### Application for Planning Permission

*[click here for case file](#)*

<b>Reference</b>	PA/24/00368
<b>Site</b>	Land comprising Harriot, Apsley & Pattison Houses and the Redcoat Community Centres, Stepney Green, London, E1
<b>Ward</b>	Stepney Green
<b>Proposal</b>	Redevelopment of the site comprising the demolition of existing buildings (including Harriot House, Apsley House, Pattison House, The Redcoat Centre and Redcoat Community Centre) to provide 407 residential units (Class C3) across buildings ranging in height from 4-8 storeys and community centre building of 1,167m <sup>2</sup> GIA (Class E (e-f), Class F1 (e-f), Class F.2 (b)), together with associated landscaped communal amenity space, accessible car parking, secure cycle parking spaces and refuse/recycling storage facilities.
<b>Summary Recommendation</b>	Grant planning permission subject to conditions and planning obligations
<b>Applicant</b>	London Borough of Tower Hamlets
<b>Architect/agent</b>	Renew Planning Limited
<b>Case Officer</b>	Kevin Crilly
<b>Key dates</b>	- Application registered as valid on 04/03/2024 - Public consultation finished on 18/04/2024

---

### EXECUTIVE SUMMARY

The application proposes the demolition of Harriott House, Apsley House and Pattison House, and The Redcoat Centre and the Redcoat Community Centre, and the construction of new residential accommodation, in the form of 407 residential units, and 1,167m<sup>2</sup> of community use space, together with extensive landscaping and outdoor amenity space.

The application proposes amendments to the scheme approved under planning permission PA/21/02703, dated 09/08/2023 [hereinafter “the Extant Scheme”]. The development now proposed, in terms of its bulk, scale, form, layout and mix of uses, is substantially similar to the Extant Scheme. The primary changes comprise the relocation of the community floorspace to a standalone building on the south-east corner of the site (with minor associated changes to the residential floorspace), the provision of second staircases to the taller blocks and a marginal increase in height of blocks to facilitate blue/ green roofs.

In line with ‘The Mayors Good Practice Guide to Estate Regeneration’, the development would re-provide 36 existing social rented (secure tenant) homes and 28 resident leaseholder

(shared equity) homes; and in addition would optimise the site capacity to deliver a further 343 new homes, with a 40.5% uplift in affordable housing (ie excluding re-provided homes). Overall, 53.3% of the proposed habitable rooms would be affordable. All proposed homes would meet the London Plan's minimum space standard and would have private amenity space provision that meets minimum standards.

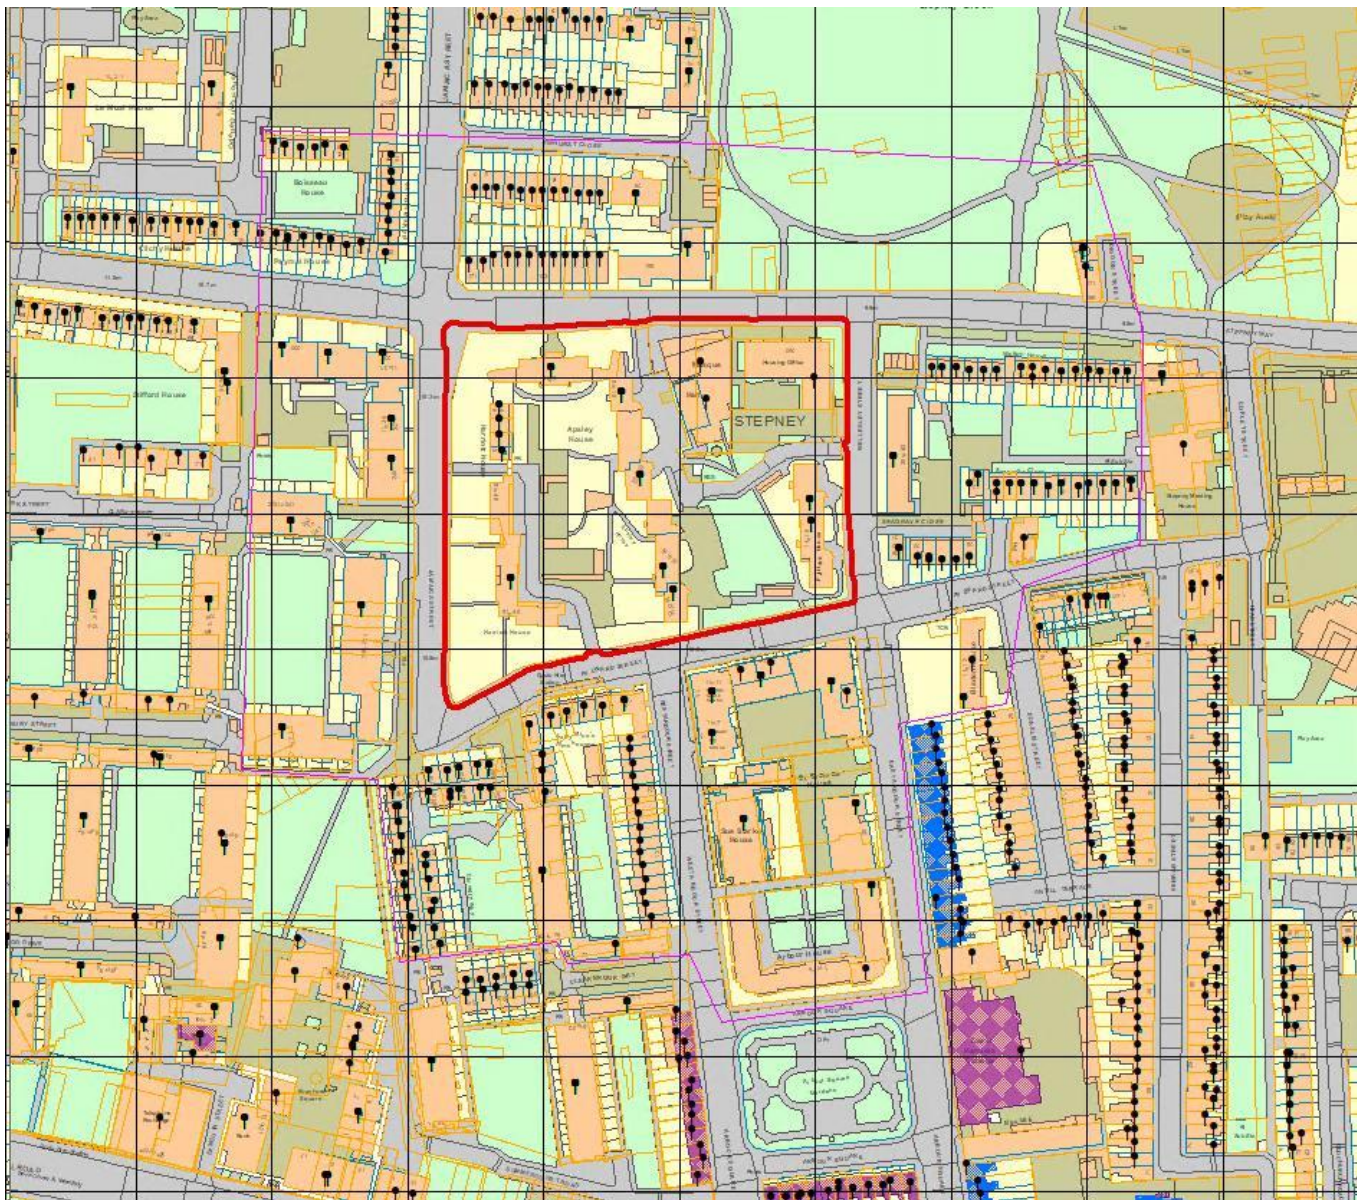

The proposed land use is strongly supported and would assist the Council in meeting its housing targets. In particular, the overall provision of 175 affordable homes, including the re-provision, would serve the needs of local residents.

The scale, form, detailed design and materiality of the development would respond appropriately to the character and appearance of the surrounding streets. Two communal courtyards for the future residents are proposed, along with a public 'inner street' to provide a convenient pedestrian and cycle route from Stepney Way to Aylward Street, improving connectivity in the area. Dedicated child play space would be introduced, which does not exist on the site at present. There would also be significant tree planting.

The proposal would have an acceptable impact on neighbouring residential amenity. The development would provide policy compliant cycle storage wheelchair accessible parking; and would meet Council policy on net zero carbon and biodiversity net gain.

This application has been considered against the development plan policies within the Tower Hamlets Local Plan 2031 (January 2020) and London Plan (2021); and against the National Planning Policy Framework and all other material considerations.

Officers recommend the proposed development be granted planning permission, subject to conditions and financial and non financial obligations.

This site map displays the Planning Application Site Boundary and the extent of the area within which neighbouring occupiers / owners were consulted as part of the Planning Application Process

**London Borough  
of Tower Hamlets**

Scale : 50m grid squares

Date: 04 June 2024

## 1. **SITE AND SURROUNDINGS**

- 1.1 The application site is 1.78 hectares in area. It is bounded by Stepney Way to the north, Jamaica Street to the west, Aylward Street to the south and Wellesley Street to the east. The site contains three linear housing blocks- Harriott House to the west, Apsley House to the centre and Pattison House to the east. The housing blocks range between 4 and 8 storeys high and date from 1954. In addition, there are two council owned community buildings on the north east corner of the site.
- 1.2 There are 100 homes on the site. These currently comprise of 31 Non-Resident Leaseholder (NRL) homes, 28 Resident Leaseholder (RL) homes, 36 Secure Tenant- Social Rented (ST) homes and 5 temporary accommodation (TA) homes. Figure one below outlines the existing uses, buildings and floorspace and homes on the site.
- 1.3 The community buildings consist of The Redcoat Centre, a single-storey building jointly occupied by the Council's Adult Services department and an organisation (Vibrance) providing services for vulnerable adults, and the Redcoat Community Centre, comprising 4 conjoined single-storey portacabin structures which are used by a local prayer group.

<b>Building</b>	<b>Existing use</b>	<b>GIA Sqm</b>	<b>No. homes</b>
Apsley House	Residential (C3)	9809	36
Harriott House	Residential (C3)		48
Pattison House	Residential (C3)		16
Redcoat Centre	Community use (F2)	460	N/A
Redcoat Community Centre	Community use (F2)	660	N/A
Total floorspace		10,929	100

***Figure one – existing development floorspace***

- 1.4 The remainder of the site consists of a mixture of hardstanding areas for servicing and vehicular access and parking, and soft landscaping in the form of vertical sections of grass running north to south between the housing blocks. The hardstanding area incorporates 58 car parking spaces.

**Figure two: Existing Site Plan**

**Figure three: Aerial View of the Site**

- 1.5 The surrounding area is residential in character, with housing estates surrounding it on all four sides. To the north-east of the site lies Stepney Green Park, a public green space. The height of the buildings within the surrounding context are generally similar to those on the site and predominantly between three and eight storeys. The buildings to the south of the site were generally built in the 1950s and before, whilst the buildings to the south and west are slightly more recent having been built between the 1960s and 1990s. There is little variety in the material palette of surrounding properties, with a predominance of brick facades, in particular buff brick.
- 1.6 The site does not lie within a conservation area, but there are a number of conservation areas close by including the Albert Gardens Conservation Area which is adjacent to the site on the southern side of Aylward Street. This Conservation Area incorporates the retained parts of the former Arbour Square Police Station and Magistrates Court building situated between West Arbour Street and East Arbour Street (now used as housing).

**Figure four - Albert Gardens Conservation Area Boundary (red line boundary around the site)**

- 1.7 The site is situated within a low probability flood risk area (Flood Zone 1) and Air Quality Management Area (AQMA), which was declared for the whole of the borough in 2002 due to high concentrations of NO<sub>2</sub> and particulate matter. The site is not situated within an Archaeological Priority Area.
- 1.8 The site has a PTAL (Public Transport Accessibility Level) of 4 and 5, which is very good, on a scale of 0-6b with 0 being the worst. There are 5 bus routes within 650 metres of the site.

Limehouse Station is 950 metres south east of the site providing access to National Rail services and Docklands Light Railway (DLR) services between Bank and Lewisham, Bank and Woolwich Arsenal and Tower Gateway and Beckton. It is an approximately 11-minute walk to Stepney Green Underground Station and an approximately 13-minute walk to Whitechapel Station.

## 2 **PROPOSAL**

- 2.1 This application proposes amendments to the Extant Scheme, which was resolved to be approved by the Development Committee on 21<sup>st</sup> March 2022 and finally approved on 9<sup>th</sup> August 2023. A full description of the current proposal follows in the paragraphs below. An outline of the differences between the current proposal and the Extant Scheme can be found at the end of this section.
- 2.2 The applicant proposes the demolition of the existing buildings on the site and the erection of new buildings ranging between 4-8 storeys in height, to provide 407 new homes and 1,167m<sup>2</sup> (GIA) of community use floorspace (Class E (e-f), Class F1 (e-f), Class F.2), together with landscaped communal amenity spaces.
- 2.3 The site would be laid out in the form of two perimeter urban blocks, each constructed around a central communal courtyard, with a new generous pedestrian walkway which would cut through the centre of the site in a north/ south orientation (referred to as the 'inner street'). Each perimeter block would comprise of inter-linked housing blocks. The 7 housing blocks to the west of the inner street (Development Area A) would front Stepney Way (north), Jamaica Street (west) and Aylward Street (south); and 6 housing blocks to the east of the inner street (Development Area B) would front Stepney Way (north), Wellesley Street (east) and Aylward Street (south).
- 2.4 All of the blocks would be residential, with the exception of the Redcoat Community Centre and Mosque (labelled 'RCCM' in figure 2 below), which would occupy a detached building on the south east corner of the site.

