures / Recommendations	
	Sex and gender	Religion/belief	Gender reassignment	Age	Sexual orientation	Disability	Pregnancy/maternity	Marriage/civil partnership	Race	Deprivation			
Delivering the Local Plan													
DV1 Areas of growth and opportunity within Tower Hamlets	0	0	0	0	0	0	0	0	0	0	0	+ Development will be focussed in highly accessible locations with good links to public transport, cycling and walking networks and town centres. New and improved facilities will likely be accessible and therefore beneficial to all borough residents.	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.
DV2 Delivering sustainable growth in Tower Hamlets	0	0	0	+	0	+	0	0	0	0	0	+ Development will be sustainability conscious and considerate of the council's goal of becoming a carbon neutral borough in 2045. Reduced GHG emissions associated with this goal will be beneficial to the respiratory health of the population. <u>Age, Disability</u> + Improvements to air quality and subsequent positive effects on respiratory health will be predominantly beneficial for the elderly, the young and disabled groups in the borough.	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.
DV3 Healthy communities	+	0	0	+	0	+	+	0	+	+	+	+ Development will be conscious of potential beneficial or adverse impacts on the population's health. Physical and mental wellbeing of the borough will likely be ensured this way. <u>Age, Disability</u> + Developments will include built and natural environments that are accessible. This will benefit the elderly and disabled groups with accessing open space as well as the public realm. <u>Gender</u>	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.

Policy	Impact										Summary of impact on protected characteristics	Mitigation measures / Recommendations
	Sex and gender	Religion/belief	Gender reassignment	Age	Sexual orientation	Disability	Pregnancy/maternity	Marriage/civil partnership	Race	Deprivation		
											<p>+ Improvements to built and natural environments will meet the needs of different genders, this will benefit both male and females within the borough.</p> <p><u>Deprivation, Race, Pregnancy and Maternity</u></p> <p>+ Improving high quality open spaces and community facilities will provide access to those who may currently be without access to these facilities.</p> <p>+ High quality open space and community facilities will improve opportunities for social interaction.</p>	
DV4 Planning and construction of new development	0	0	0	-	0	-	-	0	0	-	- High levels of development are set to occur in already densely inhabited areas of the borough. While the policy aims to ensure development will have minimal impact on the local environment and communities, it is likely that ongoing construction will have adverse effects on nearby residential receptors through noise and dust pollution.	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.
DV5 Developer contributions	0	0	0	0	0	0	0	0	0	0	Additional funds to the improvement of the environment and infrastructure in the borough will ensure sustainable development as set out in the Local Plan is being realised. This policy will therefore be beneficial to all members of the community in the borough.	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.
DV6 Promoting social value	+	+	0	0	+	0	0	0	+	+	<p>+ Added social value from development will bring additional community, culture and diversity benefits.</p> <p>+ Religion/ belief and Race</p> <p>Development will support social inclusion and equal opportunity within the borough which will positively impact community cohesion.</p>	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.

Policy	Impact										Summary of impact on protected characteristics	Mitigation measures / Recommendations
	Sex and gender	Religion/belief	Gender reassignment	Age	Sexual orientation	Disability	Pregnancy/maternity	Marriage/civil partnership	Race	Deprivation		
DV7 Utilities and digital connectivity	0	0	0	+	0	+	0	0	0	0	<p>Improvements to utility infrastructure for new developments will be beneficial to all borough residents.</p> <p><u>Age</u></p> <p>+ Improved broadband connections will be beneficial to elderly people suffering from social isolation. Greater opportunities to connect with family and friends virtually will generate positive mental health impacts. Faster broadband will also be beneficial for young people especially students who require the utility for university work.</p> <p><u>Age, Disability</u></p> <p>+ Enhanced efficiency of utilities such as heating and water will bring positive health impacts for vulnerable groups including the elderly and disabled.</p>	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.
DV8 Site allocations	0	0	0	0	0	0	0	0	0	0	<p>The application of all Local Plan polices on site allocations containing development proposals will be beneficial to all groups in the borough.</p>	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.
Homes for the Community												
HF1 Meeting housing needs	+/-	0	0	+	0	+	+	0	+/-	+/-	<p><u>Age, Deprivation, Disability</u></p> <p>The policies intention to meet the housing needs of the borough through ways that ensure the creation of mixed, inclusive and balanced communities will be beneficial to the general population. This will benefit those on lower incomes through provision of more housing, which will reduce competition in the housing market. Additionally there will be more availability</p>	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.

Policy	Impact										Summary of impact on protected characteristics	Mitigation measures / Recommendations
	Sex and gender	Religion/belief	Gender reassignment	Age	Sexual orientation	Disability	Pregnancy/maternity	Marriage/civil partnership	Race	Deprivation		
											<p>of social and affordable housing for those on lower incomes.</p> <p>Additionally, ensuring a mix of development size will ensure there is appropriately sized development for different occupier groups, who may need more or less space depending on their needs.</p> <p><u>Race</u></p> <p>The prioritisation of proposals for gypsy and traveller communities will benefit these communities.</p> <p><u>Deprivation, Gender and Race</u></p> <p>-There is potential for low levels of engagement from the community in which estate regeneration schemes are proposed. Areas in need of social housing are where factors such as low incomes and educational barriers and additional pressures such as second jobs and single-parent households are more common. Residents may be less inclined or able to engage with consultation due to pressure from other aspects of life. There could be various other reasons for low engagement, such as language barriers or physical and informational inaccessibility.</p>	
HF2 Affordable housing and housing mix	0	0	0	0	0	0	0	0	0	+	<p><u>Deprivation</u></p> <p>+ The policies target to maximise the delivery of affordable housing with a target of 50% of all new homes to be genuinely affordable will be beneficial to low-income groups who are unable to afford predominant housing availability throughout the borough. The emphasis on affordable family sized housing with a view to combat overcrowding in the borough is also beneficial to families with children.</p>	No mitigation measures have been outlined for this policy. .