**Figure five – proposed site plan**

- 2.5 In terms of the residential element of the scheme, the proposal would re-provide 64 of the existing homes on the site and in addition would provide a further 343 new homes. The 64 re-

provided homes would comprise the 28 existing Resident Leaseholder (RL) homes (as 'shared equity' units) and the 36 Secure Tenant- social rented (ST) homes. Of the additional 343 homes proposed, 111 would be affordable, amounting to a 40.5% uplift in affordable housing by habitable room; and an overall provision of 53.3% affordable housing by habitable room.

2.6 The proposed development would be phased to enable the existing residents (resident leaseholders and secure tenants) to move only once as part of an agreed decant strategy and without a need to temporarily move off-site. The phasing strategy is as follows:

- Phase 1: Demolition of existing adult social care building (including some garages and pram sheds) and construction of Blocks A3, A4 and B2 alongside the new Community building. These blocks will contain all the proposed re-provided homes. The intention is that the local prayer group currently occupying the temporary portacabin structures will move into the new community space being provided within phase 1.
- Phase 2: Once all the re-provided homes are occupied, the remaining housing blocks on the site will be demolished to enable the wider site construction, including the formation of the inner street and all associated landscape areas.

2.7 The proposed community space is expected to be occupied by the incumbent local prayer group. The remaining tenants (comprising the Council's Adult Services department and an organisation (Vibrance) providing services for vulnerable adults) will be relocated into alternative premises elsewhere in the borough.

2.8 The development would provide 35 disabled persons car parking spaces- 33 spaces would be within a ground level car park and a further 2 spaces would be located off the inner street. Cycle parking is also provided at ground floor in each of the housing blocks.

2.9 The development would provide amenity areas comprising a mixture of verdant communal amenity space, children's play space, public realm and general hard and soft landscaping.

2.10 The principle changes proposed within this application, compared to the Extant Scheme are as follows :

- **Community floorspace** – Within the Extant Scheme, the community floorspace was at ground floor level within block B2, at the north- east corner of the site. As now proposed, the community floorspace would be located within a standalone building on the south- east corner of the site. The community centre would extend over 4 storeys with its main entrance fronting Aylward Street. It would continue to be earmarked for the occupancy by the Redcoat Community Centre and Mosque.
- **Second staircases** – second staircases are now proposed to all buildings over 18m, to provide a secondary means of escape (and access) in case of emergency.
- **Residential floorspace** – to facilitate the relocation of the community floorspace, the number of dwellings proposed has been reduced from 412 within the Extant Scheme to 407. The number of additional affordable homes is proposed to increase, from 110 within the Extant Scheme to 111.
- **Building heights** - Minor increases in the heights of most of the blocks (by a maximum of 900mm) are now proposed to facilitate the provision of blue/ green roofs for sustainable urban drainage.

### **3. RELEVANT PLANNING HISTORY**

- 3.1 PA/21/02703 – Redevelopment of the site comprising demolition of existing buildings (including Harriott House, Apsley House, Pattison House, The Redcoat Centre and Redcoat Community Centre) to provide 412 residential units (Class C3) and 1,192m<sup>2</sup> GIA of community use (Class E (e-f), Class F1 (e-f), Class F.2 (b)) provided across buildings ranging in height from 4-8 storeys, together with associated landscaped communal amenity space, accessible car parking, secure cycle parking spaces and refuse/recycling storage facilities. Permitted (09/08/2023)
- 3.2 PF/20/00170 - Phased demolition of all existing buildings on the site and the construction of up to 12 housing blocks (anticipated to be in separate configurations of 6 x inter-linked blocks each) ranging in height from 3 - 8 storeys including also the possibility of a 12-storey marker building on the north - eastern part of the site and providing approximately 450 residential units and 1,000m<sup>2</sup> GIA community use (which is expected to be occupied by the incumbent local prayer group)
- 3.3 PA/20/01570 - Request for an Environmental Impact Assessment (EIA) Screening Opinion pursuant to Regulation 6 of The Town and Country Planning (Environmental Impact Assessment) Regulations 2017 ('the EIA Regulations') in respect of a planned estate regeneration scheme relating to the 7 housing blocks (known collectively as Harriott House, Apsley House and Pattison House) bounded by Stepney Way the north, Jamaica Street to the west, Aylward Street to the south and Wellesley Street to the east and also including the Redcoat Centre and Redcoat Community Centre – EIA not required (13/08/2020)
- 3.4 PA/10/01857 - The retention of single-storey porta-cabin structures to the south and the north of the Redcoat Community Centre to provide community facilities (Use Class D1) – permitted (26/10/2010)
- 3.5 PA/06/02253 – Retention of a single storey extension to the south of the existing Redcoat Community Centre (Phase 1) and erection of single storey extension to the north of the existing Redcote Community Centre (Phase 2) to provide 324 sq m of additional community facilities (Class D1 Use) for a temporary period – permitted (11/04/2007)
- 3.6 PA/05/00166 - Extension to the existing community building (D1 use class) by the positioning of a 145sqm portacabin unit alongside the existing building and creation of path to the new main entrance – permitted (24/03/2005)
- 3.7 PA/04/01135 - Extension to the existing community building (D1 use class) by the positioning of two pre-fabricated units at the rear and creation of path to the proposed new entrance – permitted (04/11/2004)

### **4. PUBLICITY AND ENGAGEMENT**

#### **Pre-application**

- 4.1 The submitted Statement of Community Involvement (SCI) sets out the non-statutory consultation undertaken by the applicant and how this influenced the application and revisions to it. The consultation process had three phases to it: the pre-ballot phase, the ballot, and the post-ballot phase. Since July 2018 the Mayor of London has required any landlord seeking GLA funding for estate regeneration projects which involve the demolition of social homes to show that residents have supported their proposals through a ballot. The Residents Ballot result revealed widespread support for the plans with 98% of residents (based on a 93% turnout of eligible voters) voting for the proposed development.
- 4.2 The pre-ballot consultation phase took place between June and December 2019 and consisted of a number of drop-in events, a newsletter with regular communication about the proposed scheme, a website dedicated to the scheme and the establishment of a 'HAP Residents' Panel'. Post the ballot, another phase of consultation took place. This phase consisted of a series of online consultations, newsletters and a children-focused event.

- 4.3 According to the SCI, the key concern that continued to emerge throughout the consultation process related to the proposals for the scheme to be 'car free'.
- 4.4 Consultations were held with the RCCM, estate residents and residents of the wider area in respect of the changes to the design which are the subject of this application, with the latest resident consultation held in February 2024.
- 4.5 Further details on the exact nature of the pre-application consultation events and the feedback given by community stakeholders can be found in the submitted SCI.

### **Statutory application consultation**

- 4.6 Upon validation of the application, the Council sent out consultation letters to 879 nearby owners and occupiers. An advert was posted in the press and four site notices were displayed outside the site.
- 4.7 A total of 2 objection letters and 1 letter of support were received. The comments raised are summarised below:

#### *Objections*

- Redevelopment will drive existing residents away and into more expensive accommodation and will not be affordable for local people
- Impact of construction works on residential amenity

#### *Support*

- The benefits of an increase in social housing is supported

## **5. CONSULTATION RESPONSES**

- 5.1 Below is a summary of the consultation responses received from both external and internal consultees.

### **External responses**

#### Cadent / Natural Gas

- 5.2 No objection

#### Canal and river Trust

- 5.3 No comment

#### Thames Water

- 5.4 No objection subject to conditions

#### Greater London Authority

- 5.5 No strategic issues raised. No requirement to seek a stage 2 referral

#### Historic England

- 5.6 No comment

#### Historic England Archaeology

- 5.7 No objection subject to conditions

#### HSE Gateway One

- 5.8 The fire safety measures meet the requirement for Gateway One.

Met Police

5.9 No objection subject to conditions

Natural England

5.10 No comment

Transport for London

5.11 No comment

**Internal Responses**

LBTH Biodiversity

5.12 No objection, subject to conditions

LBTH Tree Officer

5.13 No objection, subject to conditions

LBTH Energy and Sustainability

5.14 No objection subject to conditions and obligations

LBTH Environmental Health

*Noise and Vibration*

5.15 No objection subject to conditions

*Air Quality*

5.16 No objection subject to conditions

*Contaminated land*

5.17 No objection subject to conditions

LBTH Housing

5.18 Comments incorporated within the housing section of the report

LBTH Sustainable Urban Drainage

5.19 No comment made

LBTH Transportation & Highways

5.20 No comment, additional to that made in relation to the Extant Scheme

LBTH Waste Policy & Development

5.21 Clarifications on separation of domestic and commercial waste, collection strategy and bulky waste. Condition recommended for final waste strategy.

## 6. **RELEVANT PLANNING POLICIES AND DOCUMENTS**

6.1 Legislation requires that decisions on planning applications must be taken in accordance with the Development Plan unless there are material considerations that indicate otherwise.

6.2 In this case the Development Plan comprises:

- The London Plan (2021)
- Tower Hamlets Local Plan 2031 (2020)

6.3 The key development plan policies relevant to the proposal are:

Land Use (residential, community)

- London Plan policies: H1, GG1, GG2, GG4, S1, D1, D3
- Local Plan policies: S.H1, S.CF1, D.CF2, D.CF3, S.SG1, S.SG2

Housing (affordable housing, housing mix, housing quality, fire safety, amenity)

- London Plan policies: D6, D7, D11, D12, H4, H5, H6, H8, H10
- Local Plan policies: S.H1, D.H2, D.H3

Design and Heritage (layout, townscape, massing, height, appearance, materials, heritage)

- London Plan policies: D1, D3, D4, D5, D8, D9, HC1, HC2, HC3, HC4
- Local Plan policies: S.DH1, D.DH2, S.DH3, D.DH4, D.DH6, D.DH7

Amenity (privacy, outlook, daylight and sunlight, noise, construction impacts)

- London Plan policies: D3, D6, D9
- Local Plan policies: D.DH8

Transport (sustainable transport, highway safety, car and cycle parking, servicing)

- London Plan policies: T2, T4, T5, T6, T6.1, T7, T8
- Local Plan policies: S.TR1, D.TR2, D.TR3, D.TR4

Environment (air quality, biodiversity, contaminated land, flooding and drainage, energy efficiency, noise, waste)

- London Plan policies: G5, G6, SI1, SI2, SI5, SI8, SI12, SI13
- Local Plan policies: S.ES1, D.ES2, D.ES3, D.ES4, D.ES5, D.ES6, D.ES7, D.ES8, D.ES9, D.MW3

6.4 Other policy and guidance documents relevant to the proposal are:

- National Planning Policy Framework (2023)
- National Planning Practice Guidance (as updated)
- The National Model Design Code
- The National Design Guide
- 3<sup>rd</sup> edition of the Building Research Establishment's (BRE) '*Site Layout Planning for Daylight and Sunlight: a good practice guide*' (2022).

*LBTH*

- LBTH Planning Obligations SPD (2021)
- LBTH High Density Living SPD (2020)
- LBTH Reuse, Recycling and Waste SPD (2021)
- Central Area Good Growth SPD (2021)
- LBTH Community Infrastructure Levy (CIL) Charging Schedule (2020)
- LBTH Development Viability SPD (2017)

### *London Plan*

- The Mayor's Good Practice Guide to Estate Regeneration (2018)
- LP Fire Safety LPG (Draft)
- LP Air Quality Positive LPG (2023)
- LP Air Quality Neutral LPG (2023)
- LP Characterisation and Growth Strategy LPG (2023)
- Housing Design Standards LPG (2023)
- Optimising Site Capacity LPG (2023)
- Urban Greening Factor LPG (2023)
- LP Circular Economy Statements LPG (2022)
- LP Sustainable Transport, Walking and Cycling LPG (2022)
- LP Housing SPG (updated 2017)
- LP Social Infrastructure SPG (2015)
- LP Play and Informal Recreation SPG (2012)
- LP Character and Context SPG (2014)
- LP Accessible London SPG (2014)
- LP Control of dust and emissions during construction and demolition SPG (2014)
- LP Planning for Equality and Diversity SPG (2007)

## **7. PLANNING ASSESSMENT**

7.1 The key issues raised by the proposed development are:

- i. Land Use
- ii. Housing
- iii. Design & Heritage
- iv. Neighbour Amenity
- v. Transport
- vi. Environment
- vii. Infrastructure
- viii. Local Finance Considerations
- ix. Equalities and Human Rights

### **Land Use**

#### **Residential use**

7.2 Increasing housing supply is a fundamental policy objective at national, regional and local levels. The NPPF encourages the effective use of land through the reuse of suitably located previously developed land and buildings. Paragraph 124 part c of the NPPF states that planning decisions should give substantial weight to the value of using brownfield land within settlements for homes and other identified needs.

7.3 London Plan policy GG2 part (c) states that to create sustainable mixed- use places that make the best use of land, those involved in planning and development must proactively explore the potential to intensify the use of land to support additional homes..., promoting higher density development, particularly in location that are well connected to jobs, services, infrastructure

and amenities by public transport, walking and cycling. London Plan and Local Plan policies resist the loss of existing housing; unless the existing housing is re-provided. The delivery of housing, and particularly affordable housing, is of the highest priority in the borough.

- 7.4 The predominant existing use of the site is residential and, as such, the principle of the residential use has been established. The proposed re-provision of the existing Social Rented homes and the Resident Leaseholder (shared equity) homes on the site and the intensification of the site to provide an additional 343 homes of which 40.5% are affordable, is given substantial weight.

### **Community use**

- 7.5 London Plan Policy S1 protects social infrastructure unless there are realistic proposals for re-provision that continue to serve the needs of the neighbourhood and wider community; or the loss is part of a wider public service transformation plan which requires investment in modern, fit for purpose infrastructure and facilities to meet future population needs or to sustain and improve services. It also stipulates that redundant social infrastructure should be considered for full or partial use as other forms of social infrastructure before alternative uses are proposed unless this loss is part of a wider public service transformation plan.
- 7.6 Local Plan Policy S.CF1 supports proposals which seeks to protect, maintain and enhance existing community facilities and makes clear there is a presumption against the loss of community facilities to ensure that there is sufficient provision to meet local needs.
- 7.7 Policy D.CF2 (Part 1A) advises that existing community facilities should be retained, unless it can be demonstrated that: a) there is no longer a need for the facility or an alternative community use within the local community, or, b) a replacement facility of similar nature that would better meet the needs of existing users is provided. The policy also states that where community facilities are re-provided on site as part of any new development, the quality and accessibility of these facilities (including public access) should be enhanced. Specifically, in the context of estate regeneration schemes, Policy D.H2 (Part 5) also requires existing community facilities to be protected and enhanced.
- 7.8 The proposal would involve the demolition of the existing community buildings (1,120 sqm) and the re-provision in the form of a new community space comprising 1,1167 sqm of floorspace, which would result in a slight uplift in net area. It is anticipated that this space would be occupied by the local prayer group, who currently makes use of the Redcoat Community Centre on the site.
- 7.9 The site currently comprises two council owned buildings in the form of the Redcoat Centre and the Redcoat Community Centre. The Redcoat Centre is a single storey building jointly occupied by the Council's Adult Services department and Vibrance, an organisation providing services for vulnerable adults. The council has provided a statement confirming that a suitable alternate space on the ground floor of Pritchards Road has been found for Vibrance to occupy. Heads of Terms have been agreed in principle and council lawyers are drafting the lease for Pritchard Road. The Council's Adult Services team has already moved out of the site and the property is now empty. Given that alternative premises have been provided in the borough for Vibrance and the Adult Services team, the test set out under Part 1A of Policy D.CF2 of the Local Plan have been met.
- 7.10 The existing Redcoat Community Centre comprises four conjoined single storey portacabin structures, which are used by a local prayer group, Redcoat Community Centre and Mosque (RCCM). The RCCM intend to occupy the new community space located in a standalone building on the south eastern edge of the site. The Extant Scheme included a community centre within one of the residential blocks. This revised proposal would enable the community centre to be located in a standalone building providing a better quality layout.
- 7.11 In conclusion, the proposed demolition of the existing community space and the provision of a new larger and fit- for- purpose community space, meets the requirements of policy and

would ensure that all of the community facilities currently on site either have a new space re-provided on site or access to an alternative community space within the local community.

### **Land use conclusion**

- 7.12 In summary, the proposed residential led development and community use floorspace are supporting, and in accordance with the planning policy.

### **Housing**

#### **Housing supply**

- 7.13 London Plan Policy H1 sets Tower Hamlets a housing completion target of 34,730 units between 2019/20 and 2028/29. The proposed development would result in a net uplift of 307 new homes on the site, which would make an important and significant contribution towards meeting the above target and is strongly supported.

#### **Estate Regeneration**

- 7.14 London Plan policy H8 requires that loss of existing housing be replaced by new housing at existing or higher densities with at least the equivalent level of overall floorspace. This policy also seeks a consideration of alternative options before the demolition and replacement of affordable homes. In addition, the policy requires the replacements Social Rent units to be provided as Social Rent where facilitating a right of return for existing tenants.
- 7.15 Local Plan policy D.H2 part 5 provides criteria which estate regeneration schemes are required to follow:
- A protect and enhance existing open space and community facilities
  - B protect the existing quantum of affordable and family units, with affordable units re-provided with the same or equivalent rent levels.
  - C provide an uplift in the number of affordable homes, and
  - D include plans for refurbishment of any existing homes to the latest decent homes standard.
- 7.16 The Mayor's 'Good Practice Guide to Estate Regeneration' (the GPGER) provides detailed guidance for assessing approaches to estate regeneration. The GPGER puts great emphasis on early consultation and engagement with residents and requires all estate regeneration schemes to provide an increase in affordable housing, full rights to return or remain for social tenants, and a fair compensation deal for leaseholders and freeholders.
- 7.17 ***Like for like replacement and right to return.*** London Plan Policy H8 states that replacement affordable housing must be provided at Social Rent levels, where it facilitates a right of return for existing Social Rent tenants. There are currently 36 Secure Tenant (social rented) homes on the site, with a right to return. As proposed, all 36 homes would be re-provided for these Secure tenants on a like for like basis, who would continue to be a tenants of Tower Hamlets Council with their existing tenancy rights such as the right to buy and succession rights retained. These tenants would be charged according to the same Social Rent calculation formula, with the same assumptions, as prior to moving.
- 7.18 There are also currently 28 Resident Leaseholder homes currently on the site. These Resident Leaseholder homes would, line with the GPGER, be re-provided as 'shared equity' units. Although the 'shared equity' product is not specifically identified as an intermediate affordable housing product, the proposed shared equity product would be similar to the standard 'shared ownership' product; with the possibility to staircase. The product would be secured through the Directors Letter, along with the affordable housing obligations and as such, the council classifies these homes to be an intermediate affordable housing product.

- 7.19 The other existing homes on the estate – occupied by non- resident leaseholders and those on short- term tenancies, do not have a statutory ‘right to return’.
- 7.20 **Alternatives to demolition.** London Policy H8 states that before considering demolition of existing estates, alternative options should first be considered, and the potential benefits associated with the option to demolish and rebuild an estate set against the wider social and environmental impacts. The site currently has considerable issues, including damp, overcrowding and poor-quality amenity space. The proposed regeneration programme would re-provide homes to modern standards by delivering high-quality residential development, re-provide an improved community space and would increase affordable housing provision. Given this, officers support the proposed demolition.
- 7.21 **Maximising additional genuinely affordable housing.** As set out in the GPGER, in addition to ensuring no net loss of affordable homes, estate regeneration schemes must provide as much additional affordable housing as possible. An additional 111 new affordable homes would be provided, which equates to 40.5% of the additional homes. This is supported and is deemed to be the maximum reasonable amount of additional affordable housing. This is discussed under the Affordable Housing heading below. In addition, it is understood that the applicant proposes that 22 of the additional affordable homes would be allocated to qualifying adult children who currently live with their parents in overcrowded accommodation on the estate, which is strongly supported. These units would be provided at London Affordable Rent levels and limited to one applicant per property.
- 7.22 **A fair deal for leaseholders and freeholders.** As set out in the GPGER, Leaseholders and freeholders affected by estate regeneration should be treated fairly and fully compensated if their homes are to be demolished. As detailed in the ‘Proposed decant strategy’ report leaseholders would be offered fair compensation in line with requirements.
- 7.23 **Full and transparent consultation.** The Mayor’s GPGER requires any landlord seeking GLA funding for estate regeneration projects which involve the demolition of existing affordable or leasehold homes to demonstrate that they have secured resident support for their proposals through a ballot, subject to certain specified exemptions and transitional arrangements. The Council’s capital delivery team undertook a ballot in April 2020, which resulted in a 98% ‘yes’ vote to the scheme based on a 93% turnout. In addition, the applicant’s Statement of Community Involvement sets out details of the public consultation and engagement undertaken with the wider residents of the estate. Officers consider that the scope and extent of the engagement as detailed in the SCI generally accords with the key principles set out in the Mayor of London’s GPGER.

### **Housing mix and Tenure**

- 7.24 London Plan Policy H10 requires developments to comprise a range of unit sizes. Tower Hamlets Local Plan Policy D.DH2 also seeks to secure a mixture of small and large housing that meet identified needs which are set out in the Council’s most up-to-date Strategic Housing Market Assessment (2017).
- 7.25 The existing 100 homes on the site comprise of 32 x 2 bedroom homes, 60 x 3 bedroom homes and 8 x 4 bedroom homes. The table below sets out the proposed housing mix inclusive of the re-provided homes against the policy requirements set out in D.H2

Unit size	Total units	Affordable housing						Market housing		
		Social rent			Intermediate tenure			Units	As a %	Policy target %
		Units	As a %	Policy targets %	Units	As a %	Policy target %			
1-bed	111	23	18%	25%	6	13%	15%	82	35%	30%
2-bed	162	24	19%	30%	15	31%	40%	123	53%	50%
3-bed	106	57	45%	30%	22	46%	45%	27	12%	20%
4-bed	28	23	18%	15%	5	10%		0		
<b>Total units</b>	<b>407</b>	<b>127</b>	<b>100%</b>	<b>100%</b>	<b>48</b>	<b>100%</b>	<b>100%</b>	<b>232</b>	<b>100%</b>	<b>100%</b>

**Figure seven – housing mix (inclusive of re-provided homes)**

- 7.26 The development would deliver 63% of family sized homes within the affordable rented tenure and 56% in the Intermediate tenure. Within the market housing there would be an under provision of family sized homes and an overprovision of one bed and two bed units. However, given there is an overprovision of family sized homes within the intermediate and social rented housing, where there is the greatest need the housing mix and tenure are considered acceptable.
- 7.27 The table below sets out the proposed housing mix excluding the re-provided homes against the policy requirements set out in policy D.H2.

Unit size	Total units	Affordable housing						Market housing		
		Social rent			Intermediate tenure			Units	As a %	Policy target %
		Units	As a %	Policy targets %	Units	As a %	Policy target %			
1-bed	<b>110</b>	22	24.2%	25%	6	30%	15%	82	35%	30%
2-bed	<b>149</b>	15	16.5%	30%	11	55%	40%	123	53%	50%
3-bed	<b>66</b>	36	39.6%	30%	3	15%	45%	27	12%	20%
4-bed	<b>18</b>	18	19.8%	15%	-			-		
<b>Total units</b>	<b>343</b>	<b>91</b>	<b>100%</b>	<b>100%</b>	<b>20</b>	<b>100%</b>	<b>100%</b>	<b>232</b>	<b>100%</b>	<b>100%</b>

**Figure eight – housing mix (excluding re-provided homes)**

- 7.28 In the uplift the scheme would deliver 60% family sized units in the affordable rented tenure. Within the Intermediate tenure there would be an under provision of family sized homes and an overprovision of one bedroom and two-bedroom units.
- 7.29 Significant weight is given to the re-provision of all of the existing Social Rented and intermediate tenure homes and the focus on delivering a large portion of family sized homes, particularly affordable homes within the proposed scheme. The proposed housing mix and tenure are considered acceptable.

## **Affordable Housing**

- 7.30 London Plan policy H8 (Estate Redevelopment) part E states that all development proposals that include the demolition and replacement of affordable housing are required to follow the Viability Tested route and should seek to provide an uplift in affordable housing in addition to the replacement affordable housing floorspace. Paragraph 4.85 of the supporting text to the policy states that estate regeneration that involves the loss and replacement of affordable housing should deliver an uplift in affordable housing wherever possible. Therefore, all such estate regeneration schemes must go through the Viability Tested Route to demonstrate that they have maximised the delivery of any additional affordable housing.
- 7.31 Local Plan policy S.H1 part 2 A (i) sets an overall strategic target of 50% of all new homes to be affordable, through securing affordable homes from a range of council- led initiatives.
- 7.32 Local Plan policy D.H2 sets the requirements of affordable housing provision within development in the borough, in terms of quantum, standard and provision. Development is required to maximise the provision of affordable housing with a 70% affordable rented and 30% intermediate tenure split (Para. 9.30 making clear that rented housing is expected to be 50% London Affordable Rent and 50% Tower Hamlets Living Rent).
- 7.33 Tower Hamlets Local Plan Policy D.H3 requires development to provide affordable housing which is not externally distinguishable in quality from private housing.

### Amount and tenure

- 7.34 Of the total 407 units, the scheme would provide 53.3% (by habitable room) affordable homes, inclusive of the re-provided homes. The scheme would provide an uplift of 40.5% affordable housing, excluding the re-provided homes.
- 7.35 Within the affordable rent tenure, the proposals include the re-provision of 36 homes and the additional provision of 91 units. The re-provided homes would retain the existing Social Rent structure. The additional affordable rented homes would be provided along an 82:18 Tower Hamlets Living Rent to London Affordable Rent split by habitable room. While this does not align with the policy requirement for a 50:50 split between the two, the approach is considered acceptable, given the very strong overall affordable housing provision and the viability challenges this scheme faces.
- 7.36 Within the intermediate tenure, the proposals include the provision of 28 'shared equity' re-provided 'Resident Leaseholder' homes and the provision of an additional 20 shared ownership units.
- 7.37 The proposed tenure split between affordable rent and intermediate tenure for the additional residential units equates to 82:18 in favour of affordable rent by habitable room. Whilst this does not strictly conform to the Councils policy guidance of 70:30 the overprovision of affordable rented units is welcome in this instance, given the acute demand for this type of housing and the development does deliver a range of tenure types and unit sizes.
- 7.38 The affordable homes (affordable rent and intermediate tenure) would be provided in separate blocks to the market homes. However, the blocks would be spread across the development and all amenity spaces would be shared between all residents. The housing development would be tenure blind, in terms of the external and internal design quality of the blocks, which would be further secured by condition through the submission of materials.