Policy	Impact										Summary of impact on protected characteristics	Mitigation measures / Recommendations
	Sex and gender	Religion/belief	Gender reassignment	Age	Sexual orientation	Disability	Pregnancy/maternity	Marriage/civil partnership	Race	Deprivation		
HF3 Protection of existing housing	0	0	0	0	0	0	0	0	0	0	The policies intention to protect existing and safeguard the future supply of self-contained homes across the borough will be beneficial to the general population.	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.
HF4 Supported and specialist housing	0	0	0	+	0	+	0	0	0	0	The provision of specialist housing to offer supported living to those with additional needs will support a range of protected characteristics in the borough. The policy supports those who are homeless through the provision of shelters and transitional housing and older people through provision of nursing homes and care homes. Supported living will benefit these groups by ensuring their care and protection.	No mitigation measures have been outlined for this policy.
HF5 Gypsy and traveller accommodation	0	0	0	0	0	0	0	0	+	0	Gypsies and travellers are considered under this theme through safeguarding of the existing gypsy and traveller site at Old Willow Close. This population group will benefit from additional safety measures to their place of occupancy.	Should any additional accommodation be required as a result of improvements to the existing site the council will need to consider appropriate locations for this to avoid illegal sittings. LBTH are currently awaiting the outcomes of the Greater London Authorities Gypsy and Traveller Accommodation Needs Assessment
HF6 Purpose-built student accommodation	0	0	0	+	0	+	0	0	0	0	<u>Age</u> + The policy supports the development of student accommodation in close proximity to its relevant higher education institution, and where it does not be detrimental to the cohesiveness of communities. This will be particularly beneficial to the student population in the borough as well as the long-term state of higher education and local economy in the borough.	Accommodation such as student accommodation can be conducive to noise pollution. Accommodation should be appropriately located so as to minimise adverse effects on other residential receptors.

Policy	Impact										Summary of impact on protected characteristics	Mitigation measures / Recommendations
	Sex and gender	Religion/belief	Gender reassignment	Age	Sexual orientation	Disability	Pregnancy/maternity	Marriage/civil partnership	Race	Deprivation		
											<u>Disability</u> + It is also noted that 10% of rooms should be designed to be accessible, in line with the London Plan 2021. - An increased prevalence of student accommodation will likely result in increased noise pollution in the surrounding area. This will have adverse effects for the wellbeing of all residents	
HF7 Large-scale purpose-built shared living	0	0	0	+	0	0	0	0	0	-	<u>Age</u> + There are benefits to those occupying communal residences, particularly older people living on their own, in terms of reduction of social isolation and increased participation in activities which in turn has health benefits. <u>Deprivation</u> - The development of large-scale purpose-built shared living has the potential to compromise the generation of affordable housing throughout the borough. This will be disadvantageous to lower income groups who rely on the provision of affordable housing for their residential needs.	Large-scale buildings often have potential to infringe on the residential amenity of an area. Mitigation measures should be put in place to ensure the built environment does not have adverse effects for any population group. Large-scale buildings must also contain accessibility features in order for those who are disabled or with mobility impairments to successfully reside here.
HF8 Housing with shared facilities (houses in multiple occupation)	0	0	0	+	0	0	0	0	0	+	<u>Age</u> + HMOs are a beneficial tenancy options for younger residents who are unable to or choose not to live in traditional housing. <u>Deprivation</u> + HMOs also offer a shared room rate housing benefit. This is especially beneficial to low-income groups who are reliant on affordable means of housing.	No mitigation measures have been outlined for this policy.

Policy	Impact										Summary of impact on protected characteristics	Mitigation measures / Recommendations
	Sex and gender	Religion/belief	Gender reassignment	Age	Sexual orientation	Disability	Pregnancy/maternity	Marriage/civil partnership	Race	Deprivation		
HF9 Housing Standards and Quality	0	0	0	+	0	+	+	0	0	+	<p><u>Age, Disability, Pregnancy and Maternity, Deprivation</u></p> <p>+ Safe living conditions may be of particular importance to older people, disabled people and expectant mothers who inherently experience raised wellbeing requirements. Those on lower incomes are more likely to be living in social or rented accommodation and will benefit from well designed and maintained housing stock.</p>	No mitigation measures have been outlined for this policy.
Clean Green Future												
CG1 Mitigating and adapting to a changing climate	0	0	0	+	0	+	0	0	0	0	<p>This policy will contribute to improving climate resilience in the borough, and therefore brings benefits for all members of the public.</p> <p><u>Age, Disability</u></p> <p>+ Improvements to air quality through this policy will be particularly beneficial to disabled groups, the young and the elderly.</p>	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.
CG2 Low energy buildings	0	0	0	+	0	0	0	0	0	+	<p><u>Age</u></p> <p>+ Provision of low energy and energy efficient buildings will help to support better quality housing stock now and for future first time buyers.</p> <p><u>Age, Disability</u></p> <p>+ Provision of low energy buildings will also help to improve residents' health, particularly elderly and disabled residents, by reducing exposure to cold and air pollutants. Younger groups will also experience health benefits from the development of buildings and subsequent reduction in health damaging environmental factors such as mould.</p> <p><u>Deprivation</u></p>	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.

Policy	Impact										Summary of impact on protected characteristics	Mitigation measures / Recommendations
	Sex and gender	Religion/belief	Gender reassignment	Age	Sexual orientation	Disability	Pregnancy/maternity	Marriage/civil partnership	Race	Deprivation		
											<p>+ This policy also presents current energy/ cost savings for residents, especially important for those on low incomes who may struggle with living costs.</p> <p>+ Potential cost savings may also provide more disposable income and reduce levels of stress and anxiety associated with the rising cost of living.</p> <p>+ It is possible that additional jobs opportunities will arise to fulfil this objective.</p>	
CG3 Low carbon energy and heating	0	0	0	+	0	+	0	0	0	+	<p><u>Deprivation</u></p> <p>+ Low carbon energy and heating will contribute to more energy efficient homes and reduce expenditure on energy bills. This will benefit everyone, but especially those on low incomes who may struggle with living costs.</p> <p>+ Potential cost savings may also provide more disposable income and reduce levels of stress and anxiety associated with the rising cost of living.</p> <p>+ It is possible that additional jobs opportunities will arise to fulfil this objective.</p> <p><u>Age, Disability</u></p> <p>+ Provision of low carbon energy and heating will also help to improve residents' health, particularly elderly and disabled residents, by reducing exposure to cold and air pollutants.</p>	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.
CG4 Embodied carbon, retrofit and the circular economy	0	0	0	+	0	0	0	0	0	+	<p><u>Deprivation</u></p> <p>+ Retrofitting existing housing stock will contribute to more energy efficient homes and reduce expenditure on energy bills. This will benefit</p>	Appropriate subsidies should be considered to ensure low-income groups can access sustainable retrofitting with no additional financial barriers.

Policy	Impact										Summary of impact on protected characteristics	Mitigation measures / Recommendations
	Sex and gender	Religion/belief	Gender reassignment	Age	Sexual orientation	Disability	Pregnancy/maternity	Marriage/civil partnership	Race	Deprivation		
											<p>everyone, but especially those on low incomes who may struggle with living costs.</p> <p>+ Potential cost savings may also provide more disposable income and reduce levels of stress and anxiety associated with the rising cost of living.</p> <p>+ Retrofitting with a view for longevity will also aid in reducing maintenance costs associated with housing.</p> <p>+ It is possible that additional jobs opportunities will arise to fulfil this objective.</p> <p><u>Age</u></p> <p>+ Retrofitted properties will help to support better quality housing stock now and for future first time buyers.</p>	Retrofitting should not increase property prices in order that first time buyers remain able to buy into the property market and not be priced out.
CG5 Overheating	0	0	0	+	0	+	0	0	0	0	<p><u>Age, Disability</u></p> <p>+ Climate change is likely to result in increased heating events, therefore the prevention of overheating through this policy is essential, especially for elderly, young, and disabled residents who are vulnerable to overheating.</p>	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.
CG6 Managing flood risk	0	0	0	0	0	0	0	0	0	0	<p>+ This policy will contribute to improving climate resilience in the borough through consideration of flood risk in development, and therefore brings benefits for all members of the public, especially those residing in flood zones.</p>	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.
CG7 Sustainable drainage	0	0	0	0	0	0	0	0	0	0	<p>No protected groups are identified as specifically impacted.</p>	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.

Policy	Impact										Summary of impact on protected characteristics	Mitigation measures / Recommendations
	Sex and gender	Religion/belief	Gender reassignment	Age	Sexual orientation	Disability	Pregnancy/maternity	Marriage/civil partnership	Race	Deprivation		
CG8 Water efficient design	0	0	0	0	0	0	0	0	0	0	<p>+ This policy is likely to result in indirect positive effects on water quality due to the outlined measures to minimise surface runoff from sewers. This may indirectly improve local water quality on a small scale, bringing minor benefits to the entire borough.</p> <p>+ Ensuring blue spaces like Lea River Park are well-designed and accessible will maximise opportunities for public use and enjoyment for all borough residents.</p>	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.
CG9 Air quality	0	0	0	+	0	+	+	0	0	0	<p>+ The policy involves encouragement of sustainable movement patterns, including the use of public and active transport modes. Those engaging in active transport will likely experience physical and mental health benefit as a result.</p> <p>+ The policy also contributes to indirect positive effects upon biodiversity through improvements to air quality. Improved environmental surroundings will likely generate positive impacts on mental health for those residing in improved areas.</p> <p><u>Age, Disability, Pregnancy/maternity</u></p> <p>+ Young children, older people, pregnant women, and those with respiratory and underlying health conditions are particularly sensitive to changes in air quality and will benefit from improvements more than other groups.</p>	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.
CG10 Noise and vibration	0	0	0	+	0	+	0	0	0	0	<p>+ This policy will add to the enjoyment of the community for all residents.</p> <p>+ The policy includes measures to minimise construction disturbance which is likely to have minor positive indirect effects on local biodiversity. Improved environmental</p>	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.

Policy	Impact										Summary of impact on protected characteristics	Mitigation measures / Recommendations
	Sex and gender	Religion/belief	Gender reassignment	Age	Sexual orientation	Disability	Pregnancy/maternity	Marriage/civil partnership	Race	Deprivation		
											<p>surroundings will likely generate positive impacts on mental health for those residing in improved areas.</p> <p><u>Age, Disability</u></p> <p>+ People with autism can be especially sensitive to changes in noise. This group will especially benefit from noise mitigation. Children and young people could also be affected if work is undertaken in the vicinity of education facilities.</p>	
CG11 Contaminated land	0	0	0	0	0	0	0	0	0	0	+ This policy will improve the quality of land in the borough, and therefore brings benefits for all members of the public.	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.
People, Places and Spaces												
PS1 Design- and infrastructure-led approach to development	+	0	+	+	0	0	+	0	0	0	<p><u>Sex and Gender, Gender reassignment</u></p> <p>+ The policy outlines community engagement measures to ensure development suits community needs, and gender inclusive design.</p> <p><u>Age, Pregnancy/Maternity</u></p> <p>+ The policy contributes positive impacts to Tower Hamlets as it supports the growing population of the borough.</p> <p>- An increase in housing density through this policy will often support the development of tall buildings. High rise living can be conducive of social isolation and present barriers to suitable open space for all residents, resulting in poor mental health outcomes.</p>	In instances where tall buildings are required to meet high density requirements of this policy, potential for social isolation must be addressed through the provision of high quality private communal open space as well as shared ground floor facilities occupants of the building can use.

Policy	Impact										Summary of impact on protected characteristics	Mitigation measures / Recommendations
	Sex and gender	Religion/belief	Gender reassignment	Age	Sexual orientation	Disability	Pregnancy/maternity	Marriage/civil partnership	Race	Deprivation		
PS2 Tall Buildings	+	0	0	0	0	+	-	-	0	0	<p>+ This policy will benefit the entire borough community.</p> <p>+ Indirect improvements to mental health are made through the communal open space requirements of new developments. Access to open space improves health and mental wellbeing, with increased access to this benefitting the local community.</p> <p>+ The provision of communal open space may enhance local natural capital. The policy also requires development to have no adverse effect on biodiversity in the local area, preserving species and habitats. Improved environmental surroundings will likely generate positive impacts on mental health for those residing in improved areas.</p> <p><u>Disability</u></p> <p>+ Improvements to the accessibility of high rise developments to those with disabilities is likely to improve living standards and reduce social isolation for those who are disabled and living in high rise developments.</p> <p><u>Sex and Gender</u></p> <p>+ The consideration of gender-inclusive design is likely to improve feelings of safety within high rise developments.</p> <p><u>Marriage and civil partnership</u></p> <p>- High rise living can be a socially isolating experience, particularly for those living alone without a partner or family. Limited socialisation opportunities are presented by such living arrangements, with residents subsequently feeling a lack of social support and sense of belonging within the community.</p>	<p>Accessibility must be considered at all stages of tall building design, construction and operation so as to not exclude groups such as wheelchair users.</p> <p>Potential for social isolation must be addressed through the provision of high quality private communal open space as well as shared ground floor facilities occupants of the building can use.</p>

Policy	Impact										Summary of impact on protected characteristics	Mitigation measures / Recommendations
	Sex and gender	Religion/belief	Gender reassignment	Age	Sexual orientation	Disability	Pregnancy/maternity	Marriage/civil partnership	Race	Deprivation		
											<p><u>Pregnancy/maternity</u></p> <p>- There is a high perception of anti-social behaviour in association with communal areas of tall buildings. A low sense of control over the communal setting of one's residence can be linked to poor mental health outcomes. This is particularly significant for parents with young children who may feel the safety of their children is compromised by their residential location.</p> <p>-/+ High rise living can promote barriers to suitable open space for parents with young children. Point J of this policy should go some way to alleviate this risk through the provision of high quality private communal open space, play areas and public realm which occupants of the building can use.</p>	
PS3 Securing design quality	0	0	0	+	0	+	0	0	0	0	<p>+ This policy is likely to result in improved housing, particularly through improvements to privacy for residents, creating habitable rooms and creating residential resilience to overheating. These aspects will help to support better quality housing stock now and for future first time buyers.</p> <p><u>Disability, Age</u></p> <p>+ Accessible and adaptable buildings will improve access for elderly and disabled users who may struggle to move within buildings.</p> <p>+ The policy also ensures the health and wellbeing of vulnerable users, this includes a variety of groups, however predominantly elderly, disabled, or those with long term health conditions.</p>	Securing design quality should not come at the expense of affordable housing, in order that first time buyers and those on lower incomes remain able to buy into the property market and not be priced out, or not have access to quality development.