### Viability

- 7.39 The application is supported by a Financial Viability Assessment (FVA) prepared by Redloft. Following a robust review of the submitted viability evidence, the Council's viability team has concluded that the scheme is providing the maximum reasonable amount of affordable housing, in line with London Plan policy H8. It is recommended that the scheme be subject to an Early Stage Review. This would re-consider viability in the event that any planning

permission is not implemented within two years from the date it is granted. A Mid Stage Review (at the end of phase 1) and a Late Stage Review is also required.

### Conclusion

- 7.40 In conclusion, the provision of affordable housing is considered to be appropriate and as such, on this point, the proposed development is considered acceptable.

### **Wheelchair Accessible Housing**

- 7.41 London Plan policy D7 and Tower Hamlets Local Plan Policy D.H3 require residential developments that at least 10% of dwellings must meet Building Regulation M4 (3) 'wheelchair accessible dwellings' and the remainder of dwellings to meet M4 (2) 'accessible and adaptable dwellings'.
- 7.42 The proposed development would provide 34 wheelchair accessible dwellings, which would comprise 10% of the additional dwelling provision. These units would be in the form of 2/3/4-bed units.
- 7.43 Of the total wheelchair accessible units, 24 would be within the affordable rented sector and the remaining 10 units within the private units.
- 7.44 Each of the wheelchair units would be served by two lifts, which is in line with good practice. The wheelchair units meet the space standards. However, a condition should be secured requiring adjustments to be made to the current layout of the units, in line with comments provided by the Council's Occupational therapists.
- 7.45 In regard to the re-provided units, based on the housing needs assessment, currently no resident requires a fully wheelchair accessible home.

### **Quality of Residential Accommodation**

- 7.46 London Plan policy D6 sets out the minimum internal space standards for new dwellings. This policy also requires the maximisation of dual aspect dwellings and the provision of sufficient daylight and sunlight to new dwellings.
- 7.47 Tower Hamlets Local Plan Policy D.H3 requires developments to meet the most up-to-date London Plan space standards and provide a minimum of 2.5m floor-to-ceiling heights.
- 7.48 Private amenity space requirements are determined by the predicted number of occupants of a dwelling. Local Plan Policy D.H3 sets out that a minimum of 5sqm is required for 1-2 person dwellings with an extra 1sqm provided for each additional occupant.
- 7.49 Out of the total proposed units, 67% would be dual aspect. and the layout of the units has been designed such that there would be no north facing single aspect units, which is welcomed.
- 7.50 The proposed unit sizes meet the London Plan's minimum standard. All units would have private amenity space provision that meets minimum standards.

### **Noise / Air quality**

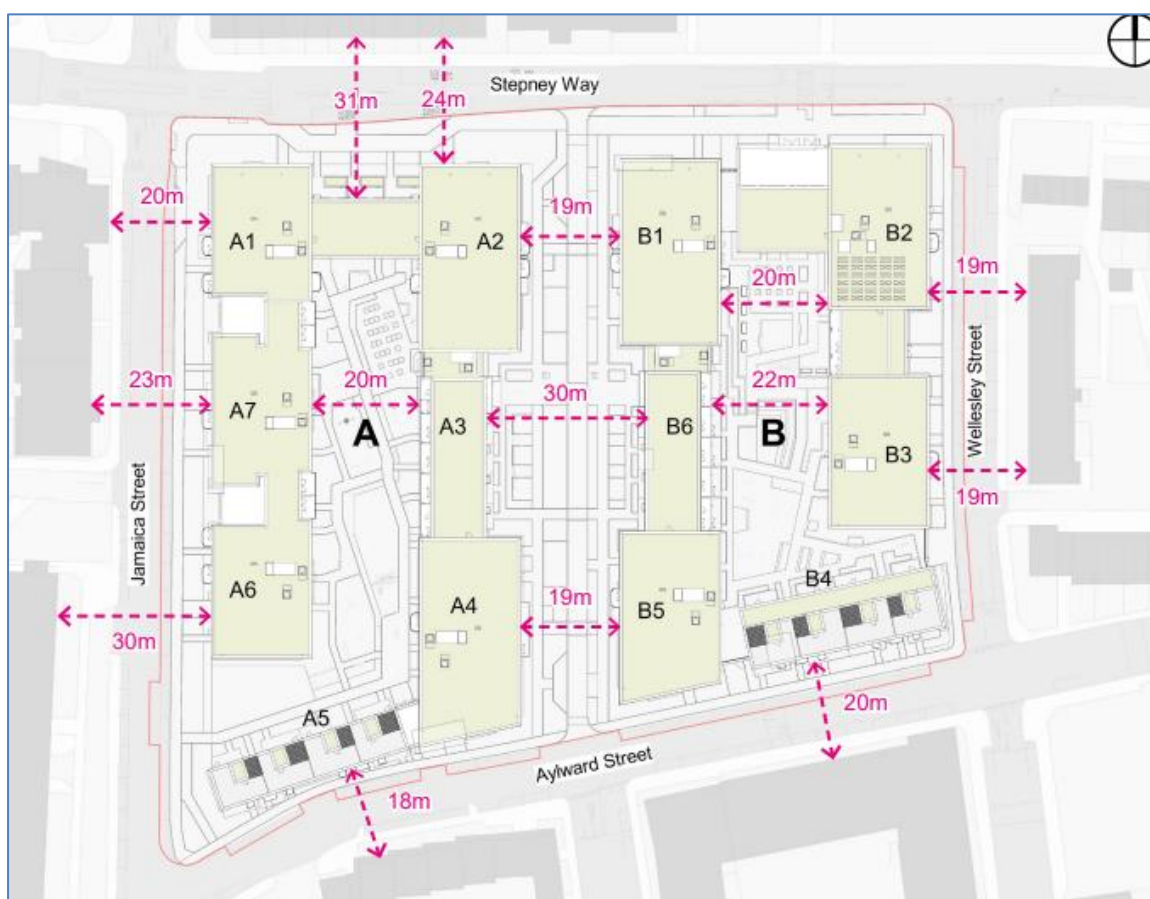

- 7.51 As confirmed by the Council's Environmental Health officers, the proposed residential units would not be subjected to unacceptable noise conditions. Conditions would be secured to ensure that new accommodation is constructed to appropriate standards with regard to acoustic insulation, noise levels from the community space are not audible from residential units and noise from mechanical plants is kept within appropriate levels.

## Air Quality

- 7.52 Tower Hamlets Local Plan Policy D.ES2 requires development to be at least 'Air Quality Neutral' and calls on air quality impacts to identify any necessary mitigation for developments that would cause harm to air quality.
- 7.53 This application is supported by an 'Air Quality Assessment' prepared by Create Consulting Engineers.
- 7.54 The Council's Air Quality officer confirms that the Air Quality Assessment and Air Quality Neutral Assessments are satisfactory. Subject to conditions relating to the construction and operational phases of the development, the proposal would not subject the future occupiers to poor air quality and would not result in undue dust or air quality impacts during demolition or construction.

## Privacy & Outlook

- 7.55 In accordance with Policy D.DH9, a distance of approximately 18 metres between windows of habitable rooms would reduce inter-visibility to an acceptable degree. As illustrated by Figure eleven, there would be at least an 18-metre separation distance between all windows. Therefore, officers can be confident that future occupiers would not suffer from unacceptable overlooking or compromised outlook.

**Figure eleven – proposed development separation distances**

## Daylight, Sunlight & Overshadowing

- 7.56 The applicant has submitted a 'Daylight, Sunlight and Overshadowing Assessment – Proposed Scheme' dated March 2024, for assessment. This methodology used in the Report is based on the guidance provided in the 3<sup>rd</sup> edition of 'Site Layout Planning and Daylight and Sunlight: a guide to good practice' (BRE, 2022).
- 7.57 In relation to daylight, the 'Illuminance Levels' method was employed, in compliance with the BRE guidance and BS EN 17037. The Illuminance Levels method uses criteria corresponding

to the recommended target illuminance level, measured in lux; and quantifies the overall amount of daylight by measuring the illuminance levels within a space, using hourly climate data. The calculated Illuminance Levels are compared with minimum values recommended for uk dwellings – 100 lux for bedrooms, 150 lux for living rooms and 200 lux for kitchens.

- 7.58 The test was carried out on all 1386 habitable rooms within the proposed development. The results indicate that 955 rooms - 69% - would meet or exceed the BRE minimum targets.
- 7.59 A number of the rooms that fall short of the BRE targets face inwards, towards the podium courtyards and inner street. It is noted that these rooms have the benefit of good outlook towards the landscaped areas. Overall the daylight results are considered to be typical of an urban location; and are deemed acceptable, with the majority of rooms meeting the BRE targets.
- 7.60 In relation to sunlight, the Sunlight Exposure test was carried out, where it is recommended that units have at least one habitable room (ideally a main living room) receiving a minimum of 1.5 hours of sunlight on a selected date between February and March. Sunlight Exposure hours were calculated for all 1386 habitable rooms within the proposed development. The results indicate that overall, 62% of habitable rooms that were analysed meet the BRE criteria for sunlight and 60% of the dwellings have their main living room that meets the criteria.
- 7.61 Sunlight availability is inevitably limited for rooms served by windows oriented towards the east and west, and for windows with a northern orientation. A large proportion of the living rooms and other main habitable rooms that fall short of the minimum requirement for Sunlight Exposure are designed have pleasant outlook towards the central podium courtyards and inner street and will benefit from reduced noise and overall, a good standard of accommodation for the future occupiers.
- 7.62 The sunlight results are considered to be typical of its urban location and whilst not meeting the recommendation in relation to Para. 7.6 above, acceptable sunlight levels are achieved overall, with an acceptable number of dwellings meeting BRE discretionary targets.
- 7.63 In relation to overshadowing, two (west and east) courtyard style amenity spaces and a secondary amenity space towards the centre of the site are proposed. Results of the overshadowing analysis conclude that the west and east courtyards would have at least 50% and 76% of their respective areas receiving 2 hours of sunlight on 21 March, in accordance with BRE requirements. The central amenity space would receive 2 hours of sunlight over 44% of its area while the four private roof terraces on block A5 would have 2 hours of sunlight over at least 80% of their area. These are similar results to those achieved by the Extant Scheme. Overall the external amenity spaces would provide good quality, well lit amenity for the future residents.

### **Wind/Microclimate**

- 7.64 The application is supported based upon the submission of an Environmental Wind Planning Report prepared by Arup. This study concluded that wind conditions within and around the completed development are expected to generally remain within 'Standing' to 'Strolling' levels and no areas are likely to reach the distress conditions. The Wind Planning Report sets out mitigation measures that should be implemented to help ensure wind conditions remain acceptable. A condition is recommended, requiring the applicant to implement appropriate wind mitigation measures.

### **Fire safety**

- 7.65 London Plan policy D12 requires all major applications to be submitted with a Fire Statement produced by a third party, suitably qualified assessor. The policy sets out the requirements in terms of details that Fire Statement should contain. London Plan Policy D5 (part B5) states that new development should be designed to incorporate safe and dignified emergency evacuation for all building users. In all developments where lifts are installed, as a minimum at least one lift per core (or more subject to capacity assessments) should be a suitably sized

fire evacuation lift suitable to be used to evacuate people who require level access from the building.

- 7.66 Under amendments to the Town and Country Planning (Development Management Procedure and Section 62A Applications) (England) (Amendment) Order 2021 ("the 2021 Order") buildings containing two or more dwellings or educational accommodation of 18m, or 7 storeys or more, in height are required to go through the Planning Gateway One. For Planning Gateway One the developer is required to submit a fire statement setting out fire safety considerations specific to the development with a relevant application. This fire statement is then assessed by the Health and Safety Executive.
- 7.67 The application is supported by a Fire Statement and Gateway One Fire Statement, produced by Jeremy Hughes who are considered to be a third party and suitably qualified assessor.
- 7.68 The scheme has been redesigned from the previously approved scheme to accommodate the requirements for access to second staircases as required by the updated fires safety obligations. The HSE has been consulted and have confirmed the proposed fire safety enhancements meet the necessary requirements for Gateway One.

### **Communal Amenity Space & Play Space**

- 7.69 London Plan Policy S4 seeks to ensure that development proposals include suitable provision for play and recreation, and incorporate good-quality, accessible play provision for all ages, of at least 10sqm per child.
- 7.70 Local Plan Policy D.H3 requires a minimum of 50 sqm of communal amenity space for the first 10 units and a further 1sqm for every additional unit thereafter, as well as the provision of appropriate child play space as determined by the child yield calculator.
- 7.71 Local Plan Policy D.OWS3 sets out that development on areas of open space is only acceptable in exceptional circumstances as part of a wider development proposal, where there is an overall increase in quantity and quality of open space.
- 7.72 The existing site provides a total of 9,196 sqm of open space. This open space is in the form of defensible space around the edge of the estate blocks and central areas of grass and hardstanding/ car parking. Although not fenced off, these areas have the character of communal housing estate land and it is not expected that local residents use the space. There is currently a public pedestrian route through the centre of the estate that links Aylward Street with Stepney Way, but this route is neither obvious nor legible and, from the street, appears to lead only into the estate. It is also dominated by vehicles and does not comprise a safe pedestrian route either for residents of the estate or the wider area.
- 7.73 The proposed development would provide 8,330 sqm of landscaped open space. This space would be in the form of two communal courtyards, open areas of green space surrounding the perimeter blocks and an inner street running through the development. Of the 8,330 sqm, approximately 3,800 sqm would be open to the public; anyone can use this space and walk around it. The existing surface level car parking spaces would be removed from the central open spaces of the site and consolidated into one section of the ground floor of the building, creating more verdant and pleasant external amenity spaces. The communal courtyards would serve as communal amenity space for the future occupiers and would only be accessible to residents of the development. The communal space provision would exceed the policy requirement, totalling 452sqM In addition, each home would be provided with policy compliant private amenity space, of where there is currently a lack, on site. An 'inner street' would be created, which would replace the existing, convoluted route. The 'inner street' would run in a straight line north south, linking Aylward Street and Stepney Way. It would be legible from the street and almost entirely car free. It would provide the future residents of the estate and residents of the wider area with a safe and convenient north south route for local journeys and would promote sustainable travel. It would also be step free and suitable for those less able and wheelchair users. This inner street would also contain a pocket park, with a small area of child play space.