Policy	Impact										Summary of impact on protected characteristics	Mitigation measures / Recommendations
	Sex and gender	Religion/belief	Gender reassignment	Age	Sexual orientation	Disability	Pregnancy/maternity	Marriage/civil partnership	Race	Deprivation		
PS4 Attractive streets, spaces and public realm	+	0	0	0	0	0	0	0	0	0	<p>+ This policy promotes a range of public spaces for community use within developments, improving the local facilities available for growing communities in Tower Hamlets. This policy will therefore benefit the entire borough community.</p> <p><u>Sex and Gender</u></p> <p>+ The policy also improves safety and reduces the fear of crime through providing well-lit routes at night time, an aspect that is of particular importance to women at night.</p>	Street features and public realm that are frequented by vulnerable groups such as children and low-income groups should consider avoiding locating nearby advertisement content including hot food takeaway and betting.
PS5 Creating inclusive places	+	0	+	+	+	+	+	0	+	0	<p><u>Sex and Gender, Gender Reassignment</u></p> <p>+ This policy involves lighting and signage measures, as well as design to make areas safe for all genders, particularly reducing the fear of crime. Resultant positive effects are through improvements to equalities, ensuring all genders are able to access community spaces equally.</p> <p><u>Sex and Gender, Sexual Orientation, Disability, Race</u></p> <p>+ The policy aims to involve a number of social groups within the design process and utilise co-design. This will improve the nature of spaces and ensure they reflect the needs of the community.</p> <p><u>Age</u></p> <p>+Improving seating in open spaces will provide opportunities for the elderly to sit and rest, improving accessibility of open spaces.</p>	The policy might encourage business and facilities to open up in parks as well as ensure active travel routes increase the busyness of parks in order to minimise idle parks that promote fear in women.
PS6 Heritage and historic environment	0	0	0	+	0	+	+	0	0	0	<p><u>Age</u></p> <p>+ Older people in the Borough are more likely to benefit from protection of a sense of place. A</p>	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific

Policy	Impact										Summary of impact on protected characteristics	Mitigation measures / Recommendations
	Sex and gender	Religion/belief	Gender reassignment	Age	Sexual orientation	Disability	Pregnancy/maternity	Marriage/civil partnership	Race	Deprivation		
											<p>personal sense of place can build with time and association with a particular area.</p> <p><u>Age, Disability, Pregnancy/maternity</u></p> <p>+ Improvements to uneven surfaces will improve the accessibility of historic locations to those who may struggle with historic surfaces, such as the elderly, disabled users, and those with mobility aids, as well as parents with pushchairs.</p>	information once development sites have come forward.
PS7 World heritage sites	0	0	0	+	0	0	0	0	0	0	<p><u>Age</u></p> <p>+ Older people in the Borough are more likely to benefit from protection of a sense of place. A personal sense of place can build with time and association with a particular area.</p>	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.
PS8 Shaping and managing views	0	0	0	0	0	0	0	0	0	0	<p>+ The maintenance of local landscape and views associated with this policy will benefit the entire borough community, particularly not detracting from people's wellbeing and mental health.</p>	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.
PS9 Shopfronts	0	0	0	0	0	+	0	0	0	0	<p>This policy aims to benefit the whole community by promoting a positive visual impact of shopfronts on the street and improving the economic diversity within the Borough at the same time. No protected groups are identified as specifically impacted.</p> <p>+The requirement of shopfronts to not be excessive or visually discordant, including the discouragement of neon and electronic displays is particularly sensitive to those with neurodivergence.</p>	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.

Policy	Impact										Summary of impact on protected characteristics	Mitigation measures / Recommendations
	Sex and gender	Religion/belief	Gender reassignment	Age	Sexual orientation	Disability	Pregnancy/maternity	Marriage/civil partnership	Race	Deprivation		
PS10 Advertisements, hoardings, and signage	0	0	0	0	0	-	-	0	0	0	<u>Disability and pregnancy and maternity</u> - Free standing advertisements can present an obstacle on the footway for disabled people as well as parents using pushchairs.	Advertisement content including hot food takeaway and betting should consider placement away from areas where vulnerable groups such as children and low-income groups may frequent. Appropriate positioning of advertisement and signage to ensure accessibility for disabled groups in public spaces should be considered. Well-designed advertisement can aid in reducing sensory overload for the neurodivergent population of the borough. Enhancement of appearance should not compromise the usability of neurodivergent people.
PS11 Siting and design of telecommunications infrastructure	0	0	0	0	0	0	0	0	0	0	No protected groups are identified as specifically benefiting or disadvantaged by this policy.	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.
Inclusive Economy and Good Growth												
EG1 Creating investment and jobs	0	0	0	0	0	0	0	0	0	+	<u>Deprivation</u> + The policy provides improved job opportunities for all groups of the working population, including those with current low levels of education. With new employment prospects low-income groups in the borough will have greater opportunities to earn and save disposable income. Increased opportunities and new income will likely reduce levels of stress and anxiety associated with the rising cost of living.	Jobs creation must be evenly distributed across space within the borough to ensure all groups are able to easily access employment.