7.74 So, while there would be some quantum loss of open space on the site, this would be outweighed by the enhanced quality of the provision, the variety of soft and hard landscaped areas, the provision of public, communal and private spaces and improvement to access routes. With respect to child play space, the following table provides details on the child yield generated by the proposed development and the minimum child play space requirements based on the LBTH Child Play Space calculator:

Age group	Child yield	Child play space requirement (sqm)
Under 5 years	108	1080
5-11 years	93	930
12+ years	86.3	863
Total	287.3	2873

**Figure twelve – Child play space requirements (LBTH Child Play Space calculator)**

7.75 As detailed above, the development is predicted to generate 288 children and therefore 2873 sqm of child play space is required, split across different age groups.

7.76 The proposed development would provide a total of 2000m<sup>2</sup> of child play space within Courtyard C1, the podium Courtyard C2 and the ‘inner street’. This space is specifically for children aged 0-11 years and would approximately meet the child play space requirement for this age bracket (2000m<sup>2</sup> would be provided versus 2010m<sup>2</sup> required by policy). All the three play spaces will be overlooked by the surrounding perimeter blocks, ensuring there is an appropriate level of surveillance. In addition, the play spaces within Courtyard C1 and Courtyard C2 would only be accessible to residents of the development, providing an additional layer of security. Play provision for over 12’s has not been provided on site. The site adjoins Stepney Green Park to the north east, with its large areas of grass, astroturf pitch and play equipment. There is also a pedestrian crossing from the site boundary, across to the north side of Stepney Way. In addition, the development would provide areas of soft and hard landscaping and safe and secure communal amenity space. Given these factors and in these specific circumstances, it is considered that the older children of the proposed development would have access to sufficient opportunities for play and activity.

7.77 In conclusion, the provision of open space and child play space is considered to be acceptable and would meet the needs of future residents of the site and neighbouring occupiers.

### **Design & Heritage**

7.78 Development Plan policies require high-quality designed schemes that reflect local context and character and provide attractive, safe and accessible places that safeguard and, where possible, enhance the setting of heritage assets.

7.79 London Plan policy D3 promotes the design-led approach to optimise site capacity. The policy requires high density development to be located in locations well connected to jobs, services, infrastructures and amenities, in accordance with London Plan D2 which requires density of developments to be proportionate to the site’s connectivity and accessibility.

7.80 Local Plan policy S.DH1 outlines the key elements of high-quality design so that proposed developments are sustainable, accessible, attractive, durable and well integrated into their surroundings. Complementary to this strategic policy, Local Plan policy D.DH2 seeks to deliver an attractive, accessible and well-designed network of streets and spaces across the borough.

7.81 The Extant Scheme was taken to the Conservation and Design Advisory Panel at pre-application stage. This development follows the same design principles with the most substantive change being the relocation of the community space.

### **Layout, landscape, public realm, movement and connectivity**

7.82 The proposed site layout arrangement is predicated on housing blocks configured on a broadly north-south perimeter grid layout to either side of an 'inner street'. There are two communal courtyards that occupy the space within the perimeter blocks. These courtyards are only accessible to residents. The site has been laid out with generous spacing between the blocks and between the built form and the boundaries of the site, creating views through and around the buildings and opportunities for pockets of landscaping.

7.83 The entire development, across both perimeter blocks, works hard to position active land uses, including new homes, entrance lobbies, and concierge desks, to face the street. This will represent an improvement on the existing situation, where many front doors and entrance lobbies are placed within the site away from the street. The south east corner of the site is marked by a new Community Centre. The building would stand alone rather than forming part of the lower floors of a residential building and would suitably prominent and distinct from the residential buildings. Image 12a below is an unverified CGI, showing the appearance of the proposed community centre.

**Figure 12a –CGI looking west along Aylward Street towards community centre**

7.84 The accessible car parking would be under a podium in Block B, meaning it would not be visible from the public realm and its impact on the street scene would be mitigated. The removal of the surface level parking from the central areas also creates a less cluttered and more welcoming site layout.

7.85 The new green route, known as the 'inner street' acts to connect Stepney Way and Aylward Street improving connectivity in the area. Access to this street would be controlled via bollards, ensuring that vehicles, with the exception of delivery, servicing and emergency vehicles, cannot use this route. This will ensure that it acts as a pedestrian and cycling friendly route, which benefits the wider community.

*Figure thirteen – Proposed Landscape plan*

*Figure fourteen - Unverified CGI – Street view showing Jamaica Street*

*Figure fifteen - Unverified CGI – street view from Aylward Street*

### **Height, Scale, Massing and Form**

- 7.86 The proposed development is comprised of housing blocks configured over 4-8 storeys in height. The tallest blocks proposed would be similar in height to the tallest buildings on the existing site, and one of the proposed blocks would be taller than the immediate context. Higher rise elements are found along Stepney Way, defined by a series of predominantly 8-storey buildings, which are interspersed with much lower link elements to reduce the buildings' visual impact. While the opposite side of Stepney Way is much lower in scale, the width of the road and the set back of the proposals from the boundary with trees and soft landscaping, result in a scale that, though taller, sits comfortably in the townscape. In addition, the eight storey element marking the north western corner of the site reflects mirrors the eight storey building on the west side of Jamaica Street. Most of the blocks are slightly taller than their equivalents within the Extant Scheme, with increases in height of between 225mm and 900mm. Blocks B1 and B2 are 75mm shorter than the equivalent blocks in the extant scheme. These are minor changes which would not materially change the appearance of the development from public views.
- 7.87 There are also taller buildings either side of the inner street, on the southern, Aylward Street side of the site. These taller elements mark the corners of the perimeter blocks and are again flanked by the lower elements. New sightlines would be created looking north up West Arbour Street and through into the 'inner street', creating an open feel to the centre of the site.
- 7.88 We particularly welcome the approach on the southern edge where the scale of the buildings respond to the scale of the nearby Albert Gardens Conservation Area. While there is a clear increase in height, scale and massing across the site, the proposals respond to the various scales of development in the area.
- 7.89 The overall distribution of height responds positively to the surrounding context. As such, officers have no concerns about the scale, height or massing of the proposals.

### **Appearance & Materials**

- 7.90 The primary façade materials will be three main colours of brick and there will be either protruding or recessed balconies. A similar material and colour palette can be found on buildings in the surrounding area, ensuring that this development is in keeping with the setting. A buff-grey brick will be used across the buildings at the ground floor level creating a sense of continuity across the development.
- 7.91 The character and appearance of the proposed development will vary slightly across the site responding to the location, use, the character of the proposed new street and proposed public realm. The scheme includes good design features, such as the use of hit and miss brickwork

across the buildings, which add a sense of fun to the design and character to the overall development.

- 7.92 In summary the design of the development would create a good quality and detailed development that would fit reasonably within the surrounding built context.

### **Trees**

- 7.93 The proposed development necessitates the loss of some of the existing trees and the sum effect is that 35 trees are identified for removal, 6 for pruning. To mitigate this loss, the scheme would provide an uplift of 127 semi-mature trees in public areas, which equates to a replanting ratio of 1:3.6. Our tree officer has confirmed that this approach is appropriate to mitigate the loss of existing trees. It is recommended that tree protection measures for the trees to be retained are secured by planning condition. It is also recommended that a condition reserves the detailed specification of the proposed new trees and requires that any that die within five years of planting are re-provided.

### **Safety & Security**

- 7.94 The scheme has been designed with Secured by Design (SbD) principles in mind, as detailed in the Design and Access Statement.
- 7.95 The Met Police have confirmed that they held meetings with the project architects to discuss their intentions around security and Secured by Design, and site-specific recommendations were made during these meetings and have been incorporated as necessary.

### **Built Heritage**

- 7.96 Statutory tests for the assessment of planning applications affecting listed buildings and conservation areas are found in Sections 66(1) and 72(1) of the Planning (Listed Building and Conservation Areas) Act 1990. Section 66(1) relates to applications that affect a listed building or its setting. It requires the decision maker to: "have special regard to the desirability of preserving the building or its setting or any features of special architectural or historic interest which it possesses". Section 72(1) relates to applications affecting a conservation area. It states that "special attention shall be paid to the desirability of preserving or enhancing the character or appearance of that area". There is a presumption that development should preserve or enhance the character or appearance of conservation areas.
- 7.97 London Plan Policy HC1 and Tower Hamlets Local Plan Policy S.DH3 require developments affecting heritage assets and their settings to conserve their significance, by being sympathetic to their form, scale, material and architectural detail.
- 7.98 Although the application site is not within a conservation area (CA) and does not contain any listed buildings or structures it is adjacent to the Albert Gardens CA which lies directly south of the application site. Within the Albert Gardens CA lies the Grade II listed Raines Foundation School and 1-13 Arbour Square. 3-19 East Arbour Street, also to the south is locally listed.
- 7.99 Key views within the CA are identified along West Arbour Street and East Arbour Street which lead up to the application site. The development would not harm the setting of the CA when viewed from East Arbour Street given that the development is only visible in oblique views from the CA. Nor would the development harm the setting of the CA when viewed from West Arbour Street; whilst the scale of the development would be greater than the built development in the existing setting this would not act as a detracting feature in the setting of the CA.
- 7.100 No harm is identified to the setting or significance of Raines Foundation School as a result of the development.
- 7.101 No harm is likely to arise to the setting or significance of 1-13 Arbour Street given the distance of the development from these buildings which would not impede the viewers ability to appreciate the special interest of their facades. In respect of locally listed 3-19 East Arbour Street, similarly no harm is likely to arise to the setting or significance of these buildings, as it would have minimal impact on the viewers ability to appreciate the special interest of the facades.

7.102 In conclusion, no harm would arise to designated or non-designated heritage assets in the vicinity of the site.

### **Neighbouring Residential Amenity**

7.103 Development Plan policies seek to protect neighbouring residential amenity by safeguarding privacy, not creating unacceptable levels of noise, disturbance or sense of enclosure and ensuring acceptable daylight, sunlight and outlook to neighbouring homes.

### **Privacy, Outlook and Enclosure**

7.104 Figure 11 within this report indicates the separation distances between the proposal and the surrounding residential buildings. Of particular note are the following separation distances:

- B2 and opposite block on Seagrave Close - approx. 19m
- B3 and opposite block on Seagrave Close – approx. 19m
- A1 and opposite block on Jamaica Street – approx. 20m
- A5 and opposite block on Aylward Street – approx. 18m
- B4 and opposite block on Aylward Street – approx. 20m

In relation to privacy, as set out in Policy D.DH8, a distance of approximately 18 metres between windows of habitable rooms reduces inter-visibility to a degree acceptable to most people and hence these adjacencies are considered to be sufficient to protect neighbouring occupier's privacy. Similarly, the separation distances between the nearest neighbouring properties and the proposed new building are sufficient so that it is concluded that there would be no undue loss of outlook from any neighbouring windows, nor would there be any undue loss of enclosure, as experienced from any neighbouring homes or gardens, with the development in place.

### **Daylight, Sunlight & Overshadowing**

7.105 Guidance relating to daylight, sunlight and overshadowing is contained within the 3<sup>rd</sup> edition of the Building Research Establishment's (BRE) 'Site Layout Planning for Daylight and Sunlight': a good practice guide' (2022) [hereafter the BRE Guide].

7.106 A '*Daylight, Sunlight and Overshadowing impact Assessment*' by PRP [the PRP Report] dated February 2024, was submitted for assessment. It should be noted that PRP also authored the Daylight Sunlight Report which was submitted in relation to for the Extant Scheme. As has been previously discussed in this report, minor increases in height are proposed to the blocks compared to the extant scheme, to facilitate additional blue/ green roofs on top of the buildings. This would create some additional daylight and sunlight impacts to neighbouring occupiers, above those found within the extant scheme. The PRP Report quantifies these differences, which are discussed further below.