Policy	Impact										Summary of impact on protected characteristics	Mitigation measures / Recommendations
	Sex and gender	Religion/belief	Gender reassignment	Age	Sexual orientation	Disability	Pregnancy/maternity	Marriage/civil partnership	Race	Deprivation		
EG2 New employment space	0	0	0	+	0	0	0	0	0	+	<p>+ New employment spaces will encourage outside investment and increase the number of jobs available in the borough, boosting the local economy. This policy will benefit the entire borough community.</p> <p><u>Age, Deprivation</u></p> <p>+ New employment spaces locating along major public transport routes with good accessibility is particularly beneficial to young and low income groups who likely will not have access to private vehicles to access employment.</p>	New employment spaces should be a diverse and equal mix of office space and spaces for small businesses to thrive.
EG3 Affordable workspace	0	+	0	+	0	0	0	0	+	0	<p><u>Religion, Race</u></p> <p>+ Affordable workspaces will support the generation and maintenance of small businesses, likely providing opportunities for different cultures and improving equalities in the borough overall.</p> <p><u>Age</u></p> <p>+ Affordable workspaces are also beneficial to young people setting up SME's who have a low income to do so.</p>	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.
EG4 Loss and redevelopment of employment space	0	0	0	0	0	0	0	0	0	0	<p>All community members will benefit from the preservation of work spaces and subsequent maintenance of employment opportunities.</p>	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.
EG5 Railway Arches	0	+	0	0	0	0	0	0	+	+/-	<p>+ This policy includes measures to ensure the accessibility to the railway arches by walking and cycling must be included within developments. This contributes to positive effects on accessibility due to walking permeability through the area. By ensuring accessibility of active travel, the overall</p>	The accessibility of disabled groups must also be considered when ensuring the walkability of the area. Footpaths must not be obstructed to allow space for wheelchair users to travel through.

Policy	Impact										Summary of impact on protected characteristics	Mitigation measures / Recommendations	
	Sex and gender	Religion/belief	Gender reassignment	Age	Sexual orientation	Disability	Pregnancy/maternity	Marriage/civil partnership	Race	Deprivation			
											<p>health of the community in the borough will likely improve.</p> <p><u>Deprivation</u></p> <p>+ This policy allows those who rely on active and public transport modes, such as those on low incomes, to reach the area.</p> <p>- By supporting the Railway arches provision of low-cost work spaces that fall outside of District Centres and Central Activity Zones (CAZ) those who are reliant on these spaces for work will not be subject to the same benefits that may be generated by investment in the CAZ as those who can afford workspaces within the designations.</p> <p><u>Religion, Race</u></p> <p>+ Preservation of the railway arches for their varying cultural uses is beneficial to ensuring diversity and equality are upheld in the borough.</p>		
EG5 Data centres	0	0	0	+	0	0	0	0	0	0	<p><u>Age</u></p> <p>+ Improved broadband connections will be beneficial to elderly people suffering from social isolation. Greater opportunities to connect with family and friends virtually will generate positive mental health impacts. Faster broadband will also be beneficial for young people especially students who require the utility for university work.</p>	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.	
Town Centres													
TC1 Supporting the network and hierarchy of centres	0	0	0	+ / -	0	0	0	0	0	0	+	<p>Improvements to centres will likely suit community needs, benefitting the entire borough community. A thriving, diverse community will also help to reduce social isolation for all borough residents.</p>	Developments should seek to improve the public realm.

Policy	Impact										Summary of impact on protected characteristics	Mitigation measures / Recommendations
	Sex and gender	Religion/belief	Gender reassignment	Age	Sexual orientation	Disability	Pregnancy/maternity	Marriage/civil partnership	Race	Deprivation		
											<p><u>Age</u></p> <p>+ Boosted vitality and improvement to the night time economy provides spaces for socialisation, entertainment and culture that young and middle aged groups will directly benefit from.</p> <p><u>Age</u></p> <p>-There is potential for negative effects on the mental wellbeing of local residents, especially the elderly, as a result of the night time economy, and noise during night time hours.</p> <p><u>Deprivation</u></p> <p>+ The policy directly provides opportunity for employment in retail and hospitality across Tower Hamlets, including for night-time workers as a result of the night time economy. A large proportion of town centres in Tower Hamlets provide night time economy areas, improving job opportunities, especially for low-income groups seeking employment.</p>	
TC2 Protecting the diversity, vitality and viability of town centres	0	+	0	0	0	0	0	0	0	0	<p>+ Preserving town centre usage is likely to attract visitors, increase footfall and boost the economy of town centres. This policy will therefore benefit the entire borough community.</p> <p><u>Religion, Race</u></p> <p>+ Diversity preservation will ensure that different communities in the borough have their needs met with specific services and amenities.</p>	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.
TC3 Town centre uses outside centres	0	0	0	0	0	0	0	0	0	0	<p>The policies aim to direct new retail development towards existing centres will likely result in a failure to meet growing demand for retail in areas outside of Metropolitan, District and Neighbourhood Centres. Lowered access to</p>	Demand for retail is high in locations outside of Metropolitan, District and Neighbourhood Centres and is necessary to meet the immediate convenience needs of local people and/or support the

Policy	Impact										Summary of impact on protected characteristics	Mitigation measures / Recommendations	
	Sex and gender	Religion/belief	Gender reassignment	Age	Sexual orientation	Disability	Pregnancy/maternity	Marriage/civil partnership	Race	Deprivation			
												services will be disadvantageous to the wellbeing of residents in these areas.	function of designated employment locations.
TC4 Markets	0	0	0	0	0	0	0	0	+	0	<p><u>Race</u></p> <p>+ Preserving markets ensures a cultural diversity in the borough's townscape and economy, benefitting the entire borough community.</p>	Developments should seek to improve the public realm.	
TC5 Food and drink	0	0	0	+	0	0	0	0	0	0	<p>New eating and drinking facilities are likely to provide places for socialisation which will improve the mental wellbeing of all borough users.</p> <p><u>Age</u></p> <p>+ Under this policy, proposals for hot food takeaway must not be within 400 metres walking distance from an existing or proposed school and/or local authority leisure centre. This inclusion will ensure the physical health and wellbeing of school aged children throughout the borough.</p>	This policy requires a delivery management plan to prevent waiting delivery drivers from acting as obstacles to users, including disabled users.	
TC6 Entertainment uses	0	+	0	+	0	0	0	0	0	0	<p>+ Commercial leisure businesses can act as attractors and support the vitality and viability of town centres. Increase footfall will likely boost the economy of town centres, benefitting the entire borough community.</p> <p><u>Age, Religion/belief</u></p> <p>+ Commercial businesses will not be located in close proximity to a school, sensitive community, or cultural facilities including places of worship. Sensitive receptors making use of these facilities will not be adversely affected by the new presence of commercial businesses.</p>	<p>Developments should seek to improve the public realm.</p> <p>Hot food takeaway and gambling premises should consider placement away from areas where vulnerable groups such as children and low-income groups may frequent.</p>	