### **Methodologies for Assessment**

7.107 To assess the impact on daylight to neighbouring properties, the BRE Guide recommends carrying out two tests :

- Firstly, any reduction in the amount of skylight hitting a window can be calculated by finding the Vertical Sky Component (**VSC**) at the centre of each main window. If the VSC of a window with the development in place is both less than 27% and less than 0.8 times its former value, then the occupants are likely to notice the reduction in the amount of skylight.
- Secondly and where room layouts are known, the BRE Guide advises calculating the distribution of daylight within main rooms by plotting the 'no sky line' (**NSL**) in each main room. If, with the development in place, the NSL moves so that the area of the room which does not receive direct sunlight is reduced to less than 0.8 times its former

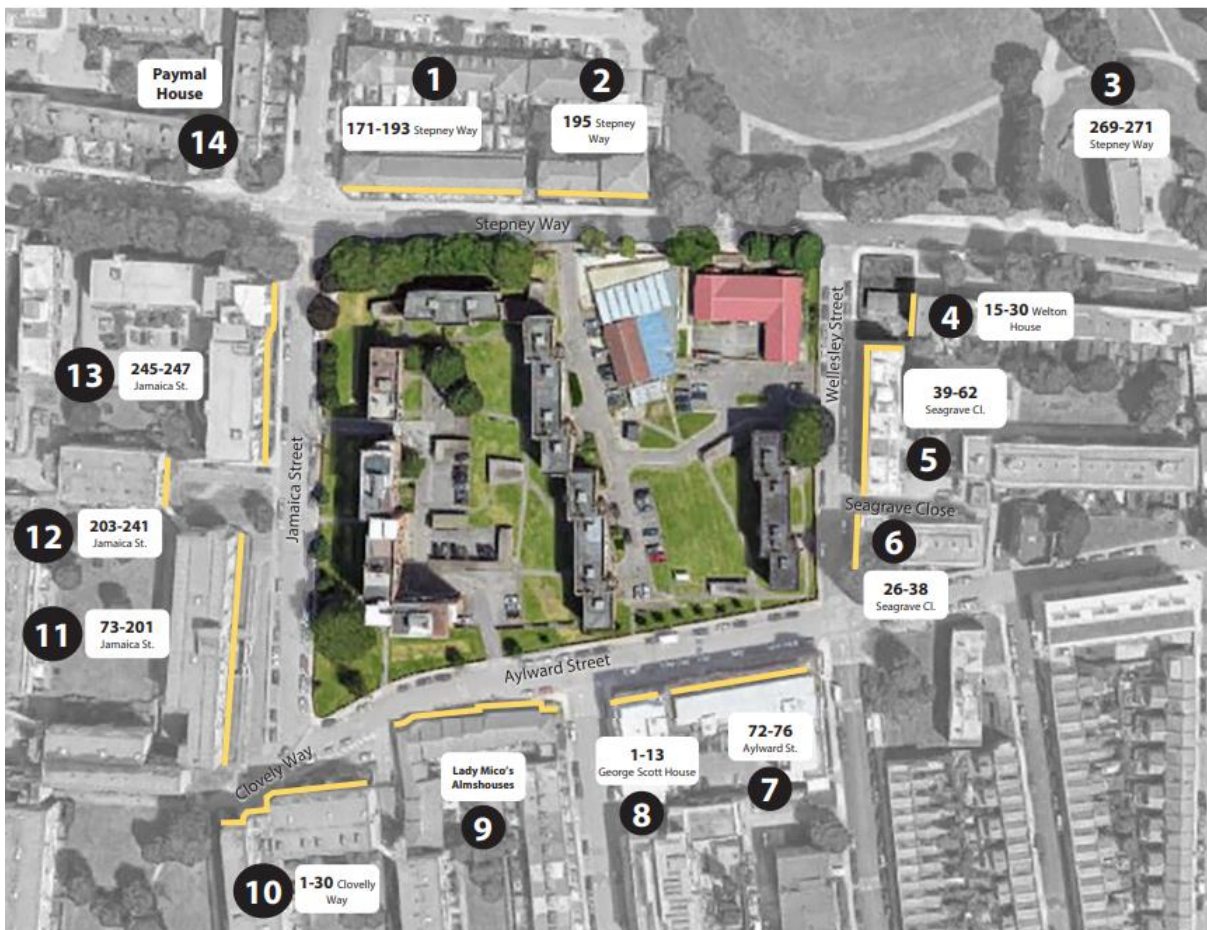

value, this will be noticeable to the occupants and more of the room will appear poorly lit.

- 7.108 In relation to sunlight, the BRE Guide states that main living rooms should be tested where they have a window which faces within 90 degrees of due south, where some part of the proposed development is situated within 90 degrees of due south of that window. Kitchens and bedrooms are less important, although care should be taken not to block too much sun.
- 7.109 The 'Annual Probable Sunlight Hours' (APSH) test is used to calculate loss of sunlight over the year. 'Probable sunlight hours' means the total number of hours in the year that the sun is expected to shine on unobstructed ground. The sunlight reaching a window is quantified as a percentage of this unobstructed annual total. If a room receives more than 25% APSH, including at least 5% in the winter months, it should receive enough sunlight. If available sunlight hours are less than the above and less than 0.8 times their former value, either in winter or over the whole year and the overall loss of APSH is greater than 4%, the occupants will notice the loss of sunlight and the room may appear colder and less cheerful.
- 7.110 In relation to sunlighting to amenity areas (overshadowing), the BRE Guide states that at least half of a garden or amenity area should receive at least 2 hours of sunlight on 21 March. If, as a result of new development, an existing amenity area does not meet the above and the area that can receive 2 hours of sun on 21 March is less than 0.8 times its former value, then the loss of sunlight is likely to be noticeable.
- 7.111 Appendix H of the BRE Guide gives advice on assessing the environmental impact of a proposed development. It states that where a new development affects a number of existing buildings or open spaces, the clearest approach is usually to assess the impact on each existing building separately. It is also clearer to assess daylight and sunlight impacts separately. Where losses of light are well within BRE guidelines, a classification of 'negligible impact' is appropriate. Where losses of daylight or sunlight do not meet BRE guidance, the impact is assessed as minor adverse, moderate adverse or major adverse.
- 7.112 Factors tending towards 'minor adverse' may include:
- a. losses of light only marginally outside the guidelines
  - b. only a small number of windows or limited area of open space are affected
  - c. the affected room has other sources of light.
- 7.113 Factors tending towards a 'major adverse' impact include:
- a. a large number of windows or area of open space are affected
  - b. the loss of light of substantially outside the guidelines
  - c. all the windows in a particular property are affected.
- 7.114 Finally, the Mayors Housing SPG states at para 1.3.45 that an appropriate degree of flexibility needs to be applied when using the BRE guidelines to assess daylight and sunlight impacts on surrounding properties. At para 1.3.46, it states that decision makers should recognise that fully optimising housing potential on large sites may necessitate standards which depart from those presently experienced but which still achieve satisfactory levels of residential amenity and avoid unacceptable harm. Paragraph 1.6 of the BRE Guide states that numerical guidelines should be interpreted flexibly since natural lighting is only one of many factors in site layout design.

#### Properties tested for Daylight and Sunlight Impacts

- 7.115 The PRP Report indicates the properties surrounding the site which were tested for daylight and sunlight impacts. These properties are shown in the image below and, for the avoidance of doubt, are listed here :

1. 173-193 (odd nos. only) Stepney Way
2. 195 Stepney Way,
3. 269-271 Stepney Way
4. 15-30 Welton House
5. 39-62 Seagrave Close
6. 26-38 Seagrave Close
7. 72-76 Aylward Street
8. 1-13 George Scott House
9. Lady Mico's Almshouses
10. 1-30 Clovelly Way
11. 73-201 Jamaica Street
12. 203-241 Jamaica Street
13. 245-247 Jamaica Street

**Figure sixteen – Neighbouring daylight and sunlight assessment**

## Daylight and Sunlight Impacts

### *173-193 Stepney Way (minor to moderate adverse daylight)*

- 7.116 173-193 Stepney Way is number '1' on the plan above. This property consists of a row of 3-storey terraced houses facing the proposed development. The floor plans of this development were available on LBTH's planning portal.
- 7.117 The tested windows are on the southern elevation. A total of 45 windows were tested and none would meet the recommended BRE VSC guidelines. However, VSC figures with the development in place would not fall below 17.52% and would not be less than 0.55 times their former value, with the vast majority of windows retaining VSC's between 0.6 and 0.7 times their former value, which is not uncommon in an urban setting. A total of 22 of the 33 rooms tested would meet BRE guidelines for NSL. The 11 rooms that would see losses beyond BRE guidelines are ground floor kitchens - one to each property- and values would drop to between 0.62 to 0.7 times of their former value. Kitchens are less sensitive to losses in daylight and the losses would not be unacceptable.
- 7.118 In relation to sunlight, 7 ground floor kitchens would see losses in sunlight that exceed BRE guidance. This is due to losses during winter months; and 25% Annual PSH would be retained in all cases. As the BRE guide notes, kitchens are less sensitive to reductions in light.
- 7.119 There would be no material difference between the impacts seen here; and those of the Extant Scheme, in relation to this block.

### *195 Stepney Way (moderate adverse daylight)*

- 7.120 This property is number '2' on the above plan, and the south facing windows were tested.
- 7.121 A total of 44 windows were tested for daylight impacts and it was found that 16 windows would meet the recommended BRE VSC guidelines. Of the remaining 28 windows, 14 serve bedrooms that are less likely to be used during daytime, limiting the effects on occupiers, and a further 10 windows serve rooms that are also served by 1 or 2 other windows located on side and rear facades. A total of 21 of the 28 rooms tested would meet BRE guidance in relation to NSL. One room of the 28 would experience a major impact, which is a bedroom. A further 6 rooms would experience minor impacts.
- 7.122 A total of 5 rooms would see losses in sunlight above BRE guidance. In each case at least 25% annual PSH would be retained.
- 7.123 There would be no material difference between the impact of the extant scheme and the proposed scheme, in relation to this block.

### *39-62 Seagrave Close (major adverse daylight, major adverse sunlight)*

- 7.124 This property is number 5 on the above plan. It is a 5 storey flatted development on the east side of Wellesley Street. A total of 100 windows on the west elevation were tested. The floor plans of this development were not available either on LBTH's planning portal, nor on any property websites. A review of the windows and façades was therefore undertaken and used to make assumptions for the internal floor layouts.
- 7.125 All 100 windows assessed would see reductions in VSC, in excess of BRE guidelines. The largest losses are at the lowest floor, however VSC's with the development in place would remain in the mid teens. The NSL test was undertaken for all 60 rooms served by these windows. 23% of the windows would meet BRE guidance, compared to 67% within the extant scheme. The reductions are due to the provision of additional height to the nearest block, to accommodate the blue/ green roofs. It is noted that the majority rooms affected have an open outlook over the site; and that any development on this site would result in a reduction in the area of the rooms that would be lit.
- 7.126 85 windows were analysed for sunlight impacts, serving 60 habitable rooms. Of these 85 windows, 19 windows would comply with BRE guidance for APSH and 52 windows would

comply during the winter months. 20 of the rooms would meet BRE guidance and of the remaining 40 rooms that do not, 19 are living rooms. Whilst there will be a reduction in sunlight to this property, the reduction is expected for a development of this size and can be partially explained by the presence of balconies on the existing property.

7.127 The additional daylight impacts compared to the extant scheme for daylight are material but not significant; and the classification of the impact to the block as a whole remains as per the Extant Scheme.

*26-38 Seagrave Close (minor adverse daylight)*

7.128 This property is number '6' on the above plan. The windows on the west elevation were tested.

7.129 This property comprises a 3-storey development with a total number of 3 flats; each flat occupying a whole floor. The floor plans of this development were not available either on LBTH's planning portal, nor on any property websites. A review of the windows and façades was therefore undertaken and used to make assumptions for the internal floor layouts.

7.130 All 12 windows facing the proposed development were tested. 11 of the 12 windows would not comply with BRE guidance in relation to VSC. However, NSL calculations for all the 9 rooms served by the windows indicate that the rooms would retain more than 80% of their former value, with the proposed development in place. Therefore, that occupiers of this property would not suffer undue adverse daylight impacts as a result of the proposed development.

7.131 There would be no adverse impact on sunlight as a result of the proposed development.

7.132 There would be no material difference between the impact of the Extant Scheme and the proposed scheme, in relation to this block.

*72-76 Aylward Street (moderate adverse daylight)*

7.133 This property is number '7' on the above plan. The windows on the north elevation were tested.

7.134 This property comprises a 5-storey development, including a basement. It occupies two sides of the urban block which is defined by Aylward Street and East Arbour Street. A total of 9 flats are located on the façade facing the proposed development. The floor plans of this development were available on LBTH's planning portal.

7.135 Overall, 98 windows were assessed for daylight impacts. 50% of these windows would meet BRE guidance in relation to VSC – compared to 53% with the extant scheme. NSL calculations were undertaken for all 47 rooms serviced by these windows, of which 36 would meet BRE guidance. Of the 11 rooms that did not meet the BRE recommended levels, 5 are bedrooms which the BRE Guidance classifies as 'less important'. Of the 6 Living-Kitchen-Dining rooms that do not meet the BRE recommended daylight levels, only 2 of these would suffer major adverse impacts. Both of these rooms would remain over 50% well lit, which is considered to be acceptable.

7.136 This property is located to the south of the proposal and would not be affected in relation to sunlight.

7.137 There would be no material difference between the impact of the Extant Scheme and the proposed scheme, in relation to this block.

*1-13 George Scott House (moderate adverse daylight)*

7.138 This is number 8 on the plan above. It is a 5-storey flatted development on the corner of Aylward Street and West Arbour Street, to the south of the proposed development. The floor plans of this development were available on LBTH's planning portal. A total of 34 north facing windows and 22 rooms were tested.