Policy	Impact										Summary of impact on protected characteristics	Mitigation measures / Recommendations
	Sex and gender	Religion/belief	Gender reassignment	Age	Sexual orientation	Disability	Pregnancy/maternity	Marriage/civil partnership	Race	Deprivation		
TC7 Evening and night-time economy	+	0	+	+	0	+	0	0	0	+	<p><u>Age, Disability</u></p> <p>+ People can be especially sensitive to noise disturbance due their age or having disabilities or neurodivergence, such as autism. This policy will allow the planning system to mitigate noise impacts of a vibrant evening economy.</p> <p><u>Sex and Gender, Race</u></p> <p>+ A vibrant evening economy requires additional safety measure to be put in place. This could help to protect people vulnerable to crime at night such as women, LGBTQ+ people and people with different ethnicities. It is noted that the policy will only allow proposals to be considered where there is a high level of public transport accessibility.</p> <p><u>Deprivation</u></p> <p>+ Facilitating the evening economy will bring economic benefits to the borough in terms of employment and income.</p>	The planning process and enforcement of conditions should consider sensitive receptors in the area on a case-by-case basis.
TC8 Short-stay accommodation	0	0	0	0	0	0	0	0	0	+	<p>+ This policy promotes visitors to Tower Hamlets and is likely to improve the visitor economy, benefitting the entire borough community, without undermining housing allocation, and therefore reducing housing availability.</p> <p>- The policy states that development proposals for short-stay accommodation must not compromise the supply of C3 self-contained homes only. Alternative housing including family-sized homes and affordable housing may therefore be threatened by short-stay accommodation development.</p>	Ensure accessibility standards are adhered to in short-stay accommodation.

Community Infrastructure

Policy	Impact										Summary of impact on protected characteristics	Mitigation measures / Recommendations
	Sex and gender	Religion/belief	Gender reassignment	Age	Sexual orientation	Disability	Pregnancy/maternity	Marriage/civil partnership	Race	Deprivation		
C1 Supporting community facilities	0	0	0	+	0	0	+	0	0	0	<p>+ The policy outlines the maintenance and enhancement of community facilities, including healthcare and sports and leisure facilities. This will likely improve physical health through encouraging physical activity, as well as improving mental wellbeing through improving spaces for socialisation and encouraging activity for all community members. This policy will encourage a sense of community and reduce social isolation by maintaining existing facilities, and prioritising new development in accessible locations.</p> <p><u>Age, Pregnancy/Maternity</u></p> <p>+ Older people and pregnant women or parents will particularly benefit from improved provision of and support from health and social care facilities, pharmacies.</p>	The policy should ensure that improvements to existing community facilities are made evenly across space in the borough so that all residents have access to improved facilities.
C2 Existing community facilities	0	0	0	+	+	0	0	0	0	0	<p>+ The retention and enhancement of existing communities, as well as the use of temporary facilities while existing facilities are closed for extended periods of time, will be beneficial to all borough community members.</p> <p><u>Disability</u></p> <p>+ This policy involves the development of accessible, inclusive new facilities, including allowing public access. This is likely to improve access to facilities to all groups of the public, including disabled users.</p> <p><u>Age</u></p> <p>+ Where school extensions are proposed and the development of play spaces is included, young children will experience positive mental and physical health benefits.</p>	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.

Policy	Impact										Summary of impact on protected characteristics	Mitigation measures / Recommendations
	Sex and gender	Religion/belief	Gender reassignment	Age	Sexual orientation	Disability	Pregnancy/maternity	Marriage/civil partnership	Race	Deprivation		
C3 New and enhanced community facilities	0	0	0	+	0	0	0	0	+	+	<p>+ This policy will bring about benefits for the entire borough community in the form of improved physical health through providing new community facilities and leisure facilities. This also improves mental wellbeing through new social facilities.</p> <p><u>Age</u></p> <p>+ New early education and care facilities will also be located in areas of acceptable air quality, indirectly improving health. This is particularly of note as young people and older people are most at risk of respiratory illnesses such as asthma due to poor air quality.</p> <p><u>Race</u></p> <p>+ Improvements to services and access to them is particularly important to the Bangladeshi community within the borough, who demonstrate a prioritisation of improved services and activities for young people, access to a place of worship, access to healthy eating programmes and public transport facilities like bus stations.</p>	New facilities should be located in accessible areas to local residents and working communities, contributing to positive effects on accessibility.
C4 Public houses	0	0	0	+	0	0	0	0	0	0	<p>+ This policy preserves public houses and provides beneficial community spaces and socialisation venues for the entire local population.</p> <p><u>Age</u></p> <p>+ Older people in the Borough are more likely to benefit from protection of a sense of place. A personal sense of place can build with time and association with a particular area or venue, and so the preservation of public houses is beneficial. Young people, especially students who may also experience loneliness and social isolation will also experience positive effects to socialisation opportunities through this policy.</p>	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.

Policy	Impact										Summary of impact on protected characteristics	Mitigation measures / Recommendations
	Sex and gender	Religion/belief	Gender reassignment	Age	Sexual orientation	Disability	Pregnancy/maternity	Marriage/civil partnership	Race	Deprivation		
											- No mitigation against additional noise pollution as a result of Public Houses is set out by this policy, and so adverse effects on nearby residential receptors can be expected.	
C5 Arts and culture facilities	0	0	0	0	0	0	0	0	0	0	+ Preserving arts and culture facilities ensures diversity is maintained and enhanced in the borough, benefitting all community members.	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.
Biodiversity and Open Space												
BO1 Green and blue infrastructure	+	0	0	+	0	0	+	0	0	+	<p>+ The community will benefit from reducing pollution, improving air quality, enhancing biodiversity, screening noise, improving natural drainage, reducing flood risk, providing benefits to mental and physical health. The promotion of space for cultural activities under this policy will also be beneficial to community cohesion throughout the borough.</p> <p><u>Deprivation</u></p> <p>+ Access to open space is particularly beneficial to low income groups who may not have access to privately owned green space.</p> <p><u>Pregnancy and maternity</u></p> <p>+ Green spaces, particularly those with play spaces included are also beneficial to parents with young children as it enables them to access opportunities for both physical activity and socialisation.</p> <p><u>Sex and Gender, Age</u></p> <p>+ Inter-generational open space with a range of activity spaces included are beneficial to children</p>	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.

Policy	Impact										Summary of impact on protected characteristics	Mitigation measures / Recommendations
	Sex and gender	Religion/belief	Gender reassignment	Age	Sexual orientation	Disability	Pregnancy/maternity	Marriage/civil partnership	Race	Deprivation		
											and young people, as well as adults and the elderly, providing spaces for various sport types and increasing physical activity opportunities. Additionally, designing spaces with women and girls in mind will likely increase the feelings of safety in open spaces and encourage physical activity and socialisation in these spaces.	
BO2 Open spaces and the green grid networks	0	0	0	+	0	+	+	0	+	+	<p><u>Age</u></p> <p>+ Preservation and creation of open space will benefit younger people by providing quality recreational space.</p> <p><u>Disability</u></p> <p>+ Green spaces provide particular benefits to people seeking to use these areas for management mental health and/or stress.</p> <p><u>Pregnancy/maternity</u></p> <p>+ Quality green space is important for parents with push chairs. Play areas benefit this group by providing a safe recreational space for children.</p> <p><u>Deprivation</u></p> <p>+ High quality parks and open spaces will benefit people living in high density residential areas who may not have access to private gardens or outside space.</p> <p><u>Race</u></p> <p>+ Access to open space is especially important to the Bangladeshi community, who currently are the most likely group in the borough to say that they do not have access to spaces with opportunities for play and recreation, the main reason being the lack of parks and green spaces in their local area.</p>	<p>New parks and open spaces should be accessible to all members of the public. Design should especially consider the safety of women and young girls by including appropriate lighting, accessible pathways and access and egress points. The policy might encourage business and facilities to open up in parks as well as ensure active travel routes increase the busyness of parks in order to minimise idle parks that promote fear in women.</p> <p>Accessibility and safety could be improved in existing spaces by providing lighting, accessible signage, and auxiliary aids to people with reduced mobility.</p> <p>Accessible surfacing should be considered for mobility aid users and people with mobility restrictions.</p> <p>Opportunities for sensory stimulation should be maximised to ensure inclusive enjoyment of spaces.</p> <p>Where practicable, sensory planting should be encouraged to aid the neurodiverse population in the borough.</p>

Policy	Impact										Summary of impact on protected characteristics	Mitigation measures / Recommendations
	Sex and gender	Religion/belief	Gender reassignment	Age	Sexual orientation	Disability	Pregnancy/maternity	Marriage/civil partnership	Race	Deprivation		
BO3 Water spaces	0	0	0	0	0	0	0	0	0	0	+ Improved public access to high quality water spaces will be beneficial to the mental wellbeing of the community in the borough.	Public access should consider the needs of people with reduced mobility, and auxiliary aids and accessible signage should be used.
BO4 Biodiversity and access to nature	0	0	0	0	0	+	0	0	0	+	<p>This policy aims to provide benefits to all members of the public.</p> <p><u>Disability</u></p> <p>+ The maintenance and enhancement of a greener landscape ecological value can add to sense of place. Improved environmental surroundings will likely generate positive impacts on mental health for those residing in improved areas, particularly people seeking to manage mental health and/or stress.</p> <p><u>Deprivation</u></p> <p>+ A greener urban landscape will benefit people living in high density residential areas who may not have access to private gardens or outside space.</p>	Public access should consider the needs of people with reduced mobility, and auxiliary aids and accessible signage should be used.
BO5 Urban greening	0	0	0	0	0	0	0	0	0	+	<p>Additional planting around the borough will improve the environmental surroundings, contributing to improved mental wellbeing for all community members.</p> <p><u>Deprivation</u></p> <p>+ A greener urban landscape will benefit people living in high density residential areas who may not have access to private gardens or outside space.</p> <p>+ The provision of allotments will be particularly beneficial to low income groups who do not have access to private gardens with which to grow food crops for healthy living purposes.</p>	Where practicable, sensory planting should be encouraged to aid the neurodiverse population in the borough.

Policy	Impact										Summary of impact on protected characteristics	Mitigation measures / Recommendations
	Sex and gender	Religion/belief	Gender reassignment	Age	Sexual orientation	Disability	Pregnancy/maternity	Marriage/civil partnership	Race	Deprivation		
BO6 Play and recreation spaces	0	0	0	+	0	+	+	0	0	+	<p><u>Pregnancy/maternity</u></p> <p>+ Quality recreational spaces are important for parents in entertaining and socialising children. Play areas benefit this group by providing a safe recreational space for children.</p> <p><u>Age, Disability</u></p> <p>+ Play is an important component of the physical and mental development of children. Creating safe spaces for children to socialise and explore will benefit the overall health of the next generation in the borough. This includes providing spaces for disabled children to play and utilise play equipment, as well as providing quiet seating and visual aids, ensuring disabled children are able to utilise play spaces and socialise.</p> <p><u>Deprivation</u></p> <p>+ Providing play space nearby to community amenities will benefit people living in high density residential areas, or areas of high deficiency to play space, who may not have access to private gardens or outside space.</p>	<p>Recreational spaces should be accessible by pushchair so parents with younger children are still able to access facilities.</p> <p>Accessible surfacing should be considered for mobility aid users and people with mobility restrictions.</p> <p>Opportunities for sensory stimulation should be maximised to ensure inclusive enjoyment of spaces.</p> <p>The policy might encourage business and facilities to open up in play and recreational spaces as well as ensure active travel routes increase the busyness of parks. A busier, more vibrant environment will lessen the prevalence of idle parks that promote fear in women, especially mothers.</p>
BO7 Food Growing	0	0	0	0	0	0	0	0	0	+	<p>+ Food growing can generate opportunities for socialisation and cross-cultural engagement in the community, benefitting the mental wellbeing of all those taking part.</p> <p><u>Deprivation</u></p> <p>+ Community food growing may be helpful to those living on low incomes in the area.</p> <p>+ The provision of allotments will be particularly beneficial to low income groups who do not have access to private gardens with which to grow food crops for healthy living purposes.</p>	<p>Food growing sites should be located in areas of best air quality in order that food grown is of a high standard and achieves good dietary nutrition and health.</p>

Policy	Impact										Summary of impact on protected characteristics	Mitigation measures / Recommendations
	Sex and gender	Religion/belief	Gender reassignment	Age	Sexual orientation	Disability	Pregnancy/maternity	Marriage/civil partnership	Race	Deprivation		
Movement and Connectivity												
MC1 Sustainable transport	+	0	0	0	0	+	0	0	+	+	<p>+ The encouragement of active travel results in direct positive effects for the physical and mental health of the population. A modal shift away from public transport will also likely reduce air pollution, indirectly positively impacting physical health.</p> <p><u>Disability</u></p> <p>+ This policy is likely to improve access to all users, including those with mobility issues.</p> <p><u>Deprivation</u></p> <p>+ Improving public and active transport also allows those on low incomes to access further areas of the Borough. The policy aims to reduce severance and increase permeability across the Borough. Greater ease of transport will improve employment opportunities for those unable to afford private transport in the borough.</p> <p><u>Sex and gender, Race</u></p> <p>+ Improvements to the safety and accessibility of active transport modes such as cycling will encourage uptake by less frequent users such as women and ethnic groups.</p>	<p>Cycle infrastructure should be designed in line with LTN 1/20 Cycle Infrastructure Design. This will ensure that Cycle tracks and footways are designed to be perceived as wholly separate facilities, ensuring the safety of both pedestrian and cyclist users.</p> <p>In order to successfully encourage the uptake of public transport, bus stops should ideally be located so that nobody in the neighbourhood is required to walk more than 400 metres from their home as per the governments Guide to Best Practice on Access to Pedestrian and Transport Infrastructure.</p>
MC2 Active travel and healthy streets	+	0	0	+/-	0	+/-	+	0	+	+	<p><u>Age</u></p> <p>+ Older people could particularly benefit from easier active travel, due to the associated health benefits.</p> <p><u>Disability</u></p> <p>+ Better connectivity between footways/cycleways and public transport will particularly benefit people who are unable to cycle.</p>	<p>Active travel infrastructure should be accessible and inclusive.</p> <p>Cycleways should provide enough space for adapted cycles such as tricycles, tandems and wheelchair cycles.</p> <p>Consideration should be made for removing other barriers towards active travel for disabled people, such as affordability. The council should work with</p>