7.139 Overall, 10 windows would meet BRE guidance in relation to VSC, compared to 13 within the extant scheme. 9 out of the 22 rooms would meet BRE guidance in relation to NSL, compared to 15 within the Extant Scheme. However of the 13 rooms which would see losses in excess of BRE guidance for NSL, 7 would have MSL values with the development in place of between 0.71 and 0.79 times their former value, which is only marginally below BRE guidance.

7.140 This property is located to the south of the proposal and would not be affected in relation to sunlight.

7.141 The additional impact compared to the extant scheme for daylight is material but not significant; and the classification of the impacts to the block as a whole remains as per the extant consent.

*Lady Mico's Almshouses (moderate to major adverse daylight)*

7.142 This property is number '9' on the above plan. This property is a 2-storey block to the south of the proposed development. The floor plans of this development were not available either on LBTH's planning portal, nor on any property websites. A review of the windows and façades was therefore undertaken and used to make assumptions for the internal floor layouts. 20 windows and 11 rooms were tested on the northern elevation

7.143 Of the 20 windows, 4 would meet BRE guidance in relation to VSC and the remainder would experience adverse effects. However, an analysis of the results shows that none of these windows received enough daylight in the existing scenario, as some of it was blocked by the pitched roof and the balconies that block some of the view of the sky.

7.144 NSL calculations indicate that with the proposed development in place, 3 rooms would meet the BRE recommended values. The 8 rooms that would not meet the BRE recommended values are kitchens, which are less sensitive to reductions in daylight. Given this, it is considered that the loss of daylight as a result of the proposed development would not have unacceptable adverse impacts on the occupiers of Lady Mico's Almshouses.

7.145 This property is located to the south of the proposal and would not be affected in relation to sunlight.

7.146 There would be no material difference between the impact of the Extant Scheme and the proposed scheme, in relation to this block.

*245-247 Jamaica Street (moderate to major adverse daylight, major adverse sunlight)*

7.147 This property is number '13' on the above plan. This property comprises of two blocks on the corner of Jamaica Street and Stepney Way. The development varies between 6 and 8 storeys. 101 windows were tested and 77 rooms, on the eastern elevation.

7.148 Of the 101 windows tested, 26 would meet BRE guidance for VSC, compared with 30 within the extant scheme. Of the 77 rooms tested for NSL, 27 rooms would meet BRE guidance, compared to 32 within the Extant Scheme. The majority of rooms which would see losses in NSL that exceed BRE guidance are bedrooms, which are less sensitive to reductions in daylight. In addition, some of the adverse impacts to windows could be partially attributed to the presence of balconies. Given this, the proposed development would not result in unacceptable amenity impacts to occupiers of 245-247 Jamaica Street.

7.149 Out of the 77 rooms analysed for sunlight impacts, 29% would meet BRE guidance for annual sun lighting, compared to 34% within the Extant Scheme. For winter sun lighting, 35% would meet BRE guidance, compared to 44% within the extant consent. The reduction in sunlight levels can be partially attributed to the presence of balconies on the existing surrounding properties. In addition, for many of the rooms the APSH values were already very low, e.g. 10-16, this means that the % loss of sunlight appears greater in percentage terms. Given this,

it is considered that the proposed development, would not result in an unacceptable loss of sunlight to occupiers of 245-247 Jamaica Street.

- 7.150 The additional daylight and sunlight impacts when compared to the extant scheme are material but not significant; and the classification of the impacts to the block as a whole remains as per the Extant Consent.

#### Overshadowing

- 7.151 A total of 12 outdoor spaces have been assessed. The sunlight values of all 12 of the outdoor spaces with the development in place, would be no less than 0.8 times their former values. As such, the spaces comply with BRE guidance and there would be only a negligible impact on overshadowing to neighbouring amenity spaces.

#### Conclusion

- 7.152 The proposed development would result in some adverse daylight and sunlight impacts to neighbouring properties, with some noticeable reductions in daylight and sunlight. Any scheme of this type, involving the densification and optimisation of an existing site, would inevitably lead to some level of adverse impacts. There are some losses in daylight and sunlight which are greater than those which would be experienced with the extant scheme in place. These additional losses are, as has been outlined above, either negligible or minor. They are due to negligible increases in height of the blocks to facilitate blue/ green roofs and are not considered to increase the overall impact categorisation for each block.
- 7.153 In addition and in compliance with the Mayors Housing SPG, the target values within the BRE Guide should be viewed flexibly, to fully optimise the potential of the site to provide housing. Overall, it is considered that the development would not result in any unacceptable adverse impacts on daylight, sunlight or overshadowing to neighbouring occupiers.

#### **Noise & Vibration**

- 7.154 The Council's Environmental Health Officers have reviewed the submitted Noise Assessment Report, prepared by Adnitt Acoustics. Subject to details being submitted via condition regarding the noise levels from the plant and restrictions on demolition and construction activities, there are no objections to the proposed development.
- 7.155 The community space is now proposed on the south eastern corner of the site. A condition would be levied, requiring suitable noise mitigation measures to be implemented so that noise from this space is kept within acceptable levels, to protect the residential amenities of the nearby occupiers, for the lifetime of the development.

#### **Construction Impacts**

- 7.156 Demolition and construction activities do inevitably result in some short term additional noise and disturbance to surrounding occupiers. To mitigate these impacts as much as possible, conditions are recommended to reduce impacts during the construction phase, including the submission of Demolition and Construction Environmental Management and Logistics and Plans.
- 7.157 In addition, in accordance with the Planning Obligations SPD, conditions would be secured towards development co-ordination and integration.

#### **Transport**

- 7.158 Development Plan policies promote sustainable modes of travel and limit car parking to essential user needs. They also seek to secure safe and appropriate servicing.

## **Vehicular, pedestrian and cycle access**

7.159 To encourage walking and cycling and allow play, the inner street would become a shared street, with vehicular access limited to emergency vehicles, occasional deliveries and refuse collections. It will be closed to all other traffic and will operate as a one-way northbound route for the permitted through movements with access from Aylward Street to the south. There would be play spaces and a pocket park to improve the quality of the public realm and encourage people to use this walking route.

## **Deliveries & Servicing**

7.160 It is proposed that servicing takes place both within the site via the inner street and from the public highway.

7.161 The inner street would become a shared street, with vehicular access limited to refuse vehicles, emergency vehicles and the occasional delivery vehicles (beyond the 2 accessible parking spaces). This new central road will accommodate bollards at the middle third of the access road to prevent vehicles from utilising this access as a cut through, the bollards will be droppable to enable refuse and emergency vehicles to serve the site via the central access road. In addition, the inner street will comprise two internal turning heads which allow for vehicles up to the size of a 4.6t van to enter the site, turn within the manoeuvring space and exit back onto the public highway. This will reduce risks of collisions and/or additional congestion resulting from reversing vehicles.

7.162 The residential properties fronting the public highway will continue to be serviced by delivery vehicles stopping on-street along yellow line restrictions on one of the frontages to Stepney Way, Wellesley Street, Aylward Street and Jamaica Street.

7.163 The community space will receive its deliveries on-street and will be controlled by a member of staff to ensure the smooth operation of deliveries, servicing and waste collection. A condition with regards a final delivery and servicing plan for the community use is recommended

7.164 It is recommended that a full delivery and servicing plan is secured by condition.

## **Car Parking**

7.165 London Plan Policy T6.1 requires residential developments with PTAL 4 and 5 for inner London should be car-free. The policy requires the provision of disabled persons parking for new residential developments ensuring 3% provision from the outset with additional 7% to be provided upon request. The policy also states that new residential car parking spaces should provide at 20% of active charging facilities with passive provision for all remaining spaces.

7.166 The proposed scheme incorporates 35 disabled persons parking spaces (33 within the car park; and 2 along the internal road). Given that any addition provision on site would be at the expense of open space, play space and public realm this level of provision is judged to be appropriate.

7.167 In accordance with London Plan policy, a condition will be secured requiring that 7 of the car parking spaces would have Electric Vehicle Charging Points (EVCPs) and the rest would have passive provision for EVCPs.

7.168 As a result of the permit transfer scheme a total of 133 homes within the proposed development could be entitled to a PTS comprising the 64 re-provision Residential Leaseholder and Secure Tenant properties and up to a further 69 affordable family-sized dwellings (including 2-bed units). The remaining 274 homes in the proposed development would be subject to a permit-free agreement with the Council.

7.169 This increase in on street car parking as a result of the permit transfer scheme may lead to increased parking congestion. This is considered to be an unavoidable impact of the scheme

and this congestion will inevitably reduce in time as permit holders move from the site and new dwellers move in who do not hold permits.

7.170 A car parking management plan will be secured by condition detailing how parking bays will be allocated and how the inner street will be kept clear of unauthorised parking.

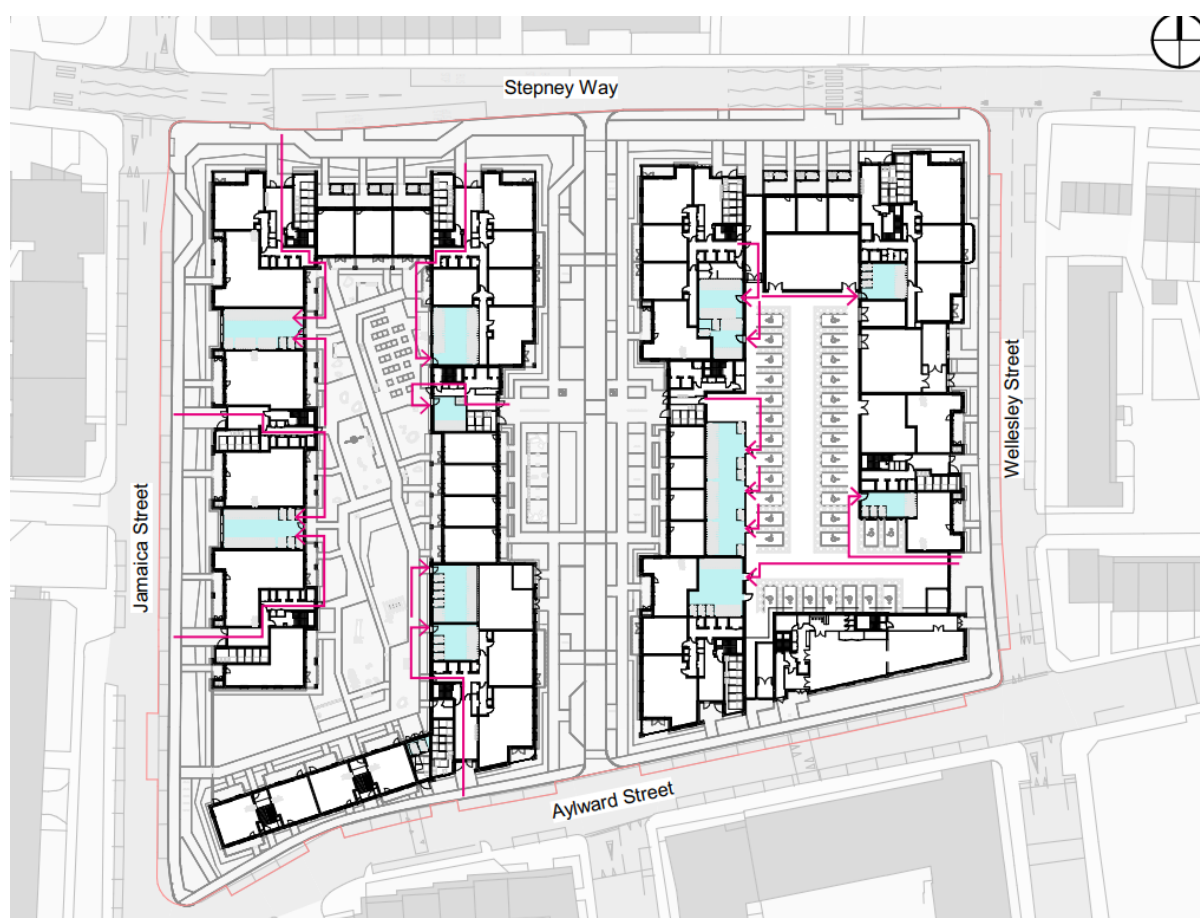

### Cycle Parking and Facilities

7.171 London Plan Policy T5 would require 759 long-stay cycle parking spaces to be provided for residential use and 12 short-stay cycle parking spaces. The scheme would provide 771 long stay spaces, exceeding policy requirements. The proposed community space would be provided with 3 long-stay stands. There would also be 28 short stay cycle parking spaces in the public realm.

7.172 Details of the short stay cycle parking, in terms of where the cycle stands would be located, has not yet been provided. A condition would be secured requiring this information to be provided.

7.173 All the long stay parking would be in secure, sheltered communal cycle storerooms – with the Cycle parking is provided at ground floor level in each of the housing blocks. The cycle parking would be in the form of either Sheffield stands or two tier stands and would meet London Plan policy requirements.

7.174 In conclusion, the cycle parking provision proposed meets the minimum requirements set out in the London Plan and has been designed in accordance with London Cycling Design Standards.

**Figure seventeen - Proposed cycle storage and car parking provision**

### Travel Planning

7.175 A framework travel plan has been provided. The final Travel Plan should be secured and monitored via a condition.

## **Environment**

### **Environmental Impact Assessment**

7.176 An Environmental Impact Assessment Screening Opinion was issued for the proposed development confirming that the proposed development is unlikely to have significant environmental effects and as such, an EIA was not required for the proposed development.

### **Energy & Environmental Sustainability**

7.177 Generally, a decarbonisation agenda has been adopted at all planning policy levels. Policy SI2 of the emerging London Plan requires major development to be net zero-carbon. This means reducing carbon dioxide emissions from construction and operation, and minimising both annual and peak energy demand in accordance with the following energy hierarchy.