Policy	Impact										Summary of impact on protected characteristics	Mitigation measures / Recommendations
	Sex and gender	Religion/belief	Gender reassignment	Age	Sexual orientation	Disability	Pregnancy/maternity	Marriage/civil partnership	Race	Deprivation		
											<p><u>Age/ Disability</u></p> <p>- Implementing measures that encourage reduced car dependency could impact on the ability of those with limited mobility to access services.</p> <p>+ Segregating pedestrian and cycle lanes will improve the safety of users, particularly those who may be hard of hearing or may not be able to see other users. This will improve safety for these users, particularly elderly and disabled users and parents with pushchairs.</p> <p><u>Deprivation</u></p> <p>+ Active travel brings benefits that add to the general health and wellbeing of the community.</p> <p><u>Sex and gender, Race</u></p> <p>+ Improvements to the safety and accessibility of active transport modes such as cycling will encourage uptake by less frequent users such as women and ethnic groups.</p>	<p>charities and other representative groups to help lower the cost of adapted cycles.</p> <p>It is likely that other forms of sustainable travel will be prevalent in the future, such as electric scooters. Parking and facilities for these schemes should be accessible and not present physical barriers to users.</p>
MC3 Impacts on the transport network	+	0	+	+	0	+	0	0	0	0	<p>This policy considers improvements to air quality through new developments, generating positive impacts on the respiratory health of the boroughs population.</p> <p><u>Sex and gender, Gender reassignment, Age, Disability</u></p> <p>+ The inclusion of both transport assessments and Active Travel Zone (ATZ) assessments will consider safety and night-time uses of active travel routes. This will assist in developing routes where users feel safe, and encourage utilisation of these routes for vulnerable groups, including women and girls, gender diverse people, children and older people, and people with disabilities.</p>	<p>No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.</p>

Policy	Impact										Summary of impact on protected characteristics	Mitigation measures / Recommendations
	Sex and gender	Religion/belief	Gender reassignment	Age	Sexual orientation	Disability	Pregnancy/maternity	Marriage/civil partnership	Race	Deprivation		
MC4 Parking and permit-free	0	0	0	-/+	0	-/+	-/+	0	0	-/+	<p>This policy involves the provision of electric vehicle (EV) charging in new developments. Encouragement of sustainable vehicles usage is likely to reduce GHGs from private vehicles, improving air quality and the overall respiratory health of the population. Provision is also supported for disabled parking.</p> <p><u>Deprivation</u></p> <p>+ The policy also includes requirements for secure cycle parking which is likely to reduce bicycle theft in Tower Hamlets. This is beneficial for those who's only accessible mode of transport as a result of low-income is cycling.</p> <p>- This policy supports the maximisation of parking in some locations with low transport accessibility. This could see the increase in private vehicle use in certain locations, rather than support improvements to sustainable transport. This may disproportionately affect lower income groups.</p> <p><u>Age and Disability and Pregnancy and maternity</u></p> <p>- EV charging can present barriers to the elderly and those with disabilities, through trailing cables, parking bays being too narrow.</p> <p>- The policy outlines car free development and a reduction in residential car parking within areas of good public transport accessibility. This may restrict accessibility for those with disabilities parents with pushchairs who may require use of a</p>	<p>It is recommended that the Purple Badge Scheme is implemented to ensure there will be no negative impacts on protected groups, such as disabled people.</p> <p>Cycle parking should be high-quality and suitable for a range of cycles including adapted cycles and cargo bikes as per the London Cycling Design Standards.</p> <p>Management should protect priority bays to maintain accessibility for protected groups.</p> <p>EV charging points should adhere to the British Standards Institution's Electric vehicles Accessible charging – Specification (PAS 1899:2022)²².</p>

²² British Standards Institution's Electric vehicles Accessible charging – Specification (PAS 1899:2022) [online] available at: <https://www.bsigroup.com/en-GB/standards/pas-1899/>

Policy	Impact										Summary of impact on protected characteristics	Mitigation measures / Recommendations	
	Sex and gender	Religion/belief	Gender reassignment	Age	Sexual orientation	Disability	Pregnancy/maternity	Marriage/civil partnership	Race	Deprivation			
												car and therefore limit accessibility, disproportionately affecting these groups.	
MC5 Sustainable delivery, servicing and construction	0	0	0	0	0	0	0	0	0	0	0	This policy considers improvements to air quality through new developments using sustainable freight through water, rail and road (zero emission vehicles), generating positive impacts on the respiratory health of the boroughs population.	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.
Reuse, Recycling and Waste													
RW1 Managing our waste	0	0	0	0	0	0	0	0	0	0	+	<u>Deprivation</u> + Maximising the capacity and efficiency of waste facilities will improve the streetscape around flats and higher density residential areas. This could bring benefits to aesthetics, accessibility and perception of crime by reducing street waste storage areas.	No mitigation measures have been outlined for this policy. Mitigations are likely to be based on site specific information once development sites have come forward.
RW2 New and enhanced waste facilities	0	0	0	0	0	0	0	0	0	0	0	+ The integration of new waste facilities into local landscape settings will likely result in minor positive effects on landscape setting. Improved environmental surroundings will likely generate positive impacts on mental health for those residing in improved areas.	New waste facilities to be constructed and utilise existing brownfield sites to reduce negative biodiversity and landscape impacts associated with new development.
RW3 Waste collection facilities in new development	0	0	0	0	0	0	0	0	0	0	0	+ Through improved collection systems and encouragement of recycling, reductions in overall waste generation brought about by this policy is likely to bring indirect minor improvements to the landscape and biodiversity of the borough. Improved environmental surroundings will likely generate positive impacts on mental health for those residing in improved areas.	Internal waste management spaces will further improve the streetscape around flats and higher density residential areas. Bringing waste facilities inside is also beneficial to disabled groups who suffer as a consequence of footpath obstruction resulting from outdoor waste management.