- Use Less Energy (Be Lean),
- Supply Energy Efficiently (Be Clean), and
- Use Renewable Energy (Be Green)
- Monitor, verify and report on energy performance (Be Seen).

7.178 Policy D.ES7 includes the requirement for non-residential developments to be zero carbon with a minimum of 45% reduction in regulated carbon dioxide with the remainder to be offset with cash payment in lieu.

7.179 The proposed energy strategy includes energy efficiency measures, air source heat pumps and the installation of PV arrays, which would result in a 71% reduction in carbon emissions compared to the GLA's SAP10 baseline. This exceeds the minimum 35% (London Plan) and 45% (THLP) carbon reduction policy requirements.

7.180 In general, the proposed energy strategy and identified measures for carbon emissions reduction are considered acceptable. In particular, officers are supportive of the air source heat pump solution (heating and hot water) as this is an electrical based system that can take advantage of the decarbonised grid in the future. A cash payment in lieu for the remainder of the carbon emissions reduction would be secured via a condition.

7.181 As requested by the Council's energy officers, a condition will be secured to ensure that the community floorspace within the proposed development achieves BREEAM 'Excellent' rating.

7.182 In relation to the 'Be Seen' element of the energy hierarchy, smart meters (energy display devices) will be installed in each home, allowing residents to monitor and reduce their energy use. It is recommended that a planning obligation requires the development owner to submit monitoring results to the GLA (in accordance with the Mayor of London's draft guidance).

### **Air Quality**

7.183 London Plan policy SI1 and Tower Hamlets Local Plan policy D.ES2 require major developments to submit an Air Quality Assessment demonstrating to meet or exceed at least Air Quality Neutral standard.

7.184 The application is accompanied by an Air Quality Assessment which has been reviewed by the Council Environmental Health Air Quality Officer. The assessment concludes that the proposed development would be air quality neutral, in accordance with planning policy. Given that the proposed development would rely on air source heat pumps there would be no NOx emissions associated.

7.185 The mitigation measures to prevent dust nuisance and air pollution during construction and the life of the development would be secured via a condition, as requested by the Council's air quality officer.

### Wind/Microclimate

7.186 The application was supported with the submission of an Environmental Wind Planning Report prepared by Arup. This report assesses windiness levels for the completed development (Phase 2) and for Phase 1.

7.187 Overall, the wind conditions around the completed development are expected to be suitable for their particular uses. It is considered that with appropriate mitigation measures in place, the proposed wind and microclimate within the proposed development and the surrounding area is considered acceptable and in accordance with the planning policy requirements.

### Waste

7.188 Policy D.MW3 of the Local Plan (2020) requires adequate refuse and recycling storage alongside and combined with appropriate management and collection arrangements.

7.189 Each housing block would be serviced by a bin store at the ground floor level. These bin stores are each located in close proximity / adjacent to the main entrance to the blocks but cannot be accessed from the internal core, due to fire safety reasons. Residents would be responsible for taking their waste/recycling to a bin store. There will be an onsite management to move the bins from the store to the collection point.

7.190 The maisonettes on Stepney Way would have their own dedicated bin stores in their front gardens and would be serviced directly from the street.

7.191 Bulky waste would not be stored in a separate store. Instead, bulk waste will be left in the bin stores and collected by on-site management.

7.192 A Site Waste Management Plan will be secured by a planning condition. As part of this condition the applicant would be required to provide additional information in relation to the bulky waste storage management plan, the onsite management of bins and the communication strategy for waste management.

**Figure eighteen - Proposed Refuse Strategy**

## **Biodiversity and Urban Greening**

- 7.193 London Plan policy G6 and Tower Hamlets Local Plan D.ES3 require developments to protect and enhance biodiversity. Policy D.ES3 requires major development to deliver net gains in biodiversity that contribute to objectives in the Local Biodiversity Action Plan. Policy G5 of the London Plan requires that major development proposals contribute to the greening of London by including urban greening as a fundamental element of site and building design.
- 7.194 The application site consists of existing buildings and surrounding green space, which is largely amenity grassland with scattered trees, shrubbery and a small wildflower patch. Most of the trees are to be retained. However, 35 trees would be removed along with the rest of the existing planting.
- 7.195 The proposed development would retain the Category A (London Plane) tree on Jamaica Street and there would also be a proposed re-planting of 127 semi mature trees. Therefore, it is considered that the biodiversity loss associated with the loss of 35 trees, including 8 Category B trees and 27 Category C, would be adequately mitigated.
- 7.196 The biodiversity enhancements as part of the proposed development include the provision of blue and green roofs over the roofs of the new buildings and ground level landscaping. Officers consider, pending details on the type of green roof proposed, that there would be a net gain in biodiversity as a result of the development as required by D.ES3.
- 7.197 Biodiverse roofs, as well as other biodiversity enhancements such as nectar rich plants, bat boxes and native tree species will be secured via condition. These will all contribute to Local Biodiversity Action Plan targets, in accordance with the planning policy. In addition, a condition requiring the removal of Japanese knotweed, an invasive species found on the site, will be levied.
- 7.198 The applicant has calculated the urban greening factor (UGF) score of the proposed development as 0.447 which exceeds the target set by London Plan Policy G5. The proposed development is therefore fully compliant with Policy G5 of the London Plan and therefore welcomed.
- 7.199 In conclusion, the proposed scheme would meet the relevant biodiversity and urban greening targets set out in policy.

## **Flood Risk & Drainage**

- 7.200 London Plan Policy SI13 sets out that development proposals should aim to achieve greenfield run-off rates and ensure that surface water run-off is managed as close to its source as possible.
- 7.201 Tower Hamlets Local Plan policies D.ES4 and D.ES5 seek to manage flood risk and encourage the use of Sustainable Urban Drain is protected to a very high standards by the Thames tidal flood defences up to a 1 in 1000 (0.1%) change in any given year. Policy D.ES6 requires new development to minimise the pressure on the combined sewer network.
- 7.202 The development site is located within flood zone 1 and therefore has no significant risk of tidal or fluvial flooding. There are surface and ground water flooding risks associated within the wider catchment area. The development proposes to reduce the overall flood risk for the development by raising existing ground levels throughout the site by 0.3m, resulting in a finished ground level of 10.5AOD.
- 7.203 The drainage strategy sets out proposals to limit surface water discharge in line with the sites greenfield run off rate and sets a discharge rate of 13l/s for the whole site (1.67ha) in a 1 in 100year + 40% storm event and will incorporate onsite storage of 1200m<sup>3</sup> provided by attenuation tanks. Thus, providing a 97% betterment from the existing site discharge rate of 421.4l/s. Therefore, the proposed drainage plan will go towards reducing the peak demand on the drainage network within this area, as the site will provide extensive betterment over the existing situation. The site will be split into 3 separate drainage catchment areas all draining

independently and will be split as such: West Block A, East Block B and Inner Street. Each section will consist of one outfall connection with a flow control device, discharging to the Thames Water combined sewers around the site. Therefore, the drainage strategy and the proposed discharge rate is accepted in principle.

7.204 Final details of sustainable urban drainage as set out in the drainage strategy such as blue/green roof, a swale, a variety of rain gardens, sections of permeable paving shall be secured by condition a condition will detailed surface water drainage scheme and SuDs hierarchy assessment is submitted prior to commencement of the landscaping works.

7.205 In conclusion, the flood risk and drainage strategy would be acceptable in principle. Final design details with regard to the SuDs features will be secured by condition.

### **Land Contamination**

7.206 The application has been reviewed by the Council's Environmental Health Contaminated Land Officer. Subject to the inclusion of standard pre-commencement and pre-occupation condition, the proposal is considered acceptable and in accordance with Tower Hamlets Local Plan policy D.ES8.

### **Health Impact Assessment**

7.207 London Plan GG3 requires developments to assess their potential impacts on the mental and physical health and wellbeing of communities through the use of Health Impact Assessments (HIAs). Tower Hamlets Local Plan D.SG3 requires major developments referable to the GLA to provide an HIA.

7.208 The application is supported by an HIA. It is noted that the site has strong potential to offer health benefits to the residents which is welcomed.

### **Infrastructure Impact**

7.209 It is estimated that the proposed development would be liable for Tower Hamlets Community Infrastructure Levy (CIL) payments of approximately £2,134,597.25 (inclusive of social housing relief and exclusive of indexation) and Mayor of London CIL of approximately £867,398.94 (inclusive of social housing relief and exclusive of indexation).

7.210 Alongside CIL, Development Plan policies seek financial contributions to be secured by way of planning obligations to offset the likely impacts of the proposed development on local services and infrastructure.

7.211 The applicant has agreed to meet all of the financial contributions that are sought by the Council's Planning Obligations SPD (2021), as follows:

- £190,632 towards construction phase employment skills training
- £349,125 toward carbon emission off-setting.

7.212 The following non-financial obligated will also be secured:

#### **1. Housing**

- Re provision of 64 units of housing; 28 Resident Leaseholder (RL) properties (as shared equity units) and the 36 Secure Tenant (ST) properties.
- 40.5% of affordable housing by habitable room (excluding re provision):
  - 22 units (66 habitable rooms) at London Affordable Rent
  - 69 units (308 habitable rooms) at Tower Hamlets Living Rent
  - 20 units (60 habitable rooms) as Shared Ownership
  - Early, Mid and Late Stage Review
  - Details and implementation of London Affordable Rent/Tower Hamlets Living Rent 'wheelchair accessible' dwellings (to M4 (3)(2)(b) standard)

## 2. Access to Employment

- 20% local procurement during the construction phase
- 20% local labour in construction
- 29 construction phase apprenticeships

## 3. Transport Matters

- Car Free development (residential)
- Approval and implementation of Car Park Management Plan (including for increasing on-street provision of accessible car parking spaces)
- Travel Plans
- Scheme of Highway Works
- Public access to the inner street

## 4. Compliance with Considerate Constructors Scheme

### Human Rights & Equalities

- 7.213 The proposal does not raise any unique human rights or equalities implications. The balance between individual rights and the wider public interest has been carefully considered and officers consider it to be acceptable.
- 7.214 Given the nature of the proposed estate regeneration scheme, particular attention should be given to the displacement of existing residents. As outlined elsewhere in this report, the applicant has pro-actively engaged with the existing residents throughout the whole process. A decant strategy, including rehousing residents has been secured which ensures that there would be no adverse impact to the existing residents' housing situation.
- 7.215 The proposed new residential accommodation would meet inclusive design standards and 34 of the new homes would be wheelchair accessible, 24 within the affordable rented tenure and 10 within the private sector (with the affordable rented homes to be built to 'fit out' standard). This would benefit future residents, including disabled people, elderly people and parents/carers with children.
- 7.216 The application has undergone the appropriate level of consultation with the public and Council consultees. The applicant has also carried out an extensive engagement with the exiting residents on site.
- 7.217 The proposed affordable housing would be of particular benefit to groups that are socially/economically disadvantaged.
- 7.218 The proposed development would not result in adverse impacts upon equality or social cohesion.

## 8. **RECOMMENDATION**

- 8.1 That **planning permission is GRANTED** subject to the recommended conditions and planning obligations.

## 8.2 Conditions

### Compliance

1. 3 years deadline for Commencement of Development.
2. Development in Accordance with Approved Plans.
3. Personal Permission.
4. Restrictions on Demolition and Construction Activities:
  - a. All works in accordance with Tower Hamlets Code of Construction Practice
  - b. Standard hours of construction and demolition
  - c. Air quality standards for construction machinery
  - d. Ground-borne vibration limits
  - e. Noise pollution limits.
5. Amplified noise
6. Hours of use
7. Inclusive access
8. External Lighting.
9. Plant
10. No plant on roof
11. No pipes on building face
12. Tree protection
13. Cycle Parking
14. Wheelchair Accessible Units

### Pre-Commencement

15. Dust Management Plan & PM10 Monitoring
16. Stage 1 RSA for Inner Street
17. Wind mitigation
18. Financial contributions
19. Non-Financial Contributions (relating to housing, transport and employment)
20. Early-stage viability review
21. Biodiversity mitigation and enhancement
22. Control of invasive species
23. Contaminated land
24. Construction Environmental Management and Logistics Plan
25. Archaeology
26. Construction Plan and Machinery (NRMM)
27. Piling

### Pre- Superstructure Works

28. Water efficiency
29. Highway works (s278)
30. Ventilation Strategy
31. SUDS
32. Communal Amenity Space and Child's Play Space
33. External Facing Materials

### Pre-Occupation

34. Phasing management strategy
35. Phase 1 – noise mitigation measures
36. Phase 2 – noise mitigation measures
37. Car-free
38. Phase 1 - waste management plan
39. Phase 2 – waste management plan
40. Travel plan
41. Water network infrastructure

42. Accessible Car Parking and Cycle Parking, EVCP and Parking Management Plan
43. Energy and Efficiency standards
44. Delivery and servicing
45. Secured by design accreditation
46. Circular economy post-completion
47. Permit free agreement

### **8.3 Informatives**

1. Development is Liable for CIL
2. Street Naming and Numbering
3. Thames Water - Groundwater Risk Management Permit, minimum pressure/flow rate.
4. Building Control
5. S278
6. Fire and Emergency
7. Footway and Carriageway
8. Hours of Work for Demolition and Construction Activities
9. Designing out Crime

## APPENDIX 1
